A detailed chronology of the 80 years of the Poet's life and work—profusely illustrated

Specially contributed articles on different aspects of the Poet's work and achievements

Portraits of the Poet at different periods of his life: Numerous Plates

PRICE FOUR ANNAS ONLY

THE WEEK IN THE CORPORATION

A SHORT RECORD OF THE MORE IMPORTANT DECISIONS OF AND DISCUSSIONS AT THE CORPORATION MEETING FOR THE WEEK ENDING MAY 10, 1941

SPECIAL MEETING HELD ON MONDAY, THE 5TH MAY, 1941.

Tenders Accepted

The tenders for the supply and delivery of (a) building materials during the year 1941-42; (b) petrol—2,14,800 gallons; (c) for lighting street oil lamps; (d) of oils and lubricants; (e) of iron and steel; (f) of hardware and engineering stores; (g) of pipes and fittings; (h) for pig iron, were considered and accepted.

Corporation Laboratory

At the commencement of the meeting Mr. N. C. Chatterjee told the House that accompanied by the Mayor he paid a surprise visit to the Corporation Laboratory and took samples at random of cholera vaccines made there and sent those for examination to independent sources unconnected with the Corporation. He was glad to say that the vaccines were tested and certified that they were up to the mark. Mr. Chatterjee, however, pointed out that the Laboratory required immediate improvement if the laboratory was to function properly.

Mr. Naresh Nath Mookerjee pointed out that an Advisory Committee of experts was formed during the Mayoralty of Mr. A. R. Siddiqi, and it might be of some help in this connection.

The Mayor (Mr. P. N. Brahma) said that he would bring the matter to the notice of the Chief Executive Officer for his opinion.

Municipal General Election Expenses

The Corporation sanctioned a sum of Rs. 30,000 to meet the cost incurred in connection with the Municipal General Election held in March, 1940.

ORDINARY MEETING HELD ON WEDNESDAY, THE 7TH MAY, 1941

Re-Appointment Of Mr. J. C. Mukerjea As Chief Executive Officer

Consideration Of Matter Postponed

THE question of Mr. J. C. Mukerjea's re-appointment as Chief Executive Officer again came up before the Calcutta Corporation on Wednesday, the 7th May. After nearly two hours' discussions, consideration of the matter was postponed till Friday next week (May 16).

At the suggestion of Mr. Sudhir Chandra Ray Chaudhuri, the question of Mr. J. C. Mukerjea's re-appointment as Chief Executive Officer was taken out of its turn.

Mr. N. C. Chatterjee moved: That the Resolutions of the Corporation dated the 28th February, 1941, and the 22nd March, 1941, whereby Mr. J. C. Mukerjea was re-appointed as Chief Executive Officer of the Corporation be re-affirmed and that in view of the settlement which was arrived at with the Government of Bengal on the 31st March, 1941, the term of his office be fixed at 15 months from the first day of April, 1941."

Points of order were raised by Mr. B. N. Roy Chowdhury, Mr. Satish Chandra Bose and Mr. Hamoodur Rahman, maintaining that Mr. Chatterjee's motion was not in order.

Lengthy discussions then ensued on the points of order raised in which several speakers from different sections of the House participated.

The Mayor (Mr. Phanindra Nath Brahma) pointed out that in view of the far-reaching consequences of the questions raised he thought it advisable that the matter should be referred to an outside, independent and competent lawyer for his advice.

At the suggestion of the ex-Mayor Mr. A. R. Siddiqi it was agreed that the Mayor would consult legal opinion in the matter and in the meantime consideration of the question was postponed till Friday next week.

MR. B. N. ROY CHOWDHURY

Mr. N. C. Chatterjee having moved the resolution, as stated above, Mr. B. N. Roy Chowdhury raised a point of order maintaining that Mr. Chatterjee's motion was not in order. Firstly, the resolutions which Mr. Chatterjee wanted to reaffirm did not exist after the Government's disapproval of the appointment of Mr. Mukerjea which was made in those resolutions. Those resolutions, he maintained, were "dead" and therefore, there was no resolution before the House to be re-affirmed. Secondly, they could not make the appointment of the C. E. O. at an ordinary meeting of the Corporation: they had to call a Special Meeting for the purpose.

MR. HAMOODUR RAHMAN

Rising on a point of order, Mr. Hamoodur Rahman said that under Rule 17 (g) of the Rules of Business of the House, no resolution of the Corporation or a part of it could be altered within six months until that resolution had been first of all rescinded. Mr. Chatterjee's resolution did not say anything about rescission. The original resolution was to appoint Mr. J. C. Mukerjea for a period of two years but in the resolution moved by Mr. Chatterjee they desired to reduce the period of two years to 15 months. This, the speaker maintained, they could not do without first rescinding the original resolution.

MR. S. C. RAY CHAUDHURI

Mr. Sudhir Chandra Ray Chaudhuri maintained that Mr. Chatterjee's resolution was absolutely a fresh one consequent upon the second letter of the Government dated March 29, 1941. His interpretation of the Government letters was that Government was not opposed to the re-appointment of Mr. J. C. Mukerjea but they were opposed to the period for which he was sought to be re-appointed in the original Corporation resolution. It was evident, remarked the speaker, from the conduct of the Government at the Conference where they agreed that Mr. J. C. Mukerjea might be re-appointed for a further period of 15 months.

The Mayor: Government did not actually agree; some of the Ministers in a friendly way agreed. A Minister is not the Government.

Mr. Sudhir Chandra Ray Chaudhuri: Government has not vetoed the appointment: they have vetoed that portion of the resolution which related to the period.

The Mayor: That is your interpretation.

Mr. Sudhir Chandra Ray Chaudhuri: Yes, Sir, that is my interpretation.

MR. SATIS C. BOSE

Rising on a point of order, Mr. Satish Chandra Bose referred to the last portion of Mr. Chatterjee's resolution where the period of service was sought to be fixed at 15 months dating from 1st April, 1941. They were thus being asked to give retrospective effect to the resolution which Mr. Bose pointed out they had no right to do under the Act. "We cannot go out of the way," Mr. Bose further pointed out, "and give retrospective effect and say that the appointment will hold good from the 1st of April, which was long past. The resolution as it stands is illegal in form and in substance."

Proceeding Mr. Bose pointed out that there was no settlement arrived at with the Government, as stated in Mr. Chatterjee's resolution. Individual Ministers could give expression to their opinions but that could not be the Government's opinion. Ministers were not Government. An individual minister could not be the Government. There was a ruling only recently by the High Court.

MR MAHOMED RAFIQUE

Mr. Mahomed Rafique thought that Government might have disapproved the appointment but so far as the Corporation was concerned, the resolution was there.

MR. N. C. CHATTERJEE

Mr. N. C. Chatterjee replying referred to the points that had been raised. The first point that had been raised, he said, was that immediately the Government disapproved, there was an automatic abrogation of the resolution.

Mr. Chatterjee proceeding said that what he wanted to submit for consideration of the Mayor was that it was not for the Government of Bengal to make the appointment; the appointment had got to be made by the Corporation. Government had got only the power of veto.

The Mayor: Government have the power of approval.

Continuing Mr. Chatterjee said that disapproval by Government did not automatically lead to abrogation of a resolution that had been passed by the House.

The Mayor: The question is, can we give effect to the resolution?

Mr. Chatterjee: The resolution may not be fully operative . .. .

The Mayor: Is it at all operative?

Mr. Chatterjee said that it might not be effective, it might not be operative but the resolution did not cease to exist as soon as it was disapproved by Government.

The Mayor: If we cannot give effect to it, then the resolution only stands on paper.

Mr. Chatterjee remarked that disapproval of the appointment did not mean abrogation, rescission or cancellation of a resolution passed by the House. If for instance, Government withdrew that

TAGORE'S EIGHTIETH BIRTHDAY

Felicitations To The Poet

The Corporation of Calcutta at its meeting on Wednesday decided to felicitate Poet Rabindranath Tagore on his 80th birthday.

Mr. Abdur Rahman Siddiqi referred to the matter as soon as the Corporation met. He said he would like to mention of an important duty that Corporation had to perform. The Poet Rabindranath Tagore would reach his 81st year to-morrow. "May I request you, Mr. Mayor, to send out felicitations on behalf of this House, if this House agrees, to him and wish him many happy returns of the day."

Mr. N. C. Chatterjee said: We associate ourselves with it.

letter of disapproval, the resolution became automatically operative.

The Mayor: Where is the provision in the Act that Government can withdraw the letter of disapproval?

Referring to the question of giving retrospective effect Mr. Chatterjee said that under Section 51, the Corporation could appoint any person for such period as it thought fit. There was no bar, no fetters, no restriction against the Corporation making an appointment for any period it liked. Mr. Chatterjee said that the Corporation had exercised this authority in the past. As an instance he cited the case of Dr. S. N. Ghose who was appointed Health Officer, under Section 51 (1) of the Calcutta Municipal Act in September, 1939, with retrospective effect from April of that year. Section 51, he said, was plain, unambiguous and comprehensive enough on this point.

MR. D. N. MUKHERJEE

Mr. Debendra Nath Mukherjee said that the points raised in course of the discussions did not relate to rules of business but were constitutional questions. They had to decide whether the Corporation had the right to make an appointment with retrospective effect. Secondly what would be the effect of the disapproval by Government of a resolution of the Corporation regarding the appointment of its officers. He pointed out that opinion on these questions was divided. He suggested that it would be prudent for the Corporation in the circumstances to refer the matter to the best legal expert, preferably to the Advocate-General for his opinion.

The Mayor (Mr. Phanindra Nath Brahma) said that he fully approved of the suggestion made by Mr. Debendra Nath Mukherjee subject to the approval of his suggestion by the House.

THE MAYOR

The Mayor said that he was prepared to give a ruling to-day on the points that had been raised but he did not consider it to be expedient or prudent on his part to do so. The questions that had been raised had a far-reaching consequence; they did not merely relate to the particular appointment but had also a bearing on questions that might arise in future. They had to decide once for all the question as to what was exactly their legal relation with the local Government with respect to the appointment of their officers. Secondly, they had to decide whether the resolutions which were sought to be re-affirmed were still extant, enforced or effective. These were the points which, the Mayor said, should be authoritatively settled by an outside, independent, competent lawyer in whom the House had confidence.

They were, the Mayor continued, between the horns of a dilemma. If Mr. Mukerjea's appointment was held to be illegal, then all the acts done by him, all the suits started by him, all the assessments made by him and all the contracts entered into by him in the meantime would be null and void. Therefore, they had to approach the matter very carefully and obtain the best legal opinion in the matter possible from some well-known legal expert from outside. They had to see whether the period of service of Mr. Mukerjea could be regularised, legalised and made effective. He referred to Mr. Burn's resolution which stated that the resolution of the 31st March last would remain operative till a proper meeting of the Corporation could be called to submit a fresh proposal to the Government. Supposing the fresh proposal appointed Mr. X and not Mr. Mukerjea as Chief Executive Officer, then who would work as Chief Executive Officer during the intervening period, Mr X or Mr. Mukerjea because the fresh proposal could not be given effect to without Government's approval. That was also one of the questions they had to consider.

MR. A. R. SIDDIQI

Mr. Abdur Rahaman Siddiqi, *ex*-Mayor, suggested that without sending the matter to any outside body, let them settle it themselves at a special meeting. Mr. Siddiqi said they should send the resolution that would be passed at the special meeting to the Government and "I can assure my colleagues in the House" he said, that "Government will accept the resolution if it is within the four corners of the agreement that was entered into." If however they decided in favour of sending the whole matter to an outside legal expert, he suggested that should be referred to a lawyer outside this province, preferably to the Advocate-General of the Federal Court.

Eventually consideration of the matter was postponed till Friday next week and in the meantime the Mayor would consult legal opinion.

The Corporation Commercial Museum

The Mayor At Foundation Day Celebration

"THE Commercial Museum is a place for study, thought and action and it has caught the imagination of the people of the country", said Mr. P. N. Brahma, Mayor of Calcutta, presiding over the Fifth Foundation Day celebration of the Corporation Commercial Museum on Friday evening last.

At the outset, Mr. Jnananjan Neogy gave an account of the activities of the Museum since its inception.

Referring to the growth and development of the Museum, the Mayor said when the idea of establishing the Museum came up before the Corporation some opposed it and others supported with doubts in their minds. But judging from the amount of interest taken by the people of the city and of Bengal and elsewhere it could be said that the decision that was taken five years back did not prove futile. Those, who would take the Museum as a place of entertainment, would do the greatest mistake. On the other hand the unemployed youths of the country should get information from here so that inspired by new ideas they could begin their lives anew.

Referring to the unclean streets of Calcutta the Mayor said that all the Officers of the Corporation and coolies and scavengers would not be able to clean Calcutta unless and until the citizens were taught how to keep clean. In this matter the Corporation Publicity Department could do a great deal.

Every library of the province, the Mayor continued, should be converted into a museum so that the children of the soil could derive inspiration. He supported the idea of enlarging the scope of the Museum and requested Mr. Neogy to collect informations from foreign countries for utilization of the people of the country.

Prof. Benoy Kumar Sarkar, Messrs. Debjiban Banerjee, K. L. Dhandhania, S. R. Dhada, D. N. Sen, and Sarat Chandra Ghosh also addressed the gathering.

Annual Report

How the Commercial Museum of the Calcutta Corporation had to act as a living reference centre during the last year as there were countless calls on its service was revealed in the fifth Annual Report of the Commercial Museum of the Corporation of Calcutta just issued by Mr. J. Neogy, Officer-in-charge of the Museum. The Commercial Museum, it is stated, has rendered service by not only creating markets for manufactured commodities but has helped prospective investors in selecting suitable business and supplied all relevant and useful information. During the year, the report says, "We had hoards of business men, travellers, market-makers and indigenous products distributors not only from all the provinces and states in India but from Siam, Java, Singapore, Federated Malaya States, Trinidad, Ceylon, South Africa, Cairo, Afganistan, Iran and Turkey. The import of articles from Germany, Britain and Japan being handicapped, commercial travellers have to find out what India have for export. The

DRAINAGE CHANNELS

Government Sanction

The Government of Bengal have just accorded sanction to the construction of two channels, a *pucca*-dry weather channel and a *kutcha* storm water channel. The latter channel has already been executed and has been functioning since the last rainy season. This channel, however, is meant only for carrying storm water and according to expert opinion any sprawling of dry weather flow into this channel is likely to silt it up in no time.

The proposed emergency *kutcha* channel is meant to carry the dry weather effluents from the city to Kulti. Government engineers who were consulted were of the opinion that such *kutcha* channel which would be ultimately absorbed in the final *pucca* channel, was an immediate necessity to save the city and the adjacent areas from being sewage-locked and also for preventing the newly excavated storm water channel from being silted up.

The matter is now pending before the Works Committee of the Corporation. As soon as their sanction is received the work will be taken in hand.

toilet and pharmaceutical products of India were in great demand. This establishes the fact that the Commercial Museum has earned a reputation as a centre on "Reference and Information" far beyond the boundaries of India."

It was, further, observed that the activities carried on in the provincial Government departments of Industries, Forest and Agriculture were of stereotyped character and the authorities of the Commercial Museum were convinced that so long as the ambition of the State and interest of the people were not identical, no Government Department could help to bring prosperity to the people or help industrial progress and give efficient national service to the country.

GOVERNMENT GRANT TO MATERNITY CENTRES

The Government of Bengal have sanctioned a capital grant of Rs. 3,000 for the establishment of two maternity and child welfare centres, one at Dupchanchia and the other at Sherpur in the district of Bogra. The money will be spent on the construction of buildings for the centres.

The Government have also sanctioned the pay of a health visitor to be attached to each of these two centres at the fixed rate of Rs. 75 per month.

POET TAGORE'S BIRTHDAY

Visva Bharati Endowment

The following statement has been issued on behalf of the Visva-Bharati :—

"It is suggested that an endowment fund to be named after the Poet should be created on this auspicious occasion. The income from the fund will be utilized in promoting the study of Bengali literature and music; the building up in a permanent form of authentic records of the Poet's musical compositions; the collection of original or photographic copies of the poet's manuscripts and rare editions to serve as basic material for critical studies.

The Samsad (governing body) of the Visva-Bharati have already taken the first step in this direction by contributing Rs. 10,000 to the endowment fund. It is to be hoped that all sections of the public will contribute to the endowment fund."—*Associated Press.*

THE CITY OF MY BIRTH

"Let this Corporation make the city of my birth great in the amenities of life, health and sanitation and dignity and self-respect. Let painting, sculpture, music and arts grow under its auspices and make the dwellings of the citizens abodes of joy. Let this city wipe out its blot of illiteracy with all its dirt and uncleanliness; let her citizens enjoy plenty, have strength of body and energy of mind, and be inspired with civic spirit born of joy; let not the poison of internecine strife pollute her life; let her citizens of all races and all sects and communities unite in goodwill and keep her fair name untarnished and her peace undisturbed —this is my prayer."

—RABINDRANATH TAGORE

in his Reply to Calcutta's Civic Address on the occasion of his Seventieth Birthday Celebrations, 1931

General Article

War Boom Assists Canadian Cities

THE war is helping Canadian cities now, but it is predicted that the boom will bring new headaches to municipalities after the war. A discussion of the situation by Lawrence Jack of the Sun Life Assurance Company of Canada was published in a recent issue of the National Municipal Review. The article follows :—

The war boom has had the effect of superficially helping out municipal finances in Canada. Even in the praire provinces, where the wheat surplus has achieved an ominous size, the federal Government has guaranteed a fairly decent minimum price for wheat and thus has maintained farm income fairly well.

Unemployment relief charges have been greatly reduced, but this has not been evenly distributed. Quebec, for instance, because of its high concentration of unskilled workers, now has 50 per cent. of total unemployed people in Canada as opposed to its normal 35 per cent.

In general, however, municipal expenditures have tended to fall off, tax collections are much better than at any time in the last ten years, a great deal of property formerly seized for tax arrears is now being liquidated, industrial construction is booming, and even home building is on the up grade.

Less Borrowing

Since municipalities are being discouraged from borrowing during the war emergency and since, with the exception of some of the larger centres, most borrowing has been done on a serial basis, the municipal debt situation should be vastly improved by the end of the war. Certainly there should be very few defaults because of refunding difficulties. There is little likelihood that the federal government will invade any municipal tax fields, although it may encroach on provincial tax sources.

This improvement, however, is bound to be only temporary if past history is likely to be repeated in any degree. There is almost certainly going to be a slump in employment after the war and before transition to a peace-time economy can once more be made.

Municipalities will, therefore, be faced again with fundamental problems with which the Royal Commission on Dominion-Provincial Relations sought to grapple. And unless some thorough overhaul can be made of the present system of passing the buck on unemployment relief to municipalities a great deal of trouble lies ahead for Canada's local governments. Thus, although the commission's recommendations may not seem so vitally pressing in view of present abnormal circumstances, the future is so loaded with dynamite that the need for reform is probably more urgent now than in the past.

A Conference between the federal and all provincial administrations, convened on January 14, 1941, to consider the commission's report collapsed after only two days' debate under the uncompromising attacks delivered by the Premiers of Ontario, Alberta, and British Columbia. These three provinces enjoy the higest per capita incomes in Canada so their objections were directed primarily against dominion subsidies to the poorer provinces and loss of existing taxing powers. An added complication was the violent personal feud between the federal government leader and Ontario's Premier, even though both are members of the Liberal party.

This fiasco, however, is looked upon as only the first round in the struggle to implement the commission's report and cannot be taken as indicating total failure. It did indicate that full agreement on the report will be a long time coming in spite of the pressing need for quick action on its recommendations.

Cities Chief Sufferers

It is notorious that in the last decade among all governmental units municipalities and municipal credit and finance were the Chief sufferers from depression. In the Canadian federal system this was bound to be the case because the main depression problem—unemployment relief—was shifted as far as possible to municipalities, but in the scramble for tax revenues local governments were bound to come a poor third to federal and provincial claims.

Municipal difficulties, however, were only one aspect of the tangled mess that the Canadian federal financial system had gotten into after more than sixty years of operation. The Royal Commission, therefore, was set up in the fall of 1938, to study the problem of dominion-provincial relations and to develop a long-term solution in this sphere of federal finance. The scope of the commission's inquiry was limited because municipal activities are directly under provincial control, and Canada has never developed the type of federal-municipal relationship which has come into being in the United States, and which has developed so rapidly through activities of PWA and other agencies.

In their recommendations, therefore, the commission refrained from making specific suggestions for municipal reform problem fell within the scope of dominion-provincial relations. Its guiding idea was so to relieve provincial finances that the way would be open to municipal reform through provincial action. But even with this limited approach it was inevitable that some of the commission's recommendations would be of direct benefit to municipalities if they were to have any validity at all in the wider field of federal finance.

In any event, municipal problems were recognized and considered on their merits because the commission was concerned with making Canadian federalism work better and it fully realized that

SMALL-POX IN CALCUTTA:
HAVE YOU TAKEN THE "SAFETY" MARK?

sound local government is the basis of an efficient federal democracy. Since municipal authorities went to great pains to present their problems to the commission, parts of the official testimony presented a good picture of municipal difficulties in all Canada's diverse economic regions. This good work was supported by research done by the comimsion's staff.

Details Complicated

The essentials of the commission's recommendations are easy enough to grasp although the detailed workings of the scheme are too complicated to be summarized here. First of all the federal government would take over responsibility for all unemployment relief. In Canada relief is constitutionally a municipal responsibility and throughout the depression, even though municipalities were patently unable to carry the load, the ultimate legal interpretation was strictly pressed and both federal and provincial governments consistently passed the buck to the hard-pressed cities.

Loans for Relief

As a matter of fact, the federal government paid about 40 per cent. of unemployment relief costs through the medium of emergency loans to

106

PEOPLE DIED

the provinces (which were supposed to meet a portion of the charges) and municipalities paid only about 17 per cent. of the total. In theory these federal grants were only loans, although in actuality most of them had to be written off. The difficulty lay, however, in the fact that municipality would have to show absolute need for even such indirect aid before it could be had and this, of course, led to complete exhaustion of normal municipal resources before such a claim could be made or entertained.

The second point was that the federal government would take over all provincial (but not municipal) deadweight debt. An interesting variation had to be made, however, in the case of Quebec, where provincial debt is an extremely small proportion of combined municipal plus provincial debt because so many governmental functions have been made municipal responsibilities, whereas elsewhere the provinces assume those burdens. In Quebec, then, the federal government would take over 40 per cent. of the total of provincial plus municipal debt, thereby directly relieving local governments of some of their swollen debt burdens.

The third recommendation was that the federal government should administer a complicated system of direct subsidies to the provinces. Rather than distributing money to the provinces on the present indefensible per capita basis the federal government, on the advice of a projected permanent National Grants Commission, would make the new subsidies on the basis of proven need. In this manner provincial budgets would be placed in balance because the grants would be irreducible and they might be enlarged in case of future need. The guiding principle here was that poor provinces should be enabled to improve the quality of services rendered to at least the dominion average without having to resort to excessive taxation or transference of responsibilities to local governments.

In return for these very considerable concessions the provinces would be required to release to the federal government their rights to levy personal income, corporation, and inheritance taxes.

CALCUTTA TUBE-WELLS

Chemical Composition Of Water

The sodium chloride content of the tube-wells in and around Calcutta is discussed in the latest memoir of the Geological Survey of India.

Tube-wells have of late come into great prominence on account of their being handy means of obtaining natural clear drinking water, which is at the same time of high and consistent bacteriological purity. Though reliable and satisfactory from the bacteriological point of view, the tube well waters in some regions, however, have given rise to various complaints from the chemical point of view.

On the basis of chemical composition, the waters of the shallow tube-wells not exceeding 432 feet in depth in and around Calcutta are shown to fall under four types. The water in the area of the Dum Dum railway junction and northwards is slightly alkaline, free from saline or marine influence and is potable. The water in the area between Dum Dum railway junction and Lower Circular Road is not alkaline, but contains sea-salts, and the sodium chloride content increases with the age of the tube-well. Waters that are potable at the start turn definitely saline in the course of a few years.

In the Bhowanipore, Kalighat, Tollygunge, Dhakuria Lake and Alipore areas, the water is more or less alkaline and potable. The co-efficiency of variation in salinity is low. The water to the south of this area is almost entirely subject to saline or marine influence, is highly brackish—as at Matiabruz and Budge-Budge—and is unfit for drinking.

The reason for these differences in type, it is suggested, is that in these comparatively shallow depths the water bearing strata of the four regions are different from one another and are replenished by water from different sources. Thus in the first region, the source is the sub-soil water derived in its turn from rain water; in the second region the character of the sub-soil water is largely altered by seepage into it of the water of the Salt Lakes east of the city; in the third the sub-soil water is replenished by fresh non-saline Ganges water while in the fourth the influence of marine conditions is manifest.

HEALTH & HYGIENE

Protect The Child And Prevent Leprosy

[By Dr. Pariboty Charan Sen, *Publicity Officer, British Empire Leprosy Relief Association, Bengal Branch, Calcutta*]

PEOPLE of Calcutta while going about the streets are often confronted by many beggar lepers showing off their open sores and deformed conditions. Some of us are even terrified if a leper comes anywhere near us. And if perchance an end of our *chadar* or any part of our clothes touches the body of a leper we feel like running back home and burning off our clothes in the fear of catching infection. I tell you a real story which happened in Federated Malaya States. A Chinese detective escorted a leper to Sungie Buloh Leper Asylum. He went home and burnt all his clothes and sent Dr. Ryrie, the Leprosy Expert of the States a bill for his new suit.

From the public health standpoint however, the leper beggars is not as great a danger as an infectious leper in the general population in so far as he does not discharge any leprosy germ from his exposed ulcers or mutilated fingers and toes and also in so far as he does not often come in close contact with children. From the public health point of view the real menace is the infectious leper living in a family in contact with infants and children who are much more susceptible to the disease and through the affections of whom the disease perpetuates itself. Judging from this aspect one cannot overlook the fact that the real danger of the leper beggar problem lies in the *bustees* where they usually live and where there are dozens of young children some of whom show signs of leprosy. Even if the child's parents are not infectious the child is in close contact with other lepers who are infectious. The chance of such children escaping infection is very small indeed due to the appalling housing condition in such *bustees*—the crowded small rooms the houses close together, no air or sun filthy drains and so on. The leper beggar *bustees* are veritable dens where leprosy breeds.

Methods of dealing with leprosy have varied from time to time according to belief or disbelief in the contagiousness of leprosy. From ancient times and during and after the middle ages the general belief was that leprosy was conveyed from one person to another by contact. But in the beginning and middle of the nineteenth century discoveries concerning heredity in other diseases led people to believe that leprosy is inherited from the parents and is not spread by contagion. The discovery of the leprosy germ by Armeur Hansen about 1870 again brought back opinion to the theory of contagion and this opinion is held by almost all authorities of the world to-day. The discovery of the leprosy germ is one of the most outstanding events not only in the scientific study of leprosy but also in the study of the germ-causing disease in human being since leprosy was the first germ detected in the human body. While such discoveries in other diseases have been followed by other discoveries of immense value which have been of great help to man in his fight against disease in leprosy this has not been so. But although the workers in leprosy have not been rewarded by great discoveries of far-reaching value, yet he has had his share of reward in picking up a little knowledge here and a little knowledge there and joining them together have resulted in a far truer insight into the nature of the disease, into the factors involved in the fight between the tissues of the body and the invading germs and also into the factors involved in the prevalence of the disease in the community. The knowledge so gathered have resulted in partly dispersing the clouds of superstition, ignorance and fear which have grown around leprosy for ages. The problem is not yet solved but it is in many ways much more clearly defined and certain principles well-established which if applied in any country should be enough to bring the spread of leprosy under control. But it is the students of history who are probably in a position to tell us as to the length of time which elapses between the acceptance of a principle and its application to the life of the people as a civic duty in an old country like that of ours.

One of the latest tendencies of modern thought on leprosy is the increasing emphasis on the importance of leprosy in childhood. The leprosy rate in children is regarded by some workers as an important index of the prevalence and the spread of the disease in any community. Some leprosy workers even think that the control of leprosy in any country is very largely a matter of controlling infection in children. In Japan the separation of children from leper parents and sterilisation of leper patients before marriage are regarded as very important anti-leprosy measures.

The fact that about 40 to 50 per cent. of children of leprous parents may show signs of leprosy, but only 2 to 4 per cent. of conjugal infections take place, shows that childhood is the most dangerous period. This is confirmed by the lepromin test which is negative in children under three years and especially under one year of age, a negative finding means less resistance to the disease.

Children born of infectious leper parents separated soon after birth have scarcely shown any sign of development of leprosy if subsequently they are kept isolated from all possible infection.

The question of leprosy in children has been studied extensively in India in many thousands of families. Dr. Cochrane is making a special study of leprosy in childhood at Saidapet Madras. The question has also been studied by Dr. Lowe and others in Bankura and by Dr. Lowe and Dr. Santra

in Santalpur. Alipur Doors. Through their efforts many interesting datas are available. Without going into the figures I would quote a real story of a family to show how extremely important is the problem of leprosy in children. This story was published in the journal of Leprosy in India in 1935 after it was fully investigated by Dr. S. N. Chatterjee of the School of Tropical Medicine.

"An Indian doctor was, and still is, working in Africa. He had with him his wife and five children. Periodically he came on holiday to India where he stayed in his brother's house. This brother had a son who developed skin patches in which he had no sensation in his chidlhood and at the age of eighteen he showed diffuse skin patches which were definitely diagnosed as due to leprosy. He is now aged twenty-four and a moderately advanced case of leprosy. Three years ago the doctor left his children permanently in his brother's house. The eldest child, a girl aged 16, is apparently healthy and was recently married. The other 4 children aged 13, 11, 8 and 6 respectively, now all show slightly thickened sensationless patches of leprosy."

This is by no means a solitary instance of how leprosy spreads in families But it is only typical of what we usually find in our investigation into families having one or more lepers who are infective. I think I have said enough to make you realise how profoundly important a place the child occupies in spread of leprosy in the general population. The importance of the child is still more increased when it is remembered that earlier a child is infected with leprosy the more severe becomes his affections in later life. In fact the child is the pivot on which the control of leprosy in our country hangs. There are three things we definitely know of leprosy :—

1. Children are not born with leprosy; they usually contract it between the ages of 4 and 10.

2. Small children staying with infective open lepers tend to develop leprosy and earlier a child is infected more serious are his affections in later life. If we left lepers alone and instead took all their children away we might be able to stamp out leprosy probably much quicker than at present.

3. Marriage with a leper rarely causes the other partner to get leprosy and that it is extremely difficult for an ordinary adult to get leprosy even if he tries. People have tried and scientists have inoculated themselves with the germs of the disease but nothing has happened. We may take it that contact with leprosy even to the extent of germs being driven into the body has very little chance of infecting an ordinary adult.

Infective lepers, therefore, should not marry and have children because the children will run a very grave risk. In case of females the strain of pregnancy and lactation aggravates the disease. If an infective leper is already married he should avoid having children and if he already has children he should avoid all contact with them, and, if possible, arrange for his children to be taken by some other members of the family to live and brought up elsewhere. Leprosy has existed in India since primitive old days and it is strange that we are carrying from generation to generation this load of a primitive old disease without even a gesture of protest. Does this complacence on our part indicate our lack of sense of humanity or lack of will to apply scientific knowledge in a comprehensive social scale, or is it due to our oriental faith in the divine law of Inevitability that we leave things to Nature to settle our affairs by its own law of Selection? It is amazing that our men should see divine inspiration in the ruins of old cathedrals, temples and palaces—beauty arising out of these ruins, but see none in the ruins of a man? Why must ugliness and misery rise out of our body beautiful when leprosy is so much easier to prevent than cure any other disease in the world.

MENTAL WELFARE

Association Formed In Calcutta

The Honorary Secretary, Indian Mental Welfare Association has issued the following :

Indian Mental Welfare Association has recently been formed with the object of offering relief to the people suffering from mental diseases and deficiencies and of preventing such disorders It has been registered under the Act XXI of 1860. Dr. Sir Nilratan Sircar of Calcutta, Maharaja Sris Chandra Nandi of Cossimbazar and Dr Owen Berkeley-Hill of Ranchi are among its promoters The management is in the hands of a strong Governing Body under the able Chairmanship of Mr. Jatindra Nath Basu, M A M.L.A., Solicitor, Calcutta High Court.

Though the sufferings caused by mental diseases both to the victims themselves and their relatives are by no means less than those caused by any physical disease, it is only very recently that the public in this country are thinking about their relief. In America the hospital accommodation for mental patients is about half of that for patients with physical disease. In England, London County Council alone maintain 34,000 beds for mental patients apart from the private Homes, Hospitals etc. Many of the Indian provinces maintain more than one mental hospital, but unfortunately Bengal has only a share of mental hospital along with three other provinces though the proportion of mental cases here is not less than that of other provinces. Census (1931) figures for the insane in India are 1,30,309 while in Bengal alone it is 22,402

Unlike most diseases of the body mental diseases grow only very slowly and though a disease manifests itself in most cases in adult life its earliest indications can often be detected by a careful observer during the school age of the individual. A tactful handling and careful management of the case at this stage may obviate a catastrophy which is otherwise liable to spoil a life.

The Indian Mental Welfare Association has taken up the task of serving the country both on preventive and curative aspects of mental diseases. On the preventive side it has already organised several public lectures to arouse the consciousness of the public in mental hygiene It is also arranging to instruct the teachers of schools about the methods of detecting the earliest mental abnormalities in school children when they may be referred to child guidance clinics. On the curative side the Association intends to establish a well equipped modern mental hospital under experts trained in Europe and craves the sympathy of the generous public for the donation of a suitable house and for funds for its equipment. All contributions will be thankfully received by Dr. Malini Ranjan Sen Gupta, 91, Chowringhee Road, Calcutta.

Sewage Treatment Abroad—I

Affected By War And Economic Conditions

[By Dr. Georg Ornstein]

THE economic conditions of European nations are reflected in the sewage treatment practices and trends of the Continent and Great Britain. In contradistinction to the elaborate treatment plants of the United States, designed for the production of as good an effluent as is desirable, and possible in the light of stream needs, and applied practice and equipment, the majority of European plants are simpler in design and degree of ultimate purification affected.

The reasons for this difference in physical and sanitary character are to be found in the economic status of the countries involved. They are due to: (1) varying view as to the best ways of disposing of sewage, (2) difference in conditions met, and (3) the capital available to be spent for the common interest and benefit.

Sewage treatment in the United States is faced with two conditions not affecting European countries, namely (1) water consumption and sewage production is two to five times greater than Europe, and (2) the majority of water supplies are derived from surface sources, thus necessitating greater production of streams than in Europe where water supplies are commonly from underground sources or from sandy infiltration galleries adjacent to stream courses. European countries specialize in intensive farming as the thrifty people avail themselves of the fertilizer content of sewage and sludge. In the United States, this trend is of secondary importance.

Sewage Farming Common

Sewage farming in large European cities like Berlin has been practised for decades and sewage sludge, as such, or compounded with garbage as in Neumuenster, Germany, has been used extensively by the farmers. In recent years, the four year plan instituted in Germany for rendering itself-subsistent has given new impetus to this trend and has caused, for instance, the city of Leipzig which had discharged its sewage into two receiving streams after mechanical settling and chlorination to build a new pumping station and pipe line to the neighbourhood of Delitzsch about 9 miles north, in order to institute sewage farming in that sandy soil district and thus utilize the fertilizing values in the sewage. Half of the sewage is screened and to it is added the sludge of the other half which has been subjected to primary settling.

Another method for the utilization of the sewage is in fish ponds in which simultaneously biological reduction of the organic contents takes place, so that the effluent will cause no harm to the receiving stream. An outstanding instance of this type of sewage purification and utilization is the city of Munich, Germany, where fish ponds have been employed for over 20 years with satisfactory results. Owing to the large amount of organic substance contained in the sewage, small organisms of a vegetable or animal origin thrive in it.

They serve as food for more highly developed organisms which, in their turn constitute food for

the fishes and they themselves are consumed by man, thus closing the cycle. The fishes most suitable are those which can live on a minimum amount of dissolved oxygen in the water and of these the kind most used is the carp, a favourite food fish in Germany. The yearly yields in increase in weight of fish according to authoritative investigations amount to about 370 to 670 lbs. per acre pond surface per year and as the ponds require little care and expense represent a paying proposition.

In Munich the fishponds cover about 600 acres. The sewage conducted to it is diluted with three parts of fresh water.

In the dimensioning of the ponds one figures three acres surface for each 2000 inhabitants. The surface per pond should be about 21 acres and the through flow time about 2 days. Under these conditions the exygen consumption in 14 hours at 22 deg. C was 7.6 ppm at the inlet and .5 ppm at the outlet, a reduction of 93 per cent. and the effluent was almost saturated with oxygen, never below 5.6 ppm. which represents the lower limit for trout, while the same figure for carp is 2.8 ppm. With some of the fish ponds in Strassburg, Amberg, Grafenwoehr and Bergedorf the effluents discharge into creeks with no receiving water at all and in these trout are living. Very important is the pH value of the water in the ponds. It must be 7.2 to 8; acid waters are deadly, so that for sewage of lower values correction with lime or calcium carbonate is necessary before allowing them to enter the pond.

If the contents of the sewage cannot be converted into useful and therefore saleable products its disposal represents an expense without returns and the tendency for building elaborate disposal plants is thus largely governed by the amount of money one desires or can be forced to spend over and above the necessary minimum required by the supervising authorities and esthetical considerations.

In the majority of cases, mechanical settling supported in some instances by chlorination is considered sufficient for preparing the sewage either for discharge into the receiver or for its further utilization on sewage farms or in fish ponds.

Ruhrverband And Berlin Plants

Two of the German plants which seem to have acquired considerable publicity in the literature, namely those of the Ruhrverband in Essen-Rellinghausen and of Berlin in Berlin-Stahnsdorf, are both equipped with activated sludge installations. But neither of them can be considered as typical in sewage purifications as both constitute experimental and testing stations, the former being connected with the scientific laboratory of the Ruhrverband and the latter despite of its size and capacity of about 24 m.g.d. dry weather flow daily being declared as a large scale testing plant in a monograph issued by the respective authorities.

According to a paper read by Dr. Imhoff before the Institution of Chemical Engineers in London in January, 25, 1933 which is entitled "German Practice in Sewage Disposal" he states that 59 cities with 5½ million inhabitants are equipped with screening plants only, as they are situated on large rivers; 25 with septic tanks in private dwellings; 240 with Imhoff tanks: 70 with mechanical settling and separate sludge digestion tanks; 45 with 6½ million inhabitants with sewage farms. Ninety have, in addition to settling tanks, trickling or percolating filters, while 17 have contact beds which, however, are no longer being installed for new plants. Twelve are equipped with fish ponds and only 13 have activated sludge plants.

This represents a fair and rather comprehensive summary of conditions in Germany. Close supervision is exercised over the pollution of the receiving streams by special offices, the Flusswasseruntersuchungsamt, which have been established particularly in the highly industrialized and in the beet sugar districts. One of the receiving streams, the Bode, has to accept such large quantities of factory effluents during the beet sugar season that a very precise schedule has been imposed upon the individual factories as to the hours during which they are allowed to discharge their effluents and this is being very closely checked by personnel of the supervising office.

Activated Sludge In Holland

Thanks to Dr. Kessener, director of the Government Institute for Waste Purification, The Hague, Holland, activated sludge treatment after mechanical or chemical settling has been introduced to a considerable extent in Holland though these installations are small compared with the ones named above. Typical plants of modern design are erected in Hilversum, Vugt and Tilburg consisting of screens, detritors, primary settling (mechanically in the first two instances or chemically at Tilberg) aerration and secondary settling. The outstanding feature of these is the aeration by means of brushes evolved by Kessener. They consist of sets of thin flexible stainless steel blades of which 12 are spaced at equal distances around the circumference of a steel shaft which extends longitudinally along and over the aeration tanks and are driven by means of an electric motor and reduction gear at a speed of about 70 to 140 rpm. The over-all diameter of the brushes is 12-inch to 15-inch and the individual sets of brushes are spaced at distances of 4 to 5 ft. from each other along the shaft. Ordinarily they dip about ½-inch into the sewage beating it and thus always exposing new surfaces to the air. The depth of dipping and thereby the intensity of aeration can be changed at will by raising or lowering the sewage level in the aeration tank which is done by raising or lowering the outlets. An additional increase of aeration is gained by a rotating movement transversely to its flow which is imparted to the sewage by the brushes in combination with the rounded cross section of the tanks and a deflecting concrete baffle in the upper part of the tank, the curve of which forms a continuation of the curved cross section of the tank itself.

As this system bears a certain resemblance to the Haworth paddles developed in Sheffield, England, it is interesting to note a report about a test run at the sewage disposal works of Stockport, England, where it was found that under equal working conditions, the Kessener system afforded a saving in power of about 33 to 38 per cent., a slightly better percentage purification and a detention time of only ½ of that of the Haworth system.

Other plants in Holland are of well known types with primary settling, frequently Imhoff tanks with no feature of special interest. Much attention is paid to have the industrial enterprises pretreat their effluents before discharging them.

CALCUTTA NEWS & VIEWS
The Week's Digest

TAGORE'S DIAMOND JUBILEE

Congratulating Poet Tagore on the occasion of his Diamond Jubilee Mr. K. K. Okazaki, Consul General for Japan has issued the following :—

"On behalf of the Japanese community of Calcutta, I send our united heartiest congratulations to the Poet, Philosopher and Sage, Dr. Rabindranath Tagore on the occasion of his Diamond Jubilee. We all join India and the Universe in a single prayer to the Omnipotent to spare him to his people so that he may continue his good work for the cause of humanity."

VIDYASAGAR COLLEGE'S NEW PRINCIPAL

Professor J. K. Choudhuri has been appointed Principal of the Vidyasagar College, Calcutta. Mr. Choudhuri has been Superintendent of the Vidyasagar College Hostel since its inception about ten years ago, and has been closely associated with the College athletic department.

BENGAL CONGRESSMEN ARRESTED

Four Bengal Congressmen have been arrested in Calcutta under the Defence of India Rules and committed to jail. They are Mr. Bhupendra K. Dutt (Editor "Forward"), Mr. Rasiklal Das, Mr. Satis Chakravarti and Mr. Arun Guha.

Mr. Tarakdas Banerjee, Secretary of the suspended Bengal Provincial Congress Committee, has also been served with an order directing him to leave Calcutta within 18 hours and reside in the district of Jessore.

MR. SARAT BOSE ON DACCA

Mr. Sarat Chandra Bose, M.L.A., who visited Dacca and the riot areas in the Narayanganj Sub-Division last week along with Dr. Syamaprasad Mookerji and Mr. Kiran Sankar Roy, has issued the following statement on his arrival in Calcutta on Monday :—

"During our present visit to Dacca and its suburbs, we found to our infinite regret that the tension between the two communities still existed. It is true that the situation has appreciably improved but we cannot feel happy until we find that normal friendly relations and peace and harmony between the two communities have been resorted.

"At this critical juncture in the history of Bengal, we appeal to both communities and particularly their leaders not to do or say anything which might in any way wound the religious susceptibilities of either community. We appeal to them to treat the places of worship of both communities as sacred. Let them show by their actions and conduct that, however helpless they may feel in external matters they are not prepared to tolerate or encourage in any way the internal enemies of humanity and all that they hold dear and sacred".

2,500 *TUBE-WELLS FOR CALCUTTA*

The Government of Bengal has sanctioned the sinking of 2,500 tube-wells in Calcutta.

The question of providing an alternative source of water supply in Calcutta in the event of the existing water supply system being destroyed as a result of an air raid, has been engaging the attention of the Government for some time past.

The problem was discussed in several Conferences with representatives of the Calcutta Corporation and other bodies, and it was decided that provision must be made for an alternative supply of drinking water. A scheme has accordingly been drawn up to give effect to this decision. The scheme involves the sinking of 500 shallow tube-wells in unsewered areas, and 2,000 tube-wells in sewered areas in the City at a total estimated cost of Rs. 16 lakhs excluding the cost of supervision during construction. Sanction, as stated above, has now been accorded to the sinking of 2,500 tube-wells.

The sites for the tube-wells will be selected in consultation with the Calcutta Corporation, and the work will be completed within as short a period of time as possible.

"GOONDAS" IN THE CITY

The following *communique* has been issued by the Commissioner of Police, Calcutta :—

"Certain citizens of Calcutta have expressed apprehension about the presence of *goondas* in Calcutta. It is published for general information that lists of *goondas* and bad characters are maintained by the police in every police station and these listed criminals are kept under surveillance. It is not to be expected, however, that these lists are complete and if any of the citizens of Calcutta are aware of the presence of any *goonda* or habitual criminal in their immediate locality, they should take steps to inform the Deputy Commissioner, Detective Department, Lalbazar.

"It was stated in my previous *communique* of April 29, that certain measures are in contemplation for dealing effectively with habitual criminals. This refers to certain alterations in the law dealing

with *goondas* and habitual criminals. It has to be expected, however, that action against *goondas* and habitual criminals would not, in any emergency, be delayed pending the decision on these new legal steps.

"Normally, the Commissioner of Police is prepared to act immediately against any *goonda*, provided any person supplies information, that the said *goonda* is actually causing apprehension to the people of any locality".

BENGALI FOR NON-BENGALEES

A move for the propagation of Bengali language and literature in and outside the province was set afoot at a meeting held on the 2nd May, at the hall of the Asutosh College, Bhowanipore.

A school organized by the *Nikhil Bharat Banga Bhasa Prasar Samiti* to teach Bengali to non-Bengalees, was opened on this occasion. Mr. Ramananda Chatterjee presided.

The object of the meeting, Mr. Chatterjee explained, was wide propagation of Bengali language and literature in and outside Bengal; it also aimed at devising ways and means for making her the state language of India.

Speaking of the educated sections, there existed, Mr. Chatterjee held, deplorable ignorance in and apathy for the cultivation of the mother tongue. There were at least one lakh of words in the Bengali language and even among the educated few could claim to have known all or most of them.

STUDENTS AND RURAL RECONSTRUCTION

The important part the students can play in rural reconstruction work was referred to by Acharya P. C. Ray presiding over a lecture on Saturday last by Mr. H. S. M. Ishaque, I.C.S., at the University Institute Library room.

Sir Prafulla Chandra said that holidays had already begun and those students who had appeared in I.A., I.Sc., B.A. and B.Sc. Examinations should, instead of wasting their time, set apart a fraction of it for removing illiteracy among the masses and in this way much could be done. In China, he said, wonders had been effected by the students community. During holidays they dispersed themselves into the country and every temple-yard was converted into temporary school.

The moral effect of this kind of work was indeed incalculable. By such work the break between the so-called *Bhadralokes* and the lower classes could be bridged. The poor classes, Acharya Ray said, Hindus and Muslims, would realise that the *Babulokes* were their friends and worked for their good.

He supported Mr. Ishaque's idea of social conscription by which a Matriculate would be required to spend at least one year in countryside doing some sort of rural reconstruction work.

ADULT EDUCATION

Liquidation of adult ignorance was the subject of an address delivered by Mr. Jnananjan Neogy on the 2nd May, at the University Institute Hall in connection with the series of Rural Reconstruction lectures.

Situated as they were in India, said Mr. Neogy, the school literacy programme could not be taken up by the State for several reasons, but they could not allow their people to struggle in ignorance and to grope in darkness. So they must take up the programme for the liquidation of adult ignorance. It should be their duty to drive ignorance and superstition, to replace mal-information and wrong information and get rid of the habit of sticking to ineffective old things and the abhorrence for new suggestions and ideas.

Proceeding Mr. Jnananjan Neogy said that it was the contact with living ideas that could transform their man to live with new ideas. Instead of [illegible] they must put before their eyes pictures and instead of sentences they should scatter slogans before their minds. Pictures had most potent educative incentives in them. A picture should tell the story of a subject. Charts, models, diagrams—all these visual forces and factors should be mobilized to create a new vision and an urge in the man.

Their youngmen lacked both vitality and imagination. Most of them had come here out of curiosity. But they had to provide the sinews of war and extend all facilities and co-operation to rebuild rural man with a new stamp and new idealism to grow and to win and that old question would arise again "Is the interest of the people and aim of the State indentical?"

PRESIDENT ROOSEVELT'S SON IN CALCUTTA

Captain James Roosevelt, son of President Roosevelt and Major G. C. Thomas of the United States Marine Court, who had been to Chungking, arrived in Calcutta on Monday afternoon. They left for Karachi on Tuesday on their way to Cairo.

Interviewed by the *United Press* regarding their visit to Chungking, Capt. Roosevelt said "We met the Generalissimo and Madame Chiang Kai-Shek. We spent four days in Chungking and saw valuable things and discussed many important problems. The Chinese are determined to carry on their struggle to victory, but it looks like there will be no immediate decision. It will be a long drawn-out affair."

As to their exact mission in Cairo, Captain Roosevelt said: "Major Thomas and myself are travelling together as military observers. We will have our headquarters at Cairo and we will receive our orders from Washington about exactly where to go."

Describing his journey from Rangoon, the Captain said it was very pleasant. Leaving San Francisco, they reached Hongkong, from where they went to Chungking by a plane of the Chinese National Aviation Corporation. They spent only one day in Rangoon on their way back from Chungking.

—Sewage Treatment Abroad

(Continued from page 876)

In France the city of Paris is supplementing its old system of sewage farming which has been operated on a very large scale (132 m.g.d.) by a treatment plant of modern American design, for a daily capacity of 58 m.g. It consists of primary settling tanks, activated sludge treatment and secondary settling tanks, sludge digestion tanks with gas recovery and use of the gas for generation of power and of heat for digesting the sludge at elevated temperature. As the plant was supposed to be ready for operation towards the end of 1939 it is doubtful if, on account of the war intervening, it was possible to finish it.

(To be continued)

CIVIC NEWS FROM FAR AND NEAR

NEW MAYOR OF KARACHI

Mr. M. H. Gazdar, M.L.A. (Moslem League), was elected Mayor of Karachi on Monday last. No other candidates filed nomination papers.

HYDERABAD'S POPULATION

A memorandum on the census in the Nizam's Dominions shows an increase of 88.6 per cent. in the literates in the whole Dominions.

It states that the population is 1,61,94,813 compared with 1,44,86,148, showing an increase of 12.2 per cent. The most marked increase is in the city of Hyderabad, the population of which is 7,28,419 compared with 4,68,894, an increase of 56.5 per cent. This is attributed mainly to improved public health and sanitary arrangements, infrequency of epidemics and also extension of the area of the city.

MADRAS CORPORATION

The Government of Madras, it is learnt, have asked the Commissioner of the Corporation of Madras to send notices to the Councillors or the Aldermen of the Corporation who are serving a term of imprisonment under the Defence of India Rules, intimating them that it is alleged they cease to hold office as Councillors under Section 53 (1) (1) of the City Municipal Act.

This cancels Government's previous orders that such Councillors cannot be deemed to have lost their seats by reason of their absence from the meetings of the Council for three consecutive months.

It is understood that the Government have directed the Commissioner to apply to the Chief Judge of the Court of Small Causes under Section 54 of the Act, for a decision on the question whether they have become disqualified or not, in case these Councillors do not admit the allegation and claim that they are not disqualified.

The Government, it is also understood, have instructed the Inspector-General of Prisons to arrange for the prompt delivery of the notices to the Councillors in prison and to despatch their replies as soon as possible.

ALLAHABAD IMPROVEMENT

A step towards town improvement was taken by the Allahabad Improvement Trust at its last meeting when the Trust approved of a scheme submitted by Mr. B. N. Verma, Executive Officer.

According to the scheme, the Trust will allow constructions or improvements of existing buildings if such property or portions of it is not required for roads—provided the applicant enters into an agreement with the Trust to pay a development value as soon as the Trust scheme is completed.

The Trust also decided that, ordinarily, development value should be considered to be 20 per cent. of the value of property that might be so exempted from acquisition.

The Trust further thought that if the public took up this scheme they should have the facility of improving the existing constructions, while the Trust should be in a position to widen the existing roads and lanes and provide open spaces before actually developing the area as a whole.

The Trust also accepted the engineer's proposal that plans of buildings proposed to be so constructed should be prepared by qualified architects and draftsmen.

The Trust decided to approach the municipal board and the Government with regard to haphazard private housing schemes and their financial implications as far as it related to the Trust. The Trust resolved to request the Town Improvement and Arboriculture Committee of the Board to reconsider their decisions.

LEGAL INTELLIGENCE

PROCEEDINGS STAYED

[BEFORE THE CHIEF JUSTICE AND MR. JUSTICE BARTLEY]

Ram Ranjan Kar

vs.

The Corporation of Calcutta

Mr. Jitendra Nath Bagchi applied on behalf of the petitioner, Ram Ranjan Kar, for a rule calling upon the Municipal Magistrate and the Chief Executive Officer of the Calcutta Corporation to show cause why an order was made by Maulvi Saiyed Salamatullah, Municipal Magistrate, directing the Calcutta Corporation to demolish a room on the fourth storey of premises No. 18, Anukul Mukherjee Road belonging to the petitioner, together with a verandah in the third storey and one Raniganj tiled shed on the ground floor of the same premises.

The Corporation's case was that the structures, directed to be demolished as stated, had been effected by the petitioner without the necessary municipal sanction. In fact, they constituted deviation from the sanctioned plan of the building at 18, Anukul Mukherjee Road.

The defence was that the Buildings Committee of the Corporation did not give the petitioner any opportunity to explain the position. In fact, the alleged unauthorized structures were all completed in the year 1933, *i.e.*, more than 5 years before the institution of the present proceedings, and the Corporation made no objection all these years. Further, the room on the fourth storey and the verandah on the third-storey both rested on an iron frame-work and was, therefore, neither unsafe nor weak as alleged by the prosecution.

The Magistrate, however, found the petitioner guilty with the result stated.

The Court granted the rule as prayed for. Pending the hearing of the rule, further proceedings were stayed.

LEAKING ROOFS

WHY the expense and delay of covering the entire roof? The water leaks through cracks—not through the whole expanse.

A TEN-POUND TIN OF

VALAMOID

IS SUFFICIENT to cover the cracks of an ordinary house roof and to render it absolutely watertight... proof against the worst storm.

INSPECT YOUR ROOF TO-DAY and if you discover cracks, fill them in at once with

VALAMOID

ASBESTOS ROOF CEMENT

VALAMOID

CAN BE QUICKLY APPLIED BY UNSKILLED LABOUR

It is the best of all Waterproofing materials, far cheaper than imported articles unsuitable for Indian conditions. Valamoid is made in Calcutta.

SMALL-POX EPIDEMIC

Health Officer's Warning

The Health Officer has issued the following :—

Although my repeated requests through the Press had some effect in inducing people to get themselves vaccinated and inoculated but still a fair percentage of the people residing in the city have not taken vaccination against Small-pox and inoculation against Cholera though both the diseases have been raging in an epidemic form in the city. This is certainly not what should be as we should by all means try to get rid of the evil clutches of our enemies—the germs of the diseases which work havoc inside our system. This can only be accomplished by maintaining and improving our resisting power and vaccination and inoculation offer the best reliefs in these cases.

The condition of the health of the civil population during war time is different from that in peace time, as anxiety, mental and physical strain, deprivation of proper food at proper time are bound to lower the stamina of the people.

It is the time for infectious germs to have their full play on the worn-out system and the custodians of public health find it increasingly difficult to cope with the ugly situation, caused mostly by apathy of the people in better times (peace time) by not taking recourse to preventive measures to guard against infection.

God forbid, if the place is subject to air raids, from outside enemy, the citizens will have to face a serious problem which will be very difficult to tackle.

I would, therefore, urge on the people to get themselves vaccinated and inoculated without delay, if these have not been done already.

If you and the members of your family are thus protected against these diseases, you may safely move about wherever you like during an emergency and can bestow undivided attention to guard your King and country against enemies' depredations.

The 7th May, 1941.

CORPORATION NOTICES

To Contractors

Tenders are invited in duplicate for the following and will be received by the Second Deputy Executive Officer on the date noted for each, up to 2 p.m. Each tender in duplicate must be enclosed in a sealed cover and superscribed—"Tender for ....." For specifications and tender forms apply to the Keeper of Records between 11 a.m. and 3 p.m. on week days and 11 a.m. and 1 p.m. on Saturdays. Price Rs. 2 per set.

1 Supply and delivery of 4 miles, 18 lbs rail, 2 ft. gauge, tipping wagons, cast steel wheels, etc., at Pulta Pumping Station.

2 Removal of the Refuse Platform from its present site at Chingrihatta to Dhappa Emergency area :—

A—Construction of Refuge Platform

B—Construction of cooly lines

C—Construction of roads.

3 Supply and delivery of Straw at District IV Gowkhana during the rest of the year 1941.

4 Supply of motor lorries for carrying filtered water in the Manicktola area during 1941-42.

Tenders for 1 will be opened on 13th May, for 2 on 20th May, and 3 and 4 on 23rd May, 1941. The rates quoted in tenders for the above are to hold good for three months.

N.B.—All cases of delay over a fortnight in the execution of agreements in respect of works and supply of materials will be reported to the Committee and the parties will not be allowed to execute the agreements after that period without obtaining orders of the Committee.

In case a party deposits earnest money by cheque, he must deposit the cheque at least three working days before the date of opening of the tender.

The contractors should maintain an uniformity of their names and styles of business, appearing on various documents, *e.g.*, Treasurer's receipts, tender forms, agreements, licenses and bills

Any deviation from this on the part of any contractor whenever detected, will render his tender liable for cancellation.

Where tenders are submitted by a Corporation, it should be signed by a principal officer of the Corporation or by an agent duly authorised in that behalf and be attested by a witness Where it is submitted by a firm, it should be signed by the proprietor or one of the partners or by an agent duly authorised in that behalf by the firm and be similarly attested

BHASKAR MUKERJI,
Secretary to the Corporation.

Central Municipal Office,
The 7th May, 1941

Time Extended.

CORPORATION NOTICES—*Contd.*

DRAINAGE DEPARTMENT

To All P. I. Contractors, District III and Dhappa

Re. repairs to the old engine room at Palmer's Bridge Pumping Station.

Dear Sirs,

Please submit your tender in the prescribed tender form for the petty improvement works of the Corporation for the above work, the details of which can be obtained from the department. The tender in a sealed cover, endorsed as above, will be received by me on the 12th May, 1941, at 12 noon.

The work is to be completed within 1½ months from the date of order to take up the work in hand.

Yours faithfully,
P. C. BOSE,
Executive Engineer, Drainage.

Central Municipal Office,
The 6th May, 1941.

Road Land Closed.

NOTICE

It is hereby notified for the information of the public that in pursuance of a resolution passed by the Corporation at their meeting held on the 10th February, 1939, in exercise of the powers vested in them, under Section 306 of the Calcutta Municipal Act (B. C. III of 1923), the triangular strip of Corporation road land, adjoining premises No. 54/4/A, Hazra Road in Ward No. 21, measuring 2 ch. 37 s.ft. sold to the owners thereof, as delineated in the map or plan, prepared in this behalf and thereon coloured green, has been permanently closed, with effect from the date of publication hereof.

J. C. MUKERJEA,
Chief Executive Officer.

Central Municipal Office,
The 8th May, 1941.

Street Alignment.

Notice is hereby given, under Section 302 of the Calcutta Municipal Act III (B. C.) of 1923, that the Roads and Bustees Standing Committee of the Corporation, in exercise of the powers, delegated unto them in this behalf, have considered it expedient to prescribe the alignment of the paved public passage off Girish Mukherji Road, by the side of premises No. 24/2, Girish Mukherji Road, and connecting it with Ganga Prosad Mukherjee Road by two east to west arms, to a width of 16 feet in Ward 22.

Any person, having any objection to the same, should submit it in writing, so as to reach the undersigned, on or before Saturday, the 7th June, 1941.

J. C. MUKERJEA,
Chief Executive Officer.

Central Municipal Office,
The 7th May, 1941.

Notice is hereby given under Section 302 of the Calcutta Municipal Act III (B.C.) of 1923 that the Roads and Bustees Standing Committee of the Corporation in exercise of the powers delegated unto them in this behalf have considered it expedient to prescribe the alignment of Anath Deb Lane and Gopal Samanta Lane connecting Raja Manindra Road and Manmatha Dutt Road in Ward 30, to a width of 40 ft. each.

Any person having any objection to the same should submit it in writing so as to reach the undersigned on or before the 7th June, 1941.

J. C. MUKERJEA.
Chief Executive Officer.

Central Municipal Office,
The 8th May, 1941.

Situation Vacant

Applications are invited and will be received by the undersigned up to 15th May, 1941, for the post of Vaccinator in the grade of Rs. 50—3—65.

Candidates must be qualified public vaccinators according to the Bengal Vaccination Act and should state the following in their applications :—

1. Age.
2. Qualifications.
3. Experience.
4. Past services, if any, in the Corporation.
5. Relationship whether by blood or by marriage with the Mayor, Deputy Mayor, any Alderman and Councillor or any Statutory Officer of the Corporation.

The selected candidate will be subject to the leave and other service rules of the Corporation and will have to contribute to the Provident Fund. Before joining duties he will be also required to furnish a declaration under Section 54-A of the Act stating that he was never convicted of an offence against the State or sentenced to imprisonment for a term of three months or more.

None need apply who does not possess a certificate of a qualified Public Vaccinator.

S. N. GHOSH,
Health Officer.

Central Municipal Office,
The 1st May, 1941.

Entally Market.

NOTICE

To all whom it may concern, that an application has been received from Mustafa Hossain and Murtaza Hossain for registration of their names in place of Tobarak Hossain, their father in respect of Stall No. 37/1, West Block, Entally Market.

Objection, if any, to this application should be submitted to the undersigned within 15 days from date hereof.

P. C. BHATTACHARYA,
Superintendent.

Entally Market,
The 2nd May, 1941.

Notice.

Offers are invited for the purchase and removal of slag, flue ash, etc., from the New Incinerator Plant at Goragatcha.

The slag is obtained from the plant mainly in the following grades :—

(1) 1½ in. to 1 in.
(2) 1 " " ¾ "
(3) ¾ " " ½ "
(4) ½ " " dust.

The other products are :—

Flue dust, under-grate dust, ash, scrap iron and other magnetic materials.

The total output varies from 1500 c.ft. to 2,000 c.ft. per day.

The crushed slag can be very well used for various purposes, such as (1) general concrete work, (2) precasted concrete shapings, bricks (hollow and solid), etc., (3) sheet asphalt work, (4) construction of roads for light traffic.

The following are the terms of contract which the party will have to enter into with the Corporation :—

(1) The party shall have to remove daily all the products mentioned above from the New Incinerator Plant at Goragatcha Road.

(2) In case the party fail to do the same, the Corporation will have the right to dispose of the products in any manner they choose and the cost of the products as well as the removal costs shall be realised from the party.

(3) The contract will run on yearly basis. But the Corporation will be prepared to consider any proposal for a longer period on terms to be mutually agreed between the party and the Corporation.

(4) The party will quote their rates for the whole of the products per 100 c.ft.

(5) Bills are to be made out by the Manager, Incinerator Plants, every month and payments will have to be made within three weeks of the following month by the party.

(6) The Corporation shall have the right to retain for their own use not more than 30 per cent. of each kind of products.

(7) The party will be required to deposit Rs. 500 in cash or in Calcutta Municipal Debenture as security deposit for due performance of the contract which sum will be refunded at the expiry of the period of contract.

Offers in sealed covers superscribed 'Purchase and Removal of Slag, etc.,' from the New Incinerator Plant at Goragatcha will be received by the First Deputy Executive Officer up to 2 p.m. of the 30th May, 1941.

Further particulars may be obtained from the Manager, Incinerator Plants at Goragatcha.

BHASKAR MUKERJI,
Secretary to the Corporation.

Central Municipal Office,
The 7th May, 1941.

Workshop Apprenticeship Examination

Applications are invited for permission to sit for the Competitive Examination to be held in Calcutta on 14th June, 1941, for admission of 10 Apprentices to the Corporation Workshop at Entally. The applicants must have passed the Matriculation Examination, obtaining 50 per cent. marks in Mathematics or Mechanics. The age of the candidates should not be less than 15 years or more than 19 years on the 1st of July, 1941. The candidates will be tested for physical fitness before admission to the Competitive Examination. Applications should be submitted to the Chief Engineer, Calcutta Corporation, in the prescribed form along with the mark sheets before the 31st May, 1941. Printed application forms may be had from the Keeper of Records at 5, Surendra Nath Banerjee Road, Calcutta, at Rs. 2 per copy. Certificates will have to be shown at the time of examination.

B. N. DEY,
Chief Engineer.

Central Municipal Office,
The 30th April, 1941.

Purchase of Guts.

Offers in sealed covers and superscribed "Offers for the purchase of guts" are invited and will be received by the 2nd Deputy Executive Officer upto 2 p.m. of 14th May, 1941, for the privilege of purchasing guts from the butchers within Bhowanipore, Chitpore, Halsibagan and Tangra Slaughter Houses for the year 1941-42. A lump sum of Rs. 1,000 has been fixed for the said privilege for the whole period or any part thereof. The lump sum fee must be paid to the Corporation in advance within a week from the date of intimation of acceptance of the offer by each successful tenderer. The approved tenderers shall carry on the business in one of the four rooms of Tangra Slaughter House to be alloted to each of them. For further particulars and conditions of license, apply to the Health Officer of the Corporation at the Central Municipal Office.

BHASKAR MUKERJI,
Secretary to the Corporation.

Central Municipal Office.
The 30th April, 1941.

CORPORATION NOTICES—*Contd.*

Notice to Rate-payers.

The attention of the rate-payers is invited to the provisions of Section 145 of the Calcutta Municipal Act of 1923, regarding obligation to give notice of transfer of title in land or building.

The Section runs as follows:—

"145. Whenever the title in any land or building, or in any part or share of any land or building, is transferred, the transferee shall, within three months after the execution of the instrument of transfer, or, if no such instrument be executed, after the transfer is effected, give notice in writing of such transfer to the Executive Officer.

Provided that in the event of the death of the person in whom such title vests, the person to whom, as heir or otherwise, the title of the deceased is transferred by descent or devise, shall within one year from the death of the deceased, give notice in writing of such transfer to the Executive Officer".

Their attention is further drawn to the penalties prescribed under Section 488 of the Act, for non-compliance with the provisions of Section 145. It may be noted that a fine of Rs. 25 may be imposed for failure to give timely notice of such transfer and a daily fine amounting to Rs. 5 may also at the discretion of the Court be imposed.

Health should not be made to wait

S. K. CHAKRAVARTI, LTD.

Water-Works, Drainage and Plumbing Engineers

Mission Row, Calcutta

Sound Plumbing means health and longevity

MARKET NOTICES.

1. It is recommended that coolies should be paid at the following rates :—

10 Minutes—Two pice. ½ Hour—One anna. 1 Hour—Two annas.

Every succeeding hour or part of an hour—One anna.

2. Coolies for carrying bazar purchases are obtainable at all the principal entrances and care should be taken that only coolies bearing number badges are engaged. For the current half-year "A" class coolies have been allowed a Khaki coat with Red numbers on a Blue Black badge. "B" class coolies of Hogg Market have Rectangular brass number badges. Entally Market licensed coolies have Semi-circular brass arm badges.

3. Any complaints about coolies should be made at the Superintendent's Office, giving the number of the cooly.

4. All complaints relating to the conduct of vendors should be made to the Superintendent. No action can be taken where the articles in dispute have been removed from the shop premises or in regard to transactions which are not brought to the notice of the Superintendent at the time of occurrence.

5. To avoid conflicts of statements both as regards the goods purchased and the nature of the sales, customers are requested to insist on getting a voucher, as far as practicable.

6. If goods are taken "on approval," customers are recommended to obtain a voucher to that effect stating the price paid.

7. Any articles lost or found in the market should be reported at the Superintendent's Office.

8. No dogs, bicycles, tricycles or perambulators are allowed inside the market.

9. For the convenience of the public a stand is provided at the south-west corner where the visitors can keep their bicycles in charge of the lessee thereof on payment of a fee of 0-1-0 for a Bicycle and 0-2-0 for Motor Cycle, the Corporation not having any liability in this connection.

10. Customers are requested that if they suspect any weight used by any vendor of the market to be short, they will bring the matter immediately to the notice of the Superintendent when the weight will be duly tested in the Office and the vendor punished if it is found short.

11. The public and the shop-keepers of the market are requested to assist in the mitigation of the beggar-nuisance by refraining from giving alms of any description within the market.

12. Customers are requested to examine the coins, obtained in the course of transaction, before they leave the shop. Ordinarily no action can be taken against the shop-keeper if any spurious coin is alleged to have been detected after they leave the shop.

G. C. WOODWARD,
Supdt., S. S. Hogg Market.

The Week In The Corporation

Mr. J. C. Mukerjea Re-appointed

Chief Executive Officer For Fifteen Months

BY an overwhelming majority of votes the Corporation of Calcutta, at its Special Meeting on Friday afternoon (May 16) re-appointed Mr. J. C. Mukerjea as the Chief Executive Officer for a term of fifteen months with effect from the 1st April last.

Mr. Mukerjea is to draw the same pay and emoluments and continue on the same terms and conditions of service as on March 31, 1941.

The resolution will be forwarded to the Government of Bengal for approval.

WHAT HAPPENED BEFORE

The Corporation on the 28th February 1941, *passed the following resolution nem con :—*

"That in modification of all previous resolutions on the subject, Mr J. C. Mukerjea be re appointed, under Section 51 (1) of the Calcutta Municipal Act, as the Chief Executive Officer of the Corporation for a term of two years with effect from the date of expiry of his present terms of service (1st April, 1941) on his present pay and emoluments and on the existing terms and conditions of his service."

The above resolution was forwarded to the Government of Bengal, who on the 13th March, 1941, *replied as follows :—*

"I am directed to refer to your letter No. S. 2044, dated the 1st March, 1941, and to say that Government

regret that they are unable to approve, under the proviso to Section 51 (1) of the Calcutta Municipal Act, 1923, the re-appointment of Mr. J. C. Mukerjea as the Chief Executive Officer of the Corporation of Calcutta for a further period of two years from the 1st April, 1941."

The matter came up again before the Corporation on the 22nd March, 1941, when *they resolved as follows* :—

"1. That this Corporation feels it its duty to request the Government of Bengal to revise their decision refusing their approval to the re-appointment of Mr. J. C. Mukerjea as Chief Executive Officer in terms of the resolution of the Corporation dated the 28th February, 1941, in view of the almost unanimous opinion of the Councillors and Aldermen in favour of it.

2. That this Corporation re-affirms the resolution passed by the Corporation on the 28th February, 1941, re-appointing Mr. J. C. Mukerjea as the Chief Executive Officer of the Corporation, for a further period of 2 years from 1st April, 1941, on his present pay and emoluments, and this Corporation directs that this resolution be forwarded forthwith to the Government of Bengal, for approval under the proviso to Section 51 (1) of the Calcutta Municipal Act.

3. That in the event of the approval of the Government of Bengal not reaching the Corporation on or before the 31st March, 1941, Mr. J. C. Mukerjea do continue as the Chief Executive Officer of the Corporation on his present pay and emoluments in terms of the said resolution of the Corporation dated the 28th February, 1941."

The resolution of the Corporation was again forwarded to the Government of Bengal, who on the 29th March, 1941, *replied as follows* :—

"I am directed to refer to the correspondence resting with your letter No. S. 5369, dated the 22nd March, 1941, forwarding the resolutions passed by the Corporation of Calcutta at the Special Meeting held on the 22nd March last, regarding the re-appointment of Mr. J. C. Mukerjea as Chief Executive Officer of the Corporation on the expiry of his present term of appointment.

2. In reply, I am to state that, after giving due consideration to the matter, Government informed the Corporation in their letter No. 442-M, dated the 13th March, 1941, that they were unable to approve, under the proviso to Section 51 (1) of the Calcutta Municipal Act, the re-appointment of Mr. J. C. Mukerjea as Chief Executive Officer for a further period of two years from the 1st April, 1941. Government have again given their most careful and anxious consideration to the request made by the Corporation to revise their decision referred to above, but they regret their inability to accede to the request.

3. In this connection, I am to point out that the position assumed by the Corporation in resolution (3) of their meeting of the 22nd March, 1941, is contrary to law as Mr. Mukerjea cannot legally function as the Chief Executive Officer of the Corporation after the 31st March, 1941, without the approval of Government to his re-appointment."

At the meeting of the Corporation held on the 31st March, 1941, the following decision was arrived at by the members, present :—

"That in the present emergency and in the face of the legal impasse Mr. J. C. Mukerjea do continue to act as Chief Executive Officer, subject to the powers delegated to him and by him redelegated to his officers until a proper meeting can be called to submit a fresh proposal to the Government."

The validity of this decision was challenged in a Court of Law on the ground that the provisions of Section 60 of the Calcutta Municipal Act had not been complied with in arriving at this decision.

In the course of the Court proceedings, it was pointed out to the Hon'ble Judge that a motion signed by some members of the Corporation had been forwarded to the Secretary of the Corporation, seeking virtually to regularise the decision arrived at on the 31st March, 1941. The Court took cognisance of this fact.

In the course of his judgment refusing to grant *an interim* injunction restraining Mr. Mukerjea from performing his duties as Chief Executive Officer, the learned Judge observed that "His Lordship had every reason to believe that the situation would be set right in about a week's time."

PROCEEDINGS OF FRIDAY'S SPECIAL MEETING

When the House met the Mayor (Mr. Phanindra Nath Brahma) said that in accordance with the resolution passed by the Corporation, he had obtained the opinion of Sir N. N. Sircar in regard to the various points raised in the course of their discussion at the last meeting on the question of re-appointment of Mr. J. C. Mukerjea as Chief Executive Officer. The Mayor told the House that he got Sir N. N. Sircar's opinion only at about 2 p.m. that day and he had not been able to go through that opinion very carefully. In the circumstances, he suggested that the item fixed for that day's discussion might be taken up on some other day so that members might have an opportunity of going through Sir Nripendranath's opinion in the matter carefully.

Objecting Mr. S. C. Ray Chaudhuri said that since the city had been without a Chief Executive Officer since April last the consideration of the matter should not be postponed on any pretext.

The Mayor asked the House to consider if it would not be desirable to give the members time to go through this opinion carefully. Personally he found some difficulty on some points to follow. If the House agreed they could fix any other day for the purpose.

Mr. N. C. Chatterjee pointed out that the points of order which had been raised with regard to the resolution he moved the other day were dead having regard to the opinion expressed by Sir Nripen. Sir N. N. Sircar had definitely stated that the resolutions of February 28 and March 22 were not non-existent and were still alive. Sir Nripen had also given his opinion that it was within the power of the Corporation to make an appointment with retrospective effect. That disposed of all the points of order. Therefore there was no use in wasting time any further and the matter ought not to be delayed any more.

Mr. Naresh Nath Mookerjee submitted that he received the opinion of Sir N. N. Sircar on the floor of the House just as it met a few minutes ago. It had therefore given him no chance whatever to consider the opinion in all its details. He did not think that heavens would fall if they postponed the consideration of the question till Monday next.

Mr. Narendra Nath Dalal found no necessity for adjournment of the House.

Mr. Md. Rafique stressed the necessity of settling the matter once for all. Now since they had received the opinion there should be no objection against the speedy disposal of the question. It was just possible that some of the Councillors had not been able to go through the opinion of Sir N. N. Sircar carefully. If they adjourned the House for 15 or 20 minutes everyone of them could go through the text of the opinion.

Mr. Hamoodur Rahman thought that it would not be a very great calamity after all if the appointment of the Chief Executive Officer which had been delayed for the last three months was further delayed by a few days more. It was urgently necessary that they should very carefully study the opinion.

Mr. B. N. Roy Chowdhury suggested that since the Mayor had not sufficient time to go through the opinion it would be better for all concerned if Mr. Brahma studied this problem thoroughly and give the House his well-considered ruling.

Mr. Hamoodur Rahman moved that consideration of the matter be adjourned till Monday next.

Mr. Naresh Nath Mookerjee seconded the proposal.

Mr. Bidhu Bhusan Sarkar proposed adjournment of the meeting for half-an-hour.

Mr. N. N. Dalal seconded the proposal which was carried

When the House re-assembled after the half-an hour adjournment Mr. N. C. Chatterjee with the leave of the House withdrew the following resolution which he had moved at the last meeting: "That the resolutions of the Corporation dated the 28th February, 1941, and the 22nd March, 1941, whereby Mr. J. C. Mukerjea was re-appointed as Chief Executive Officer of the Corporation be re-affirmed and that in view of the settlement which was arrived at with the Government of Bengal on the 31st March, 1941 the term of his office be fixed at 15 months from the 1st day of April, 1941."

Mr. Chatterjee said that in order to avoid all legal difficulties it would be prudent to sanction the other resolution on the agenda.

Mr. Madan Mohan Burman then, with the leave of the House, moved the following resolution:

(1) That the portion of the resolution passed by the Corporation on the 28th February, 1941, and re-affirmed by them on the 22nd March, 1941, fixing the term of re-appointment of Mr. J. C. Mukerjea as Chief Executive Officer of the Corporation at 2 years from 1st April, 1941, be rescinded and that the said resolution of the Corporation be altered and/or modified so as to fix the term of re-appointment of Mr. J. C. Mukerjea as Chief Executive Officer of the Corporation at 15 months from the 1st day of April, 1941 and that the said resolution altered and/or modified as aforesaid do read as follows:—

That in modification of all previous resolutions on the subject Mr. J. C. Mukerjea be re-appointed, under Section 51 (1) of the Calcutta Municipal Act, 1923, as the Chief Executive Officer of the Corporation for a term of fifteen months with effect from the 1st April, 1941, on the same pay and emoluments and on the same terms and conditions of service as on the 31st March, 1941.

(2) That the Corporation directs that this resolution be forwarded forthwith to the Government of Bengal for approval under the proviso to Section 51 (1) of the Calcutta Municipal Act, 1923.

Mr. Sudhir Chandra Ray Chaudhuri seconded the resolution.

Mr. Satish Chandra Bose opposed the resolution. Mr. Bose pointed out that he objected to the personnel of the proposed candidate for appointment as Chief Executive Officer. The candidate was now 60 years old and he would complete his 60th year in the month of July, 1941. He was long past the age of active exertion. They did not want an old and decrepit gentleman to carry on the arduous and responsible duties of the Chief Executive Officer, remarked Mr. Bose. From that point of view the House should reject the resolution.

Supporting the resolution Mr. Mahomed Rafique said that he was at one with Mr. Bose that the Chief Executive Officer should not be an old man. Mr. Rafique thought that the Chief Executive Officer should be between thirty and forty years of age. But having appointed Mr. J. C. Mukerjea who had been in the Corporation for a long time he did not think there would be any harm in giving him extension for a year and three months. He said that when the new Municipal Act came into operation the Chief Executive Officer would be appointed in a better manner. It was with that idea that they had agreed to the extension of the term of office of Mr. Mukerjea as Chief Executive Officer by one year and three months. He expressed the hope that by that period the Second Calcutta Municipal Amendment Bill would come into operation.

Mr. Narendra Nath Dalal did not see any reason why Mr. Bose should oppose the appointment because Mr. Mukerjea was 60 years of age. Mr. Bose did not say that Mr. Mukerjea was unable to perform the duties of the Chief Executive Officer. Mr. Bose should have known that the High Court Judges were permitted to act up to the 60th year and the Chief Justice of Bengal was permitted to act up to 62. The Premier of Bengal was above 65. Therefore Mr. Dalal did not think that the question of superannuation could be a serious bar to the appointment.

Mr. Mahomed Rafique held that the question of age did not arise in this particular matter under consideration. The question could have well been raised in the case of a new appointment. But Mr. Mukerjea had been serving the Corporation for a long number of years and Mr. Rafique thought that no harm would be done by giving him an extension of 15 months. When

the amending bill would come into operation they could make the appointment of the Chief Executive Officer in a better manner. That was the idea behind his extension of service by 15 months. Mr. Rafique had no doubt that Mr. Mukerjea would carry out the work successfully during this period.

The motion of Mr. Madan Mohan Burman when put to vote was carried by overwhelming majority, only nine members of the Bose group, including Mr. Satish Chandra Bose, Mr. Naresh Nath Mookerjee and Mr. Debabrata Mukerjee recorded their dissent.

SIR N. N. SIRCAR'S OPINION

Below are reproduced the questions on which the Corporation sought elucidation and the opinion which Sir N. N. Sircar gave on the issues raised in connection with the re-appointment of Chief Executive Officer.—

QUESTIONS

1. Can the resolutions of the Corporation dated 28th February and 22nd March, 1941 be treated as being still alive or in existence so as to enable the Corporation to re-affirm and/or modify or alter the same?

2. If so, can the Corporation re-affirm and/or modify or alter them as proposed in the motions tabled by several Councillors as per items Nos. 40 and 41 of the Corporation Agenda dated 7th May, 1941?

3. With a view to alter or modify the resolutions of the Corporation dated the 28th February and 22nd March, 1941 as proposed in the said motions, is it necessary that the portion sought to be modified should be first rescinded with the permission of the House as provided in Rule 17(g)(i) of the Rules of Business for Corporation Meetings?

4. If it is held that the resolutions of the Corporation dated the 28th February, 1941, and 22nd March, 1941, are no longer alive or in existence, can the Corporation, in the circumstances that have happened, pass a fresh resolution appointing Mr. J. C. Mukerjea as Chief Executive Officer for any period with retrospective effect from the 1st April, 1941.

5. For the purpose of passing such a resolution, should the Corporation start from the stage at which they were before their resolutions dated 28th February and 22nd March, 1941 were passed after receipt of the recommendation of the Services Committee as per their resolution dated 22nd March, 1941 and fix a date for appointment of the Chief Executive Officer or has the matter to be started afresh and sent to the Services Committee as provided in Rule 19 of the said Rules of Business?

6. Can such appointment be made at an ordinary meeting of the Corporation or should a special date be fixed for the purpose as provided in Rule 19 of the said Rules of Business?

7. If it is held that the Corporation cannot pass a resolution appointing Mr. Mukerjea with retrospective effect from 1st April, 1941, what steps should the Corporation take to regularise his appointment for the period for which he actually serves and functions as Chief Executive Officer in pursuance of the resolution of the Corporation, dated 31st March, 1941?

8. What steps should the Corporation take to carry on the duties of the Chief Executive Officer from the date of the proper meeting at which a fresh proposal regarding the appointment of the Chief Executive Officer is accepted for submitting to the Government till a valid appointmnnt is made with the approval of the Government?

9. Assuming that the resolution of the Corporation dated 31st March, 1941 was illegal or irregular can the same and the actions taken in pursuance thereof be validated or regularised?

If so, how?

10. In view of the doubts expressed by Panckridge J, is the resolution of the 31st March, 1941 a valid resolution and can Mr. J. C. Mukerjea validly function under that resolution?

And generally as to the steps the Corporation should take to put right the situation that has arisen.

ANSWERS

The term of service of Mr. J. C. Mukerjea being due to expire on 1st April, 1941, Corporation resolved on 28th February, 1941 to reappoint Mr. Mukerjea for two years with effect from 1st April, 1941, on the present pay, conditions etc.

On 13th March, 1941 Government of Bengal, in its letter of date expressed "regret that they are unable to approve under the proviso of Section 51(1) of Calcutta Municipal Act, 1923, the re-appointment of Mr. J. C. Mukerjea as the Chief Executive Officer of the Corporation for a further period of two years from 1st April, 1941".

Government of Bengal did not declare, (nor was it bound to do so) whether their objection was to the personality of Mr. Mukerjea or the duration of the renewed term, or the conditions of service and pay.

On 22nd March, 1941 at the meeting of the Corporation the resolution of 28th February, 1941, was not treated as dead or non-existent by reason of Government disapproval on 13th March, 1941. On the other hand Mr. Watson moved an amendment that the resolution of 28th February, 1941 be reaffirmed subject to altering two years to one. This amendment having been lost the Corporation passed resolution the purport of which was :—

1. It was Corporation's duty to request Government to reconsidor their refusal.

2. Corporation re-affirms resolution of 28th February, 1941.

3. In event of Government approval not reaching Corporation on or before 31st March, 1941. Mr. Mukerjea do continue as Chief Executive Officer in terms of resolution dated 28th February, 1941. Government by its letter dated 29th March, 1941 expressed its inability to approve the re-appointment of Mr. Mukerjea etc.

Government pointed out that the position assumed by the Corporation in resolution (3) is contrary to law as Mr. Mukerjea cannot legally function as Chief Executive Officer after 31st March, 1941 without Government approval. It will be noticed that the Government did not take the view that (1) and (2) were wholly invalid being based on a non existent thing and indeed they said in their letter that they expressed disapproval after "giving the due consideration to the matter."

When Corporation re-affirmed on 22nd March, 1941 the resolution of 28th February, 1941 they did not feel that they were trying to resuscitate a dead matter—and no objection was taken by anybody on the ground that the resolution of 28th February, 1941 had become non-existent by reason of Government disapproval.

Government Disapproval

It is not suggested that the fact of no objection having been taken operates as a bar to taking the objection now but it is pointed out that both Government and the Council-

lors of the Corporation have already proceeded on the footing that the resolution of 28-2-41 did not cease to exist by reason of Government disapproval.

The question raised about such non-existence requires careful consideration on its merits.

The word "resolution" has no magic in it. It means the formal expression of opinion and intention of the Corporation leading to action being taken or result following from such expression.

Is there any distinction between a resolution having become incapable of being carried into effect temporarily or permanently and its becoming "non-existent for all purposes?

The proposition may be considered with reference to other examples two of which are discussed below :—

I Corporation passes a resolution on 31-3-40 that a message of condolence on the death of Councillor X be sent to his only son Y.

Later on 30th March or let us say on 31st March Y is killed in a motor accident.

Position Of Resolution

What then is the position of the resolution? It has become incapable of being carried out by reason of the death of Y but because it has become inoperative has it evaporated altogether and become non-existent? If it has not become non-existent, for what purposes does it exist,

It seems to me that it exists *inter alia* as containing the expression of opinion and intention of the Corporation -and it exists for the purpose of being modified by putting in the name of the widow of X in place of Y the son.

II. The Corporation passes a resolution that a fire engine be purchased for Rs. 10,000, the engine being defined by the name of the maker, specifications etc. When the resolution is tried to be carried out, it appears that owing to war, or Corporation having been misinformed, the particular engine cannot be purchased for less than Rs. 13,000 within (i) a reasonable time, there being no prospect of the price coming down within such time or (ii) even within a unduly extended period of time, there being no prospect of the price coming down so far as could be seen within the next year or two.

The resolution has become completely inoperative, and no effect could bt given to it, but does it exist at least for the purpose of being modified by altering the figure of Rs 10,000 to Rs 13,000?

Not Non-existent

To my mind it is quite clear that the resolution is not non-existent, because by reason of extraneous circumstances *de hors* the resolution, effect cannot be given to it either within a reasonable or a longer time.

The fact that in the present case, the resolution of 28th February, 1941, has been rendered ineffective by Government disapproval does not make it "non existent". It was properly affirmed on 22nd March, 1941, and it can be affirmed completely or with modification, again leaving it open to the Government to express its disapproval after giving due consideration to the matter. I am not considering here the legal position of Mr. Mukerjea during the period of the Corporation passing its resolutions and Government expressing disapproval—but I express my opinion in answer to question (1) *viz* :—

The resolutions of 28th February, 1941 and 22nd March, 1941, are not not-existent and may still be treated as alive and in existence, for enabling the Corporation to re-affirm and to modify the same.

Two Courses Open

There were two courses open for making the resolution of 28th February, 1941, non-existent *viz.*, rescission by the Corporation, or Government action under section 19. Not only has either of these courses not been followed, but both the Government and the Corporation have treated the resolution dated 28th February, 1941, as existing and capable of re-affirmation after expression of Government disapproval on 13th March, 1941.

Question—2 : On the assumption that my answer to the previous question is correct, it follows that the answer to this question should be in the affirmative, but I would like to make some remarks on motions being items Nos. 40 and 41 of the agenda dated 7th May, 1941. The substance of these motions is that the resolutions of 28th February, 1941 and 22nd March, 1941 be modified. The use of the word "re-affirmed" in motion No. 40 does not make it a re affirmation, because the whole resolution is not intended to be re-affirmed and the substitution of 15 months for two years bring out what is intended *viz.* modification. The motion also contains an incorrect recital *viz.*, "the settlement which was arrived at with the Government of Bengal". There has been no agreement with the Government of Bengal as such. The expression of opinion by individual Minister may undoubtedly be very good reason for modifying the resolutions dated 28th February, 1941 and 22nd March, 1941, and is no doubt complete justification for the attempted modification, but that does not make the recital a correct one.

Operative Part

An incorrect recital in the circumstances of this case does not nullify the operative part of the motion, but I do not desire to be understood as acquiescing in the statement that there has been a settlement with the Government of Bengal.

Question—3 : Whether the words used are "re affirmed with alteration", or any other words, the essence of the matter is that the portion of the resolutions of 28th February, 1941 and 31st March, 1941, relating to two years is intended to be rescinded.

This attracts rule 17 (g) (i) and the requirements of that rule must be complied with.

Question—4 : If my answer to question (1) is correct this does not arise but I do not desire to shirk answering the question whether Corporation can appoint a person with retrospective effect. This question can only arise in case of appointment of a person who is already acting in the post, without having a proper resolution appointing him.

This consideration throws no light on the power of the Corporation to make appointment with retrospective effect, nor the fact that on previous occasions such appointments have been made, if that be the fact. If it were a case of construction of a statute, then there being no express language permitting appointment with retrospective effect, nor anything leading to this result following by necessary implication, it would be rather difficult to argue that giving retrospective effect is permissible. The situation here is not on all fours with interpretation of other statutes, as in matter of appointments, it is easy to imagine that an officer has to be appointed at once without waiting for the passing of a formal resolution. Not only there is nothing in the statute expressly forbidding appointment with retrospective effect but "previous sanction" is not necessary as for example in section 67. When Government gives its sanction to an appointment, necessarily so far as such sanction is concerned, it has retrospective effect. Taking note of the various considerations which are relevant for

answering this question my conclusion is that it is within the powers of the Corporation to pass a resolution making appointment with retrospective effect.

Questions—9 & 10: I have read the judgment of Panckridge J. and considered the summary of the points made by Mr. S. C. Bose and Mr. S. N. Banerjee respectively, and I have not doubt in my mind that resolution dated 31st March, 1941, is illegal and invalid. In view of answers given by me to previous questions these two questions do not arise.

MR. S. C. BOSE'S POINTS

I would like to state that I generally agree with the points made by Mr. S. C. Bose for concluding that the resolution was invalid and I am not in agreement with Mr. S. N. Banerjee's argument that section 60 is not mandatory. Quite irrespective of other very cogent considerations, I do not see the necessity of the proviso, if the main section were not mandatory.

Questions—5 & 6: In my opinion these questions do not arise. The appointment has been made by their resolutions dated 28th February 1941 and 22nd March 1941 appointment being for two years. When this portion is rescinded Corporation will be left with an appointment for an unspecified term and this lacuna will be filled up by the resolution which will mention 15 months.

Appointment having already been made, Rule 19 is not attracted, and that being so special date under that rule need not be fixed.

Questions—7 & 8: Resolutions of 28th February, 1941 and 22nd March, 1941, are in my opinion not non-existent, and further Corporation has power to appoint with a retrospective effect but it may well be that not Mr. Mukerjea but X will be appointed Chief Executive Officer. In such circumstances the position of Mr. Mukerjea during the period 1st April, 1941 and the appointment of X has to be regularised. I suggest that in addition to the resolution appointing Mr. X as Chief Executive Officer of the Calcutta Corporation, another supplementary resolution should be passed appointing Mr. Mukerjea as Chief Executive Officer from 1st April, 1941 to the date of appointment of X and his taking over charge.

Generally: In connection with the appointment of Chief Executive Officer from 1st April, 1941, the whole procedure, contemplated by rule 19, has already been complied with, and there is no obligation for going through it again.

Corporation Employees And A. R. P. Work

The Corporation decided to grant to its employees engaged in A. R. P. and Civic Guard work, facilities similar to those given to Government employees engaged in such work.

In regard to Air Raid Precaution, the Corporation confirmed the recommendation of the Estates and General Purposes Standing Committee which runs as follows:—

(1) That in view of the present financial condition of the Corporation, the Committee do not think it possible for the Corporation to make any contribution whatsoever towards the cost that may be incurred by the Government in connection with the Air Raid Precaution in Calcutta. The Committee, therefore, suggest that a representation be made to the Government accordingly.

(2) That in the opinion of the Committee, the Chief Executive Officer and the Chief Engineer should be requested to suggest the personnel of an expert committee to be appointed in this connection in consultation with the Government to consider what steps should be taken by the Corporation in the event of an emergency due to the dislocation of the city services as a result of air raid and also for taking precautionary measures in this connection.

City Services During Air-Raids

Directions of the Provincial Government conveyed in their letter of May 6 last regarding proper maintenance of the important municipal services during an emergency arising out of air-raids, next came up for consideration before the House.

In this connection the Corporation unanimously adopted the following motion moved by Mr. F. G. Watson, leader of the European group:—"That the Corporation advises the Government that they should like to have a meeting with them at an early date by a joint committee of say 12 members, those from the Corporation to consist of the Mayor, the Deputy Mayor, the Chief Engineer, the Chief Executive Officer and three members of the House, one a Hindu, one a Moslem and one from the minority communities and that the Chief Executive Officer be directed to write to the Government accordingly."

On the motion of Mr. Waston, Mr. N. C. Chatterjee, Mr. Syed Badrudduja and the mover were appointed representatives of the members of the House at the proposed joint meeting of the Government.

Lighting Restrictions

In connection with the Government order regarding lighting restrictions from May 29, the Corporation, at the instance of Mr. N. C. Chatterjee, authorised the Chief Executive Officer "to spend the minimum amount which is absolutely necessary to comply with the immediate Government requisition for the obscuration of lights in the city and place the details of expenditure for sanction before the House."

As regards the question of air raid precautions, the Corporation, on the motion of Mr. F. G. Watson, decided to advise the Government that they should like to have a meeting with the Government at an early date by a joint committee of say, 12 members—those from the Corporation to consist of the Mayor, the Deputy Mayor, the Chief Executive Officer, the Chief Engineer, and three members of the House (including Mr. N. C. Chatterjee, Mr. Syed Badrudduja and Mr. F. G. Watson.)"

In the course of the discussion, the Deputy Mayor, Mr. M. A. H. Ispahani, said that the Government order regarding lighting restrictions had got to be complied with. The matter was urgent and the Chief Executive Officer should be authorised to take necessary action immediately.

Mr. N. C. Chatterjee said he was not against taking A. R. P. measures, but the Government should be responsible for the cost involved. As

regards lighting restrictions, the cost involved would be Rs. 30,000 and the Chief Executive Officer should be directed to spend the minimum amount required.

Mr. Susil Ch. Sen said that they had got to be alive to possible dangers and to make some arrangements. They should do things expeditiously and not try to delay matters.

Mr. Syed Badrudduja said that there was no reason why the Corporation should shirk their responsibility. They should suggest to the Government that the Corporation would contribute 10 percent of the cost involved.

To Popularize Defence Loan

The Adjourned Corporation meeting on Wednesday, the 14th May granted permission to the Bengal Defence Loan Committee to make use of the College Square and Cornwallis Square tanks for the purpose of popularizing Defence Loans.

The idea of the Committee is to draw the attention of the public to these loans by means of floating pageants.

When the recommendation on the subject was proposed, objection was taken by Mr. Sudhir Chandra Chatterjee, who said that since the Congress was opposed to taking any part in the war effort, they could not be a party to the proposal.

Mr. Bejoy Singh Nahar wanted to defer consideration of the matter on the ground that the Committee had not furnished them with the exact date when the proposed pageants would be held and other details.

Mr. Md. Rafique was against procrastination. "If you are not going to give them the permission, he said, "say so. If, on the other hand they are to receive permission they should be informed so that they might make the necessary preparations."

Mr. Hamoodur Rahman expressed surprise at Mr. Nahar's opposition.

He pointed out that the Corporation often granted permission to different political parties and organizations to hold meetings and conferences in their squares. It was, indeed, the right of the citizens to whatever party they might belong, to make use of public squares and tanks provided they conformed to the rules. In the present case it could not be said that they all held the same opinion; but when one class of persons was allowed the use of public parks, squares and tanks, he did not see why the same privilege should be withheld from another class of persons.

Mr. Nahar's amendment was lost and the original recommendation granting permission to the Defence Loan Committee to make use of the tanks was carried by a large majority. The European group, Moslem League group and the Nominated group voted for the motion, while the Hindu Mahasabha and the Bose group opposed it.

Revised Vagrancy Bill

The House postponed the consideration of the report of the special committee on the revised Vagrancy Bill (proposed by the Rotary Club) for a fortnight and in the meanwhile asked for a report from the Chief Accountant on the financial aspect of the question.

Muslim Employees Of Municipal Markets

The meeting accepted the recommendation of the Services Committee No. II that the Mahomedan employees of the Municipal Markets be granted leave for one hour from 12-30 p.m. to 1-30 p.m. on Fridays to enable them to say their prayers in congregation.

MY CITY.

"My City is where my home is founded, where my business is situated, where my vote is cast, where my children are educated, where my neighbours dwell, and where my life is chiefly lived.

"It is the home-spot for me.

"My City has a right to my civic loyalty. It supports me and I must support it.

"My City wants my citizenship—not partisanship; friendliness—not offishness; co-operation—not dissension; sympathy—not criticism; my intelligent support—not indifference.

"My City supplies me with work, education, friends, recreation. I should believe in my City and work for it.

"And I will"

"Cleaner Calcutta" Campaign

To Be Launched By The Corporation

A CLEANER Calcutta campaign will shortly be launched by the Corporation of Calcutta.

In the first instance an attempt will be made to deal with the refuse problem, and the Corporation's Publicity Department will immediately take steps to educate the public in the proper use of dustbins and receptacles for temporary storage of garbage and refuse. Leaflets and posters will be utilised with this end in view.

A Conference of the district engineers was summoned by the Deputy Mayor, Mr. M. A. H. Ispahani, at the Corporation buildings on Thursday last. The Mayor, Mr. P. N. Brahma, presided and those present included Mr. N. C. Chatterjee, leader of the Hindu Mahasabha party in the Corporation; Mr. J. C. Mukerjea, Chief Executive Officer: Dr. B. N. Dey, Chief Engineer; Mr. Sailapati Chatterji, 1st Deputy Executive Officer, and Dr. S. N. Ghose, Health Officer. Dr. B. Ganguli, representing the Cleaner Calcutta Committee, and Mr. Dhandhania, Secretary of the Marwari Chamber of Commerce, were specially invited to attend the meeting.

Two Wards Chosen

It was decided to begin the campaign in two Wards—Ward No. 5 in the Burrabazar area and Ward No. 24 in the Chetla Alipore area.

The District Engineers of Districts I and IV were directed to draw up schemes setting forth certain particulars such as the number of dustbins required in their respective areas, the sites for such dustbins, provision of receptacles in dwelling houses, particularly in tenement houses and *bustees*, and selection of premises where such domestic receptacles should be provided.

The conference decided to take action under sections 371 and 372 of the Calcutta Municipal Act in order to make provision for the collection and temporary deposit of rubbish and offensive matter from various parts of the city. The Chief Engineer was requested immediately to take steps to cover up lorries and carts which are used for the transit of refuse.

The conference further resolved to amend the building rules and regulations so as to make it compulsory for occupiers of premises, in case of new buildings, to provide receptacles or to provide suitable space for the temporary deposit of refuse, and the City Architect was directed to frame the requisite rules and regulations.

The authorities of the Corporation assure the citizens of Calcutta that the practice of bringing vegetables from Dhappa area in conservancy lorries has been definitely stopped and that this practice will never be revived.

The Mayor, the Deputy Mayor and Mr. N. C. Chatterjee will inspect Ward No. 5 next week to initiate the Cleaner Calcutta Campaign.

GARIAHAT MARKET

NOTICE.

To all whom it may concern that an application has been received from Babu Monmotha Nath Ghosh for registration of his name as the sole occupier of stall No. 1 in Block "C", Gariahat Market, in place of Babu Upendra Nath Ghosh.

Objection, if any, to his application should be submitted to the undersigned within 7 days from the date hereof.

Gariahat Market Office,
The 16th May, 1941.

R. K. GHOSH,
Superintendent, Gariahat Market.

SLUM-CLEARANCE IN U. P. TOWNS

Work Of Trusts Reviewed

"All the three Improvement Trusts seem to be more alive to the importance of slum-clearance in the interest of public health and to their responsibility in providing cheap and suitable houses for the working classes," says an official review of the activities of the Improvement Trusts at Allahabad, Cawnpore and Lucknow.

At Allahabad a beginning has been made in slum clearance by the initiation of the south housing scheme (part II) and the Sultanpur-Bhawa scheme. The Trust reports that it has provided better living accommodation for labourers. So far 10 quarters have been built and 18 more are under construction. Similar proposals are under consideration for the George Town area. Here the Trust proposes to construct 43 quarters to suit family requirements.

The Cawnpore Trust reports that no new quarters for the working classes have been constructed during 1939-40, but private enterprise has erected 400 quarters in the different areas in which the Trust is operating. Further a scheme for the construction of 1,000 quarters for workmen has been prepared and is under consideration by Government.

No special progress in this direction has been reported by the Lucknow Trust excepting that a small portion of scheme No. 7 (industrial areas scheme) has been reserved for the erection of quarters on sanitary lines for labourers. It is understood that construction will be taken in hand shortly. This Trust in the past has launched many important schemes but the middle classes seem to have benefited to a greater extent than the working classes as numerous plots have been made available for out-right purchases on which houses have been built by private enterprise. It is desirable that more attention should be paid to the provision of suitable accommodation for the working classes.

Potency Of Cholera Vaccine

Test Reports Contradict Unfounded Rumours

IN connection with the recent controversy regarding the quality of our Cholera vaccines prepared in the A.V.D. Laboratory, the reports of examinations made from time to time of these vaccines by independent authorities are published below, with a view to allaying unfounded suspicion in this respect in certain quarters.

Three such reports are published—two made in 1939 and the third recently.

19th August, 1939.

To

The Health Officer, Calcutta Corporation.

Sir,

Ref. H-4072, dated 10th August, 1939.

I have examined the ampoules of cholera vaccine Ref. 1) sent for examination and beg to report as follows :—

Sterility test—Contains no living organisms.

Purity test—Smears do not show any sporing contamination in the cultures for which the vaccine was made.

Agglutination test shows presence of cholerogenic strains in the vaccine. *Strength* judged by opacity tubes come to about 5000 millions per c.c.

Yours faithfully,
(Sd.) C. C. BASU,
Professor of Pathology
Carmichael Medical College

To

Dr S. N. Ghose I.M.S. D.P.H., D.T.M.
Health Officer to Corporation of Calcutta.

Sir,

With reference to your letter No. H/10940 dated 28th March, 1941 forwarding samples of Cholera vaccine for examination and report I am glad to report on my findings as follows :—

Strength—Approximately 5,000 millions per c.c.

Sterility—Contains no organisms as determined by anaerobic and aerobic cultures.

Purity :—The smears made from the vaccines do not show any extraneous organisms.

Tests for the presence of Cholerogenic vibrios show presence of both Inaba and Ogawa types of vibrios.

I have the honour to be
Sir,
Your most obedient servant,

The Director of Public Health, Bengal,
Writers' Buildings, Calcutta.
18th October, 1939.

Sir,

With reference to your letter No. 8917-E, dated 31st August, 1939, I have the honour to furnish below the report of Major C. L. Pasricha, I.M.S., Professor of Pathology and Bacteriology of this Institution on the Cholera Vaccine sent therewith.

REPORT.

3 ampoules containing 5 c.c. of vaccine received on 3rd September, 1939.

Our reference No. 36/8.
Date of beginning test—14th September, 1939.
Ampoules White jena glass 5 c.c. well sealed.
Suspension Uniform without clumps.
Sterility test Passed.
Toxicity test (a) Phenolic Passed.
(b) Abnormal toxicity Passed.

Potency Tested in rabbits.
Satisfactory, compares favourably with control.

Remarks : The vaccine is satisfactory. This vaccine has apparently been made with strains recently taken by the Calcutta Corporation from the department and according to agreed methods.

It is suggested that the dosage be stated on the label. For the purpose of the test the adult dose was taken to be 0·5 and 1·0 c.c.

It might be advantageous also to indicate the date of manufacture of the vaccine.

I have, etc.,

Director of Public Health, Bengal.

CALCUTTA CORPORATION CONTRACTORS' ASSOCIATION MEET THE MAYOR
Mr. Ramananda Chatterjee presided over the function

Corporation Contractors Welcome The New Mayor

Presentation Of Address

AN address of welcome was presented to Mr. Phanindra Nath Brahma, the new Mayor of Calcutta, by the Calcutta Municipal Contractors' Association at the Ram Mohan Library Hall, on Saturday last. Mr. Ramananda Chatterjee presided.

The address, which was printed on silk and presented in a silver casket, after rejoicing at the unanimous election of Mr. Brahma to the high office of Mayor, referred to some of the grievances of the municipal contractors. The address regretted that the contractors who formed an important limb of the municipal administration had no recognition and status in it and emphasised the desirability of the Corporation executive consulting the Association in matters vitally affecting both.

Councillors N. N. Dalal and K. C. Chakravarty who addressed the gathering both paid high tributes to Mr. Brahma.

The Mayor's Reply

Replying to the address, the Mayor, Mr. Phanindra Nath Brahma, expressed satisfaction at the fact that the municipal contractors had formed themselves into an Association. Nothing, he pointed out, could be achieved now-a-days without Association. He asked them, however, to remember that a mere 'pouring out' of their grievances would not serve their purpose: they had also to "equip" themselves for the realisation of their aspirations. There were four to five hundred municipal contractors in the city and they came from the poor middle class. The Mayor thought that there were some items of works, besides those now entrusted to them which could be given to these contractors.

Mr. Brahma believed that if an Arbitration Board was set up to settle disputes arising between contractors and the Corporation that might result in the saving of much time and money on both sides. In conclusion, he asked them to push forward their claims in a body and assured the Association that in any reasonable demands that they might make they would find in him a champion of their cause.

Calcutta Then And Now.

In his speech, Mr. Ramananda Chatterjee compared Calcutta as he found it when he came here sixty years ago for purposes of study, with the city as they found now and remarked that it could not be denied that Calcutta was a much cleaner city to-day. It could not also be denied that there had been much more improvement in various directions in the city under the management of elected councillors compared with the state of affairs prevailing under civilian administration. Of course, much yet remained to be done. Mr. Chatterjee laid stress on the fact that the Corporation should devote much more attention to the question of child and maternity welfare work, especially to the question of supply of pure milk for children of the city at a reasonable price.

The guests were treated to light refreshments.

Among those present on the occasion were Councillors N. N. Dalal, K. C. Chakravarty, H. K. Ghosh, Dhirendra Kumar Mazumdar, Amullya Ch. Mitter, Messrs. S. C. Ghosh, Nanda Bhattacharjee, Biren Bhattacharjee, K. L. Dey, M. N. Ganguly, S. Mitter, M. N. Bose, K. L. Sett, Kiron Chandra Dutt, Prof. M. M. Bose, Prof. Kali Charan Shastri, Dr. M. N. Mitter, Dr. Jagabandhu Basu and many officers of the Corporation of Calcutta.

THE ADDRESS

"We, the members of the Calcutta Municipal Contractors Association, beg to offer our sincerest felicitations to you on your unanimous election to the proud position of the First Citizen of the First city in the East. In honouring you, Sir, this city has only recognised the true and selfless service you have in your quiet and unostentatious manner rendered to her throughout your long and chequered career as a Councillor of the Calcutta Corporation, member and Chairman of various Standing Committees of the Corporation and as a Deputy Mayor.

"Sir, Mayor, your election to the Mayoralty, has not only given us the greatest pleasure but has also instilled in our hearts the hope that, untiring as your efforts have been in eradicating inefficiencies and injustice from the Civic Administrations, your present high position will enable you to pursue your admirable task with greater purposefulness and to greater effect. We have every confidence in you that under your keen and expert eye and ceaseless care the administration of the City Corporation will achieve a new orderliness, a new efficiency and a new brilliance which it has been the citizens' long cherished hope.

"Allow us, Sir, on this happy occasion to say a few words about ourselves. The Calcutta Municipal Contractors Association is the only representative body of the Contractors who exclusively serve the Calcutta Corporation. Our right interests are inextricably linked with those of the Corporation of Civic Services of which we have become, so to say, an almost integral part. While the Corporation cannot do without our services, we on our side cannot do without the Corporation. Yet, is it not strange that, this important limb of the administration has had no recognition, no status in the eye of the Civic Administrators? Sir, it is most desirable that where our mutual interests are concerned and in matters vitally affecting the Contractors, the Executives of the Corporation should consider it necessary to consult this institution or even to ascertain our opinion, thus avoid landing themselves into impracticabilities and sometimes absurdities and as a consequence leading to waste of time and money on both sides. Knowing you, Sir, as we do, as a friend of the rate-payers and a firm believer in justice and fairness, we appeal to you to obviate these difficulties and waste by giving our Institution due recognition and creating a strong and healthy bond between the Institution and the Corporation which we have the honour to serve. With this appeal we again tender our respectful felicitations to you.

"Lastly, your love for your city, your passionate zeal for reform, your firm determinations to remove inefficiencies and corruptions are too well-known to the citizens of Calcutta, who cherish the highest hopes about the success of your missions. On our part, we assure you, Sir, that we wholeheartedly associate ourselves with you and that should occasion ever arise, we shall unhesitatingly be on your side and give of our best in the cause of improvement of our city."

Corporation Commercial Museum

Record Of A Year's Activity

[By Jnananjan Neogi, *Officer-in-Charge, Commercial Museum, Corporation of Calcutta*]

STUDIED in the perspective of the present great European War it can be safely declared that the Commercial Museum, organised by the Corporation of Calcutta, has creditably earned another year of its useful existence. In May, 1936, following the organisation of an extensive Samples Exhibition, the exhibits were consolidated into a permanent Museum, studied with instructive and thought-provoking facts and figures, slogans and tips. Since then year after year newer varieties in the range of exhibits have been added and different features have been developed with a view to make the whole show a centre of education, inspection and aspiration. To-day our Museum is serving as a model and a pattern to the rest of India.

The dislocation in the import of foregin products owing to War conditions has served as a great impetus to the growth and development of indigenous industries. The slogan 'necessity is the mother of invention" has begun to materialise. So during the last year there were countless calls on the services of Commercial Museum to supply information regarding the sources of raw materials, necessary machineries and informations about experts, distributors and market potentialities. The War conditions have brought the Commercial Museum into a prominence and popularity as could not have been dreamt of for a decade. The prospective investors, the indigenous substitute-seekers, manufacturing formula hunters and whoever was in need of accurate data and information regarding consumption and production, availability of raw materials etc. readily utilised the Commercial Museum as a living 'Reference Centre' and confidently took to enterprises. During the year under review we had hoards of businessmen, travellers, market-makers and indigenous products distributors not only from all the provinces and states in India but from Siam, Java Singapore, Federated Malaya States, Trinidad, Ceylon, South Africa, Cairo, Afganisthan, Iran and Turkey. The import of articles from Germany, Britain and Japan being handicapped, commercial travellers have to find out what India have for export. The toilet and pharmaceutical products of India were in great demand. This establishes the fact that the Commercial Museum has earned a reputation as a centre of "Reference and Information" far beyond the boundaries of India.

Thus our Commercial Museum has rendered service by not only creating markets for manufactured commodities but has helped prospective investors in selecting suitable business and supplied all relevant and useful informations and has guided the consumers in securing genuine Swadeshi instead of pseudo-swadeshi or foreign ones. The educative annual catalogue "Where to Buy" has proved to be a potent instrument to cater information to the consumers and the distributors and its universal demand demonstrates its usefulness. Every moment the Commercial Museum is creating a mentality among the people a buy-swadeshi attitude and even to relish botched indigeneous products at some sacrifice instead of attractive and cheap foreign products. As a centre of education it is a unique spot in the whole of India.

Charts and diagrams and legend-synopsis of raw materials or of individual industries create living interests and suggest future careers of earning to lots of young men. What schools and colleges are to a modern community, Commercial Museum is to the economic structure of a nation and as such Corporation Commercial Museum has no parallel institution in India to-day.

The exhibits are collected from all possible sources in India to represent both large and small scale industries as well as cottage industries. Special attention is given to rural industries which are still struggling for existence and have vitality to revive in the face of competition. The task of collecting exhibits is rather a difficult one as it entails constant watching and surveying and we have to perform the work as best as we can in the midst of our limitations. Every care has been taken to give prominence to new industries or resurrected industries. An occasional round in the Museum Hall will amply show the improvements that are being achieved in the form of daily additions in the line of latest novelties in the midst of endless handicaps. The Museum relates a visualised story of the progress of industries in Bengal and India, and it also tells how much more remains to be scored and suggests the unattempted lines. The exhibits have been arranged in a scientific way so as to sustain educative interests even in the lay visitors and the Process Section has been so displayed as to yield a proper incentive to prospective visitors.

The quantity and variety of foreign commodities imported into India serve as an index to the possibilities of consumption of such articles in India. Most of these articles can be manufactured within the country with raw materials in most of

the cases available within Inda. Every day it is being borne out that the raw material resources in India have neither been surveyed nor investigated with any potential intention. The administration in India has been heartlessly indifferent to the development and organisation of Indian industries on a proper basis. In the organisation of Railway freight and tariff or Marine tariff and Custom tariff there is neither a plan nor a scheme in the interest of the people of the land or in the interest of the industries of the country.

The Commercial Museum is absolutely convinced that so long as the ambition of the State and the interest of the people are not indentical no Government Departments can help to bring prosperity to the people or help industrial progress and give efficient national service to the country.

During the year under review the Information Bureau had to attend about 500 calls on the average every month. A single question from an enquirer often takes lots of hours to prepare the answer and to deliver the information in an effective form. The services of the Section have been appreciated and acknowledged with gratitude and thankfulness from all near or distant. As an extension service of the Information Bureau many interested people were taken to the various workshops, to factories, and to dealers and distributor to give the right perspective of the business enterprise into which they are going to embark. Such services could be rendered on a more efficient and enlarged scale if we had the adequate number of staff at our Museum

Besides the permanent Exhibition, special shows of products of particular industries are held every year to concentrate public attention on those industries and to break the monotony of the permanent show. This plan has proved to be a huge success. Lectures by experts dilating on the various details of these industries and other lectures on different aspects of commerce etc., are arranged and the public attend such lectures in large numbers. This method serves the purpose of a Commercial College where post-graduate students may get ample material for assimilaton.

As many as sixteen lectures on various topics were organised during the year under review and it is our great pleasure to express our gratitude to all the lecturers individually and collectively for the trouble to come over to this place and help the institution with their hearty co-operation. Most of the lectures have been printed and serve the purpose of the most useful monographs on the respective subjects.

The Exhibitions that had been held during the year were peculiarly individualistic in character and were never known to have been held in India before. The Pioneer Industrialists Exhibition held in May 1940, was a successful effort in giving the public the early and inner history of the struggle that attended each pioneer industry in Bengal. A very arduous collection of pictures of the pioneers themselves graced the halls of the exhibition. How difficulties beset the path of the organisers and the way in which they were overcome is not only an interesting study for the present generation but also serves as a guide to future industrialists of our land.

The next exhibition, the Acharya Ray Jayanti Exhibition, held in connection with the eightieth Birth-Day of our Scientist-sage Sir Prafulla Chandra Ray, was a unique affair. Opened by Sir N. N. Sircar and exhibits coming from all the notable scientific bodies in India it clearly demonstrated India's position in the domain of Chemical and Pharmaceutical industries. If the attaintment was great it was felt that greater still remained to be achieved. The Exhibition opened the flood gates of enquiry regarding possibilities of Chemical Industries in India and the organisers are almost certain that new enterprises will gradually develop on the basis of information derived from the Exhibition. Never has a scientific Exhibition been attended by so many people which ran into thousands every day. All the exhibitors deserve special thanks and thanks are also due to the Advisory Board for their ungrudging help in making the Exhibition what it was. Full report of the Exhibition will be published in a book form by this Department at the earliest opportune moment.

This Exhibition was closely followed by the Maternity and Child Welfare Exhibition held in connection with the Gynoecological Congress Session in Calcutta and was opened by Sir Mangaldas Mehta. Every aspect from diet to lying-in-room hygiene, care of the baby and baby food, blindness in childhood, spread of venereal diseases and of leprosy and every other matter was shown by charts and exhibits. The Show was visited by thousands of ladies particularly on the days when entrance was reserved for them. A full report will also be published in due course

To deal with the needs and difficulties of the Indian distributors and dealers and with a view to form a permanent organisation to co-ordinate the field work of the dealers and to establish better co operation with the indigenous manufacturers which will eventually help the distribution of indigenous products through such Institution, a Conference of Indian Distributors and Dealers was held under the auspices of the Commercial Museum on the 22nd September, 1940, under the Presidentship of Mr. N. R. Sarkar, where Sir P. C. Ray delivered his inspiring inaugural address before a large gathering.

Through the efforts of the Commercial Museum indigenous manufacturers of Bengal have been able to establish agencies in different parts of India and considering the difficulties in the marketing of goods this work is of inestimable value to the trade of the Province. These are but few amongst the many of the activities of the Museum. It is not possible to give even a brief account of them at the present moment. But more remains to be done. Absence of a selling agency within the Museum has been keenly felt, because enquirers are always willing to possess the article as soon as they make their choice. With lapse of time and for the difficulty of securing the same article outside the Museum, the desire becomes stale and the thing is never purchased. The Exhibitors are anxious to have such an organisation in this premises, but this cannot be done unless the Corporation accords the necessary sanction.

Even a casual visit to the Museum will prove how hard pressed we are for space. We have had to refuse many willing parties clamouring for space. The exhibits already collected and huddled up within the halls may well be displayed in twice the room that they occupy. It is highly desirable that the

Corporation will make provision for larger space and provide facilities for extensive activities for the regeneration of our dormant industries through this Museum. It will not only raise the standard of the Museum but will enable it to function in the larger interests of the country. If industry grows, Commercial Museum may claim to have contributed its mite in the solution of the unemployment problem of the Province. We hope the present Mayor who has a keen interest in the welfare of this Institution together with his able colleagues will try to give his sympathetic attention for the improvement of the Institution.

One of the chief criterion of the popularity of an Institution is indicated by the increase in the number of daily visitors and the growth of variety in the composition of the crowd. At present the normal number of visitors range between 10 to 12 thousand per week and during the Exhibitions the attendance becomes huge and unmanageable. Lately it has been observed that women folk are taking greater and greater interest in the permanent Show. The number of young men employed and unemployed, University students, struggling manufacturers and dealers are daily swelling the volume of the visitors. Another feature which could be developed and extended is our growing organic relations with the different Chambers of Commerce in Calcutta and beyond and useful contact with Scientific and Technological Laboratories throughout India.

We must take this opportunity to offer our grateful thanks to all Chambers, Technological Institutions and all the Government Departments, Provincial and Indian, who have generously helped us in organising exhibitions and developing the usefulness of the Commercial Museum. Each Industry Exhibition and special Exhibitions have brought us into contact with different workers and thinkers, experts and advisers in different fields of economic life. Their friendship and enthusiastic support and the universal spirit of co-operation have increased the assets and the possibilities of our Museum. We do not know of an organisation which can count on so many multiverse units for co-operation and help.

We would be failing in our duty if we forget to acknowledge our indebtedness to the different manufacturers and exhibitors for their generous support without which it would have been impossible to develop this Museum and also the News Papers and Agencies and Journals of the City through whose co-operation it was possible to give effective publicity to the activities of this Museum and has made the Museum well known throughout India. We are also thankful to the eminent citizens of Calcutta and public men of India for their advices and suggestions for the betterment of our organisation. Specialists and experts in different industrial and scientific lines have extended the privileges of their co-operation liberally. We are also thankful to the different Departments of the Corporation of Calcutta for all their help and co-operation in developing the Commercial Museum.

Special Article

Rural Reconstruction

Its Aim And Scope

[By Ramesh C. Ray, B.A., *Headmaster, Mangalkandi H. E. School, Noakhali*]

"The Indian village to-day is nothing but a collection of thatched and mud-built cottages located in insanitary surroundings, and often a prey to the ravages of pestilential diseases and periodically subjected to the ravages of floods and famines. There is no proper facility for education, no provision for drainage and irrigation and no arrangement for health and sanitation. There is always scarcity of good drinking water. To save ourselves from annihilation we must rebuild our villages."

—THE NATIONAL YEAR BOOK

THE Picture pales the conditions of life of the jungleman of the Dark Continent into nothingness! Whoever has turned over the illustrated pages of any book on the people of the world, must have come across kindred pictures of the savage life lived in many of the benighted parts of the globe.

We, who vaunt of being the inheritors of a hoary civilization, must hang down our heads in shame at having to live, in this age of science and progress, in dwellings which are no better than pig's sties, amid filthy surroundings. Dirt, disease, poverty, and ignorance—these summarise the conditions of life in the average village of Bengal, or for that matter, India to-day.

Just imagine the future of a nation ninety-three per cent. of whose people have to live in these conditions! Does not the picture curdle the blood of one who has a heart to feel and an eye to see, and drive him to cry out in agony, "Yes to save ourselves from annihilation, we must rebuild our villages"?

Over three decades ago Poet Rabindranath Tagore saw the vision of a rebuilt nation and set himself to the task of reconstruction, in his humble way unaided and unblessed by the powers that be. And to-day, as a result of his endeavours, is growing up before our eyes a centre of peace and plenty in Sriniketan serving as a model for rural reconstruction work.

The Poet Pathfinder has been followed by others notable among them in the field being late Sir Daniel Hamilton at Goshaba, the Christian Colony at Ushagram in Burdwan, and late Rai Bahadur Nagendranath Banerjee of Birnagar near Krishnanagar. But a comprehensive scheme of reconstruction envisaging the complete life of the village-man is only found in the Poet's efforts and vision.

The late Deshabandhu C. R. Das realized the magnitude of the task before the patriots, and, finding that no tangible work on a countrywide scale was possbile without sinews of war, wanted one crore of rupees to begin the work. Had Deshabandhu been in the land of the living to-day, "model villages", a phrase which is so much in vogue in official parlance these days without any justification would not have been conspicuous by their absence round us.

"Model Village" Idea

A "model village" in the strict sense of the phrase, must, of course, in this age of scientific progress, be a small urbanized unit studded with beauty spots amid tilled fields and radiant verdure with all the amenities of civilized life. It must be an abode of plenty, peace and health. It must foster sturdy manhood and produce the best specimens of humanity.

When peace, plenty, and health have been assured to it, it must then transform itself into a cluster of shapely houses preferably according to a scientifically prepared building programme and well laid out plans with a bias for aesthetics and sanitation. Each homestead must have its own self-cleaning stenchless latrines and its own orchard, flower and kitchen gardens, and source of water-supply. It must also have its own temple of worship or a house of prayer.

Each village of such homesteads must then have a proper drainage system to prevent accumulation of water in pools and breeding of the malaria-carrying mosquito. It must have good roads and byways constructed according to a plan.

Each big village or a unit of several small villages must, then, have its own mart, school, public library, post-office with a savings bank, a co-operative or a land-mortgage bank, and a charitable dispensary under a qualified medical man preferably with a hospital and a maternity home attached to it. The last-mentioned item may excite ridicule! But there is at least one instance within the knowledge of the writer, testifying to the possibility of success of such a hospital in the rural parts as a result of private enterprise.

Each "model village" or a combine of such villages must have a model agricultural, dairy, and poultry farm on a miniature scale, and also a net work of cottage industries to supply the essential needs of the villages and for export to urban areas.

Each "model village" must also have an organization to foster all kinds of traditional and recreational activities, and sports and athletics of the rural folk. It must have a public hall attached to its school premises, equipped with a radio set and arrangement for public lectures and cinema shows to be given by the Rural Welfare Units or Publicity Workers of the Government or others, and also for annual exhibitions of rural arts and crafts, agricultural products, and health posters.

It must have its cremation and burial grounds as well as its public places of worship and prayer.

In one word, the contents of a model village must grow in number in proportion to the growth of its prosperity and the awakening of civic consciousness of its people.

Economic Basis

What has been stated above is but an outer manifestation of an inner prosperity. These model villages can grow up only when the rural people have their economic independence assured. In other words, such improved conditions of life are possible only when the people have enough food to eat and enough money to spend. It has been found in practical life that only those which can boast of a good number of men of substance have got good roads, good water-ways, good schools, good libraries and a good many other things worth having in this age of rapid progress.

The problem is, therefore, essentially an economic one. And, when the whole nation is concerned, the problem goes beyond the scope of private enterprise and glides into the province of the state. The state must do all it can through its legislatures, to make money flow into the countryside with increasing rapidity. The whole administrative machinery must be invested with a rural bias. Its agricultural industrial, and fiscal policy must be reshaped with that end in view. And, in fact, the State has already recognized the need of this change of policy as has been demonstrated by the various measures adopted so far as to ameliorate the economic condition of the masses, particularly to reduce rural indebtedness and illiteracy and to foster cottage industries, intensive agriculture, and improvement of livestock.

But what is needed is increasing acceleration of the speed of these ameliorative measures to reach a clearly marked stage of achievement and level of efficiency within a stated period. This means "Planning" in the economic parlance of the modern age. Happily the Congress has already set itself to this planning, but unluckily its antithesis the state has not yet thought it worth its while to think of it

Specific Objective

Simultaneously with this steady and sustained drive towards the economic betterment of rural life in general according to a clear cut plan, the State must do all it can to translate the "model village" idea into actualities all over the province as a specific objective to reach within a stated period.

Planning is a great idea. It supplies energy, inspiration and driving power. A clearly defined objective is to be reached within a well-marked period of time, and this is enough to energise the whole band of workers engaged in it.

Fortunately, rural reconstruction and nation-building now forms a permanent plan in the programme of the public utility services of the Government of Bengal. There is provision in the annual budget for the purpose with a separate department under the control and guidance of an I.C.S. Officer designated "Director of Rural Reconstruction". This department, if it so wills, can take the wind out of the sail of all anti-government movements by doing real work for the villages with a sympathetic heart.

But those who live in the villages do not feel much encouraged by the way in which the Department is doing its duty, which has so far only proved anything but a clear grasp of the noble work before it.

The distribution of doles that occasionally reach the rural parts here and there for water-supply, medical aid, roads and waterways, libraries, playing fields, or such activities as clearing of jungles and eradication of the water hyacinth pest, making of roads and digging of canals with the help of voluntary labour, appear to be nothing but window-dressing and only give a handle to the critics to stigmatize these activities as designs for vote-catching for the party in power.

Apart from the inadequacy of funds available for rural uplift work, the way in which the doles from these funds are given away points to "something rotten in the State of Denmark". The distribution is more often than not sullied by what appears to be preferred patronage and anybody who has anything to do with a successful electioneering campaign has a share in the loot This way of doing things goes to solve anything but the problem of Rural Reconstruction.

Of course we have some tube-wells sunk, some roads made or remade, some waterways dug or re-excavated, some libraries started or helped and some playing fields provided now and then, here and there. And some good has no doubt accrued from all that has so far been done. Some grievances have been redressed and some stimulus has been provided for well-living and well-doing. Yet it cannot be said that the activities constitute a scientific approach to the problem of Rural Reconstruction.

All beneficial work started must carry in it the seed of permanence and those who do the work must see that the initial step taken must not lead to nothingness in the end for lack of sustained effort or resources for maintenance. Viewed from this standpoint, one must admit that much of the work that has so far been done or much of the money spent in this direction in the past few years has been so much waste

Modus Operandi

The Rural Reconstruction Department must, then, draw up an elaborate plan of work with the seed of permanence in it. This plan must be all comprehensive dealing with the complete life of the rural people, material and spiritual.

Ten years ago I wrote in the course of an article under the caption the "Village Beautiful" published in the Sixth Anniversary Number of the *Calcutta Municipal Gazette* that the people of the villages were

> "inert, static, and dead to new calls, new urge for life and action. The humdrum animal life with lip homage to religion as a prop to our spiritual vanity has produced an unfathomable ennui unknown in any other country..... The problem of the village to-day is, therefore, to give life to the dead bones, to remove the boredom that has overtaken it. It is not merely to redress a catalogue of grievances, to supply water, make roads, start schools, set up village courts, or dispensaries or co-operative societies, to better the economic condition of the rural people and to increase their purchasing power. It is all these, but it is also something more. It is an organised attempt to give them a new philosophy of life, to educate the mind of the people, to transform their attitude towards life and the world, to teach them to live a life of truth, beauty, good, and knowledge,—a life *satyam*, *shivam* and *sundaram*. The amelioration of their economic condition and the outward signs of a happy living will in that case follow automatically..... It is to be remembered that the aim is to energise, to awaken, to stir the people to action; to enable them to stand on their own legs and develop community consciousness. A large measure of our patriotism may flow through this channel of constructive work".

Almost exactly the same thing was uttered by Mr S M. Ishaque, Director of Rural Reconstruction, the other day. In the course of his New Year greetings to Rural Bengal published in the "Calcutta Municipal Gazette" of the 4th January last, Mr. Ishaque says,

> "The time has come to recast the spirit, and, through the spirit, the present scheme of things entire. We plan for spiritual revival of Rural Bengal, which alone can sustain any effort at *material reconstruction*. The greatest obstacle in our task is not so much material as spiritual. It is the weakness of the spirit, the inertia which paralyses our best resolutions."

Need Of Propaganda

The problem, therefore, reduces itself at the initial stage to a spiritual one, which can be solved by intensive and extensive propaganda among the rural people through a machinery inspired with love, sympathy and patriotism. The workers should approach the people with a spirit of service and then, and then alone can they expect an effective hearing.

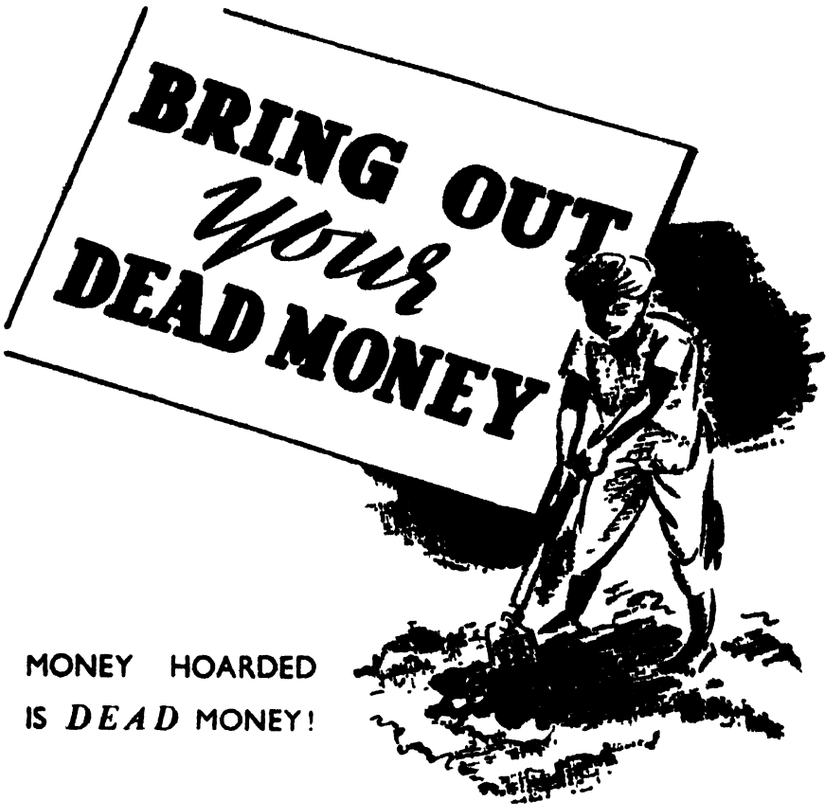
The greatest obstacle to an adequate response to a call for well-living and well-doing from a State agency, however well-intentioned it may be, is that it is suspect in the eyes of a very large section of the public But this leads to the bigger problem of politics which is foreign to the purpose of this article However it may be, the apathy and suspicion of the people can be conquered by determined and sustained efforts inspired with love and sympathy

Trained bands of workers should be sent out to the remotest corners of the province like the National Welfare Units with films and literature in illustrated leaflets dealing with every aspect of better rural life including rural economies, health, housing and sanitation. One year's extensive propaganda is expected to rouse the civic consciousness of the people

The propaganda work will then be followed by actual field work according to a plan. The items of the programme should not be too many for tackling at one and the same time. One item should be taken up for one year and it should be finished with a small and inexpensive machinery left to look after the continuity of the work. Take, for instance, the question of lilac devil. The pest should be eradicated once and for all in one, two or three years by intensive and extensive activity. Then a small local board may be set up to see that the devil may not raise its head again. Then take up the question of malaria and the clearing

of jungles and filling up of stagnant pools. This work may be spread over three or four years, or say, five years. In this way the entire scheme of things would be gone through stage by stage and—one by one. For, simultaneous handling of all the rural problems with limited resources have produced no tangible results so far.

Question Of Funds



The Department's activities should be co-ordinated with those of the District and Union Boards to prevent overlapping and waste.

The mere cries of "nation-building" or constant use of the phrase in official reports will not build a nation. Adequate funds should be provided in the provincial budget which should be supplemented by contributions from the District and the Union Boards. Rs. 8 lakhs allotted in the provincial Budget is not enough.

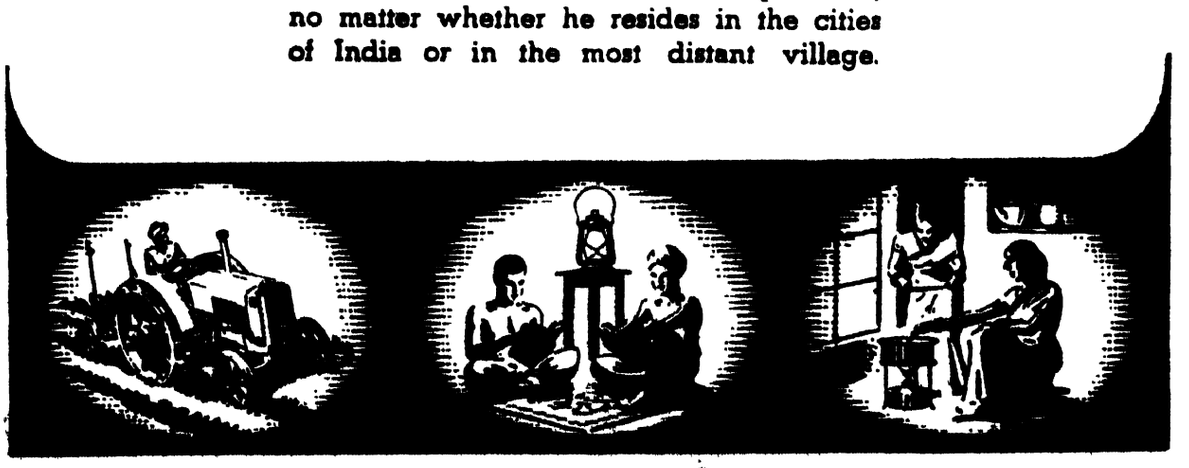
The Union Boards are handicapped by lack of funds. But in my article under the caption "Civic Consciousness of Rural People" published in the last Anniversay Number of the *Calcutta Municipal Gazette*, I have shown how, by reducing the expenditure on the Village Police Force and augmenting their income through profitable ventures, they can at least find Rs. 1,200 each to spend every year on rural welfare work. We have over 500 Union Boards in Bengal. These 500 Union Boards can annually spend over Rs. 60,00,000 (sixty lakhs) on Rural Uplift Work under the guidance of the Director of Rural Reconstruction, if the suggestions made in the above-mentioned article be carried out.

If there is a will, there is a way. If the nation is to be rebuilt, the ways and means must be found.

Money lying dormant is useless, but money invested in Defence Savings Certificates is working for you day after day. For instance, Rs. 10 invested now in a Defence Savings Certificate will earn you Rs. 13-9 in ten years. *Property can depreciate*...**Savings Certificates cannot.** *Coin and Jewels can be lost*.....**Savings Certificates, being registered in the name of the holder, can never be lost.** *Grain and foodstuffs decay*.....**Savings Certificates are always encashable at FULL value at any time. They are issued in amounts of Rs. 10/-, Rs. 50/-, Rs. 100/-, Rs. 500/- and Rs. 1000/-.**

HOW TO PURCHASE CERTIFICATES BY INSTALMENTS

All you have to do is to go to the Post Office and ask for a Defence Savings Stamp Card, which will be given you free. Then buy as many Defence Savings Stamps as you can afford, either As. 4, As. 8 or Re. 1, just when and how you like. When your Card has Stamps to the value of Rs. 10 stuck on it, present it to any Post Office doing Savings Bank business and you will be given a Rs. 10 Defence Savings Certificate. This Certificate will earn money for you and in ten years will be worth Rs. 13-9, free of income tax. Should you at any time want your money back it will be refunded to you with the interest due.



No. 5 THE DEALER

To most of India's four hundred million people the strength or weakness of the monsoon is a matter of vital importance, many of the essentials of life depend upon it, the regular supply of kerosene is however never in doubt.

The Burmah-Shell system of distributing Kerosene guarantees that supplies will always be available to everyone. If a village has even one shop, Burmah-Shell Kerosene will be on sale. The past decades have brought the confidence that—happen what may—regular and ample supplies of Kerosene will be available to every Indian, no matter whether he resides in the cities of India or in the most distant village.

Is the world a blur? Have you enough "visual purple"? Does green look like red? In short, do your eyes tell you lies so that you can't believe what you see?

Health & Hygiene

You Can't Believe What You See?

[By F. B. Griswold]

THE care and feeding of our eyes demand the services of more varieties of scientists than are needed for any other human organs. Even in simple cases, eye men use the findings of physicians, surgeons, engineers, chemists, physicists, mathematicians and psychiatrists. The simple process of supplying correct glasses for near-sightedness requires accurate and complicated machines for the examination, special glass for the lenses, and careful grinding by an expert. For more complicated cases the lifelong work of leaders in a dozen professions is required to make two eyes see clearly what neither could see before. The teamwork of eye men in the last few years has been magnificent.

The discovery and treatment of the eye ailment known as aniseikonia is a case in point. For years the experts had been baffled by patients—about one out of ten—whose headaches, nervousness, stomach disorders, tired feeling, and eyestrain couldn't be cured by glasses or anything else. The eyes seemed to be the seat of the trouble, but the eye men didn't know what to do.

It had long been suspected that in some cases one eye might be transmitting an image which was larger than and shaped differently from that captured by the other. But there were no instruments to measure this, no way to tell a lens grinder what sort of job to do.

The problem was at length solved by doctors, an engineer, a mathematician, a physicist, a psychologist, and a lens designer. Combining their talents, they developed a machine, as complicated as any Einstein theory, to measure differences in eyes and to provide prescriptions for lenses.

These prescriptions are so different, and the lenses must be so carefully made that men had to be trained especially to grind them. Each lens will enlarge or reduce the image of one eye so it will match the image of the other. Through the discovery of aniseikonia and the development of a remedy, five thousand persons have already found relief from their mysterious troubles by wearing the new glasses. Because of the highly specialized technique there probably will not be enough doctors and machines to serve everybody for several years. But I was assured that the time is coming when hundreds of thousands of persons will be helped.

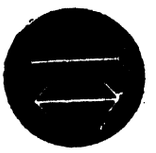
Among other dramatic new inventions are contact lenses, shell-like corrective glasses which fit over the eyeball and under the lids so that your best friends can't tell you wear them. Doctors find that most of the several thousands of persons who have been fitted with them can wear them for four or five hours without discomfort—if they are properly made. But proper fitting is a gamble and sometimes the patient has to buy two or three sets, at about fifteen pounds a set, before he gets lenses that don't drive him mad.

As the art of the lens maker progresses, more and more successful do telescopic lenses become. Persons whose vision is so far gone that there is almost nothing left to focus, can be aided by lenses that are practically binoculars. And chemists are now producing an optical glass that is practically unbreakable for workers in occupations where flying fragments have hitherto broken glasses and put out eyes. All of these inventions are helping to reduce the number of blind persons.

The eye men have also contributed recently to the prevention of motor car accidents by new discoveries about so-called "night blindness." When a driver is temporarily blinded by glaring headlights on the road, they have found that his eyes haven't enough "visual purple," which is the stuff that restores sight after brilliant light has temporarily taken it away. They know now that glasses don't help night blindness, for it is usually caused by a lack of vitamin A in the diet. If you are a victim of night blindness, they advise you to eat more raw carrots, more prunes, and more cod-liver oil.

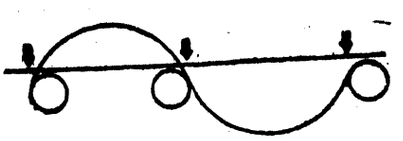
If you are having a lot of headaches, the cause is not necessarily eye trouble. Half the headaches

are caused by something besides eyestrain, such as sinus trouble, kidney disease, bad digestion, and high blood pressure.



Normal eyes are rated at 20/20 which means that they can read a line of a certain standard size twenty feet away. If they can read at twenty feet only a line that the normal eye could read at forty feet, the rating is 20/40. A 20/60 rate of vision is not considered too serious. That means that if your keen-eyed friends can read a certain line that is sixty feet away, you have to move up to the twenty-foot line before it is legible. Of course, with that rating you need glasses, but by no means are you approaching blindness. But 20/70, only ten feet more, is rated partial blindness, and people with a 20/200 rating, if nothing can be done to help them may be able to read only by the Braille touch system. Most eye trouble is either nearsightedness, far-sightedness, or astigmatism. If you suffer from near-sightedness, technically called myopia, you can see things that are near but you aren't so good at long distance. This is because the eye has grown longer from front to back and the focusing spot of the image is in front of the retina. The muscles tire and give you a headache because they cannot force the eye into focus. Glasses for near-sighted persons push the focusing point back to the retina.

Fix your eye on the centre and watch the wheel revolve dizzily

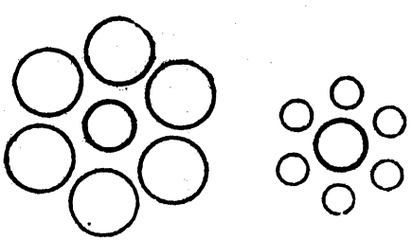


Do these lines bulge in the middle? Certainly not, they are parallel!

The top line is the longer, you think. You are wrong for they are of equal length

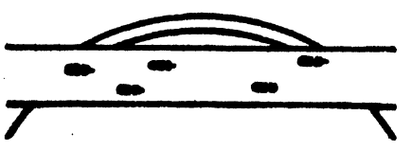
When you are far-sighted, the eye is flattened a little, shortening the distance from front to back, and another lens corrects that. In astigmatism the cornea, the window in the front of the eye, is awry —like a piece of imperfect window-glass. A lens corrects that, and it shouldn't be a round lens, for round lenses sometimes turn in the frames when they are being cleaned and so get out of focus.

Astigmatism is sometimes combined with far-sightedness or nearsightedness, but there are glasses that concorrect both defects at the same time.



The arrows above these three circles are exactly the same distance apart. Measure them if you doubt it

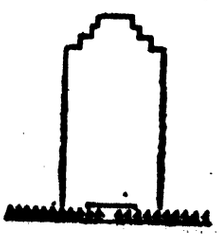
Colour blindness is one thing that nobody so far has been able to remedy. Eight men out of a hundred have difficulty in distinguishing between certain shades of red and green, although the man is rare, fortunately, who can't tell a green traffic light from a red one.



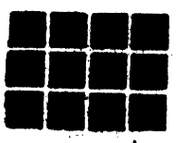
Light is measured in foot-candles. One foot-candle is the light given by one candle at the distance of one foot. In the shade in the summer, the illumination is about one thousand foot-candles. Too many persons, at night, read so far from a small bulb that they get only two or three foot-candles. Your vision is best under about thirty foot-candles. Lighting engineers recommend one one-hundred-watt bulb or two sixty-watts in reading lamps. Under ideal conditions that might give you more light than you need, but ordinary lamps and reflectors cut down the light and make that bulb the right one, if you want to be sure.

Too much light doesn't hurt your eyes, provided there is no glare. The light, of course, should not strike your eyes; from where you sit you should not be able to see a bulb or, in daytime, a window. Position yourself so that no reflected light is allowed to reach your eyes.

Lights of a definite colour are bad for the eyes,



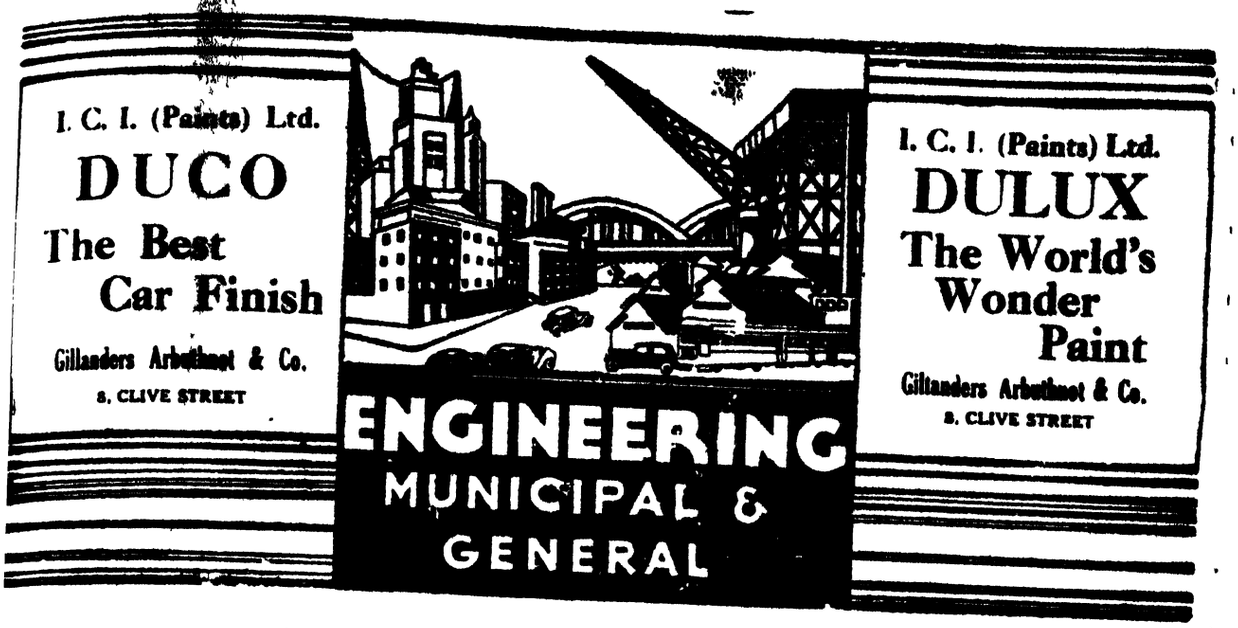
If the centre circles were gold nuggets, which one would you take? Don't worry too long, they are both the same size



In this railway running under a viaduct the single rail below the viaduct is actually an extension of the inside rail above

although in some coloured lights you may seem to see more clearly. "Daylight lights", which are not all blue, although they produce more blue than any other colour, are effective, provided the walls of the room are the right colour. Light green walls are perfect. But engineers have found that when daylight lights are used in rooms which have blue walls, the preponderance of blue makes some workers actually ill.

Conscientious eye men suggest many ways in which you can conserve your sight and postpone,



Is this theatre queue longer or shorter than the building itself? Neither. It is the same length

Flying in a plane over these city blocks you see grey spots at intersecting points. These are only ghosts. They do not really exist

for a time, the need for glasses. It all boils down to warnings that you should not strain your eyes —avoid glare, make sure that the light is adequate, wash your eyes in the morning, and be careful of your posture when you read, so that your eyes will see comfortably. But, for the average person, luck is a great factor. About half of us are unlucky, and, even if we obey faithfully every rule, we're going to find before we are fifty that the good old sight has slipped. But if you are fortunate enough to have generally good health, if you happen to be blessed with good eyes, you will live a great many years before you need glasses.

Sewage Treatment Abroad—II

Affected By War And Economic Conditions

(Concluded from the issue of 10th May, 1941)

Great Britain Highly Advanced

CONTRARY to Continental Europe, sewage treatment in Great Britain has been on a very advanced level. This was to a great extent necessitated by congestion of population in cities and industrial centers, large quantities of industrial effluents and only small receivers for the resulting large amounts of concentrated sewage. The Ministry of Health therefore requires far-reaching treatment of the sewage before discharge into the streams. Biological treatment has reached a very high stage and activated sludge treatment has been installed on a full plant scale in a number of variations in sewage disposal plants at Manchester, Sheffield, Birmingham and other cities.

The most recent large scale development is "The Main Drainage of Middlesex," a large co-operative development west of London which has now taken over the work of, and supersedes 28 older sewage works in that district, a type of development which had its predecessors in Germany at Emschergenossenschaft, Ruhrberband and Niersverband. These co-operative developments have been necessitated by the common interests of the entire district which rendered it imperative to handle the problems involved by one central organization to which all small and factional interests which previously had been working one against the other had to be subordinated.

Middlesex Works

The Middlesex Drainage Works, opened in October 1936, treat an initial dry weather flow of 40 mill imperial gals .or about 43 mill. U. S. gals daily and are designed to handle three times this quantity after full development of the district. Stormwater tanks have been provided, so that any excess can be given sedimentation treatment. In the plant the sewage is first screened, the screenings are macerated and dumped back into the sewage. The sewage then passes through grit chambers, primary and secondary sedimentation tanks, is aerated and after final settling is discharged into the Thames The sludge resulting from the three sets of sedimentation tanks is pumped to thickening tanks and subjected to two stage digestion at a temperature of about 80° F. The gas production is about 800,000 cu. ft. (8 cu. ft. per capita) per day and is used in the customary way for the power and heat requirements in the plant.

Of much older date are the two co-operative undertakings in the Ruhr district, Germany, the Emscher-genossenschaft and the Ruhrverband. The Emscher-genossenschaft was formed in 1900 and confirmed by law in 1904 for the purpose of regulating by common action all parties concerned the water supply and sewage disposal conditions in the very densely populated and highly industrialized

Ruhr district. Nine years later the Ruhrverband was formed for the purpose of maintaining the important Ruhr river in a good and wholesome condition. As a result of the co-operation of these two associations, supported by laws of the respective administrative bodies, numerous sewage disposal plans (64 up till 1930) were built for the purpose of purifying the sewage and factory effluents sufficiently for admitting them into the common receiving streams without detriment. An outstanding feature of this work was the regulation of the Ruhr tributary, the Emscher.

Industrial Wastes In Germany

The large industrial concerns in the territory, aside from contributing financially, have had to instal purifying equipments for their own effluents for the removal of phenol, wool, grease, waste pickling liquor, coal dust, waste pulp liquors, etc. Most of the sewage of this district is discharged into a former tributary of the Ruhr, the Emscher, and the brooks emptying into it. The beds of all of these have been regulated and graded and the Emscher is now discharging directly into the Rhine, thus taking a very large sewage load off the Ruhr river.

Not far from the Ruhr district is located another co-operative undertaking, the Niersverband which has to take care of the sewage and effluents of another highly industrialized region, the cities of Rheydt and Muenchen-Gladbach, in which abound cotton and wool textile mills, dyeing plants and iron and leather industries. From these result very large and strong effluents of about 13,000,000 gals. daily and an hourly dry weather maximum of over one million gallons, which in rainy weather increases to about 2.3 mill. gals. The Niersverband is serving the purpose of disposing of the sewage, regulating the Niers and maintaining it and its tributaries in a condition meeting the health standards despite the large amounts of sewage flowing into it.

The sewage of the above named cities is conducted into the Niers by a pipe line of 2.7 miles length. The average flow of the Niers is less than the maximum hourly sewage flow, so that at times not even a dilution of 1 :1 is obtained. The $KMnO_4$ consumption of the filtered sewage is 600 ppm and increases to 900 ppm and this coincides with the maximum total hourly sewage quantity. From initial tests it had been determined that chemical precipitation followed by activated sludge treatment would best serve this difficult problem but the costs for the coagulants would have been prohibitive, unless most of the chemicals could be recovered. Eventually Dr. Jung, the scientific head of the Niersverband, worked out a process by which the sewage is treated with dissolved iron. The iron is precipitated together with the suspended matter in the form of ferric hydroxide. This sludge is collected in the reduction plant in which by fermentation the dissolved oxygen is consumed and the ferric hydroxide reduced to ferrous hydroxide, which contrary to the former is soluble in carbon dioxide. The sludge is then pumped into the screened sewage behind the detritor and exhaust or other gases containing carbon dioxide are pressed in. The iron hydroxide is dissolved and additional carbon dioxide is absorbed by the sewage, thus also neutralizing to a large extent the excess alkalinity in the raw sewage which otherwise would be detrimental in the activation step. The sewage passes on to primary settling tanks where mechanical settling takes place.

Iron Aids Further Treatment

The sludge is returned to the reduction plant while the clarified sewage still containing dissolved iron and carbon dioxide is subject to an additional carbon dioxide treatment, so that it becomes nearly saturated with it. In this condition it is caused to flow over iron scrap dissolving a quantity up to 50 ppm Fe which would correspond to 147 ppm anhydrous or 226 ppm crystallized ferric chloride resp., or 155 ppm anhydrous chlorinated copperas. After this quantity of iron has been incorporated in the sewage the latter is aerated which removes the excess carbon dioxide. The iron thereupon precipitates in the form of ferric hydroxide taking with it the suspended matter. The super-natant clear sewage is thereby purified to such an extent that a subsequent ½ hours activation is sufficient for producing, after settling, an effluent which meets all requirements. For the purpose of procuring best results in a minimum of time, ample use is made of the beneficial precipitating and settling effect of return sludge. In practice, therefore, the procedure is as follows: Screening through 4-inch and ¾-inch screens; grit chamber; 10 min. first acidification with carbon dioxide gases; 15 min. mixing with sludge from reduction plant containing iron in form of ferrous hydroxide which

LEYLAND OFFER YOU TWO ESSENTIAL SPECIALITIES

QUALITY AND SERVICE

THE LEYLAND & BIRMINGHAM RUBBER CO., (INDIA) LTD.

MANAGING AGENTS: BURN & CO., 12, MISSION ROW, CALCUTTA.

is partly dissolved by the carbon dioxide; primary settling 1½ hours; sludge precipitated here goes back to reduction plant; 10 min. second acidification as above; passing sewage 5 min. over iron scrap for dissolving additional iron; aeration 30 min. for driving out excess carbon dioxide; addition of return sludge from subsequent settling tanks and excess activated sludge; settling; sludge from here partly to reduction plant, ½ hour's activation of clarified sewage after seeding with biological sludge and final settling. The sludge is conducted to digesters, the gas collected and used for heating the sludge and generation of power, while the waste gases are employed in the acidification of the sewage for dissolving the iron as explained above. The time for the sewage to pass through the plant amounts to above 6 hours.

Chemicals Reclaimed

By this process the advantages of chemical precipitation are used to the fullest extent without the high cost of the chemicals. Not only is about 2/3rd of the iron continually recovered but for the iron to cover the balance of 1/3rd, iron turnings and other scrap are employed by which the costs for the iron are reduced to less than 1/10th of the equivalent amount of iron in the form of commercial ferric salts, namely $7·56 per mill. gals. instead of $90·72 to $151·20 per mill. gals. In spite of the 1 3rd of the iron remaining in the sludge which thus represents a mixture of mechanical and chemical sludge, the digestion proceeds entirely normal and undisturbed by the presence of the iron.

PERMANENT
HUME STEEL PIPE
(with Spun Concrete Lining and R. C. C. Outcoating)
POSSESSES FULL PROTECTION, INTERNAL AND EXTERNAL. GIVES LONGER LIFE THAN UNPROTECTED METAL PIPE.
SATISFIES ALL CONDITIONS ! !

Gives about 30 per cent. superior flow of water.
Saves in laying, jointing and transport.
Stands very high pressure easily.
Free from Rust and Tuberculation.
Saves a large amount initially.
Is regarded as the best Pipe by Eminent Experts.
Can be re-used after a number of years elsewhere.
Free from Bursts.

Particulars from :
THE INDIAN HUME PIPE CO., LTD.
Head Office:—
Construction House, Ballard Estate, Bombay.
FACTORIES ALL OVER INDIA.

Another plant utilising chemical precipitation and aeration combined with recovery of the precipitant is located at Tilburg, Holland (5). Here also sewage of a highly industrialised district is to be treated. Alum is used for coagulation (35 ppm) and 80 per cent of it are recovered from the sludge by the addition of sulphuric acid, settling, drawing off the clear supernatant liquor, which contains most of the aluminium sulphate, and washing once more with water. In the aeration tests it was found that a 98 per cent. B.O.D. reduction could be obtained by aeration of either mechanically or chemically settled sewage, but for the latter less than ¼ of the time was required than for the former, namely 3·2 instead of 7·2 hours, thus reducing not only the time and operating expenses for the sewage, but also the investment for space to be provided, tanks, blowers, etc. This fully checks with the experiences gathered by the Niersverband and both may offer useful suggestions for American developments in this direction.

The new sewage disposal plant of Henriksdal, Stockholm, Sweden, represents an interesting development inasmuch as the entire plant is located inside of a mountain and only the tops of the digestion tanks are level with the top of the ridge. 117,000 cu. yards of rock had to be blasted out to provide room for the plant which comprises grit chambers, two mechanically-cleaned screens with ·8-inch openings, also a grease chamber with 11 min. detention time. Compressed air blown into the sewage floats the grease where it is skimmed off and pumped to the sludge digesters together with the sludge from the settling tanks. The tank construction is such that chemical precipitation can be employed in them, space having been provided for flocculation and for slow paddle wheels upstream of the sludge hoppers. Pre- and postchlor-ination has been installed. The sludge is thickned and digested in two stages. The gas produced is expected to be sufficient for the entire heat and power requirements of the plant, and as additional safeguards one of the boilers can be heated with oil and the plant is furthermore connected to the Stockholm electric works.

A Trieste Plant

In the city of Trieste, Italy, a sewage disposal plant of modern type was built in 1935, consisting of grit chambers with detritor, mechanical settling, aeration, secondary settling and sludge digestors with gas recovery.

Generally speaking, it is surprising how much American equipment has been furnished to European sewage plants.

TWO MAYORS KILLED IN RAIDS

Two Mayors have been killed in the raids of London—the Mayor of Westminster on Saturday night (May 10) while visiting a shelter which received a direct hit, and the Mayor of Bermondsey, who was helping in the fire-fighting in a recent raid.

CALCUTTA NEWS & VIEWS
The Week's Digest

THE MAYOR ON CHILDREN'S PLAYGROUND

Under the auspices of the Alpha Athletic Association a reception was given to Mr. Phanindra Nath Brahma at Hrishikesh Park on Sunday evening last on his unanimous election as Mayor of Calcutta. Pandit Bimalananda Tarkatirtha presided.

Mr. Brahma was then presented with two addresses of welcome by the Alpha Athletic Association and Young Friends' Association. He was also garlanded on behalf of the Ananda Bazar Association and Shyamapada Institution.

Pandit Bimalananda Tarkatirtha referred to Mr. Brahma's honesty, courage and outspokenness and said that it was these qualities which had earned for him the high honour of mayoralty and made him so widely popular.

Councillor Hriday Krishna Ghose, Councillor Amulya Chandra Mitra, Sreemati Sarala Chakravarty and Mr. Bishnupada Ghose also offered their felicitations to the Mayor.

Replying Mr. Phanindranath Brahma said that he had every sympathy with the objects of athletic associations. He pointed out that it would not be practicable for the Corporation of Calcutta to purchase suitable plots of land for the purpose of converting them into playgrounds. He suggested that public should ask the Corporation to secure plots of land on moderate rents and then turn those into playgrounds where children might play and take physical excercise. He also suggested the setting up of a Committee by the Corporation to enquire into the causes that led to a progressive deterioration into the health of the people of Bengal.

NOTICE TO QUIT CALCUTTA

A notice has been served on Mr. Aurobindo Bose, nephew of Mr. Subhas Chandra Bose, directing him to quit Calcutta within 48 hours from the service of the notice and to stay within the jurisdiction of Rajpur Police Station in the district of 24-Parganas. The original home of the Bose family is in village Kodalia within the jurisdiction of Rajpur Police Station.

UNIVERSITY SCIENCE COLLEGE

The workshop of the Applied Chemistry Department of the University College of Science, Calcutta, is being enlarged in order to meet the demand that is being made on the department to carry on scientific researches more vigourously and in varied subjects by both the provincial and central Governments as well as by private and public bodies.

A.R.P. PROPAGANDA IN CALCUTTA

Propaganda work in connection with air-raid precautions in Calcutta, taken over by the Public Relations Committee, Bengal, will, for the present, concentrate upon A.R.P duties of the house-holder, whose need for such education is considerably greater than in the case of larger units such as the factory and the office.

Mr. G. W. Tyson, Chairman of the Committee, in a letter to the various Chambers of Commerce says that the Committee consider that one of the best means of getting their message over to a large number of householders is through the office clerks, who are generally men of importance in their own families and localities.

Subject to the agreement of employers, the Committee propose to hold meetings in individual offices at which the necessity and mechanics of household A. R. P. will be briefly expounded. It is suggested that the head of the firm should preside over such a meeting held in his office and a short speech will be given by an Indian gentleman of some standing on the citizenship aspect of the matter. Then a brief lecture will follow explaining the simple domestic arrangements and precautions involved in household A.R.P.

The Committee have requested the various Chambers to express their opinion on the proposal, and if they approve of it, to indicate the time they consider to be the most suitable hour for such meetings to be held.

IN THE EVENT OF AIR-RAID

The Government of Bengal has recently drawn the attention of the Corporation of Calcutta to the fact that it is essential that the Corporation should take all necessary precautions so as to ensure the repair of damages to their roads, drains and other essential services due to the Air-Raid.

For the maintenance of these services it is necessary, state the Government, that an efficient organisation of mobile repair squads should be created and that the Corporation should take steps for this purpose to prepare a map showing the location of their plants, prepare a statement of the existing facilities for immediate repair of these services which will be promptly available, should enquire whether the facilities at present available are adequate, etc.

It is further pointed out that the Corporation should take immediate steps in regard to this and furnish the Government at a very early date with a report of the action taken by them.

It is understood in this connection that the Chief Engineer of the Corporation has submitted proposals as suggested by the Government for the consideration of the Corporation. These proposals if accepted are estimated to cost the Corporation several lakhs of rupees.

CIVIC NEWS FROM FAR AND NEAR

HOOGHLY MUNICIPALITY

At a special meeting of the Commissioners of the Hooghly-Chinsurah Municipality, held on Saturday last, Mr. Devendra Nath Mondal (Congress) was elected Chairman in place of Mr. Nagendra Nath Mukherji, now undergoing a year's imprisonment in connection with *satyagraha*.

BENGAL GRANT FOR WATER SUPPLY

The Government of Bengal have sanctioned Rs 5,000 for the construction of wells in certain parts of the Bankura district, where the people are now in great distress due to the scarcity of drinking water.

PARTY FLAGS AND MUNICIPALITIES

A U P Government order states that the Governor has declared expenditure on the hoisting of flags representing communal or political parties as illegitimate charge on municipal and district boards' funds and should not be agreed to in future

SUKKUR MUNICIPAL ELECTIONS

Khan Bahadur Allahbux, Premier of Sind, in an interview on his return from Sukkur, said that general elections of Sukkur Municipality, under the joint electorate basis held last week, were quite a success.

CHANDERNAGORE MUNICIPAL AFFAIRS

The Government inquiry into the affairs of the Chandernagore municipality started on Monday.

In the meantime six out of the 11 members of the municipal council, including the Mayor, have handed in their resignations to the Administrator of Chandernagore.

UTTARPARA MUNICIPALITY

The budget estimates of the Uttarpara Municipality, Hooghly, for 1941-42, presented by Mr. Lokenath Mookerjee, the Chairman, showed that the estimated total receipts with an opening balance of Rs. 8,507 were Rs. 71,157, and the expenditures Rs. 65,120, leaving a closing surplus of Rs. 6,037.

MUNICIPAL ELECTIONS POSTPONED

The U. P. Government have decided to postpone for another year general elections to the municipal and district boards in the province which were due to be held at the end of this year.

It will be recalled that the elections which would ordinarily have been held in 1939 were postponed for a year by the Congress Government and again last year by the Governor.

KARACHI LOCAL BOARD

Ten members of the Karachi District Local Board have given notice of a motion of no-confidence against Khan Bahadur Gabole, President for his "conduct at a meeting of the Board held on April 16" and asking him to vacate the office of the President.

The President has been asked to convene a special meeting of the Board immediately to consider the motion.

BILASPUR DISTRICT COUNCIL DISSOLVED

A Gazette extraordinary announces dissolution of the District Council of Bilaspur (C. P.), on the ground that it has abused its powers. The charge against the Council is that it made use of its organisation for furtherance of activities of a particular party, namely, the Congress, and that its employees were used to secure new members for the Congress party, to make collections, to advertise political meetings etc.

BENGAL LOCAL BOARDS AMENDING BILL

The Bengal Local Self-Government Amendment Bill which was passed by the Provincial Legislature during the last session has, it is understood received the assent of the Governor.

The Amending Bill abolishes the jurisdiction of civil courts regarding disputes arising out of elections to local and district boards, and provides for the appointment of tribunals to deal with such disputes

POONA MUNICIPALITY

Amidst uproarious scenes, the President of the Poona City Municipality had to dissolve the meeting of the general body held recently in which a vote of no-confidence was to be moved against himself.

The meeting began with a condolence resolution on the death of the Municipal Magistrate, Mr. Kamat, after passing which, it adjourned for some time. When the House reassembled, a member put some questions demanding an immediate reply. The President ruled that notice was necessary for those questions. Several other members now intervened and chaos prevailed. This made further work of the meeting impossible and the President adjourned the meeting till June 17.

TRUST SCHEME FOR CAWNPORE

At a meeting of the Cawnpore Improvement Trust held under the chairmanship of Rai Bahadur Dr Brijendra Swarup, M L.C , a five-year programme for the improvement of the city was approved. The programme provides for an expenditure of Rs. 81,47,042 during 1940-45, of which Rs 31,43,863 has been allotted for expenditure on slum-clearance schemes and for the removal of congestion in the interior of the city.

The Improvement Trust has already prepared 14 slum-clearance schemes and these it proposes to work during the quinquennium.

The Improvement Trust sanctioned an estimate for Rs 26,750 for the construction of storm-water drains for its Gutaiya and Sisamau development schemes, and a Rs. 11,332 for the laying of a water-main in Raipurwa.

Fresh sales of land of a capitalized value of Rs. 25,468 were sanctioned, bringing the total value for two months to Rs. 85,566.

SUBURBAN WATER SUPPLY IN U. P.

Attention is drawn to the shortage of water in almost all the suburbs of town, which has become a "perennial problem" in the report of the Public Health Engineering Department released recently.

While there has no doubt been a considerable increase in the population of most of the towns, the report adds, "There is little hope of any permanent improvement, even if supply is increased and the distribution systems revised, unless the laws in regard to wastage are strictly enforced."

The department shortly propose to send up a detailed scheme for training waterworks personnel, as there is shortage of skilled staff in practically all the waterworks.

Referring to drainage, the report says: "The pollution of the rivers in the neighbourhood of all large towns by the discharge of raw sewage has reached alarming proportions, and is a contant menace to the health of the public. Artificial methods, such as the activated sludge process, will sooner or later, have to be adopted if the pollution of rivers is to be prevented.

Owing to the increasing demand for installation of sanitary fittings and the non-availability of sewers, a considerable number of septic tanks are now being constructed in residential areas due to the failure of the Boards to provide proper drainage facilities.

ALLAHABAD MUNICIPAL BOARD CENSOR

The U. P. Government's resolution on the report of the Committee appointed to enquire into Katra-Colonelganj drainage construction tragedy which resulted in the loss of lives of some labourers here is now available, almost every one connected being censured by the Enquiry Committee, namely, the Municipal Board, the Municipal Engineer, Contractors, the Executive Officer and the Public Works Committee. The first and most obvious cause of the tragedy, in the Committee's view, was the defective timbering of the trench.

The Governor regrets lack of responsibility and disregard of public interest as shown by the Allahabad Municipal Board and its Public Works Committee. He does not doubt the extraneous interests are largely the the cause of allotment of contract to an incompetent firm. The Committee has recommended a monthly allowance to the families of workmen killed and the matter is under consideration of the Governor. It may be recalled while the work of excavation was progressing the sides of trench which was dug to the depth about 18 feet collapsed, killing a number of labourers.

BENGALI MUSLIMS AND THE CORPORATION

At a meeting of the representatives of Bengali Muslims representing Bengali Muslim citizens of Calcutta and Mussalmans of Bengal, held in Calcuta recently, at 20, European Asylum Lane, the "All-Bengal Bengali Muslims Association" was constituted. Moulvi Syed Habibur Rahaman, the President, was in the chair.

The meeting adopted *inter-alia* following resolutions:—

This Association on behalf of the Mussalmans of Bengal expresses its deep concern that Mr. Huq, his Cabinet and his M.L.A. supporters, all being themselves Bengalee Muslims and elected to the Assembly by the Bengalee Muslims, have betrayed the interests of these very Bengalee Muslims in the Calcutta Corporation and deprived them of their legitimate civic rights in their own metropolis, driving out Bengalee Muslims from almost all nominated and elected Muslim seats of Corporation Councillorship and Aldermanship, making importation of non-Bengalee Muslims in Corporation services, all due to the introduction of the separate electorate by the suicidal Calcutta Municipal Amendment Act, based upon a demand made not by Bengalee Muslim citizens of Calcutta or Mussalmans of Bengal, but by a group headed by Sir K. Nazimuddin, Nawab Khaja Habibullah and Mr. Suhrawardy serving by this piece of reactionary legislation their selfish ends, preparing the ground for the next general election.

This Association, therefore, urges the Bengal Ministry to drop the second Municipal Amendment Bill, the offspring of the Calcutta Municipal Amendment Act, now pending before the Assembly and make an immediate amendment of the present Calcutta Municipal Amendment Act by restoring the joint electorate system of the monumental act of the late Sir Surendranath Banerjea.

This Association resolves to carry on an all-Bengal agitation on behalf of the Mussalmans of Bengal if the Bill is not dropped and the Act is not removed from the Statute book.

This Association urges the Bengal Ministry to make statutory provision for 25 Bengalee Muslim seats in Corporation councillorship and aldermanship and 25 per cent of Muslim services in the Corporation for Bengalee Muslims and adult franchise for them for Corporation election so that the number of Bengalee Muslim voters may reflect the actual population strength.

By the last resolution the Association deplores the attitude of the non-Bengalee Mulim authorities of the Calcutta Muslim Orphanage towards the rejection of Bengalee language from the curricula of the Bengalee Muslim students, compelling them against their will to read Urdu in place of Bengalee, which is their birth-right to read as their own mother tongue. The Association therefore draws the attention of the Bengal Ministry for redressing this just grievance of the Bengalee Muslim students by restoring to them their own mother tongue of Bengalee in the curricula of the Bengal Muslim Calcutta Orphanage School financed by grants from the Bengal Government, Corporation and contributions from the generous Muslims of Bengal.

Letters TO THE EDITOR

[The Editor does not hold himself responsible for the views expressed by the correspondents]

Conservancy Complaint

To THE EDITOR, "CALCUTTA MUNICIPAL GAZETTE."

Sir,—May I draw the attention of the Councilors and of the executive to the insanitary condition of the roads and streets of Calcutta specially of the northern quarters due to the discontinuance of the practice of flushing them by water. The cleaning by water had the salutary effect of not only washing down the dust and the filth thereby preventing spread of diseases but also lent the streets a bright and healthy look. The discontinuance of this practice has filled the roads and streets with dust, which are driven up now and then by the wheels of motor cars and lorries carrying with it the germs of diseases.

If the city-fathers really want the welfare of the citizens as they no doubt do, they should at once take steps to water the streets and remove the nuisance. The authorities should also see that streets are properly swept after they are watered.—Yours etc.

TARA PROSAD BANERJEE.
281, Chittaranjan Avenue, (North),
Calcutta,
The 17th April, 1941.

Calcutta Associations & Institutions

DARIDRA BANDHAB BHANDAR

ANNUAL GENERAL MEETING

The eighteenth ordinary annual general meeting of the members of the Daridra Bandhab Bhandar (to which are attached the Chittaranjan Databya Chikitshalaya, Ward III Health Association, Satchidananda Granthagar, Free Industrial School and Kusansashi Sebayatan) was held at 65/2 B Beadon Street, the new registered office of the Bhandar on the 4th May with Sir Hari Sanker Paul Kt., in the chair

The following office-bearers and members of the Executive Committee were elected for the year 1941 :—

President—Sir Hari Sanker Paul. *Vice-Presidents*—Pandit Sris Chandra Vedantabhusan, Dr. Sasi Kumar Sen Gupta, Messrs. Raghu Nath Dutt, Tarini Churn Law, Sudhir Chandra Nawn, Jatindra Kumar Das and Girindra Nath Ghosh. *Secretary*—Mr. Sudhir Chandra Ray Chaudhuri. *Assistant Secretaries*—Messrs. Chandra Sekhar Gupta, Manmatha Nath Bhattacharyya, Susil Kumar Ghosh and Prasanta Kumar Gupta *Treasurer*—Messrs. Nemai Chand Datta. *Members*—Messrs. Chaitanya Charan Pyne, Pramatha Nath Mukherjea, Nrendra Nath Kar, Nirmal Chandra De, Bimal Kumar Roy, Bhrendra Nath Sarbadhicary, Charu Chandra De, Joggeswar Roy, Akshay Kumar Mitra, Balai Chand Das, Moulvi Mosaheb Ali Khan, Dr. S. N Ghose, (*Health Officer, Corporation of Calcutta*), and Kabiraj Haroprasad Majumdar.

Messrs. M. K. Deb and S. M. Sen Gupta, B.Sc., R.A., were unanimously re-elected Hony. Auditors for the current year.

DILKUSHA INSTITUTE.

ELECTION OF OFFICE-BEARERS

The 21st annual general meeting of the Dilkusha Institute was held on Sunday, the 27th ultimo, at 5 p.m., at the Institute building at 66 Dilkusha Street, Khan Bahadur Alhadj Wahul Islam, Additional Chief Presidency Magistrate presided.

The meeting was opened with recitation of verses from the Holy Quoran. The annual report of all Sections (*viz.*, Library, School, Sports and Labour) of the Institute was read out by its Jt. Hony Secretary Mr. S. Abid Hosain, and that of the Building Fund was read out by its Jt. Hony. Secretary, Mr Serajuddin Ahmed. They were passed unanimously

The following Office bearers were elected :—

President—Khan Bahadur Alhadj Wahul Islam, *Vice Presidents*—Moulvi Md. Khalil Seth Haji Md. Yusuf and Khan Sahib Md Mohsin Khan *Jt Hony Secretaries*—Messrs Serajuddin Ahmed, and S Abid Hosain *Hony. Librarian*—Mr Md Siddique. *Hony Assistant Librarian*—Mr A M M Amjad *Captain* Mr Akram Hosain *Vice-Captain* Mr G M Khan—*Hony. Treasurer* Mr. Yaqub. *Members* Alhadj M A H Ispahani, Haji Md Hayat Khan, Mr Md Haneef, Dr S M Ali, Dr S M. Yaqub Hasan, Mr Q Zaman, and Mr. M A. Waheed Khan.

SPORTING COMMITTEE

Chairman—Alhaj M. A. H. Ispahani *Vice Chairman*—Mr Abdul Hamid *Hony Secretary* Mr Serajuddin Ahmed *Members* Seth Haji Md Yusuf Mr Md Haneef, Mr. Q Zaman, Mr Abdul Latift *Captain* Mr. Akram Hosain *Vice-Captain* Mr G M. Khan

DAKSHIN KALIKATA SEVASRAM

ANNUAL GENERAL MEETING

The annual general meeting of the Dakshin Kalikata Sevasram was held on the 30th March at 97, Lansdowne Road under the presidency of Mr Atul Chandra Gupta at 6 30 p.m.

The annual report and audited accounts were read and adopted

The following office-bearers were elected for the year 1941 :—

President Mr Sarat Ch. Bose *Vice Presidents*—Messrs. Atul Ch Gupta, Santosh Kumar Bose and Prabhudayal Himatsingka. *Secretary*—Dr. Gobinda Prosad Mitra *Assistant Secretaries*—Messrs Provat Kusum Ray Chowdhury and Sudhangsu Sekhar Nandy *Treasurer*—Mr. Prafulla Kumar Mukherji *Executive Committee* Messrs N C. Chatterji, B C Chatterji, Debabrata Mukherji, Indra Bhusan Bose, Tejoy Kumar Banerji Dhirendra Ch. Ghosh, Ramaprosad Mukherji, Amritalal Chatterji, Anath Bandhu Dutta, Abanti Ganguly, Nishit Ch. Sen, Manindra Nath Banerji, Susil K. Banerji Paritosh Banerji, Biswanath Mukherji (Sr.), Biswanath Mukherji (Jr.), Sukumar Ray, Kulada Ranjan Sengupta, Satyendra Nath Chatterji, Siblal Sha, Dhirendra Nath Ganguly, Himangsu Sekhar Ghosh, Khitindra Kumar Mitra, Romesh Chandra Ganguly, Subinoy Roy Chowdhury, Suhrid Kumar Ghosh. Anil Kumar Banerji, Anukul Chatterji, Hem Chandra Rauth, Rishikesh Mitra, Kanailal Dey, Sudhi Ranjan Das, Beman Banerji, Sudhangsu Sekhar Mukherji, Sarat Chandra Chakraborty, Dr. Prafulla Chakraborty, Dr. Nripendra Nath Mukherji,, Dr. Bomkesh Bose, Dr. Amar Nath Mukherji, Dr. Sudhangsu Kumar Mukherji, Dr. Charu Ch. Chatterji, Miss Mira Dutta-Gupta.

LEGAL INTELLIGENCE

CORPORATION'S APPEAL

(Before Mr. Justice Mukherjea and Mr. Justice Roxburgh)

THE CORPORATION OF CALCUTTA—APPELLANT

vs.

DR. BOSE'S LABORATORY, LTD.—RESPONDENT

This was an appeal on behalf of the appellant, the Corporation of Calcutta, against the decision of the Small Cause Court Judge at Sealdah, allowing the appeal preferred by the respondents, Dr. Bose's Laboratory, Ltd., and directing the case to be sent back to the Corporation for fresh assessment of the premises in question under section 127 (b) of the Calcutta Municipal Act (*i.e.*, on the basis that the premises were for residential purposes).

It appeared that Dr. Bose's Laboratory, Ltd., preferred an appeal before the Small Cause Court Judge at Sealdah against the assessment of the premises No. 10, Radha Madhab Dutt Garden Lane, which had been assessed by the Corporation under section 127 (a) of the Act (*i.e.*, on the basis that the premises were for letting purposes and to be assessed on a rental basis). The company's contention was that the premises were neither erected for letting purposes nor were ordinarily let. It was further alleged that the factory was not on No. 10 of the lane but was housed in the premises Nos. 11 and 13 and no separate notices were served with regard to those premises.

The Corporation produced the Assessment Register which showed that Babu Charu Chandra Bose and Dr. Bose's Laboratory, Ltd., were the recorded owners of the premises No. 10 and as such the factory had been rightly assessed under section 127 (a).

The Small Cause Court Judge found that the company being the owner and occupier of the factory buildings, the assessment had been made on a wrong basis; the assessment should have been made under section 127 (b) of the Act. The case was accordingly directed to be sent back for re assessment under section 127 (b). Against the said decision the present appeal was preferred by the Corporation on various grounds.

Their lordships admitted the appeal.

Mr. Pashupati Ghosh appeared for the appellant Corporation

VITAL STATISTICS

For the City of Calcutta for the week ending 3rd May, 1941

CITY OF CALCUTTA (TOWN & SUBURBS)

The total number of deaths registered during the week was 808 against 901 and 902 in the two preceeding weeks and higher than the corresponding week of the last year by 170. The general death-rate of the week was 36·8 per mille against 30·1 the mean of the last five years.

Town (*Wards* 1—25 *and* 27.)

The number of deaths registered during the week ending 3rd May, 1941, was 687 against 788 and 762 in the two preceding weeks. There were 109 deaths from cholera, against 143 and 117 in the two preceding weeks. There were 88 deaths from small-pox during the week against 169 in the previous week. There were 2 deaths from influenza against 1 in the previous week. The mortality from fevers and bowel-complaints amounted to 22 and 76 respectively against 23 and 93 in the preceding week. The general death-rate of the week was 35·7 per mille per annum.

106

PEOPLE DIED

OF

There were 31 imported deaths. Excluding these, the death-rate of the Town was 34·1.

There were 105 deaths from respiratory diseases against 90 in the previous week.

There were 81 deaths from tuberculosis against 53 in the previous week.

There were 121 deaths of infants under one year.

Suburbs (*Wards* 28—32)

The number of deaths registered was 121 against 113 and 140 in the two preceding weeks. Of these 17 were from cholera, 18 from small-pox, nil from influenza, 5 from fevers, 20 from bowel-complaints and 22 from respiratory diseases. The death-rate of the suburbs (or added areas) was 44·3 per mille.

There were 5 imported deaths. Excluding these, the death-rate was 42·4.

There were 11 deaths from tuberculosis against 7 in the previous week.

There were 22 deaths of infants under one year.

CORPORATION NOTICES

To Contractors

Tenders are invited in duplicate for the following and will be received by the Second Deputy Executive Officer on the date noted for each, up to 2 p.m. Each tender in duplicate must be enclosed in a sealed cover and superscribed—"Tender for....." For specifications and tender forms apply to the Keeper of Records between 11 a.m. and 3 p.m. on week days and 11 a.m. and 1 p.m. on Saturdays. Price Rs. 2 per set.

1. Removal of the Refuse Platform from its present site at Chingrihatta to Dhappa Emergency area :—

A—Construction of Refuge Platform
B—Construction of cooly lines
C—Construction of roads.

2. Supply and delivery of Straw at District IV Gowkhana during the rest of the year 1941.

3. Supply of motor lorries for carrying filtered water in the Manicktola area during 1941-42.

Tenders for 1 will be opened on 20th May, and for 2 and 3 on 23rd May, 1941. The rates quoted in tenders for the above are to hold good for three months

N.B.—All cases of delay over a fortnight in the execution of agreements in respect of works and supply of materials will be reported to the Committee and the parties will not be allowed to execute the agreements after that period without obtaining orders of the Committee.

In case a party deposits earnest money by cheque, he must deposit the cheque at least three working days before the date of opening of the tender.

The contractors should maintain an uniformity of their names and styles of business, appearing on various documents, *e.g.*, Treasurer's receipts, tender forms, agreements, licenses and bills.

Any deviation from this on the part of any contractor whenever detected, will render his tender liable for cancellation.

Where tenders are submitted by a Corporation, it should be signed by a principal officer of the Corporation or by an agent duly authorised in that behalf and be attested by a witness. Where it is submitted by a firm, it should be signed by the proprietor or one of the partners or by an agent duly authorised in that behalf by the firm and be similarly attested

BHASKAR MUKERJI,
Secretary to the Corporation.

Central Municipal Office,
The 15th May, 1941.

Time Extended.

Re : Registration of names as contractors for Petty Plumbing and Petty Improvement Works for the year 1941-42

Street Alignment.

Notice is hereby given, under Section 302 of the Calcutta Municipal Act III (B. C.) of 1923, that the Roads and Bustees Standing Committee of the Corporation, in exercise of the powers, delegated unto them in this behalf, have considered it expedient to prescribe the alignment of the paved public passage off Girish Mukherji Road, by the side of premises No. 24/2, Girish Mukherji Road, and connecting it with Ganga Prosad Mukherjee Road by two east to west arms, to a width of 16 feet in Ward 22.

Any person, having any objection to the same, should submit it in writing, so as to reach the undersigned, on or before Saturday, the 7th June, 1941

J. C. MUKERJEA,
Chief Executive Officer

Central Municipal Office,
The 7th May, 1941.

Notice is hereby given under Section 302 of the Calcutta Municipal Act III (B C) of 1923 that the Roads and Bustees Standing Committee of the Corporation in exercise of the powers delegated unto them in this behalf have considered it expedient to prescribe the alignment of Anath Deb Lane and Gopal Samanta Lane connecting Raja Manindra Road and Manmatha Dutt Road in Ward 30, to a width of 40 ft each.

Any person having any objection to the same should submit it in writing so as to reach the undersigned on or before the 7th June, 1941.

J. C MUKERJEA,
Chief Executive Officer

Central Municipal Office,
The 8th May, 1941.

Notice.

Offers are invited for the purchase and removal of slag, flue ash, etc., from the New Incinerator Plant at Goragatcha

The slag is obtained from the plant mainly in the following grades :—

(1) 1½ in. to 1 in.
(2) 1 " " ¾ "
(3) ¾ " " ½ "
(4) ½ " " dust

The other products are —

Flue dust, under-grate dust, ash, scrap iron and other magnetic materials.

The total output varies from 1500 c ft. to 2.000 c.ft. per day.

The crushed slag can be very well used for various purposes, such as (1) general concrete work, (2) precasted concrete shapings, bricks (hollow and solid), etc., (3) sheet asphalt work, (4) construction of roads for light traffic

The following are the terms of contract which the party will have to enter into with the Corporation :—

(1) The party shall have to remove daily all the products mentioned above from the New Incinerator Plant at Goragatcha Road.

(2) In case the party fail to do the same, the Corporation will have the right to dispose of the products in any manner they choose and the cost of the products as well as the removal costs shall be realised from the party.

(3) The contract will run on yearly basis. But the Corporation will be prepared to consider any proposal for a longer period on terms to be mutually agreed between the party and the Corporation.

(4) The party will quote their rates for the whole of the products per 100 c.ft.

(5) Bills are to be made out by the Manager, Incinerator Plants, every month and payments will have to be made within three weeks of the following month by the party.

(6) The Corporation shall have the right to retain for their own use not more than 30 per cent. of each kind of products.

(7) The party will be required to deposit Rs. 500 in cash or in Calcutta Municipal Debenture as security deposit for due performance of the contract which sum will be refunded at the expiry of the period of contract.

Offers in sealed covers superscribed 'Purchase and Removal of Slag, etc.,' from the New Incinerator Plant at Goragatcha will be received by the Second Deputy Executive Officer up to 2 p.m. of the 30th May, 1941.

Further particulars may be obtained from the Manager, Incinerator Plants at Goragatcha.

BHASKAR MUKERJI,
Secretary to the Corporation.

Central Municipal Office,
The 7th May, 1941

Workshop Apprenticeship Examination

Applications are invited for permission to sit for the Competitive Examination to be held in Calcutta on 14th June, 1941, for admission of 10 Apprentices to the Corporation Workshop at Entally. The applicants must have passed the Matriculation Examination, obtaining 50 per cent. marks in Mathematics or Mechanics. The age of the candidates should not be less than 15 years or more than 19 years on the 1st of July, 1941. The candidates will be tested for physical fitness before admission to the Competitive Examination. Applications should be submitted to the Chief Engineer, Calcutta Corporation, in the prescribed form along with the mark sheets before the 31st May, 1941. Printed application forms may be had from the Keeper of Records at 5, Surendra Nath Banerjee Road, Calcutta, at Rs. 2 per copy. Certificates will have to be shown at the time of examination.

B. N. DEY,
Chief Engineer.

Central Municipal Office,
The 30th April, 1941.

Notice to Rate-payers.

The attention of the rate-payers is invited to the provisions of Section 145 of the Calcutta Municipal Act of 1923, regarding obligation to give notice of transfer of title in land or building.

The Section runs as follows :—

"145 Whenever the title in any land or building, or in any part or share of any land or building, is transferred, the transferee shall, within three months after the execution of the instrument of transfer, or, if no such instrument be executed, after the transfer is effected, give notice in writing of such transfer to the Executive Officer.

Provided that in the event of the death of the person in whom such title vests, the person to whom, as heir or otherwise, the title of the deceased is transferred by descent or devise, shall within one year from the death of the deceased, give notice in writing of such transfer to the Executive Officer".

Their attention is further drawn to the penalties prescribed under Section 486 of the Act for non-compliance with the provisions of Section 145. It may be noted that a fine of Rs. 25 may be imposed for failure to give timely notice of such transfer and a daily fine amounting to Rs. 5 may also at the discretion of the Court be imposed.

J. C. MUKERJEA,
Chief Executive Officer

VITAL STATISTICS—Continued from page 924

For the City of Calcutta for the week ending 10th May, 1941.

City of Calcutta (Town and Suburbs).

The total number of deaths registered during the week was 712 against 808 and 901 in the two preceding weeks and higher than the corresponding week of the last year by 91. The general death-rate of the week was 32·3 per mille against 29·9 the mean of the last five years.

Town (Wards 1—25 and 27.)

The number of deaths registered during the week ending 10th May, 1941, was 607 against 687 and 788 in the two preceding weeks. There were 95 deaths from cholera, against 109 and 143 in the two preceding weeks. There were 58 deaths from small-pox during the week against 88 in the previous week. There were 2 deaths from influenza against 2 in the previous week. The mortality from fevers and and bowel-complaints amounted to 20 and 71 respectively against 22 and 76 in the preceding week. The general death-rate of the week was 31·6 per mille per annum.

There were 25 imported deaths. Excluding these, the death-rate of the Town was 30·4.

There were 92 deaths from respiratory diseases against 105 in the previous week

There were 53 deaths from tuberculosis against 81 in the previous week.

There were 114 deaths of infants under one year.

Suburbs (Wards 28—32.)

The number of deaths registered was 105 against 121 and 113 in the two preceding weeks Of these 11 were from cholera, 13 from small-pox, nil from influenza, 3 from fevers, 18 from bowel-complaints and 15 from respiratory diseases The death-rate of the suburbs (or added areas) was 38·5 per mille.

There were 7 imported deaths. Excluding these, the death-rate was 35·7.

There were 7 deaths from tuberculosis against 11 in the previous week.

There were 21 deaths of infants under one year.

Health should not be made to wait

Mission Row, Calcutta

Sound Plumbing means health and longevity

MARKET NOTICES.

1. It is recommended that coolies should be paid at the following rates :—
10 Minutes—Two pice. ½ Hour—One anna. 1 Hour—Two annas.
Every succeeding hour or part of an hour—One anna.

2. Coolies for carrying bazar purchases are obtainable at all the principal entrances and care should be taken that only coolies bearing number badges are engaged. For the current half-year "A" class coolies have been allowed a Khaki coat with Red numbers on a Blue Black badge. "B" class coolies of Hogg Market have Rectangular brass number badges. Entally Market licensed coolies have Semi-circular brass arm badges.

3. Any complaints about coolies should be made at the Superintendent's Office, giving the number of the cooly.

4. All complaints relating to the conduct of vendors should be made to the Superintendent. No action can be taken where the articles in dispute have been removed from the shop premises or in regard to transactions which are not brought to the notice of the Superintendent at the time of occurrence.

5. To avoid conflicts of statements both as regards the goods purchased and the nature of the sales, customers are requested to insist on getting a voucher, as far as practicable.

6. If goods are taken "on approval," customers are recommended to obtain a voucher to that effect stating the price paid.

7. Any articles lost or found in the market should be reported at the Superintendent's Office.

8. No dogs, bicycles, tricycles or perambulators are allowed inside the market.

9. For the convenience of the public a stand is provided at the south-west corner where the visitors can keep their bicycles in charge of the lessee thereof on payment of a fee of 0-1-0 for a Bicycle and 0-2-0 for Motor Cycle, the Corporation not having any liability in this connection.

10. Customers are requested that if they suspect any weight used by any vendor of the market to be short, they will bring the matter immediately to the notice of the Superintendent when the weight will be duly tested in the Office and the vendor punished if it is found short.

11. The public and the shop-keepers of the market are requested to assist in the mitigation of the beggar-nuisance by refraining from giving alms of any description within the market.

12. Customers are requested to examine the coins, obtained in the course of transaction, before they leave the shop. Ordinarily no action can be taken against the shop-keeper if any spurious coin is alleged to have been detected after they leave the shop.

FOOD AND DRUG CONTROL

By

BT.-COL. SIR RAMNATH CHOPRA, KT., C.I.E., M.A., M.D. (Cantab), SC.D. (Camb), F.R.C.P., I.M.S. (Retd.)

&

DR. B. MUKERJI, M.D.

Biochemical Standardisation Laboratory, Government of India, Calcutta

EVERY civilised country in the world has been faced at one time or another with the menace of adulteration in some sphere of human endeavour. The extent and nature of adulteration varies in different countries but there is no country which can claim to be absolutely immune. Adulteration in food products has existed from the very beginnings of community life. The practice of drug adulteration is of later origin. The importance of supplying pure foods and drugs to the masses and its indirect bearing on the promotion of national health and well-being is seldom realised. This is particularly evident in India where an attitude of *laissez faire* is adopted in these matters and things have so far been allowed to drift. Though attempts have been made from time to time to improve the state of affairs by legislative enactments, their enforcement has never been satisfactory. This will be evident from a perusal of the Report of the Public Health Commissioner with the Government of India for 1937, which reads as follows:—

> "Adulteration of the common article of food is widely practised in India and the attention which has so far been devoted to this subject by health authorities has been wholly inadequate in relation to its importance. Important articles of food, *e.g.*, milk and milk products, are everywhere subjected to a large degree of adulteration. One of the causes of this deplorable state of affairs is almost complete apathy with which the public view the matter. As it has been pointed out by the Public Analyst to the Government of Madras, education of the general population would therefore seem to be essential, if success is to be achieved in any campaign against food adulteration. Certain improvements in administration would seem equally necessary. The [redacted] of legal

authorities are vested in elected chairman, who are subject to continual pressure from their electorates."

Extent of Adulteration in India

(1) *Food adulteration* :—The comparative tables presented below will indicate the extent of food adulteration in India and Great Britain.

machinery. In all civilized countries, every effort is now being made to safeguard the health of the community and the interests of the purchaser, manufacturer and seller by instituting suitable legislative enactments and by insisting on their successful enforcement. In Great Britain, the Food and Drug Adulteration Act of 1875 has been recently repealed (1938) with a view to controlling the manufacture,

INDIA.

Province.	Food article.	Extent of adulteration (Municipalities and Distric Boards).
Bengal (1937)	Mustard Oil	32—38%
	Ghee	44—45%
	Milk	65—66%
	Butter	*Nil* to 77%
	Dahi	40—92·7%
	Ata & Wheat flour	2·0 to 4·7%
	Tea	19·0 to 25·0%
Madras (1937)	Milk & Ghee	35 to 40%
Bombay (1938)	Milk & Ghee	3—78%

N.B.—Approximate consolidated figures are given from Public Health Reports.

GREAT BRITAIN.

Area.	Good articles.	Ext. of adulteration.
England & Wales (1930)	All commonly used food articles.	2·8%
London City (1930)	,,	2·8%
Birmingham	,,	3·7%

N.B.—Approximate figures of 500 samples analysed per Public Health Reports.

(2) *Drug adulteration* :—No systematic records are available with regard to drug adulteration in this country, as there was no proper machinery so long in India to analyse and standardize drugs. From the experience gained in the Biochemical Standardization Laboratory, since 1937 where more than 1,500 samples have been analysed both by biological and chemical methods, it appears that the percentage of adulteration may be as high as 46 per cent. In Great Britain, if similar figures are worked out, it will surely not extend beyond 5 per cent.

Though a strict comparison of the conditions between India and Great Britain is not possible, it is apparent from the tables and figures presented above that adulteration is very low in the latter country. *A more efficient control both by legislative and executive machinery is to be credited for this encouraging state of affairs.*

Need for Control

The necessity for protecting public health by regulating the sale of foods and drugs has been recognised from early times. Ancient Indian literature of the time of *Asoka* contains records indicating the existence of food and drug control measures. Heavy punishments were meted out to offenders. The early system of control, however, gradually deteriorated during the many political and administrative upheavals through which India passed during successive conquests by the Tartars, Huns, Mohammedans and the English. Only during this century, the ideas regarding the control of foods and drugs and the public health aspects of such control have again emerged from the chaos ; and to-day, this is gradually, but surely, coming to be recognised as one of the primary functions of a progressive State

importation, distribution and sale of foods and drugs of all kinds in such a way as to protect the consumers from trickery and fraud of all descriptions. In America also, considerable attention has been drawn to the subject by the Federal Food, Drug and Cosmetic Act, of 1938, which has been so designed and modified as to check every conceivable form of danger to public health through the consumption of unwholesome foods and adulterated drugs.

In British India

A comparison of the conditions existing in Great Britain, America and India points irresistibly to the fact that India is not under as efficient a system of control in this regard as are the progressive Western countries. It will be interesting, therefore, to examine where the defect lies and how this can be remedied. It has been often remarked that there is no suitable legislation prohibiting the sale of adulterated foods and drugs in British India and because of this, a large group of offenders, who are plying a profitable trade by undermining community health, cannot easily be brought to book and penalised, as is possible in Great Britain and America, for example. This remark is only partially correct. An examination of the Statute books reveals that there are a number of legislative enactments, both Central and Provincial, which give adequate powers to penalize offenders coming under this category. Most of these legislative measures, however, have remained practically dead letters in India, because a suitable machinery for analysing and standardizing foods and drugs and giving technical opinion on their quality and extent of adulteration had not been created simultaneously with the legislative measures. The defects in the method of control which are responsible for such widespread

adulteration in almost all staple articles of food and all commonly used drugs and pharmaceuticals in India may be traced, on ultimate analysis, not so much to the absence of legislative prohibitory enactments (though these may have contributed partly to such results) but mainly to the absence of adequate machinery for the analysis and standardization of drugs and food products. The truth of this statement will be evident if we examine the status of present legislative measures in respect of food and drugs in the country.

Existing Legislations

(1) *Central*:—There is no enactment of the Indian Legislature which aims directly at the prevention of adulteration of food and drugs or which ensures their conformity to proper standards of purity and strength. The Opium Act, 1878, the Poisons Act, 1919 and the Dangerous Drugs Act, 1930, though they control the manufacture, importation and sale of certain drugs do not exercise any precise bearing on the subject of adulteration or standards of strength. They are designed to meet excise and customs requirements and to prevent the illicit use of certain dangerous drugs. The Indian Penal Code, the Indian Merchandise Marks Act, 1889, and the Sea Customs Act, 1878, however, contain some provisions bearing on food and drug control. Intentional adulteration of any food or drug so as to lessen its efficacy or change its operation or to make it noxious and the actual sale of any such drugs are penalized by sections 274 and 275 of the Indian Penal Code, while the sale of a drug as a different drug or preparation is punishable under section 276 of the Indian Penal Code. The fraudulent sale of a food or drug, which is not of the nature, quality or substance demanded by the purchaser, will also amount to cheating under section 415, Indian Penal Code.

The Cantonments Act, 1924, extends to all the Cantonments in British India. It empowers the Cantonment authority to enter any shop or place and seize any article of food or medicine which is adulterated or is different from what it is represented to be along with any utensil used for preparing, manufacturing or containing it. If the Health Officer or the Assistant Health Officer is also of the same opinion, the article, if perishable, could be destroyed forthwith. In other cases, the owner or the person in possession of the article is punishable with fine and the article itself liable to forfeiture or destruction.

(2) *Provincial*:—Almost all the Provinces in British India have fairly elaborate legislative measures for the control of food and drug adulteration. These are modelled more or less on the lines of the English Food and Drugs Act with only minor differences in detail. In Bengal, we have the *Bengal Municipal Act of* 1884, which applies to the municipalities in Bengal other than Calcutta. It deals with foods and drugs but does not treat them similarly. The Act confers powers of entry and inspection on the Commissioners or those authorised by them and empowers them to seize foods or drugs suspected to be adulterated or deteriorated so as to lessen *their efficacy, change their operation or render them noxious*. While the magistrate could order destruction of the article in the case of both foods and drugs, the infliction of fine on the person in possession is permissible in the case of food only and not of drugs. There are provisions for the purchase of samples of food for analysis, but none such exists to protect the drugs offered for sale.

In Bengal

The Bengal Food Adulteration Act, 1919 applies to the whole of Bengal, except Calcutta, and is confined to foods. There is no such *ad hoc* legislation in respect of drugs. The *Calcutta Municipal Act, 1923* applies to Calcutta only and deals with foods and drugs in a fairly comprehensive manner. It defines the expressions 'adulterated' and 'misbranded' in relation to foods and drugs. The sale, manufacture and storage for sale of 'adulterated' or 'misbranded' foods and drugs or foods and drugs which are unsound, unwholesome or unfit for human consumption are prohibited, subject to exceptions in the case of (1) the innocent addition of non-injurious ingredients, (2) the unavoidable intermixture of extraneous substances in the process of collection, and (3) the sale of articles in accordance with their patents. There are provisions for the inspection, seizure, analysis and destruction of foods and drugs which appear to be adulterated, unsound, unwholesome or unfit for medicinal purposes and of utensils used for preparing or containing them which are of such a kind or state as to render the food and drug unsound, unwholesome or unfit for medicinal use. The Local Government may declare the normal constituents of any food and drug and determine by *rules* what deficiency in constituents or addition of extraneous matter will raise a presumption that the food and drug is not genuine or is injurious to health. *A Public Analyst* is to have regard to such rules in certifying the result of his analysis. The duties of inspection, etc., devolve on the Health Officer or any person authorised by him in this behalf.

The Bengal Excise Act, 1909, mainly deals with the licensing of, and levy of duty on, excisable articles and not with the maintenance of their purity. It, however, punishes the admixture of any noxious or objectionable substance with any excisable article (which does not amount to an offence under section 272, I. P. C.), as well as the infringement of any rule regarding the reduction of the strength of liquor. In actual practice, it is stated that the Excise Department exercises an indirect control upon the quality of the manufactured articles.

From the above, it will be seen that the Central Government as well as the Provincial Government in conjunction with the Municipalities are *prima facie* armed with considerable powers for dealings in the adulteration of foods and drugs. In actual practice, however, these laws are not of much avail. *The absence of specified standards of all foods and drugs used, the lack of supervising staff (Inspectors),*

entrusted with special duty of keeping vigilant watch over cases of infringements of law and the *absence of properly equipped laboratories* for analysis and standardization and detection of adulteration have rendered the provisions ineffective. The powers given under the Acts for confiscation of adulterated foods and drugs and for levy of penalty are rarely enforced. The control is thus far from being strict and evasion is easy. The provisions though more or less satisfactory have, therefore, naturally remained practically inoperative. In the case of foods, the municipalities and District Boards have done creditable work in many directions but due to lack of co-operation, public interest and administrative difficulties, much progress has not been achieved yet. Drugs have fared worse than foods in many respects.

The Drugs Act, 1940.

It is a welcome sign of the times that the baneful results of food and drug adulteration on public health, on community life and on honest commercial endeavours are being more and more appreciated by the educated public. Of late, encouraging attempts have been made both by the Calcutta Corporation, the Karachi Corporation and several scientific bodies such as the Institution of Chemists (India), to draft a Pure Food Bill incorporating improved provisions for the control of food adulteration. Increasing efforts are being made by many Provincial Governments to insist on public bodies like the Corporations and Municipalities to exercise more stringent vigilance towards the control of food adulteration (milk, *ghee*, mustard oil, etc.). The problem of food adulteration, however, is a vast one and is not easy of solution unless a bold and energetic policy is adopted, and the problem is attacked on all fronts.

Ths Government of India have recently shown commendable zeal and interest in this important public health problem by putting in the Statute Book, the Drugs Act, 1940. This Act has not yet come into force but will, it is hoped, be enforced in the near future. This is an All-India Act and includes within its scope all aspects of the control of importation, manufacture, sale and distribution of drugs. Under the Act, provisions have been made for a *Central Drugs Laboratory*, which will be staffed with competent technical personnel capable of carrying out analysis, both by biological and chemical methods, of samples of imported and locally manufactured drugs, and to give opinion in cases of complicated and disputed analyses. A *Drugs Technical Advisory Board* will be set up to advise the Central and the Provincial Governments on all technical matters arising out of the administration of this Act. The Act further authorises the Provincial Governments to employ *Government analysts* and *Inspectors* with powers to visit manufacturing establishments, check stocks of dealers in drugs and to send suspected samples for analysis by the Government analysts. This Act, it may be confidently hoped, will effectively control the serious situation with regard to drug adulteration and spurious drug trade in this country.

A Heavy Toll

Adulteration of foods and drugs has a serious bearing on public health. Adulteration in other spheres may lead to mere financial loss, but in the case of foods and drugs it may mean a heavy toll of human life. Therefore, this may be considered as one of most cruel forms of injury to public health and community life. No other public health measure requires so urgent an attention as the control of adulteration in foods and drugs and the institution of proper measures to supply pure food and drugs at a cheap price to millions of under-nourished and sick people in India. The money spent in maintaining an adequate machinery for control is well worth spending and will not be a bad investment. It will pay a dividend in the shape of national well-being and fitness.

THE FIRST DRUG STORE

The First Drug Store in the world was established in Bagdad in the year 1000 A.D. Up to this time the herb rooms of the physicians served as dispensaries of drugs. The Convents also, as acts of charity, distributed medicines to the poor and needy free of cost.

THE POST-GRADUATE TEACHING *of* MEDICAL MEN *in* INDIA

A PLEA FOR INCREASED FACILITIES

By

LT.-COL. H. E. MURRAY, B.A., M.D., M.CH., F.R.C.O.G., I.M.S.,

Professor of Midwifery, Medical College, Calcutta

THE medical student goes through and completes his course in the most ideal surroundings. From the very start of his studies he receives the best of teaching in the orthodox subjects of Anatomy, Botany, Zoology, Chemistry, Physics and Physiology. These subjects, except for Physiology to a certain extent, are mostly concerned with facts and thus "advancement" in them is more or less non-existent in comparison with Medicine, Surgery, Obstetrics & Gynaecology, and those newer subjects such as Biochemistry, to say nothing of Pathology and Bacteriology.

The student is taught in well-equiped and excellently arranged institutions, medical schools, hospitals etc., by men and women of the highest ability and knowledge: Teachers who are continuously keeping abreast of contemporary and modern day thought and practice. The student, therefore, is constantly being instructed in the ever advancing part of the science of Medicine, as well as in those sections of unchanging facts which will remain for all time. Therefore, when the great day dawns on which the student becomes a graduate of his medical school, he can truly be described as one who is an up-to-date finished product of his school in his first degrees as far as it is humanly possible to make him.

Alas, only too many of these finished products never go any further. Too many of them not only do not feel the urge or necessity to take higher qualifications, but they are content to rest for the rest of their lives on the original laurels won, and not only to rest on them but to stagnate and rot on them, for we can never in this world remain in a status quo as regards study and knowledge. We must either continue to learn or we shall surely forget.

There are some, of course, who, with all the wish in the world, are debarred either from financial, family or health reasons from continuing their medical courses to the higher degrees, but they can subscribe to various medical periodicals and so at any rate read of the latest thought and methods. And, lastly, there is that envied class who have the means, time, opportunity and inclination to read and sit for the higher qualifications, and it is to these men and women that in their turn become the Professors of subjects, leaders of medical science, and the teachers of the future generation.

II

WHILE it is only a certain number who can ever rise to this eminence, it should be that every medical man and woman should have some post-graduate teaching at stated intervals. This applies to both the city and country doctors. The latter require it more than the former on account of their distance from the centre of things. The former class meet together and arrange discussions amongst themselves, and pay visits to other towns and countries for the purpose of these discussions. The financial burden is borne, to a great extent, by the individual himself, and sometimes it is possible to be invited as a guest just for accommodation. The country class are often not able to avail themselves of this form of post graduate discussion, and so if at all possible the doctors come up to the large towns: back to their own old medical schools, to do refresher courses as often as they can. In the United Kingdom, America and other parts of the world there are courses. Some are elaborate and long. Others are simple and short. Every kind of post-graduate study for every kind of doctor, to suit every size of purse is provided. There is no free course, but almost every doctor in these countries takes at some time or other in his life, and as often as he can, post-graduate training, and so endeavours to the best of his ability to advance his knowledge for the benefit of himself and his patients.

The foregoing is a resume of the methods in vogue in other countries, and has been described purely as a comparison to what is being done in India, and as a criterion for India to strive after. Before going further, it may be stated here at in the United King-

dom and America there is to the best of the writer's belief no arrangements for the post-graduate teaching of nurses. A qualified nurse may of course take out her certificate of "the Central Midwives Board": her "Sister Tutor's degree"; her "Housekeeper's certificate": her "Electro Therapeutic and Massage" certificate etc., but these are definite projects entailing the attendance at regular courses of instruction with the examination in view, and the examination has to be passed. There are no purely refresher courses, not necessitating an examination, for nurses.

III

NOW to turn to India, and especially Bengal, in which province it is the writer has had most of his experience in civil medical work in India.

First of all, one must realise that whereas in Calcutta and the *Suddar* towns of districts there are to be found medical men, both European and Indian, who possess a very high degree of medical knowledge and ability, and who lose no opportunity of continuing to learn something every day and of keeping abreast of contemporary practice, a very different state of affairs exists in the mofussil districts. In such places the medical men in charge of dispensaries etc., are certainly a type who do not possess the knowledge and ability of their "brethren" in the metropolitan areas. Many of them have been qualified a long time and for years have been medical officers under the "District Board" or local municipality. Many of them are long past the retiring age of 55 years and are partially blind and deaf, but because of compassionate grounds are kept at their posts while younger men, perhaps their own relatives are vainly seeking for some appointment and getting more and more soured with disappointment. Country practice without an official or semi-official post with pay, is so un-lucrative that doctors hesitate to take it up. Therefore, the only doctor usually to be found in these small villages is the type referred to. It is only too true that he soon sinks into a daily routine of the simplest nature. His pay is poor; so he cannot provide himself with books and the periodical of current medical literature. He cannot attend the post-graduate work at the colleges in Calcutta for the following reasons:—

(*a*) Financial, as he would have to pay for these.

(*b*) Family, as he cannot leave family and there is no facility for bringing his family about.

(*c*) Unless he is on the cadre of the Government medical service he is not permitted to take out the recognised post-graduate course in the Medical College Hospitals.

It stands to reason, therefore, that in a very short space of time such a doctor is behind the times and every year gets more behind, and when he is a really old man, partially blind and deaf and having forgotten 90 per cent. of what he learned at College some 50 years previously, he is a menace. It is to improve this state of things that this plea is put forward. Until post-graduate training is available to all, desired by all, and it is to be hoped made compulsory for all, the mofussil doctors in India cannot improve, and until they do improve the general health of the public must suffer.

IV

IT has been shown that for various reasons, the country doctor cannot come to the towns for his post-graduate teachings, so the teaching must be brought to the country districts.

The writer, therefore, suggests that in much the same way as the travelling eye-dispensaries bring help for eye conditions, that teachers should be sent round the circuit of the various towns in Bengal, say for a month at a time in a district, and there give lectures and demonstrations to the district doctors. The travelling teachers would have to be good men, keen and knowledgeable, and receive good salaries as otherwise good men would not take up this work, and so defeat the project at the start. If this suggestion meets with the approval of public spirited people then the working out of a scheme is only a matter of detail The new "Rural Uplift" movement might perhaps sponsor such a scheme of post-graduate training outlined above. One last plea and that is that the age-limit for retiring from service in the district dispensaries should be rigidly fixed at not older than 55, and extensions of service be not given.

There are only too many young doctors who are bitterly disappointed at their inability to get appointments while they see around them old men, not only long past their period of usefulness, but really public dangers, keeping them from obtaining the employment, which should, on account of their ages, legitimately be theirs.

HEALTHOUGHTS

Can you account him wise or discreet that would willingly have his health and yet will do nothing that should procure or continue it?—ROBERT BURTON

THE DEVELOPMENT of PUBLIC HEALTH in AMERICA

By

WILSON G. SMILLIE, M.D.

Head of Dept. of Preventive Medicine, Cornell Medical College, U.S.A.

THE development of public health on the North American continent may be divided into six fairly definite periods:

1. The Colonial Period, which began with the first settlements in Virginia in 1608 and continued through the end of the Revolutionary War.
2. The Period of Great Epidemics, 1800-1850.
3. The Dawn of Sanitary Consciousness, 1850-1875.
4. The Golden Era of Communicable Disease Control, 1875-1900.
5. The Promotion of the Health of the Individual, 1900-1925.
6. The Integration of Preventive Medicine with Clinical Medicine, 1925 to the present.

The Colonial Period

THE first physicians in the Colonies came to Jamestown under contract; they were there primarily to care for the sick explorers, to do any necessary surgery following accidents and the hazards of battle, and to promote the health of the colony in so far as it was possible to do so. They obviously did not intend to stay and make careers for themselves in the New World. In fact, when Captain Smith was injured by a gunpowder explosion, there was at the time no physician in the colony, and it was necessary for him to go home to England for treatment.

Samuel Fuller was the first physician who really came to stay. He was on the Mayflower and was a pious, sincere, and devoted man. The problems he encountered during the first few years were devastating. Over half his flock died the first winter from privation, starvation, and illness of various kinds, and life in those first years was extremely hazardous. Eight years after he came to Plymouth, Dr. Fuller responded to a call at the new settlement at Salem, where there was an epidemic. Just what this was we do not know—probably it was small-pox; but in any case, this devoted first physician died in this epidemic in 1629.

The problems that the physicians encountered were varied, although we are not sure what diseases gave them the greatest concern. We do know that a terrible epidemic swept over the Indians shortly before the Pilgrims arrived at Plymouth. Apparently this epidemic was brought to the continent by the Spaniards in Mexico, swept up through Arizona, New Mexico, crossed the Mississippi River and finally invaded the tribes in the east, wiping out almost one-third to one-half the people of some of the tribes. This great epidemic may have been measles, but more probably was smallpox. In any case, it so weakened the Indians that they were not in a position to make effective resistance when the white settlers landed.

Medical knowledge at that time was so limited that we really have no idea what were the major public health problems. Riverius, whose Latin work was one of the first medical books translated into English (1657), wrote five books, all of which could be incorporated in the pages of an ordinary medical book today; these contained all the essential medical knowledge of the day. Sydenham did not publish his famous studies until 1676, and only at that time was measles differentiated from other fevers. Physicians in the early Colonial days did not devote their entire time to medicine—in fact, most of the doctors were also clergymen. One reason for this was that clergymen were highly educated men, who read Latin readily, and since all medical books were published in Latin, it was an easy matter for them, in the course of their theological training, to spend a few short months acquiring the available medical knowledge.

Thus, we find that the first medical publication in the Colonies was by Thomas Thacher, a Boston clergyman who also had had medical training. It was a broadside, published in 1677, entitled "A Brief Rule to Guide the Common People of New England How to Order Themselves and Theirs in the Small Pocks, or Measels." This publication was mostly an exhortation to the people for their personal guidance

for the prevention of an epidemic of smallpox that was raging in Boston at that time, and it is interesting chiefly as a medical curiosity.

The colonists were devastated by a variety of diseases, most of which seem to have been imported from Europe and the West Indies. There was probably no plague or cholera at that time, but yellow fever continually invaded the colonies, and smallpox was a terrible scourge. The chief public health activities were attempts to control epidemics, largely by maritime quarantine. Thus, we find regulations in regard to quarantine of ships from the West Indies as early as 1701. The results were not satisfactory, largely because the people did not understand the principles of communicable disease transmission, and especially did not understand the incubation period of disease.

The promotion of community cleanliness was considered a public health responsibility from the very first. We find references to the disposal of garbage and refuse, and particularly ordinances relating to the prevention of bad odors. The reason for this, of course, was that people believed that all disease was transmitted by decaying animal and vegetable proteins.

The first immunization procedures of which we find record were instituted by Zabdiel Boylston. He began inoculation as a preventive against smallpox in 1722. He was urged to take this action by Cotton Mather, the fiery theological leader of the day. Boylston met tremendous opposition and was stoned in the street ; a mob came to burn his house, but he received full support from Mather and eventually came to be regarded as a great public benefactor.

The case fatality rate of smallpox was reduced from 20-25 per cent. where the disease was acquired in the "natural" way, to 3-5 per cent. of those inoculated by Dr. Boylston. This inoculation method was the only effective preventive against smallpox until Jenner's discovery of cowpox vaccination at the end of the century. The method was somewhat dangerous and had the disadvantage that the patients, though they had the disease in a mild form, might transmit to others and produce a severe disease.

At the end of the Revolutionary War, closing the Colonial Period, we find that there were thirteen colonies, widely separated, with no departments of public health and very few physicians, most of them poorly trained. One medical school in Philadelphia had been firmly established and one other was just getting under way in New York. There were no departments of vital statistics. Physicians had no understanding of the mode of spread of disease. The colonies had a high birth rate, but also a very high death rate. Thus, increase in population was largely by immigration. Periodic devastating epidemics swept over the land. This had been particularly true during the war, so that the whole nation was badly disorganized. It is true that a firmly established nation had obtained a foothold in a new world, but it had required nearly 200 years to achieve this end. In fact, as much time elapse from the Jamestown settlement to the end of the Revolutionary War as has elapsed from the Declaration of Independence to the present day.

Medical practice and public health procedures in this period may be epitomized in the yellow fever epidemic that occurred in Philadelphia in 1793. Philadelphia was at the time the national capital, the largest city in the land, with a population of about 35,000.

The summer had been dry and hot, with a pestilence of mosquitoes. Dr. Benjamin Rush was the leading physician of the day. Washington, the President, was in Mount Vernon on vacation, and most of the Government officials had left the city when the epidemic began on August 20. Rush made the diagnosis on that date, but the epidemic really did not get under way until the first of September. By October 16, over 4,000 people had died of yellow fever in Philadelphia. Dr. Rush himself had the disease, as did every person in his household. He saw his sister die, and lost three of the five young assistants who lived and worked with him. He was the first to make the diagnosis of the disease and first to inform the authorities of the presence of yellow fever in the city.

Dr. Rush believed that there was and could be but one fever, and that all its varieties typhus fever, pleurisy, consumption, measles, intermittent fever (malaria), yellow fever, and all the rest, were symptoms of a "primary disease in the sanguiniferous system". All kinds of fever were preceded by general debility, and this debility was brought about in various ways, from miasmata to violent emotion. On this extraordinary and preposterous foundation he built his complicated structure of the phenomena of fever through 36 pages of confused thinking and completely erroneous conclusion *

Thus, when yellow fever struck Philadelphia in August, he was sure that it was not contagious, nor had it been introduced from the West Indies. It was due to a pile of spoiled coffee that had been "thrown on Mr. Ball's wharf . . . in the 24th of July . . . which had putrefied there." He treated the early cases to this source of infection, communicated his information to Dr. Hutchinson, inspector of sickly vessels, and having expressed himself forcefully on this matter of the cause of the outbreak, he set about his deadly rounds of treatment.

Fifteen grains of jalap and ten grains of calomel constituted a single treatment. Three doses were given six hours apart. He stated: "The effects of this powder not only answered, but far exceeded my expectations." . . . . . "But I did not rely upon purging alone to cure the disease. The theory of it which I had adopted led me to use other remedies to abstract excess of stimulus from the system. These were blood-letting, cool air, cold drinks, low diet, and applications of cold water to the body."

* Rush, Benjamin. "Medical Inquiries and Observations chapter on The Phenomena of Fever. Vol. III, p. 3 ff (1815 edition).

This last technique consisted in "buckets full of cold water to be thrown frequently" upon the patient; but later was modified to application "by means of napkins to the head," and injection "into the bowels by way of clyster", after "three out of four of my patients died, to whom the cold bath was administered." "A gentle vomit of ipecacuanha" was resorted to on the first day of the fever, and of course, infusion, powder, and tincture of chinchona bark were given freely, with blisters "to the limbs, neck, and head." "The quantity of blood drawn was proportioned to the violence of the fever. Sometimes the loss of a hundred ounces was required for a cure."

Dr. Rush consulted with patients until he became so exhausted that he was in a complete daze. He went to bed, but got no rest; he saw a hundred patients a day at their bedsides; thirty or more distressed fathers talked to him in quick succession while he ate his dinner. He became so steeped in the dreadful miasmata that when he rubbed his hands they gave off a sulphurous smell, and his night perspiration became so offensive that he had to draw his bed clothes close about the neck "to defend myself from the smell."

He saw his best friends die in quick succession, and lost all sense of sorrow and grief. With dogged courage he fought his way from home to home to minister to the sick. The weather was hot and dry, with very little wind. "*Mosquitoes (the usual attendants of a sickly autumn) were uncommonly numerous.* Here and there a dead cat added to the impurity of the air." "A meteor was seen at 2 o'clock in the morning about the 12th of September."

In his review of the epidemic Rush devotes 27 pages to a discussion as to the non-contagious nature of yellow fever, and then goes on to prove that it arises from putrefying animal and vegetable matter. His enumeration of the substances that may produce the summer and autumnal fevers encompasses most of the bad smells of the day. Among others may be mentioned exhalations from marshes, rotten cabbage (which was particularly dangerous), rotten potatoes, onions, peppers, Indian meal, coffee; wet cotton, hemp, and flax; musty old books and paper money, the timber of an old house, green timber in a new ship, bilge water, stagnating rain water, hog sties, duck ponds, locusts, spoiled salt beef and salt pork, raw hides, fish entrails, and *privies*. Putrid vegetable matter was worse than putrid animal matter. He is able to cite instance after instance in which exposure to each and every one of these various effluvia has resulted in sudden illness and death of individuals, sometimes wiping out whole families, destroying the entire crew of a ship, and even developing widespread epidemics.

These views of Dr. Rush as to the cause and mode of spread of many of the common communicable diseases were so strongly entrenched in the minds of physicians, and of laymen as well, that they persisted right down through the 19th century and well beyond the period of the development of the science of bacteriology.

As we review the naive absurdities of Dr. Rush's reasoning, we find only a few grains of sound wheat in all the chaff. He made an exact early diagnosis of the disease and warned the authorities of an approaching epidemic. His clinical description of his cases is precise, and many of his epidemiological observations are exact: the fact that the disease began at Ball's Wharf, that white refugees from the recent revolution in the French West Indies were immune, and that Negroes were less affected than the whites. The universally hot, dry weather, with stagnation of streams and springs, and particularly the stagnant water in the rain barrels and cisterns were noted, but their true relationship to the epidemic was not understood. Finally, we find the reference quoted above to the "uncommonly numerous" mosquitoes.

It is all so simple to us, for we now know the secret. Things are no plain to us that, like children playing "hunt the thimble", we cannot understand why Dr. Rush could be so stupid when all the evidence was at his finger tips. The disease came from the West Indies by ship during the hottest part of July. Because of the hot, dry season, conditions were unusually favourable for development of the household mosquito responsible for the transmission of yellow fever. If only the rain barrels had been turned over to check mosquito breeding the whole chain of tragic events would have been broken. The tremendous efforts expended by Dr. Rush in treatment did more harm than good, for the disease, once established, runs its course. Stephen Girard, the financier who had volunteered to organize and run the emergency hospital at Bush Hill, really accomplished something, for he gave the patients rest, food, and nursing care and organized a home for the children made orphans by the epidemic.

When frost finally came, and infected "mosquetoes" were destroyed, the epidemic ceased. We now know, of course, that the whole population might have been injected with a simple yellow fever vaccine, which would have prevented the epidemic from gaining headway.

The Period of Great Epidemics

THE first local Boards of Health were authorized in Massachusetts in 1797, and Boston organized the first local Health Department in 1799, with Paul Revere as its chairman. These Health Departments concerned themselves chiefly with isolation and quarantine, disinfection and the promotion of environmental cleanliness. They were more or less sporadic in their activities, received little or no compensation, and usually were most active during and after epidemics.

Cowpox vaccination was introduced by Benjamin Waterhouse of Cambridge, Massachusetts, in 1800. He secured some silk threads inoculated with cowpox virus from Jenner, and thus began vaccination against smallpox in the United States. Compulsory vaccination, however, was not the vogue, and smallpox continued as a serious menace for more than half a century.

The period from 1800 to 1850 is the period of great expansion. The nation grew from a narrow strip of territory along the Atlantic Coast to practically its present proportions. Settlers pushed across the Appalachian Mountains into the Mississippi Valley. The Louisiana Purchase opened up huge territories. Florida was acquired, and finally the gold rush to California in 1849 expanded the nation from the Atlantic to the Pacific, and from the Canadian boundary to the Gulf of Mexico. It was also a period of great immigration, particularly from northern Europe. This was hastened by persecutions in Germany and famines in Ireland.

Despite the enormous growth in area, resources, and population, there was little increase in the knowledge of methods of handling and preventing disease, and because of the rapid immigration, the moving about from place to place, the increase of population, and the growth of cities, the period was marked by devastating epidemics. The overtones were smallpox, cholera, yellow fever, and typhus fever. These produced the peaks of the death-rate curve. But concealed beneath these mountain peaks of epidemics was the great mass of disease that took its toll year by year. The death rate from tuberculosis, for example, grew to proportions of 300 or more per hundred thousand population. Diphtheria, scarlet fever, pneumonia, typhoid fever, and especially the diarrheal diseases of infancy, took a terrific toll.

There was little understanding of the mode of transmission of disease, and the pioneer spirit was every man for himself, the strong to survive, the weak to perish. This period represents the dark ages of the control of disease and the promotion of public health in the United States.

The Dawn of Sanitary Consciousness (1850-1875)

Lemuel Shattuck is the founder of public health in the modern sense in the United States. He was not a physician, but a bookseller. He first became interested in vital statistics, and in 1845 published a small book called "The Census of Boston", which discussed the causes of death in the city and the various economic and social factors that were influential in the production of these deaths. The Legislature asked Shattuck to make a study of the sanitary condition of the State, and the Report of the Sanitary Commission of Massachusetts of 1850, which was published by the Legislature, is almost entirely from the efforts and the pen of Lemuel Shattuck himself. It has become a classic in the public health field in the United States. He was undoubtedly influenced by the sanitary awakening in England, and drew much of his sound information from the activities that were already under way in Great Britain. He was a man of great foresight, however, understood the needs of the United States, and worked out a plan in which most of its details is still being carried out. For example, he recommended the formation of state health departments, and the appointment of full-time health officers, trained and well qualified for their work. Yet it required 19 years before the first State Health Department was established in Massachusetts, in 1869. He recommended the development of schools for training nurses, and this recommendation was soon carried into effect and has had a wider influence on public health than almost any other recommendation that he made. Shattuck recommended also the teaching of preventive medicine in the medical schools and the establishment of full time professorships in this subject.

Shattuck's recommendations were so farsighted, so carefully developed, so well suited to national conditions, that even today, nearly 90 years after the publication of his report, we have not succeeded in carrying out to the fullest extent all the improvements which he suggested, and which we now know were so wise.

The first Sanitary Congress in the United States was held in 1857, and three were held thereafter—in 1858, 1859, and 1860. These meetings were highly controversial, interested chiefly in the control of yellow fever, and devoted to acrimonious discussions as to whether or not this disease was contagious and how yellow fever was to be prevented. This organization, however, served a useful purpose and undoubtedly would have advanced public health in this country, except for the fact that it was abandoned at the beginning of the Civil War. The formation of a permanent national public health organization was postponed until 1872, when the American Public Health Association was formed.

One other striking public health advance occurred in 1867. Stephen Smith, a young practitioner of New York, became interested in the high incidence of typhus fever in certain sections of the city. He investigated the home conditions of these people, and was so shocked by his findings that he secured the support of a citizens' committee of New York to make a sanitary survey of the city. This report of the Citizens Committee on the Sanitary Condition of New York, published in 1867, was instrumental in the formation of the Metropolitan Board of Health. Furthermore, it fired Stephen Smith with a lifelong enthusiasm for public health, and he, with a few of his friends, saw the necessity for a national public health association in 1872. Public health may be said to have been finally launched in this country and established on a firm basis with the formation of the American Public Health Association, and all credit belongs to Stephen Smith, to Dr. Rauch, State Health Officer of Illinois, and to J. M. Toner, Elisha Harris, Ezra Hunt, and a few other devoted men, who brought the association into the world and carried it through its troublesome period of infancy and early childhood.

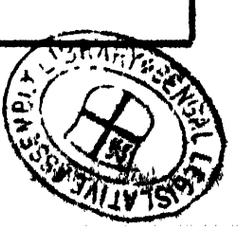
The Golden Era of Communicable Disease Control (1875-1900)

The twenty-five years that followed the organization of the American Public Health Association were marked by the greatest advance in methods of control of communicable disease that has ever occurred in the world. Pasteur had discovered the

true cause of infectious disease, and his studies were to result in the rapid discovery of most of the principle [illegible] of contagious disease. One after another, [illegible], typhoid fever, diphtheria, pneumonia, [illegible] scores of other diseases were determined to be due to specific organisms. Knowing the cause of the disease, the mode of spread and method of prevention could be worked out with a reasonable degree of success. Thus, practically the entire energy, thought, and activity of health department officials during this period was devoted to the modes of control of contagious disease, and the results were extraordinarily successful.

Some mistakes were made, of course. Gaseous disinfection was considered an essential part of communicable disease control, but it was soon discovered that this procedure was not effective and it was abandoned.

Diphtheria antitoxin was discovered in 1894, and specific prophylaxis and immunization procedures against disease were begun. It was a glorious epoch in the development and promotion of public health in the nation, but was marked by inefficiency, poor administration, and great lag between the acquisition of new knowledge and its direct application for the benefit of mankind.



Individual Health Promotion, 1900-1925

THE promotion of the health of the individual had its inception long before 1900, but it really did not begin to develop its fullest effectiveness until after the beginning of the century. It is impossible to say just when this point of view in relation to the health of the people originated. The district nursing service which was organized in the early eighties was intended essentially as a bedside nursing service for the sick poor. Certainly the founders of this organization had no idea that they were inaugurating a world-wide public health activity, nor that they were assuming an essential function that eventually would be considered as a public responsibility. Nathan Straus, who established milk stations for the benefit of the sick child of the slums, probably never realized that he had opened a page of a great book which was eventually to be entitled "Child Health and Infant Welfare". An epidemic of diphtheria in the schools of Boston resulted in the appointment of school physician; but little did Samuel Durgin realize the ramifications of the school health program that was to be developed within 25 years.

In a few short years the concepts of infant hygiene, prenatal service, well-baby clinics, venereal disease clinics, dental hygiene, and a score of other related activities, became incorporated as part of the normal activity of a health service; a definite public responsibility to be assumed by full time, trained personnel, paid from the public purse. This change in the point of view in relation to the promotion of public health developed so rapidly that many mistakes of administration were made. The demand was so great that new activities were developod before properly trained personnel could be secured to carry out the activities effectively. Since preventive medicine was taught so ineffectively in most medical schools, the physicians who were in practice were not prepared to carry out the various special activities of this new field of work. Conflict and misunderstanding between the official health service and the organized medical profession unfortunately but inevitably occurred. Leaders in the public health field soon saw how stupid and unnecessary was this friction, so that steps were taken toward the last and present phase of the development of public health in the United States, namely, *the integration of preventive medicine with clinical medicine*. This is the period in which we find ourselves at present, and all of us are famliar with its various aspects and the trends that are developing at the present time.

Thus, in summary, if we are to learn anything from this hasty survey of the development of public health in America from the earliest Colonial times down to the present time, we learn the essential fact that it is a flowing stream, sometimes moving with great rapidity, at other times with sluggishness, or with whirlpools and counter currents, but always increasing with the streams of new knowledge that pour into it as it advances, always changing, but always maintaining the same direction. The great advantage of a prevention of this sort is that it not only gives us an opportunity to review the achievements of those who have gone before us, but it also points to the trends of the future and shows us the probable course of events that will unfold themselves. It also encourages us to carry out our best efforts to bring about the proper and expeditious solution of the problems that will arise in the course of these developments.

I

SHOCKED I expected to be, even before I had set out from my home. As, however, the motor carried me across the Thames at Westminster Bridge, this feeling became more and more intense.

Naught else could be expected in the circumstance, I said to myself. I was going to meet a newspaperman who had been stricken blind. Nothing could be worse than that, I thought.

As this emotion surged within me it threw me backwards into time gone by. I found myself once again in the first fortnight of 1910. I had just crossed over from the United States of America. When on the point of leaving New York an editor who took keen interest in me, then in my late twenties, handed me a letter. It was addressed to the conductor of a great evening paper with offices in Shoe Lane that opens out of Fleet Street. Woodward was his name. He, in turn, had put me in touch with his uncle—C. Arthur Pearson—who, at the time, controlled a large and influential section of the London press comprising dailies, weeklies and monthlies.

And now that great power in the publishing world was blind. On the shelf, I fancied him to be. So obsessed was my mind with this notion that by way of greeting I said:

"I am very sorry, Sir Arthur, to find you in this helpless condition."

"Helpless?" he queried. "Helpless? Ah! You refer to my blindness. A handicap, no doubt, but it has not rendered me helpless. Far from it.

"God bless your soul!" he continued. "I cannot see, it is true. But I have learnt to do without my eyes. I have developed five eyes in each hand. Every morning I get up, shave myself, dress myself—all without assistance. You see, I am sure, no cut across my cheek or chin, do you?"

I admitted, somewhat abashed, that a man with two eyes could not have shaved himself closer or have avoided cuts and scratches more skilfully.

Resuming the thread of his talk, as if there had been no interruption, on my part, he went on

"I go about the house, up the stairs, down the stairs, as need be, from floor to floor, without knocking against the woodwork or masonry. I cut up my meat with knife and fork without injuring myself or soiling my shirt-front or the tablecloth.

"And what is more, I do a full day's work here at the office."

II

AS I soon [illegible] for myself, the blinded [illegible]on was working, if anythi[illegible]harder than the sighted Pearson had done. Now, however, he was not working for himself—piling up profits—he was working for others.

These others were men who had been blinded by man's perversity —by man's inhumanity to man.

Across the sea they had gone, some weeks or months, may be a year or two before, in the flower of their manhood, to fight the terror that had been let loose upon the Continent and had spread from there to Asia and Africa. In one theatre of war or another they had been blinded. Some had lost a limb or more in addition to being bereft of their sight. Brought back to their native shores, these blinded fighters were being helped by the blinded newspaper Baronet to overcome the handicap in as large a measure as possible—to be self-reliant and self-supporting, despite their dreadful disability, just as he had made himself be

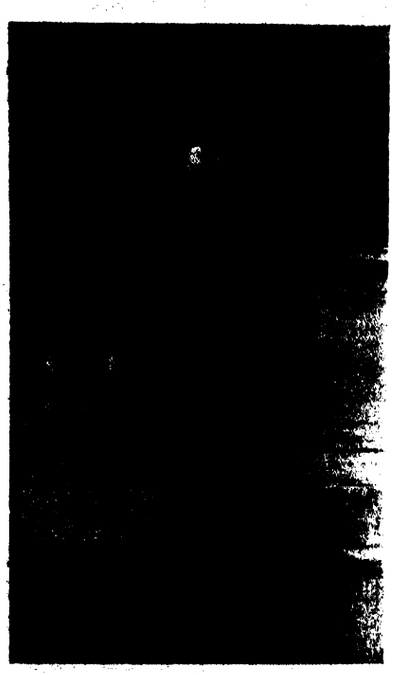
The place in the neighbourhood of Regent's Park where I met my old editor had been the summer home of an American financier-Mr. Otto Kahn—where he holidayed far from the fuss and flurry of Wall Street. Moved by the plight of men who had been blinded while fighting, he handed it over to Sir Arthur Pearson to help them to help themselves.

—Here the blind leads the blind

With the mansion standing in large and beautifully laid-out grounds as a nucleus, that organizing genius had proceeded to build up St Dunstan's Institution for blinded Sailors and Soldiers—or St Dunstan's, as it was generally called for short. The principle upon which it was conducted was to take in men who, in their country's cause, had suffered a grievous loss, and send them out of that home filled with a spirit that was cheerful despite their handicap ; and with skill in their hands that would enable them to support themselves and even their dependants without being beholden to anyone. Such was the ideal.

III

I was surprised and delighted as I went out of the office in which I had had that inspiring talk



into the corridor, thence into one room after another and finally across the huge, green, carefully clipped lawn, on towards a lakelet in one corner of the grounds. Men blinded in both eyes were going about on one errand or another, or for exercise, without stick or other support, with almost the sure-footedness of the sighted. At a question from me, Pearson's secretary, who was accompanying me, called my attention to the strips of carpet and the little knobs that, in the initial period of their stay at St. Dunstan's, gave them indications as to where they were and whither they were going.

"These aids," he explained, "these invaluable aids almost compensate for sight."

Each department that I visited was a hive of industry ; a hive not

Unable to do anything else, this disabled ex-fighter sold matches on the street and thus made a living.

merely because of the intensity with which the work was being done, but also because of the spirit pervading it. There was that buzzing in each room that cadences joy—joy that comes only when the fight against a dire difficulty has been successful.

In one room blinded soldiers were being taught to weave baskets and mats ; in another to make and to repair boots ; and in a third cabinet and carpentry work. I was quite prepared to see blind persons make baskets and mats, for that is a sort of traditional occupation for them the world over. I was, however, greatly surprised to see them working with sharp tools necessary for carrying out boot repairs and carpentering. They handled them with as much ease as if they had their sight, never so much as scratching, much less cutting themselves. The instructors in both departments were themselves totally blind, so it was really a case of setting the blind to lead the blind. I was told that the soldiers trained in the boot department were, in some cases, earning a pound a week doing repair work.

The blind instructor in the carpenter shop was specially expert at taking raw men, like agricultural labourers who had never done anything of the kind before, and, in a remarkably short time, inducting them into the mysteries of wood-working. It was not a case of knocking together pieces of timber, but of producing furniture that was pleasing in appearance and sound in construction. I was shown drawing room tables, desks, bookshelves and trays that did not show a single dent where the hammer or saw had struck them carelessly.

The work of teaching a blind man one of these trades, my guide informed me, did not stop till he had learnt it so well that, without any assistance or supervision, he could be independent when he left the Institute. One man, for instance, had made Rs. 3,300 in 45 weeks after he had been set up in business for himself.

Another section that interested me greatly was the poultry farm. There the blinded fighters were initiated into the mysteries of the incubator ; taught to distinguish the breed of a fowl by the sense of touch ; and instructed how to draw and truss one ready for cooking.

Blind men were at work in the garden growing vegetables to feed the poultry and also for human consumption. They worked efficiently with spade, hoe and rake. Had I not been assured that they were totally blind I should have taken them for ordinary gardeners employed for that purpose.

In another part of the grounds men were being taught netting and were busy making hammocks, shopping bags, fish-nets and similar articles. Those who so

Since an artificial foot or leg did not affect a disabled soldier's capacity to use his hands, he was able to do light jobs as a handy-man and thus earn his livelihood.

desired were trained as telephone operators, and even divers.

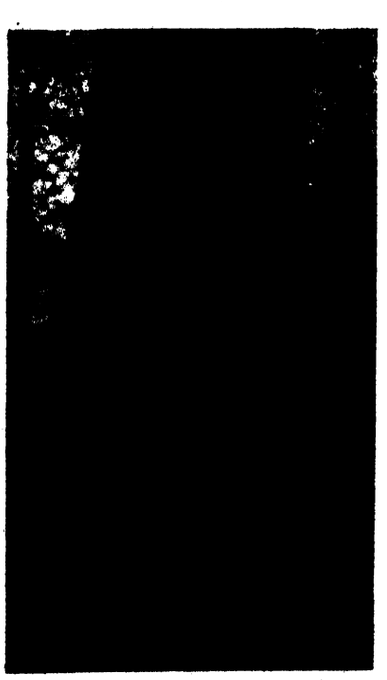
Another profession found specially suitable for blinded soldiers was massage. The teaching was eminently practical.

An assortment of human bones was placed on a long table around which sat several blinded men. One of them might be holding the skeleton of a foot, slowly and carefully passing his hand over the bones, noting their characteristics and peculiarities. The teacher told him the name by which it was known to science and also the tendons with which it was bound to others and the muscles with which it was operated. In this way men who knew nothing of anatomy before being blinded became conversant with it. Among other aids there was, I noted, a complete model of the human body, so constructed that every muscle, nerve and bone was fully defined and every organ was removable.

After becoming well grounded at St. Dunstan's in anatomy and physiology, the student was passed on to the Institute for Massage by the Blind—conducted by the National Institute for the Blind —St. Dunstan's parent—which provided unexcelled facilities for teaching massage to sightless persons. When he had completed his period of instruction,

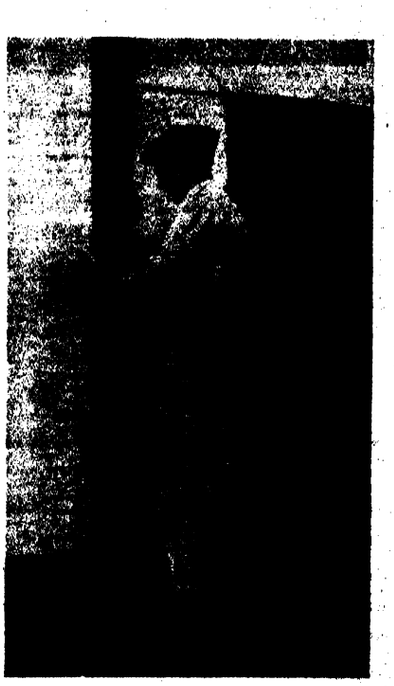
A London hospital that was always full, even beyond capacity, with wounded soldiers during the last war.

the blind pupil went up for the examination prescribed by the Incorporated Society of Trained Masseurs. The tests were exceedingly stiff—the same for blind as for sighted persons. In one examination, I was told, a blind man from St. Dunstan's had topped the list, while another had stood sixth. Once he left the Institute, a blind masseur was able to earn about Rs. 35 a week. Many had not earned even a third of that amount before the war, when they had their sight.



IV

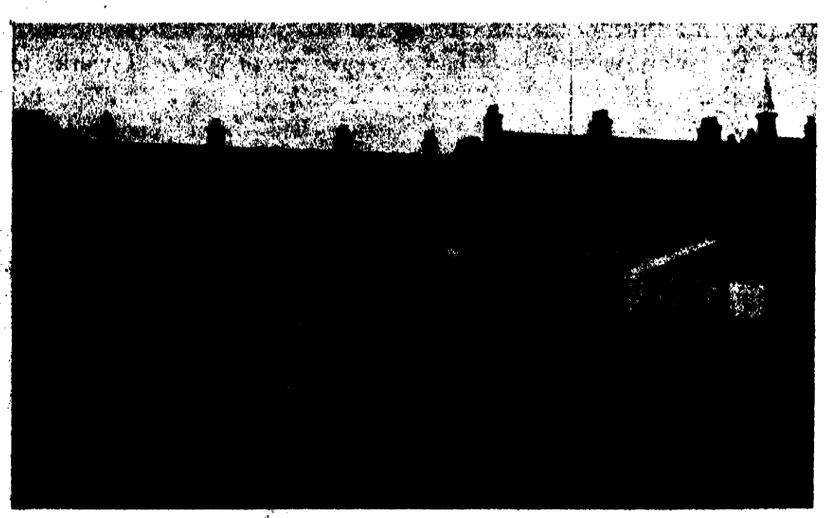
PRIOR to being given training in one or another useful trade or profession, all blinded fighters were taught the Braille system of reading for the blind. This knowledge enabled them to refer to such books as may be recommended for them to study. It opened up the avenue to professional work, too.



A system of Braille shorthand had been invented, also a small machine for the blind to use for making their notes. It was as ingenious as it was simple. By pressing the various keys, a series of dots were embossed upon a narrow strip of paper tape. When the end of the composition was reached, the tape

Some men disabled in the last war learnt to work with the left hand. This chap chose window-cleaning as his new trade.

Where the disability permitted it, men mauled by Moloch in the last war became skilled chauffeurs.



Men with one arm or with an artificial arm or hand were able to work as painters and even as masons, using the left hand.

was torn off and wound back on the wheel. Any one conversant with Braille could run his finger-tips over the raised dots and read what had been written.

I was amazed to see that some of the blinded shorthand writers were able to take down dictation as fast as my principal secretary, who was not only sighted but had also had the advantage of university education. I was even more surprised to watch them transcribe from their notes rapidly and accurately.

One man working at a typewriter specially interested me. My attention was drawn to him by a contraption attached to the machine at which he sat. It looked novel to me. In a moment or two I discovered its purpose. By pressing his right thigh against a long bar that had been fixed to the typewriter, he shifted the spacer. This he had to do because he had lost his left arm in addition to his sight.

A London Infirmary in which incurable and totally helpless persons found rest and loving care.

V

SOME time later, while talking with a friend, an eminent specialist in Harley Street, I happened to enthuse over what I had seen at St. Dunstan's. After remarking "fine work, that," he asked me:

"Have you been to Roehampton?"

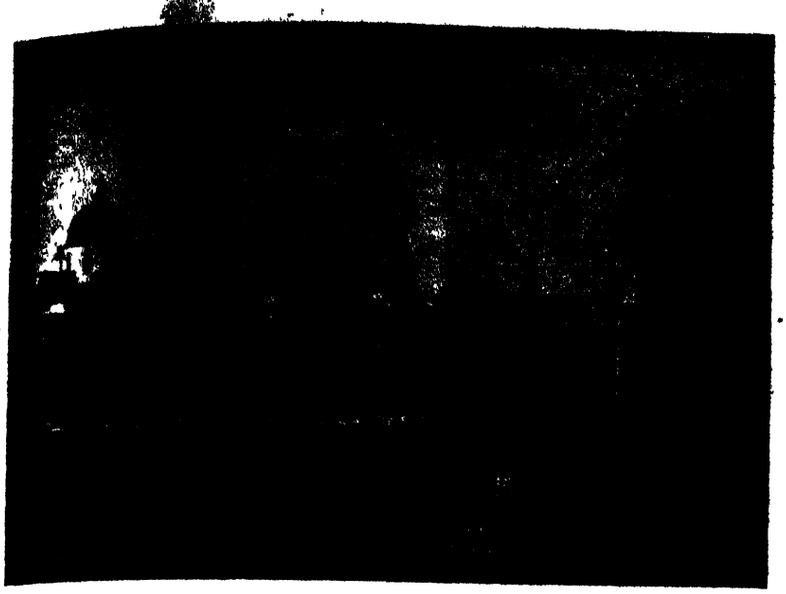
Immediately an encounter that I had had several years earlier rose before my eyes. Mr. W. T. Stead, unquestionably the most distinguished journalist of his time, at any rate in Europe, with whom I was then intimately associated, had given me an address. "If you go past the golf course at Roehampton," he said, "and up such and such an avenue, you will find a house bearing, to your surprise, a name borrowed from your country—borrowed without acknowledgment, I dare say. In that house you will find a collector of picture—pictures, mind you, not necessarily photographs—from which you can choose the two or three we need for illustrating the article in the *Review of Reviews* (of which he was the editor-proprietor). That will be the simplest, quickest and cheapest way to get over the difficulty."

I went. London then, to me, was a wonderful world to be explored on any pretext or without one. Every turn of the wheels of the huge motor bus revealed to me something new. Nothing was more interesting, however, than the man who opened the door at the address bearing the Indian place-name. It was high noon, but he was still in his dressing gown and genially invited me to share with him a cup of "breakfast coffee."

The Harley Street specialist laughed. "There are places in Roehampton other than the house with an Indian name and an unconventional occupant," he said. "You go to this address, see what there is to see and then tell me what you think of it."

I went as soon as I could. Into the room to which I was conducted at that address sauntered a man and taking a chair facing me he said:

"From India? So I judge from the name on the card you sent in." While quizzing me about my Motherland he took a cigarette case out of an inner coat-pocket and, opening it, held it out to me. Needless to say, I—a Sikh—declined, with thanks. He then took a match-box out of his side trousers pocket, struck it and lit his "fag."



"Let me see something of what you are doing here," I asked, the first moment I decently could.

By way of reply, he removed his coat and waistcoat, rolled up his right shirt-sleeve and, pointing to his arm, said: "You see? The bulk of this fore-arm and the gloved hand are only bits of steel hinged together and controlled by chains and strings."

After a little pause for effect, he showed me the inner mechanism of an artificial hand and arm. It immediately became easy for me to understand how, by merely raising or lowering the shoulders, ropes were pulled and wheels set going which took the place of the muscles and tendons of the natural hand and arm.

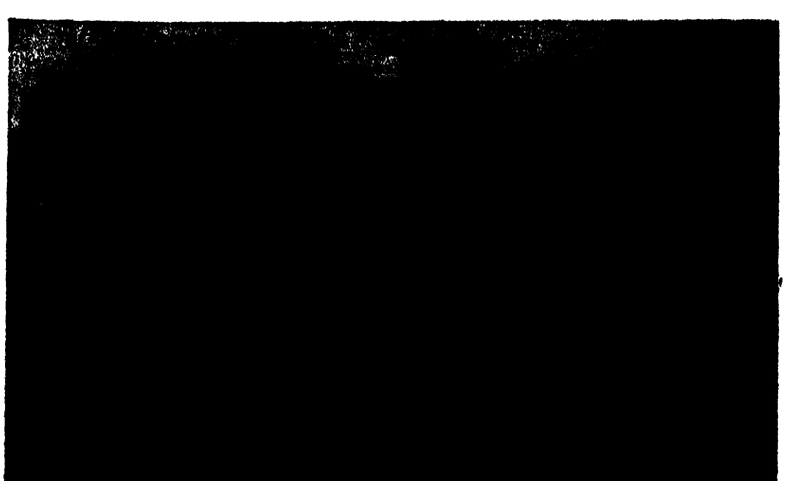
Then I learnt that the gentleman who had received me and with whom I was talking was Mr. V. S. Borreld, in charge of the Carnes Artificial Arms and Hands Bureau at Roehampton. This institution was only one of a series of enterprises set up by sympathetic men and women in Britain to enable fighters who had lost one or more limbs to be fitted with artificial ones specially made for them.

Often not only had an artificial limb to be supplied, but also what remained intact of the body had to be cured of ailments. For this purpose the wounded man was sent to a sister institution. It was located in Brighton, famed as "London by the Sea." The salt-laden breeze there was, in itself, a tonic to him. With the attention given him by doctors and nurses and nutrition graduated according to his needs and assimilative powers, he became well and strong.

Trafalgar Square, London was a favourite gathering place for convalescent wounded soldiers during the great war . . . .

No amount of talk could, however, be effective if it [illegible] with the facts of life. A man who was minus a hand or a foot could not be cheerful unless he could reasonably hope to maintain himself and his family. In a great many instances he could not go back to the heavy manual labour in which, before he became maimed, he was engaged. Having had no training for a skilled trade, the future could not but look black to him.

Here it was that the institution at Roehampton came to his rescue. The specialists took careful stock of his physical and mental resources. If they found that he had become unfitted to go back to his old occupation or may be that, even before his disability, he had been a misfit in it, they would devise means effectively to help him.

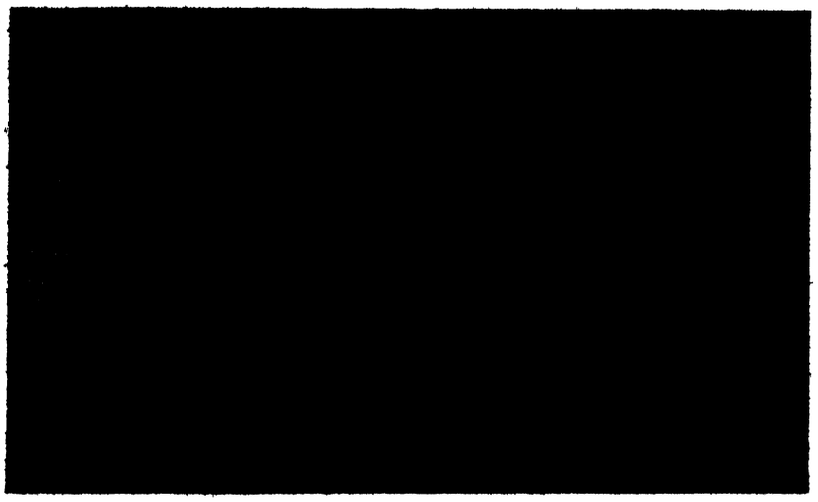


VI

THERE was, however, more to be done for the fighter sent back from the front without one or more limbs than putting right his maimed body and supplying him with artificial hand, arm, foot or leg, as the case may be. His mind had received a terrible shock. His heart, too. What was to become of him? Was he merely to be a charge upon society—a burden to his relatives? If not, how was he to supplement his pension—to fill in his time—to keep himself healthy and sane?

Psychological treatment was, in fact, necessary. He must be taught to cultivate a cheerful outlook upon life—to feel that, though maimed, he could be useful to himself and to others if he only would try.

. . . . There they gathered to watch people feed the pigeons that made their headquarters there where they knew they would always be able to have a good meal provided for them.



Many men who had lost a hand or an arm found jobs with the tram and 'bus companies as ticket inspectors, starters, signallers, and the like.

VII

FIRST as to the misfits. Here is one instance:

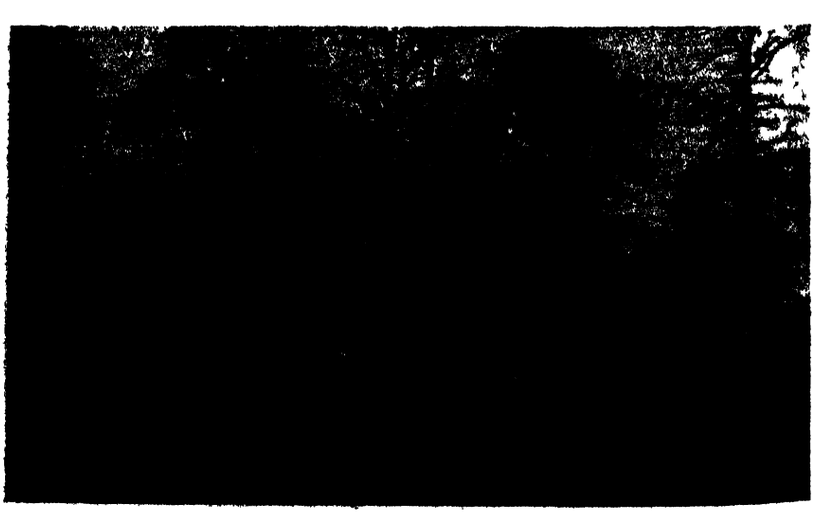
A valet in the service of a gentleman went to war and left a leg behind him "somewhere in France." As the process of healing proceeded, he began to wonder what would become of him when he was discharged from the hospital.

This ex-soldier with a flaire for art supported himself and his dependents by drawing sketches on the pavement of a much-travelled street, hoping thereby to coax pennies from people watching him

Life had not exactly suited him in the old days, even if he did have two legs and his full complement of fingers and toes. He could not, for the life of him, figure out how he would now be able to compete with normal men in the great world that, in his gloomy moments, he thought required so much and gave so little for what it demanded. Though he had been a good valet, he doubted if he, minus a leg, could obtain a job as lucrative as that he had formerly held. His education having come to a stop when he left school at fourteen, he was not intellectually fitted to do anything else. These thoughts, rioting in his mind, hurt him more than the throbbing stump that was left of what had been his leg and kept his temperature above normal in spite of all the attention he received in the ward.

A nurse (a gentlewoman who had taken up nursing as her "bit" in the great war) set the wheels of ambition buzzing in his head. One day, as she passed his bed, she slipped a paper into his hand. It was a circular, signed by the Commandant and the Honorary Director of studies at the Institute, calling attention to the facilities offered in the workshops and classes conducted in conjunction with them.

"All those who are in real earnest as to their future," he read, "should take up one or more of the courses, and thus prevent the possibility of the handicap by loss of a limb bringing added regrets in after life." A little further on he read: "All men who have gone successfully through the trade courses have been able to obtain good appointments."



That settled the matter for him. He realized, in a flash of inspiration, that there was hope for him. His ambition leapt beyond a mere "living." He might perhaps even engage in work, after his wound had healed, that would enable him to do more than just exist—that would enable him to earn even more than he had done as a valet—an income that would make it possible for him to enjoy some of the comforts and even the luxuries of life, thus far denied him; and to save against the day of the sere and yellow leaf, when he would have to yield place to the rising generation.

When, in the course of her duties, the nurse returned, he eagerly asked her for details. After a heart-to-heart talk with the secretary of the After-Care Department, he decided that he would take a commercial course and learn to do office work. In time the erstwhile valet minus one leg, was employed in an office where he received a salary four times larger than he used to be paid as a servitor and was assured that it would be raised as he made himself more and more indispensible to his chief.

VIII

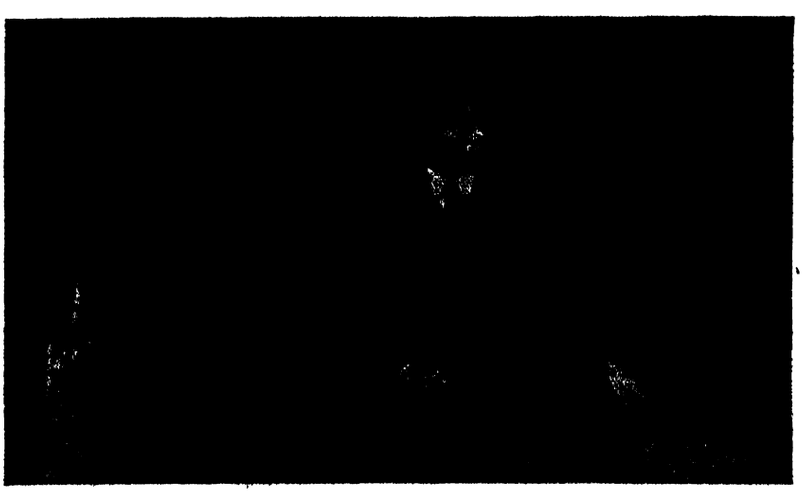
So manifold were the activities that I had to stay the whole day at Roehampton. I went from one department to another and found that facilities were provided there for imparting training in 87 occupations.

Some of them, upon becoming skilled in their chosen trade or profession, I was told by Mr. Dudley B. Myers, O.B.E., Honorary Secretary of the Employment Bureau, had gone as far afield to work as India and Persia. He knew of a man who had lost a leg and yet had been able to go back to his job as a carter and was hauling and carrying heavy weights He could not have done so, however, had the amputation been above the knee, for then he would have experienced difficulty in lifting heavy objects, climbing stairs

Men with artificial arms and legs, properly fitted, were even able to play football and to engage in other active sports.

and the like. [illegible]t men with one artificial leg f[illegible] at the Institute, could cycle, play football and tennis, and dance.

The prospects of a man who had los both legs depended largely upon the point at which the legs had been amputated. Many who had lost both legs below the knee were holding their own in the industrial world. In cases where the amputations had been above the knee, however, there were complications. Such men found locomotion by walking slow and painful and had to depend more or less upon wheel chairs for getting about. They had, perforce, to choose some kind of "sitting—down job," such as light leather work, basket-work, boot-repairing, tailoring, and fancy-work.



This naval man, disabled in the war, found it more profitable to go about the streets playing a "hurdy-gurdy" (mechanical piano) than to set up in a trade or business His "chits" were fastened to the back of the instrument, which played airs likely to arouse sympathy. They include an enlarged picture of himself, identifying him as the veritable person to whom they referred.

A number of disabled soldiers found jobs as porters in Covent Garden and other markets of London

Even the case of a man who had lost two arms was not considered wholly hopeless. If he had the use of even one arm below the elbow joint, he could be fitted with artificial appliances that would make it possible for him to find a place in the work-a-day world. With the aid of a stylographic pen attached to the artificial appliance, some armless men were able to write legibly and one even produced excellent sketches. An industry in hand-painted fabrics, made by stencilling designs in colour upon cotton or canvas, produced under the patronage of the Disabled Soldiers' Mutual Association of Sheffield, had made it possible for a number of armless men to make a living.

The man who had lost a hand or an arm or both hands and arms, was no doubt greatly handicapped, for industrial work of all kinds that required the use of two hands; and posts that could be filled by one-armed men were limited. Work was usually found for them as clerks or commissionaires, gatemen, gymnastic instructors, labour-masters in warehouses, liftmen, lodge keepers, messengers, porters, railway workers doing miscellaneous duties, schoolmasters telephone-switchboard attendants, timekeepers, commercial travellers, ward-masters, watchmen and weighmen.

This young man lost the use of his legs when the aeroplane he was flying crashed in the last war. He made a good living selling toy aeroplanes on Kingsways, in London.

Old Calcutta

Health and Sanitation

—A Hundred Years Ago

By

B. V. ROY, M.A.

For sometime Asst. Collector, Corporation of Calcutta

THE conditions in the city of Calcutta as regards health and sanitation even till a hundred years ago, *i.e.*, upto the middle of the 19th century, were, to put it mildly, simply appalling. Writers of the times have used much stronger epithets and more variegated adjectives in describing these conditions. One of them says:

> "One of the chief contributory factors of the high mortality among Europeans was the insanitary condition of Calcutta, upon whose open cess-pools, filthy streets and contaminated drinking tanks, every visitor remarked with surprise and horror. The "putrid fever" and the flux were ever at hand, and the death-rate in the hot weather was so high that towards the end of October it was the general practice for those Europeans who had survived the deadly season, to meet together and celebrate their deliverance by thanksgiving banquets. Funerals were a daily occurrence despite the small numbers of the British colony".

In order to appreciate properly the conditions under which the people of Calcutta lived a hundred years ago, we must know something of its topography from its first beginnings. It is well known that at the end of the 17th century when Job Charnock and his small band first "settled" here, and the East India Company obtained the lease of three villages abutting on the river bank—Sutanuti, Govindapur and Kalikotta—as the first nucleus of the town, the entire area now covered by Calcutta proper was marshy or swampy land with rank vegetation and jungles, and scattered patches of arable land or comparatively higher patches on which stood clusters of huts forming small villages.

From such beginnings, a town built in a haphazard manner gradually grew up, as so aptly described by Rudyard Kipling:—

"Thus from the midday halt of Charnock.
More's the pity—
Grew a city.
As the fungus sprouts chaotic from its bed
So it spread—
Chance-directed, chance-erected, laid and built
On the silt—
Palace, byre, hovel—poverty and pride
Side by side".

I will now sketch out the town as it was during the 'thirties and 'forties of the last century, drawing mostly upon contemporary records. The town was then divided, for purposes of police, conservancy etc, into four divisions.*

II

THE principal English "settlement" was still centred about the "Loll Diggy" including both business and residential quarters; while along Dharamtolla Street were scattered residences of Europeans, Anglo-Indians as well as Indians. The main business thoroughfare was "Cossaitollah Street" (now Bentinck Street) where there were shops, taverns, coffee-houses, livery stables etc. The dense "tiger-infested" jungle which had occupied the site of the "Maidan" had been cleared away long before, and Chowringhee was becoming a favoured spot for residences of Europeans. But even in 1824 it was still regarded as a suburb of the town, and palanquin-bearers charged double fare for going there. It was not until 1858 that the *first footpath* in Calcutta was made by filling up the open drain running along the entire length of the Chowringhee Road.

As for the "Black Town", as the Indian portion was called, the most densely populated part was the area north of Bowbazar Street upto "Mutchooa Bazar Street". Burrabazar also was as much crowded then as it is now. North of Machuabazar Street however, upto the Bagbazar Canal (*i.e.*, the area now comprised in Wards I to IV), habitations were sparsely scattered and there were "extensive gardens, huge

* The town was for the first time divided into Wards, six in number, in 1876, comprising the following Police Stations, viz.:—

Ward 1.—Cossipore, Chitpur, Cooltadanga.
2.—Manicktolla, Beliaghata.
3.—Entally, Beniapooker.
4.—Ballygunge, Tollygunge.
5.—Bhowanipur, Alipur.
6.—Garden Reach, Tollygunge, Watgunge.

—B. V. R.

half-dried tanks and ruinous tenements." Mr. M'Farlan, Chief Magistrate of Calcutta, in the course of a report (1836) says "the only broad streets in the native part of the town are Amherst Street and the Central Road,* the former unfinished and neither of them considerable thoroughfares. The Chitpur Road is the great thoroughfare, but it is narrow, winding, dirty and encroached upon, while the cross-ways are all lanes very narrow, very filthy and bounded generally by deep open ditches."

From another report relating to the southern suburbs we get a description of Bhowanipur as "the most densely populous of the native suburbs . . . . with low, closely built and ill-ventilated streets, great stagnant ditches lined with rank vegetation, a background of extensive marsh and underwood, and innumerable half-dried tanks and pools." In fact, at this period not only Bhowanipur but most parts of the town were still covered with patches of jungle and rank vegetation, green and unwholesome tanks and pools of water fringed by wild vegetation, and numerous ruined houses choked up with overgrown jungle and filth.

So much for the general appearance and configuration of the town. I shall now take up the sanitary aspects as prevailing at the time.

Water Supply

A comprehensive survey of the town as regards sources of water supply was made at the instance of the "Fever Hospital Committee" about 1836-37, and it was found that "good tanks and clean, well-repaired wells are to be found in very few parts of the town". River water was generally used by the Hindu inhabitants, especially the higher castes, both for drinking and cooking purposes, except by those who lived at distance from the river and had perforce to depend on tanks and wells. The river water was considered injurious to health from April to September, as it became saline until the rains set in, when it became turbid.

Well-to-do people kept a store of large jars filled in February in their houses, while others had Ganges-water brought down from such places as Balagarh, Santipur, Kalna, up the river. Europeans residing in Calcutta fought shy of using the river water owing to its unwholesomeness caused by the number of dead bodies floating in it and the filth thrown in. The arrangements, at this time, for the cremation of Hindu dead bodies were primitive and extremely limited, and the poorer classes disposed of their dead by throwing the bodies into the river. Bishop Heber, in his journal, dated 1822, mentions dead bodies floating by, as he was proceeding up river by boat. Mr. (afterwards Sir John) Strachey, in his report, as Sanitary Commissioner for Bengal, so late as March, 1864, stated that, "more than 5,000 corpses have been thrown from Calcutta into the river, which supplies the greater part of the inhabitants with water for all domestic purposes, and which for several miles is covered with shipping as thickly as almost any river in the world. 1,500 corpses have actually been thrown into the river in one year from the Government Hospitals alone."

It is said that in those days, the captains of ships anchored in the river used to send one of their crew every morning to remove dead bodies from the cables! The European residents, therefore, mainly relied for their water-supply on the "Lall Diggy", which was "crowded from 6 a.m. to 10 p.m." A "mussack" of *Lal-dighi* water (about 8 gallons) cost one pice. Giving evidence before the Fever Hospital Committee in 1836, Mr. Scott Thomson said that he kept *Lal-dighi* water taken during the height of the rainy season, stored in a deep and well-constructed masonry tank, which would also receive and collect rain water. The mud settled in about 10 days, and he then had the water filtered by running it off through a bed of sand and charcoal into a series of large jars, also immersing a red-hot iron in each jar to destroy the living organisms ("animalculae" was the word he used). This water kept sweet for several months and he used it to make "soda-water" and for supplies to persons proceeding to sea. Europeans also used to collect and store rain water in large "pegu" jars for domestic use.

Besides the *Lal dighi*, the only other tanks of any size from which people could obtain water were the Wellington Square, "Hadooa" (Cornwallis Square) and "Pudduldanga" (College Square) tanks. The poorer classes had mainly to depend on the filthy and half-dried tanks with which the town abounded.

In 1820, a small pumping plant was set up at Chandpal Ghat for lifting river water into open masonry aqueducts, which distributed the water by gravitation over a small portion of the town (Old Court House Street, Dharamtala Street, Chowringhee, Park Street, part of Chitpur Road, Lallbazar, etc.). Water could be taken from these aqueducts by dipping buckets into them, and the supply was also used for street-watering and for replenishing public tanks in the vicinity.

The system of aqueducts was extended, in 1854, to further parts of the town, such as, Wellington Street, Wellesley Street, College Street, etc., the cost being contributed by the Government as well as the public.

The first Calcutta Waterworks for supplying filtered water were constructed about 1870, river water being taken in at Pulta, filtered and conveyed through pipes to an underground reservoir at Tallah Pumping Station. At Tallah, another pumping plant delivered the water partly to consumers and partly into another underground reservoir at Wellington Square, the distribution being completed by another pumping station at the latter place. MacCabe's scheme of an overhead reservoir at Tallah

* This refers to the long road which bears in its various portions the names of Cornwallis Street, College Street, Wellington Street and Wellesley Street. It is curious to note that there have been two other "Central" roads since, *viz.*, the present Harrison Road, which was first called Central Road and later named after Sir Henry Harrison, Chairman of the Corporation; similarly, the long and wide road now bearing the name of "Chittaranjan Avenue" was originally called Central Avenue and is still referred to by this name by some people.—E.V.R.

was taken in hand in 1909, and was completed and brought into use in 1911.

Drains

Up to the seventies of the 19th century, the only drains in Calcutta were deep open ditches running alongside the roads, and always full of filth and stinking matter. An Englishman resident in Calcutta for over 40 years (John Phipps) says: "In many parts of the city and more especially in the most densely populated parts of it the drains, many of them merely irregular furrows in the soil without any brickwork, are continually left in a most filthy, uncleaned state, emitting the most noisome effluvia". Lieut. Abercrombie who held office as Superintendent of Conservancy, gives a description (1836) of the abominable drains in the northern part of the city: they were unpaved, and the labours of the coolies in digging out in a haphazard manner the black mud and filth which obstructed their flow, merely succeeded in increasing the unevenness of the surfaces . . . . in some places the bottom of the drain was nearly 2 ft. below its supposed outlet, so that the deposit of filth, consisting chiefly of the contents of privies and other matter in varying stages of decomposition, gave out a most offensive stench when disturbed for removal. The underground drainage scheme (Clark's scheme) was approved and sanctioned by Government only in 1859, and it took about 16 years to complete the main sewers alone.

Conservancy

It was not until about 1820, that energetic steps were taken to have the roads properly metalled, surface drains improved, and refuse removed regularly, so that some kind of cleanliness was achieved. I will quote again, however, from Lt. Abercrombie's report (1836). He says:

> "There are at present no effectual means in use for putting the streets into a proper state of cleanliness and preserving them in such. Dust, rubbish and all kinds of dirt are thrown into the streets *ad libitum* from every house, to be picked up as may be when the carts of the present very inefficient establishment* may happen to come round. The greater number of these carts are common native hackeries of the worst description . . . . drawn by wretched old bullocks unfit for employment by the merchants, and are supplied by a contractor. The drivers also are obtained in the same manner, so that there is no effectual control over them when they neglect their work or do it lazily. The coolies also are supplied in the same way . . . . The probability is that half of them neglect their work in order to work for private employers, receiving pay both from them and the town".

Lt. Abercombie refers also to road-obstructions with which his department was powerless to cope, *e.g.*, at Hatkhola, where the road was completely blocked for two days every week by a market held there, and also in one part of the Strand Road owing to a large grass-market being kept going there.

As regards removal of night-soil, the arrangements were still more primitive and objectionable. Mr. Goode in his admirable work on "Municipal Calcutta", says:

> The larger houses possessed private privies while the poorer classes who lived in huts, sometimes shared one privy between four or five huts, and sometimes resorted to the "Mehtar tatties" or public necessaries, which instead of being municipal property, were built and managed by private enterprise, fees being charged for their use. A monthly fee of two to four annas, or a casual fee ranging from a few *cowries* to two pice were the usual charges . . . . the night-soil collected from private privies by Mehtars, who were paid fees by the occupiers of the premises, was conveyed to depots called "Tolla Mehtar's depots", which were situated at convenient centres. It was then removed to the night-soil ghat on the river bank near the Mint, carried down stream in boats hired by the Municipality on the contract system, and thrown into the river . . . . This practice of throwing the night-soil into the river was not stopped until 1870, after which it was discharged at depots into the Main sewers of the new Drainage system . . . . The connection of private house-drainage with the Main sewers was not carried out until the 'eighties of the last century.

Incidentally, I may mention that street lighting arrangements upto the middle of the 19th century were practically non-existent considering the size of the town. It appears that up to about 1857, when the first gas-lamps were put into use, the city was lighted by a few scattered oil-lamps, their number being only 313 in 1857. People going about at night were preceded by torch-bearers holding "musshals" to light the way.

Disposal of the Dead

I have already described above how most of the Indian inhabitants of Calcutta conveniently and cheaply disposed of their dead by throwing the corpses into the river. As regards Europeans, their original burying ground was in the site of St. John's Church A new cemetery was opened in 1767 at the eastern end of Park Street, which then bore the name of "Burying-ground road". Another was added shortly after, in 1791. (These two are the North and South Park Street cemeteries). The Council granted the Chaplain who conducted burial services an allowance for palanquin-bearers on account of the long distance of the burying ground from the "Town" which, as I have already said, was then centred in and around "Tank Square". As regards the Mohamedans, they originally had a very large burial ground (nearly 40 bighas) at Kasiabagan (occupying the land on either side of Woodburn Park Road), which was closed in 1859. A new site (over 13 bighas) was provided by the Corporation at Tiljala, the land being acquired in 1894 and the cemetery opened in 1897. Further additions were made to it from time to time as required. There were also two other principal burial grounds at Manicktola and Ekbalpore, and later, one at Bagmari.

---

* There were at this time only 115 sullage Carts belonging to the town, and about the same number supplied daily by a contractor, *i.e.*, a little over 300 carts to serve the whole town.—B. V. R.

III

WITH the prevailing conditions of sanitation as described above, it is no wonder that diseases and death were rampant in Calcutta in those days. The death-rate among Europeans, mostly from different kinds of fever, *e.g.*, typhoid, dysentery, enteric, etc., was pretty high. As regards diseases (and death) among the Indians, we have it on evidence that they suffered mostly from fevers (bilious intermittent or remittent), diarrhoea, dysentery, dyspepsia, rheumatism and venereal diseases . . . . . that nearly two-thirds of the Indian population had dyspepsia producing general debility which predisposed to other diseases . . . . that Hindoo children were generally weakly. An Indian physician of the time states definitely that: "he does not see in the town of Calcutta any children that are in perfect health" which is a pretty sweeping and damning indictment of the health of the town at the time.

Floating Population

There was quite a large floating population in Calcutta at the time, and it is recorded that besides the multitude of resident inhabitants, who were destitute of any organised form of medical aid, except from a few dispensaries, people from various parts of Bengal came to Calcutta "to seek for employment, to beg charity and assistance from their friends and acquaintances, and for speculation". They came and lived with persons employed in offices or workmen or those who followed menial professions, and whose means were very limited. If they were able or willing to live separately, they would hire lodgings in some hut or old building, where tiny apartments were let from two annas to two rupees a month. These people did not possess sufficient clothing even, and having no beds "had to lie down on mats or leaves spread on the damp ground in their cells and holes. In hot weather they slept out in open places and on the borders of the road exposed to all kinds of changes of weather". Consequently, the mortality among these people was very large. There was a Police Hospital (established in 1779) to take in all descriptions of paupers without distinction of caste or creed, mostly those found lying sick on the public roads. It is stated that before its establishment it was nothing unusual to see in the morning human bodies lying on the streets mangled by jackals, or lying for days quite helpless and in a dying condition. We can, therefore, easily understand why heaps of corpses were thrown into the river.

Hospitals

The arrangements for the treatment both medical and surgical, of the sick were still practically in the embryonic stage. Besides the Pauper (Police) Hospital mentioned above, there was the Presidency "General Hospital" to which only (civilian) Europeans were admitted, and the adjoining "Regimental" Hospital for European soldiers and sailors. There was a single "Native Hospital" started about 1789, situated at Dharamtola, which was originally meant only for surgical cases, *i.e.*, for the treatment of accident cases and injuries, but was extended later to take in medical cases as well. It had two outlying "dispensaries" for giving medical advice and medicines, one at Garanhata and the other at Colinga (Park Street), both being in charge of English surgeons assisted by native dispensers, dressers, etc.

The "Fever Hospital Committee"

The surgeon in charge of the Garanhata dispensary, Dr. James Ranald Martin, submitted a report to the Medical Council in 1835, urging the necessity of establishing a Fever Hospital in a central part of the town and at the same time submitted an able note on the Medical Topography of Calcutta based on personal enquiry and experience. This was the starting point which led to the appointment, in 1836, of the famous "Fever Hospital Committee", which was instrumental in the inauguration of some of the most important improvements in the town. Its functions were two-fold, namely, to report on the desirability of establishing a Central Fever Hospital and to go into the ways and means of obtaining funds to carry out the project. The Committee was in existence for 12 years and produced three voluminous reports dealing in a minutely painstaking way with the two objects of its existence, and the student of history is grateful to them for the enormous mass of information collected and set forth in the reports, one volume of which lies before me as I write, consisting of nearly 250 printed pages of foolscap size, from which the voluminous nature of the Reports may be gauged. The final verdict of the Committee, in a nutshell, was that "a very large amount of diseases in Calcutta was caused by the absence of cleanliness, drainage and ventilation, and that the Hospital accommodation of the city was most inadequate for its wants." Funds were thereafter collected from the public, and financial help was also rendered by Government, for the establishment of the Medical College Hospital, of which the foundation stone was laid on the 30th September, 1848. But that, I may point out, is another story, which I may tell at some future date.

V

THE Fever Hospital Committee consisted of about a dozen Europeans, and several Indians, among whom from time to time were Russomoy Dutt, Rajchunder Doss, Radha Kanta Deb, Rustomjee Cowasjee, Ram Comul Sein, Dwarka Nath Tagore, Prosunno Coomar Tagore, and others. I will conclude this essay with short biographical notes regarding the Indian members.

Russomoy Dutt (1780-1854)—belonged to the well known "Rambagan Dutt" family and was grandfather of O. C. Dutt who served the Corporation as its Collector and also for some time as Vice-Chairman. D. C. Dutt, O. C. Dutt's son also served as Collector to the Corporation. Rasamoy Babu was one of the first Honorary Magistrates appointed in 1839 and was also a Commissioner of the Small Causes Court. He began life as a clerk on Rs. 16/- a month under Hawk, Davis & Co. Their accounts had got hopelessly involved and they offered a house of

Diet

in the Tropics

By

LT.-COL. S. L. S. GREVAL, B.SC. (Punjab), M.D., CH.B., D.P.H. (Liverpool), I.M.S.

The School of Tropical Medicine, Calcutta

THE unfortunate association between sociability and over-eating at lunches and dinners is doubly unfortunate in the tropics where the requirements of the body to live and even to grow are very much less than in colder climates. Excessive eating apart from causing waste actually shortens life, as if providence had allowed each human his total ration which he could finish (and then depart) either long before 'three score and ten' years or long after.

The unfortunate association is growing in Indian society as a direct result of relaxation of orthodoxy and of greater association with European society after the World War of 1914-18. Hence a critical examination of the situation

EXTREMES HAVE ALWAYS EXISTED

ORIENTAL people have always provided glaring instances of of the couplet:

Ná chandán bakhur kaz
dahánat bar áyad
Ná chandán keh az zoab
jánat bar áyad
—Sa'di of Shiraz.

Neither eat so much that the food regurgitates
Nor so little that you die of weakness.

The upper strata of the population have been over rich and the lower strata extremely poor. With the lower strata has been included that hard working, sturdy, honest and respectable peasantry which has kept the characteristically absolute monarchs on their thrones. 'His Highness the Nawab is out riding, look at his stirrups of gold' remarks one farm labourer to another. 'Ah, well, a Nawab can get his stirrups made of *gur* (crude brown sugar), if he so desires' observes the other. That growers of food should look upon *gur* as something more precious than gold is a tragedy that can be acted only by the poor farmers' poorer farm labourers in India. That the standard of ethics of the village folks should remain so high despite such extreme poverty is a wonder of wonders. This, however, is a digression.

UNEVEN DISTRIBUTION

WHILE the most unevenly distributed wealth of the subcontinent of India was building the Taj Mahal at Agra and making the Peacock Throne, the universal belief was and still remains that a diamond lick is poisonous. Not one in a thousand could have had an opportunity of possessing a diamond in any shape or form, when the superstition originated. Local traditions all over Northern India speak of ruined bankers, discarded courtiers and Hindu widows under certain circumstances, dying, in the privacy of their homes, of diamond licks. The knowing ones have only recently started to add that arsenic was more probable as a cause.

"The law of compensation for murder, ... , is attended with pernicious effects. It depresses the spirit of the poor; and encourages the rich in the unmanly passion of revenge. The price of blood in India is not the third part of the value of a horse. The innate principles of justice and humanity are weakened, by these means" [*The History of Hindustan*, from the death of Akbar to the complete settlement of the empire under Aurungzebe, by

Alexander Dow, printed by John Murray, London, 1792, p. vii].

Many more instances could be given of the uneven distribution of wealth and the consequent extremes in the standard of living characterising Asia generally and India particularly.

Two Simple Rules

THE food given to children should make them grow (in height, upwards) and keep their bones well covered. The food of the grownups should not make them grow (in girth, outwards) although it should keep their bones well covered.

Children's growth is easily judged by clothes. The grownups' growth shows itself in this order (*i*) on the seat, (*ii*) on the neck and chin and (*iii*) on the belly. The increments at the first two sites are, perhaps, useful indicators of a man's social position and opulence, and need not cause alarm. The increment at the third site is a serious disadvantage and disability. The girth of the belly should not be allowed to exceed that of the chest. *The diet must be decreased or altered.*

The bones to watch are: (*i*) cheek bones, (*ii*) collar bones, (*iii*) backbone and (*iv*) joints generally. The limbs should not look like spindles. If more and better food does not check wasting, advice of a medical man should be sought.

Calories and Basal Metabolic Rates are best left alone, outside wards and laboratories. These figures are mostly worked out for colder climates and cannot be applied without modification. Besides, they are not needed for such a simple human need and conduct as one's daily food and one's daily work.

Quantity not Quality!

THE main difficulty of almost everybody in this country is the *quantity* not the *quality* of the food. A very small percentage eats too much. The great majority does not get enough. For the latter, questions of PROXIMATE PRINCIPLES, BALANCE, ESSENTIAL SALTS and even VITAMINES do not arise. Give them enough and they will adjust all details.

Rural populations, including the small percentage not engaged in agriculture, usually manage to follow the two simple rules, although certain articles of diet considered delicacies are denied to them. Their diets are fairly well balanced like prison diets and taken all round are of about the same order in palatability. Milk and milk products are nearly always available to everybody in villages, and are better and cheaper than the meat ration of prisons.

Rural people leave their homes to engage in industry in towns, because land never pays like factories. This evil is common to the present economic system of most of the world. In Asia generally and in India particularly the evil is more tragic in its operation because the majority of the population only delight in the glitter of the gold, not in its real utility. When earned at the cost of health, it is first hoarded then wasted on births, deaths and marriages! The problem deserves serious attention of the social reformer. This, however, is another digression.

The unskilled, ill-paid and newly arrived labourers in towns die of lack of familiar food. The cheap unfamiliar food weakens and kills before an association can be developed between its palatibility and balance. The one need of the poor urbanising population is their familiar food which could be provided at special depots. Concessions in its transport should be obtained from railways.

A very small Minority

MEMBERS of a certain turf club in India may have lunches on certain days for Rs. 5/-. This sum is exclusive of beverages. To have a big lunch on a race course is unwise for reasons of health. To spend Rs. 5/- on a meal in a country where labour and food are so cheap is unsound for reasons of economics. To spend so much money on only one of the three meals of the day, in the midst of a population which cannot afford to spend as much per head per month, is ethically wrong.

Why do we want to eat so much for lunch? Why should these lunches be so expensive? Do the caterers deserve so much profit? Do they come from countries known for their cooking? Do they contribute anything to Indian or British prosperity? These and many more allied questions arise and cannot be answered in favour of the five-rupee lunch. Even slightly cheaper lunches, served elsewhere in India, in European style, are open to the same objections.

Milk and Milk Products

THE Punjab diet builds the best bodies in India. 'May you have milk in your house and may you have sons' is the blessing given to a bride by the elderly female in-laws in that province. 'I will give to the poor mashed *chupaties* and light lamps filled with *ghee* if I hear that Waras Shah is coming' sang the love-stricken heroine Hir, daughter of a squire of Jhang, on the river Chunab, the widest in the land of the Five Rivers. Incidentally, all the love stories of that land originated in the region watered by the Chunab, where wheat grows best and milk cattle thrive best.

The wise Rasaldars and Subadars of the Indian Army compose differences amongst the young fellows in their regiments by asking the offender to bring *ghee* for the offended, from the latter's village and home, on his return from leave. Nothing pleases a Punjabi soldier more than home-made *ghee*. It is much more than mere cooking fat.

Sweets made from milk are common in Indian diet. They are expensive. Other preparations are very few. Cheese from various grades of milk should be made and used liberally.

Cheap Flesh-building Food

ALL leguminous plants produce seeds which hold PROTEIN, a substance identical with the one of which flesh is built. All the *dâls* (lentils) hold proteins in a dried form which defies interference with cold storage and blockades. The soya bean has acquired fame recently. Gram will do so too before long. *Dâls* were better known to the Persian writers than they are to the English. Here is a page from one of them: 'On account of the death of Aurangzeb and in consequence of the confusion in Hindusthan, the

price of grain in all the provinces remained unsettled. In some places it was more, in others less. Thus in the first year after the death of His Majesty, in 1119 of the Hijra, the price of grain in Delhi became known to Asaf-ud-daula, viz. the rate at which it was sold for ready money. Wheat was twenty *sirs* per rupee ; barley twenty-seven *sirs ;* gram twenty-five *sirs ; suhkdas* rice ten *sirs ; dal mung* (a kind of vetch) fifteen *sirs ; mash* (pulse) eighteen *sirs ; moth* twenty *sirs ; 'adas* eighteen *sirs ; ghi* two *sirs ;* pungent oil (*raughan-i-talkh*) seven *sirs ;* red sugar twelve *sirs.*' [*Tarikh-i-Bahadur Shahi,* from The History of India by Sir H. M. Elliot, K.C.B., edited by Professor John Dowson, M.R.A.S., Trubner & Co., London, 1877, Vol. VII, p. 566].

Vegetable proteins are not inferior to animal protein. In spheres of thought, word and deed, the historians of to-morrow will not find it easy to ignore some vegetarians of to-day.

The vegetable proteins are decidedly superior to animal proteins in dieting cases of many disorders and diseases. Subjects suffering from chronic kidney diseases in India and living on vegetable proteins upset all calculations of morbidity and mortality of European text books on medicine.

Fresh vegetables, particularly, coloured and leafy, which can be eaten raw are plentiful in India. Cost of their transport limits their use in towns. *Ság* which should be cooked slowly by simmering at low heat does not lend itself well to cooking in towns where the fuel, gas; coal or charcoal, is usually intended for rapid cooking at a high degree of heat. It is available throughout the year in the form of tender tips of some plant or other.

Fruit in India is also plentiful. Some of it is so cheap that it is not considered marketable. Transport is the difficulty. The same remarks apply to nuts.

In addition to what is usually called fruit, the rural population of India eats a variety of unripe cereals and oil containing seeds, quickly roasted or parched, throughout the year. It is thus fully protected against lack of vitamines.

Sea fish and other sea animals preserved by refrigeration, drying or salting, are a source of animal protein deserving a consideration. Sterile eggs may supplement a vegetarian diet based on sentiment. It is not generally known that sterile eggs are laid by hens

—*Continued on page 27*

OLD CALCUTTA HEALTH AND SANITATION—*Continued from page 23*

Rs. 10,000/- to have them put in order. This was won by Rasamoy Babu. Later, he was appointed on Rs. 1,000/- a month under Cruttenden, Mackillop & Co.

Prosunno Coomar Tagore (1801-1868)—Lawyer, public man, author, the first Indian to be appointed to the Viceroy's Legislative Council. Founded the "Tagore Law Professorship" of the Calcutta University with a donation of three lakhs of rupees. One of his sons was Maharaja Sir Jotindra Mohan, and another, Ganendra Mohan, was the first Bengali Barrister (who adopted Christianity later).

Radha Kanta Deb (1784-1863)—only son of Gopi Mohan, who was the adopted son of Maharaja Nabakrishna, the founder of the Sovabazar Raj family. Radhakanta was a great patron of learning and culture, and one of the first "educated natives", well versed in Sanskrit, Persian, Arabic and English. He was instrumental in founding the Hindu College, and the Bengali Encyclopaedia named "Sabda-Kalpa-Druma" was published at his instance. A Justice of the Peace and Honorary Magistrate, obtained the title of Raja Bahadur in 1836.

Rajchunder Doss (1789-1836)—belonged to the well known "Marh" family of Jaunbazar. A philanthropist, built several ghats on the river Ganges, notably the "Baboo ghat". Was the husband of Rani Rashmoni, who founded the Great Kali Temple at Dakhineswar and appointed a young priest named Gadadhar to officiate there. This priest later became known all the world over as the Saint Rama Krishna Paramhansa.

Rustomjee Cowasjee (1790-1852)—Parsee merchant, Honorary Magistrate, joined in all kinds of public philanthropic activities. Founded the Parsee Fire Temple in "Doomtolla" (present Ezra Street) in 1840.

Ram Comul Sein (1795-1844)—grandfather of the great religious reformer, Keshub Chunder Sen. Was Dewan of the Mint and later (1832) Dewan of the Bangal Bank. One of the first Indians appointed Honorary Magistrates. Was intimately connected with many educational and philanthropic institutions. A distinguished patron of learning.

Dwarkanath Tagore (1794-1840)— grandfather of the world-famous poet Rabindranath. Was Dewan of the Salt Board and had many-sided social, political and philanthropic activities. Was a partner of "Carr Tagore & Co.", a Director of the "Union Bank" ; purchased and became proprietor of two newspapers of the time, *viz.,* the "Englishman" and the "India Gazette". Gave Rs. 3,000/- for prizes to the successful students of the newly started Medical College, and repeated the gift for three successive years. Also bore the entire expenses of sending and maintaining two Indian graduates of the Medical College to England for higher medical studies. Purchased the site of the Chowringhee Theatre (which had been destroyed by fire in 1839) at the corner of Chowringhee and Theatre Road for Rs. 15,000. Purchased Joseph Barretto's land to the south of Tiretta Bazar for Rs. 51,000/-. Gave one lakh of rupees to the District Charitable Society. Purchased the extensive garden with villa called, "Belgachia House" and gave lavish entermainments there to his friends, as well as, on occasion, to the Governor-General and European ladies and gentlemen, dinner being generally followed by "nautches" and fireworks, etc. King Edward VII, when he visited India as Prince of Wales in 1876, was entertained there by the Indian community. Dwarkanath was popularly known as "Prince" for his lavish hospitality and munificence.

WOMEN *and* ALCOHOL

By

LT-COL. OWEN BERKELEY-HILL, I.M.S. (Retd.)

THE people who inhabit this world of ours rarely think. If they did think more, the world would not be half as sad a place as it is. During the last few years there has been a considerable number of our legislators engaged in trying to introduce Prohibition into India. Their efforts have only met with partial success. Had they been gifted with more psychological understanding of the problem which confronted them, their success must have been greater, but Prohibition is a problem of great psychological significance.

Many aspects of the problem of Prohibition have been ventilated in our daily Press but one, and by no means the least significant, has not, to the best of my knowledge, received any attention at all and that is the attitude of women towards the consumption of alcohol. The attitude of women towards alcohol differs fundamentally from that of men towards alcohol in two respects. First, women have no taste in alcoholic beverages. If they drink they will drink almost anything. For them alcohol is a stimulant and nothing more. A woman who is a judge of wine is as rare as a white crow. Who ever heard of a man mixing port and lemonade? Many women do and enjoy the mixture. To refer to wine in the presence of women as "bottled sunlight" is to run the risk of being thought a bit weak in the head. The impressive ritual prescribed by lovers of good wine that attends the decantering of a bottle of mature port or the delicate manipulation of a bottle of rich burgundy, fails to evoke any sympathy or interest in women. They regard such procedure as 'fuss' or a waste of time.

II

AS I have observed already, alchohol in any form finds favour with women for the 'kick' in it, hence when women take alcohol they generally take more, sometimes very much more, than they can stand. But habitual drunkards among women are rare. There is another aspect of women" attitude towards alcohol which is even more important, for it has its root in a fairly accurate psychological and physiological system-complex which most women seem to apprehend instinctively, namely that men who drink heavily cannot love and if they can, they love each other. Now if the imitators of Pussyfoot Johnson had had the requisite insight into the female mind to realise this utterly feminine belief, they would have played this card for all they were worth to promote Prohibition. As they do not play this card we must assume either they did not know of it or were too fastidious to play it. It should be obvious that played with skill, it is the ace of trumps in the prohibition game.

III

OBSERVERS of women cannot fail to note the concern nearly all women display about the drinking habits of the men they *love*, be it fathers, husbands, brothers or sweethearts. The individualism of the great majority of women leads them to ignore the drinking habit of other men. Compare the attitude adopted by a son to a father who has had "one over the eight" to that of a daughter. The son will be amused while the daughter, (unless her father is an out-and-out toper), will be gravely distressed. Another curious trait in women is their tendency to exaggerate the amount of liquor consumed by the men they love. When Daddy has had three pegs his daughter accuses him of having had five. A wife does not ask her husband if he enjoyed his drinks at the Club. She wants to know *how many* he had, although he is as sober as a bishop. And so on. In short, the way to bring about Prohibition is on the female vote. This has been done already elsewhere—in New Zealand.

DIET IN THE TROPICS—*Continued from page 26*

and are in the opinion of some poultry farmers a better business proposition.

BEVERAGES.

TEA has come to stay: so has perhaps coffee. *Sharbats, thandais* and *shakanjbins*, however, are excellent for hot weather. The last named has been re-introduced through European market as 'squash'. The first two await a similar bold step on somebody's part. They will be excellent means of showing sociability and cementing friendship alongside milk shakes and icecreams in milk-bars and soda fountains.

The intention is not to run down alcoholic beverages although restriction in their use is desirable in the tropics. Many obscure tropical diseases have disappeared during the last twenty years in which fashions in beverages have also changed prejudicially to alcohol. Toddy, beer and cyder and even rum and whisky could at times provide cups which cheer but do not inebriate. They could all be made in the country and sold at a reasonable price. The making of alcoholic beverages is not a difficult matter at all as should be well known to all in Calcutta which has distilled, blended, bottled and exported many famous brands of whisky for many years. Some of these brands the connoisseurs 'could tell blindfolded'. As in art so in alcoholic beverages one generally pays for the name, not for the quantity or quality of the alcohol. Likewise, one is afraid to admit that a good cyder may be bracketed with champagne.

DEFINITION OF TERMS in HEALTH EDUCATION

[A Committee in the United States recently prepared a list of common terms used in health education, and individual members proposed definitions. To these were added definitions from two persons in the field. These were momeographed and sent to eighty-five persons engaged in some aspect of health education work, who were asked to rank one, two, and three giving rank one to the definition that was most satisfying etc. They were also requested to make alterations or write new definitions if none expressed their view in the matter. The result of these is given below.—EDITOR.]

I

HEALTH EDUCATION is the sum of all experiences which favourably influence habits, attitudes, and knowledge relating to individual, community, and racial health.

Health Education is a general term covering a wide field of human experiences. It includes more than just instruction in health and should be used to designate the broader field.

II

SCHOOL HEALTH EDUCATION is that part of Health Education that takes place in school or through efforts organized and conducted by school personnel.

The child is educated in health in all his experiences that in any way influence favourably his habits, attitudes, and knowledge relating to health, but the experiences, that emerge from and are identified with school life are those of School Health Education.

This aspect of Health Education is definitely linked with Public Health Education as it operates in the home and community.

III

PUBLIC HEALTH EDUCATION is that part of Health Education that takes place in the home and community.

This phase of Health Education operates largely through the efforts of health departments and various semi-public or private agencies interested in promoting health among the people. As a rule the methods used are those of general publicity such as radio, newspapers, distribution of literature, lectures, study groups, conferences, etc., but the work done in homes by public health personnel is also Public Health Education.

Public Health Education reaches children as well as adults and thus is one kind of experience relating to health.

The public health official who comes to the school to control communicable diseases is in effect a school official and hence this experience of the child may be regarded reasonably as an aspect of School Health Education.

IV

HYGIENE is the applied science of healthful living: it provides the basic scientific knowledge upon which desirable health practices are founded

It will be noted of course that there are several varieties of hygiene such as military hygiene, oral hygiene, social hygiene, personal hygiene, racial hygiene, etc. In effect all rest upon basic scientific knowledge common to all but in particular instances special application to areas of life or aspects of functions is indicated.

V

SANITATION is the application of scientific measures for improving or controlling the healthfulness of the environment.

HYGIENE relates specifically to the individual; *Sanitation* relates specifically to the environment. There is, of course, no sharp line between the two for the "total situation" identifies man and his environment. Nevertheless, for emphasis and description, it is sometimes helpful to distinguish between the two.

VI

HEALTH in the human organism is that condition that permits optimal functioning of the individual enabling him to live most and to serve best in personal and social relationships.

It will be noted that this definition emphasizes optimal functioning and hence stresses the biological view, but it also recognizes that man is a social being and hence how he lives socially is not ignored. To live most implies to live most now and assume that the best way to live a rich and full life in the future is to live that life now. To serve best implies that fullness of function is more effectively secured when the individual attaches himself to causes, purposes, needs, movements outside of self that are bigger than individual wants and desires.

VII

HEALTH INSTRUCTION is that organization of learning experiences directed toward the development of favourable health knowledge, attitudes, and practices.

Generally, Health Instruction is a classroom procedure presenting factual information important for children to know, in order to maintain a high level of individual functioning. Actually, of course, children learn about health in other aspects of health education, in health service and in healthful school living, but the term Health Instruction is used to define that special effort in the class exercise to promote understanding of and practice in health. Indeed, the practice is so essential that Health Instruction seeks to integrate health knowledge with actual living in home, school and community.

VIII

HEALTH SERVICE comprises all those procedures designed to determine the health status of the child, to enlist his cooperation in health protection and maintenance to inform parents of the defects that may be present, to prevent disease, and to correct remediable defects.

This terminology is preferred to Medical Inspection as the latter term denoted a service which was often nothing more than inspection and the long association of a limited service with the term makes a new one desirable.

HEALTH SERVICE is accomplished through the combined and coordinated efforts of the administrative and teaching staffs working with parents and various health agencies outside the school. The technical work is carried on by medical, nursing, dental, psychiatric, nutritional, and other specialists in close cooperation with educational officers and teachers.

IX

HEALTHFUL SCHOOL LIVING is a term that designates the provision of a wholesome environment, the organization of healthful school day, and the establishment of such teacher pupil relationships that give a safe and sanitary school life favourable to the best development and living of pupils and teachers.

This rather long term is selected to combine under one category a number of health provisions that have now attained recognition.

It has long been known that the school plant should be sanity. The term School Hygiene stressed this but often included so much more that it has lost much of its value as a descriptive term for these specific health provisions. Hygienists have maintained for years that no part of the school experience should injure the child's health and hence attention has been directed toward the health aspects of discipline, fatigue, and other matters relating to children's health.

The term HYGIENE OF INSTRUCTION stressed these matters but, in use, it was often confused with the term Instruction in Hygiene. Teacher-pupil relationships have at times been considered under the Hygiene of Instruction also.

Obviously there is an advantage in bringing under one inclusive term these many but related factors. Moreover, there is potentially a great gain for administrative efficiency if these important values can be brought together into one division of Health Education.

X

HEALTH EXAMINATION is that phase of health service which seeks through an examination by physicians, dentists, and other qualified specialists to determine the physical, mental, and emotional health of an individual.

The function of Health Examination is revealed in the operation of Health Service.

A NEW wonder-working chemical named sulfathiazole, the latest "relative" of the sulfanilamide group was described recently before the annual congress of the American College of Physicians.

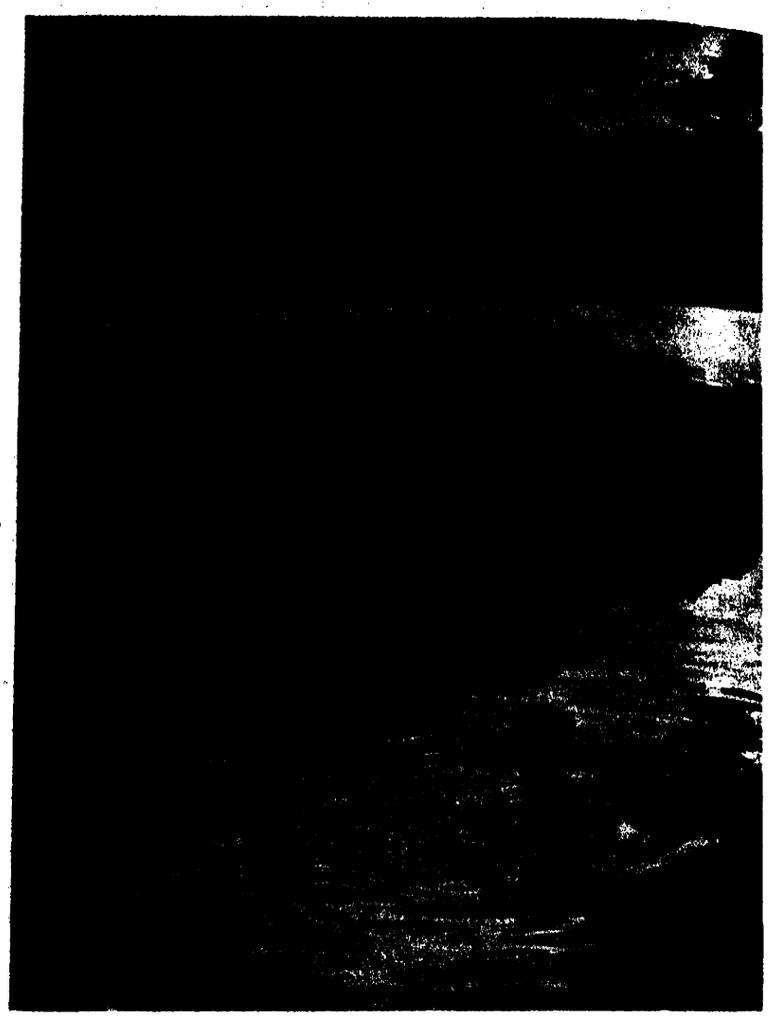
Sulfathiazole is the offspring of a chemical marriage between sulfanilamide and one-half of the molecule of vitamin B-1, the life-essential nerve vitamin without which neither plant nor animal could thrive

Sulfapyridine, too, the wonder drug that has proved so effective a weapon against all types of pneumonia, was the offspring of a similar marriage, one between sulfanilamide and nicotinic acid, another member of the large vitamin D family which recently was found to cure pellagra, the "poor man's disease of the South."

The strange fact that the combination of the sulfanilamide with parts of the molecule of two of the vitamin B group has yielded two highly effective drugs against a group of specific bacterial diseases, it was stated, has given biochemists reasons for expecting that similar combinations of sulfanilamide with other vitamins, or parts of vitamins, may bring forth a host of other new important drugs to combat other ills of man.

In all, it was stated that 1,600 human patients had received the new drug, in a large group of diseases caused by bacterial infection, including pneumonia and infections of the kidney of various types. In a great majority of the cases, it was reported, the new drug had yielded highly satisfactory results.

The drug was said to have shown itself thus far to be as effective in the treatment of pneumonia as sulfapyridine, with the added advantage, however, that the sulfathiazole does not seem to produce the undesirable effects, such as nausea and vomiting, caused in many cases by the sulfapyridine. For this and other reasons it is possible to give much larger doses of the new drug, thus affording quicker results.



One of the significant findings about the new chemical is that it is effective against infections caused by the group of microbes known as staphylococci, a family of germs causing serious infectious diseases against which neither sulfanilamide nor sulfapyridine have proved effective.

FOUNTAINS OF HEALTH

By

B. VENKATAVARADAN

Madras

Dusk falls on the lake at Wakdsu, where the poor in health are taking the care in hot-spring waters bubbling up from the bottom.

EVERY schoolboy knows the story of "Androcles and the Lion"—that dramatic tale of how a Roman slave ministered to a wounded jungle lion and got strangely rewarded for his kindness. A somewhat similar version, at least in its moral emphasis, occurs in Japanese folklore. In this case a huntsman is said to have come upon a deer with an injured leg resting beside a pool of rising vapours. The huntsmen, moved to compassion by the deer's imploring look, bathed its wounds in the warm waters of the pool. The wounds healed so fast that the huntsman, believing the pool contained miraculous powers, brought the sick and the injured of his village here for the cure. He was the first to discover the therapeutic value of the hot-spring bath.

There are some 950 known hot springs in Japan to-day, formed by the several volcanic chains on which the archipelago rises. They occur in a wide variety of places: along the sea-shore, in valleys and ravines, on plateaus, or high up in the mountains. They bubble up on the sides of streams or come boiling up from under the water.

What the huntsman believed to be the miracle was, of course, nothing more than the action of certain minerals found in these thermal waters. Modern scientists have found that hot springs contain a sufficient amount of such mineral compositions to cure a number of ailments and diseases.

Precious Waters

Towns, villages and resorts have been built around great many of the hot springs of Japan. The precious waters, both hot and cold, have been piped into great tiled baths and swimming pools in luxurious inns and hotels—a perpetual lure to both ailing people and holiday-makers. The natural fondness of the Japanese for the hot bath has been a great factor in the development of such spas, so that today they may be likened in effect to the great Roman aqueducts of old.

Hot-spring waters are effective both when taken internally and used externally. Externally they may be utilized in a number of ways, of which the most prevalent in Japan today are the vapour bath, the cascade massage, the time bath, the prolonged subthermal bath, and—along the seashore—the sand bath.

For the convenience of the public, the principal hot springs of Japan have been classified by scientific experts to some dozen varieties, each with its own peculiar therapeutic value, together with information as to where they may be found. Dr. Koichi Fujinami, one of the greatest authori-

ties on the subject, lists them below.

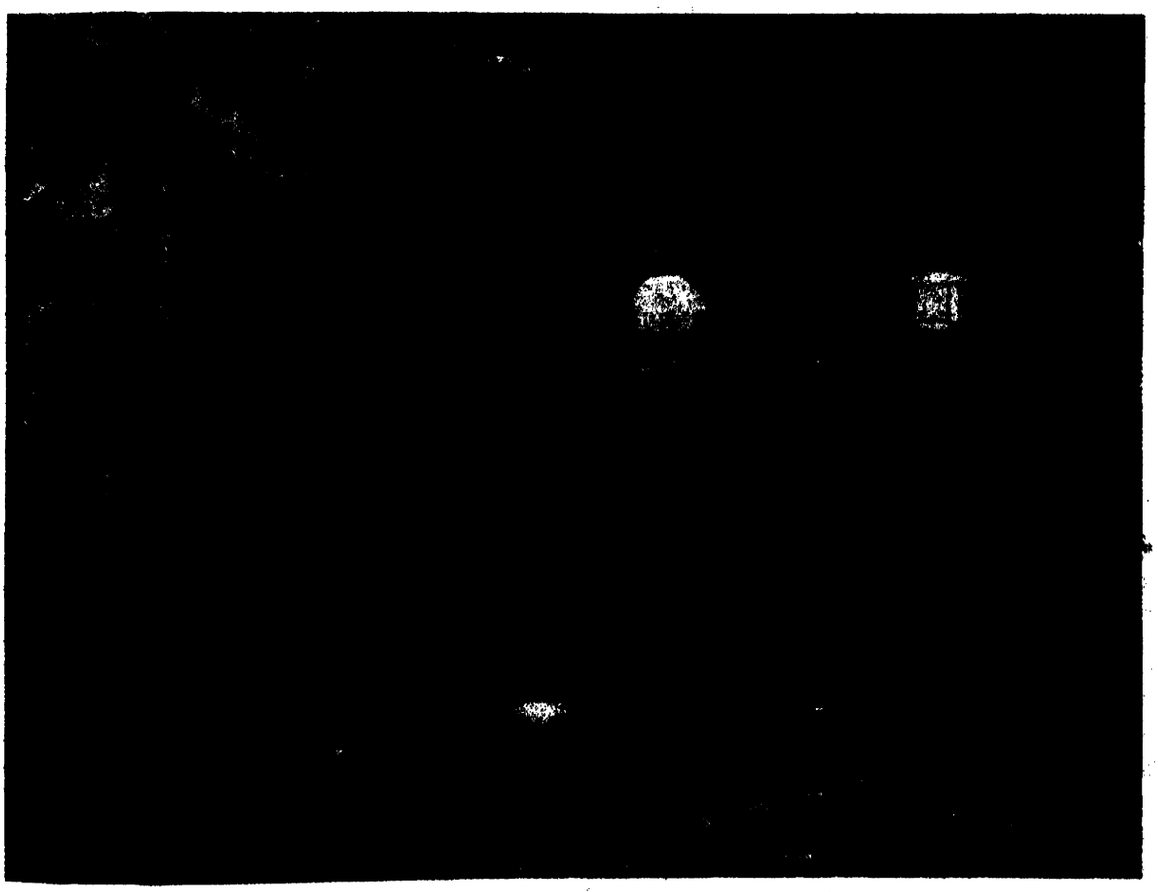
MANY VARIETIES

(1) *Simple Springs*: Their virtue consists in the action of water and temperature. Beneficial for rheumatism, nerve troubles, sciatica, intercostal neuralgia and migraine.

(2) *Carbonic Acid Springs*: These contain more than one gram of carbonic acid. Effective in promoting the function of digestive organs.

(3) *Alkaline Springs*: Contain carbonate of soda and varying proportions of free carbonic acid—good when taken internally for acid dyspepsia, gall-stones, concretion and diabetes. Bathing in alkaline waters relieves nervous prostration, heals fractured bones. The presence of a large amount of carbonic acid gas (not always the case) is beneficial for heart trouble and arterial sclerosis.

(4) *Iron Springs*: Noted for their therapeutic action on the blood. Efficacious in treating anemia and chlorosis, but taboo for indigestion and tuberculosis.



(5) *Sulphur Springs*: Contain free hydrogen sulphate sulphuretted alkaline metals and their secondary products. The higher the temperature, the greater seems to be their therapeutic action. Persons suffering from liver trouble, chronic metallic poisoning, syphilis, skin diseases, scrofula, diseases of the spinal cord, and caries have found them to be of definite curative value. The vapor when inhaled is effective in chronic bronchial catarrah.

(6) *Earthy Springs*: Contain a large amount of mineral matter in solution, such as calcium, magnesium salts, carbonic ferric suboxide, carbonate of soda and common salt. These springs are prescribed for pleurisy, diseases of the bones, inflammation of joints, prostatitis, and catarrah of the bladder.

(7) *Common Salt Springs*: Besides salts, the waters contain alkali sulphate, sulphate earths, carbonic earths, carbonic ferric suboxide, iodine, and bromides. They aid digestion, promote the peristaltic action of the intestines, increase haemoglobin and quicken metabolism. Bathing in these springs is effective in curing skin and bone diseases.

(8) *Bitter Springs*: Contain lye, sulphate of sodium or Glauber's salts, common salt, alkaline, earths, etc. Used for purgative purposes. Excellent for chronic constipation, emphysema and obesity.

(9) *Radio-Active Springs*: Contain radio-active compounds. Have the virtue of lowering blood pressure.

Tokyo is fortunate in having a number of hot spring resorts scattered about within a distance of some 100 miles of it. A westward train journey of a little over two hours takes one to the springs at Hakone, well known to Western visitors for its beautiful mountain scenery. The Hakone region is blessed with something like a dozen springs—Yumoto, Tonosawa, Miyanoshita, Sakokura, Dogashima, Kiga, Kowakidani, Gora, Ashinoyu, Ubako, and Sengokuhara. Here is the gorgeous bath-room of a well-equipped hotel of Miyanoshita for foreign visitors.

PUBLIC HEALTH

in

The Soviet Union

By

S. UPADHYAY,

Calcutta

SCIENTISTS are the real makers of Civilisation. The progress of the world owes much to them; and the most-needed Science for the existence of man is the science of medicine. Nature, red in tooth and claw, does not pity the weaker ones. For the laws of nature are inexorable and often baffle intellect: they leave man exposed to a gloomy future. But man struggles and nature is gripped and controlled by a marvellous organisation. And out of this struggle emerges the promise of life, while man is armed with stronger weapons. Man, the vanquisher of Nature, with all his past history, meets the conflict and agony with new resources of energy and fortitude. His weapon is the science of life—popularly called Medical Science.

The primary object of medical science has always been the protection of human life against calamies of nature. But though humanitarian in spirit, medical science has not been able to make life happy and free from the corroding anxieties of physical ailments. This is no defeat for medical science; it only points to the further possibilities of its development on a truly humanistic basis. Human life, to-day, is botched and bruised, and there is only despair and darkness all round. Man slowly loses faith in life when he beholds nothing but evidences of decay and death. And a melancholy permanence seems bestowed on this sorry state of things because the guardians of society have lost respect for human life.

The Soviet Union stands against all these. In Soviet Russia, the physician does not boast of isolation from the people, nor does he succour to the needs of the few. The Soviet State does not believe in the efficacy of charity, nor does it find the various measures of social insurance potent enough to guarantee security to its citizens. The protection of health of the citizens is a sacred task with the State, and medicine, therefore, is a function of the State instead of being a private trade. The right of every citizen to enjoy free medical attention is thus laid down in the Soviet Constitution:

> "Citizens of the U. S. S. R. have the right to maintenance in old-age and also in cases of sickness or loss of capacity to work. This right is ensured by the wide development of social insurance of workers and other employees at State expense, free medical service, and provision of a wide network of health resorts for the accommodation of the workers."

Of the annual budget of the Republic this forms the most important part; and to this are added the funds provided by the Consolidated Budget.

II

SOVIET MEDICINE has abolished the traditional difference between preventive and curative medicine. Medicine failed in old days to cope with the problems of society in the past. But now the perspective has been widened and physical medicine has to be corrected and supplemented by social therapy. The Russian State now primarily aims at prevention, the work being carried out in the following manner:—

(*a*) by means of hygienic food-research service with analysts and research laboratories at the principal food-producing establishments and adequate measures for hygienic supervision—by means of qualified inspectors and analytical laboratories of food industries, storage and distributing centres, markets and slaughter-houses;

(*b*) by means of sanitary inspectors and establishments for enforcement of the statutory regulations on hygienic and sanitary measures as laid down by law, for new residential buildings and communal institutions like theatres, clubs, cinemas, railway stations, health resorts, housing accommodation, railway trains and other public conveyances and transport;

(*c*) by means of sanitary inspectors and medical officers of health, who supervise the hygienic aspect and sanitary conditions of labour in industrial undertakings and enforce the taking of precautions necessary for the safety and health of the workers employed there.

The organisation for combating epidemics includes:—

(*i*) Laboratories in urban and rural districts, with expert epidemiologists whose duty is the prevention of the outbreak of any epidemic, or in the event of such outbreaks, the application of measures necessary to overcome them; and

(*ii*) disinfecting stations and centres by medical officers, with staff and equipment of every kind for the purpose of disinfecting, fumigating and decontaminating premises and infected articles as required.

III

MEDICAL TRAINING under the Czarist regime was notoriously ill-conducted; and the surgical department was primitive. The Soviet State is now wide awake to the need of proper training of physicians. In the earlier years of the Soviet regime medical education was lop-sided, but the New Decree of 1932 set up the standard and the courses were properly adjusted. At present only those that have completed seven years of school can join the Secondary Medical School and the course extends over three years.

The *Second Moscow Medical Institute* has a teaching staff of four hundred members; and the total number of students is four thousand and five hundred. It has two Faculties, and the course extends over five years. The Medical School like other organisations has its party committee, local committee, and Trade Union Committee. All these are elected by the students and work in co-operation with the Director of the Institute.

Of late there has been a rapid increase of medical students, though the number is still inadequate. The women studying in medical schools number about 75 per cent of the whole. Women in Soviet Russia share equal responsibilities with men, and the medical profession is widely practised by them. Some Medical Institutes have women Directors.

The Soviet Union needs more physicians and the trained ones are promptly posted. The need being overwhelming, there is no surplus number of students to undergo post-graduate training. Therefore, the post-graduate courses of medical students is periodical. Every year working physicians are invited to attend a course of lectures for three months, and in three years they complete the post-graduate course. This has proved beneficial, the physicians themselves being very eager to return to the school to learn new facts of science.

The midwife occupies an important place in the health administration. Before the revolution, the midwives were a much maligned community—literally comparable to the field-barber. The revolution created a new type of midwife and at present midwifery is an integral part of the medical cadre. The midwife works in the rural area and organises the Committee for the Protection of Motherhood and Infancy.

IV

IN the Soviet Union, medical workers belong to the Medical Sanitary Workers' Union. The organisation, though in form resembling the Trade Union, is not to fight exploitation and inequality. The organisation exists to co-ordinate the activities of the medical workers all over the Republic. The guiding principles of the Medical Workers' Union, as formulated by the All Union Central Council of Trade Unions, are :—

> "The Central Committees of the Trade Unions and their agencies focus their attention upon the question of wages; regulation of labour; improvement of production and advancement of productiveness of labour; improvement of material living conditions of the workers. Their entire work must be based upon the most earnest study of the peculiarities of the various crafts and other groups of workers and upon careful examination and investigations of complaints and depositions of workers."

The Soviet Government has widened the basis of medical service and has brought into being various institutes of public welfare. The Public Health Service consists of (1) Hospitals, with special departments for internal disorders, surgical cases, venereal diseases, nervous disorders, nose and throat diseases, opthalmic ailments, and children's hospitals; (2) Outside establishments comprising clinics and dispensaries with consulting rooms and full surgical equipments, X-ray and medico-therapeutic clinics and surgeries for children, special centres for the treatment of tubercular and venereal cases. The outside medical centres are meant for industrial workers and technical staff.

Of late, there has been an increase in beds in the municipal hospitals and dispensaries and clinics have increased ten-fold. Specialists treat complicated cases and there are numerous centres that deal with nervous disorder. Of these the neurological institutes of Moscow, Leningrad and Gorky have acquired international recognition. Treatment by blood fusion is widespread and surgery has attained a high degree of perfection. This, in short, is the medical organisation in the Soviet Union.

V

SPECIALISED services are being increasingly brought within the reach of people dwelling far off. Hospitals in the rural area have three departments: Surgical, therapeutic, gyno-cological-obstetric. There is a widespread organisation of maternity, infant and child welfare all over the Republic. These comprise—(1) Creches in the towns and villages, women's surgeries which provide medical advice and supervision for expectant mothers, and infant welfare centres where new-born infants are under continuous medical supervision and obtain nourishment; (2) Lying-in hospitals in towns and villages and maternity centres in rural districts; (3) children's hospital both general and infections and convalescent establishments for children and young persons including sanatoria, open-air schools and camps.

Research on medicine in the Soviet Union is financed by the State and its achievements are startling. Science is no longer harnessed to the services of the few; nor are the scientists, the agents of death. Scientific research, they say, is not a luxury to be supported by some philanthropic agency. It is the source of social good and helps to realise the socialist objective. Science, divorced from the society, has no meaning in Russia now, and scientists, in living contact with mankind, help to create a new type of Humanity. Fellowship, coupled with the ideal of social good, is the urge that guides these scientists. In the Soviet Union, scientific research forms an integral part of national economy. But this does not mean that scientists are regimented. In the past, scientists professedly opposed to the New Regime, did enjoy the greatest amount of independence in their work. This is a rare privilege nowhere enjoyed in the present-day world.

VI

IN the early days of the Soviet regime there were technical difficulties in carrying along with research, though the new generation was not lacking in initiative. There was, for instance, dearth of literature and the Soviet Union being isolated from the rest of the world, scientists were denied the privilege of visiting important centres in other parts of the world. So the International Congress of Physiology was held in Moscow in 1935 and Pavlov presided over it. This really helped to bring the Soviet scientists much closer with the world.

The premier institute for studies of medical science is the *Maxim Gorky Institute of Experimental Medicine*. This is an old institute and dates back to the early nineteenth century. At present it is in the city of Moscow and has a staff of six hundred students. The Institute is organised into seven departments—Physiology, Morphology, Pathology, Biology, Chemistry, Physics, Epidemiology and Hygiene.

Besides there are 311 Medical Research Laboratories and Institutes with 15,000 scientists and 2,000 technical assistants working. In matters of general instruction, the supreme body is the *Medical Council* composed of 120 representatives, of various institutes. The Council sets up various committees and commissions to examine the problems of vitamins and endocrones, etc.

There are thirty-five medical journals devoted to the study of various branches of medical science. And the Medical Publishing Department publishes thousands of medical works every year.

And with all these working in unison to a common ideal, the Soviet State in Russia look after public health.

COMMON COLDS

By

ROBERT OLESEN,

Assistant Surgeon General, United States Public Health Service, New York

OUR knowledge of colds is so incomplete that an exact definition of the conditions cannot be given. However for practical purposes it may be said that a cold is an acute, self-limited infection which attacks the mucous membranes of the upper respiratory tract, ordinarily lasting from 7 to 9 days and frequently accompanied by serious complications. Ironically the expression "common cold" is applied to a group of infections which, far from depending upon cold as a causative factor, are frequently the direct result of living in close, overheated surroundings having a lower relative humidity than the driest desert known to man.

The manifestations of a cold are so well-known through personal experience that it may seem superfluous to recount them. However, a brief review of the symptoms may enable a better understanding of this disagreeable condition. The affection often begins in the posterior nasal passages with a feeling of congestion, accompanied by frequent sneezing and a profuse watery discharge from the nose. As inflammation extends, there is a feeling of soreness in the eyeballs, while the inflammed and tender mucous membrane of the throat feels harsh and dry.

During the course of a cold there is often a headche as well as a moderate and sometimes prolonged fever. When the disease extends to the larynx, trachea and bronchi there may be hoarseness, cough, and a feeling of tightness or pain across the chest. Smillie points out very properly that an uncomplicated cold is self-limited and that a prolongation or aggravation of symptoms is the result of complications. The onset of a cold is sudden, the principal symptoms, including rise in temperature, appearing within 1 or 2 days, after which the disease, if uncomplicated, subsides within 5 to 7 days.

In a study made by Collins and Gover it was found that "the percentage of respiratory attacks accompanied by given symptoms varied widely with age, and a few symptoms showed definite differences between the sexes at specific ages. However, the great majority of symptoms occurred with about equal frequency in attacks among males and females."

THE COMMON COLD

THE common cold is no respecter of persons. It sweeps through an entire household, an entire city, and entire State, attacking the young, the adolescent, the middle-aged, and frequently carrying off the aged, the weak, and debilitated. Schools, factories, stores are suddenly crippled by epidemics of this sort, and the complications following the disease add to the great economic loss and suffering produced in this way. Very small babies, because they are less likely to be exposed to persons having colds, have this disease less frequently than older children. However, children under 5 years of age are more susceptible to colds than any other age group. As children become older there is a lessened tendency to colds. However, young adults are extremely susceptible to colds. While elderly persons are less likely to have colds than young adults, when they contract the disease it may be serious.

Judging from observation and experience there is little natural immunity to the common cold. Susceptibility to more than one attack seems to be almost universal. The strong and vigorous have their bouts with the malady with apparently the same frequency as the puny and delicate.

THE CAUSE OF COLDS

IT will probably amaze many people to learn that the exact cause of the common cold, that is, the specific causative agent, remains unknown. Medical science has identified no organism, germ, or bacterium that gains access to the body from the outside and then proceeds to arouse the common cold, nor does medical science designate any definite change or combination of changes that may take place within the body as capable of setting up the cold. This may appear remarkable when viewed in the light of other discoveries and of the untold labour to discover the cause or causes and nature of the diseased condition termed the "common cold" on the part of hosts of distinguished students of disease the world over. It is not that complete ignorance reigns concerning the common cold. That the condition is caused by a very minute living agent—a filterable virus—that it is infectious, that is, transmissible from person to person, are facts pretty well established. This filterable virus is a micro-organism much smaller than a bacterium and so small that it cannot be seen with a high-magnification microscope and will pass through the ordinary laboratory filters that hold back bacteria. And yet, thus far, the common cold has defied all attempts to resolve it into its elementary or primal causative agents, and the mechanism of its onset is still obscure.

It is especially interesting to note that the virus is present in the nose and throat of the person ill with a cold particularly during the early stages of the infection. Moreover, the virus may be recovered from the filtered nasal secretions, cultivated in the laboratory, stored under suitable conditions, and transferred experimentally to other human beings and experimental animals.

PREVENTION OF COLDS

IT was formerly taught that the maintenance of what was called "body resistance" was an effective defense against the common cold. Now there is reason to believe that the physically fit succumb to a cold almost as readily as the weak. The principal advantage in maintaining physical efficiency is that the manifestations of a cold may be somewhat curtailed and the uncomfortable consequences modified when one is strong and well at the onset. The proneness of the common cold to attack the strong and vigorous is analogous to the havoc wrought by influenza, a disease that may be closely related. It will be remembered that during the last great influenza epidemic many healthy young adults presumably in the "pink of condition," were stricken.

A good deal has been said about "hardening" people so that they will not contract colds. There is an element of danger in this, since to expose a weak persons to the rigors of cold

baths and cold drafts is likely to lower resistance, thus favouring the very condition it is desired to avoid. At the same time it should not be forgotten that the Arctic explorer does not ordinarily have colds so long as he stays out in the open. Rosenau says that "it is not the engineer and the firemen in the cold, drafty cab who catch colds, but those who ride in the dusty, overheated coaches behind."

To recommend that the "cold" infection be avoided may appear to be rather difficult advice to follow, yet obvious precautions may be taken. Manifest sources of infection, such as persons with a cold in a family or work place can, within limitations, be shunned. Certainly if the sick person is ordered away or remains away voluntarily, the opportunity for the spread of the disease will be correspondingly lessened. It is greatly to be hoped that far-seeing supervisors will some day enforce a rule against the presence in schools, offices, and other places in which people congregate, of persons having colds. Not only would the infectious individuals be removed but the best possible treatment for the condition, rest, would be supplied. Of course, without voluntary compliance on the part of the sufferer with the spirit of such a rule, little may be expected in the way of beneficial results.

Increased educational efforts are needed for the segregation, even punishment, of infected persons who sneeze, cough, and spit while in proximity to others. To commit these acts without benefit of a shielding and disposable handkerchief, is reprehensible.

The handling of inanimate objects that may have been freshly soiled with the secretions from the nose and mouth of a person suffering from a cold should, of course, be avoided. This brings up two additional points of importance, namely the danger attending the putting of fingers to the nose and mouth, as well as the necessity for washing the hands before eating. In this connection the desirability of sterilizing eating utensils, not only in public places but also in private homes, deserves a fair share of consideration.

TREATMENT

THE physician is frequently asked whether a stock of vaccine, such as may be obtained from a biologic manufacturing firm, is useful as a cold preventive. While there is no unanimity of opinion on the subject, the majority of observers aver that the mixed vaccine, in which the various organisms found in the nose and throat are utilized, is not helpful in preventing colds. At the same time it is reasonable to expect that when a vaccine is produced from the filterable virus responsible for colds, an agent of considerable efficacy will become available. If, in the opinion of the attending physician, a suitably prepared vaccine is helpful in preventing the complications of the common cold, the prophylactic may be tried.

There is no good reason for believing that a cold may be prevented by the use of a special diet, not even when certain vitamins are present in extra quantities. In some quarters the efficacy of vitamin C has been extolled in this connection, even so humble a medium as the cough drop having been utilized as a vehicle. However, the proof of such benefits is not convincing.

If every person having a cold would go to bed for a day or two several desirable objectives would be achieved; first, a cold-spreader would be removed from circulation, and, second, the patient himself would be receiving the best possible treatment—rest. Despite extravagant claims made in behalf of proprietary preparations and the belief of many individuals that they have personal knowledge of how colds may be 'broken up", the fact remains that there is no specific treatment. It should again be recalled that a cold is a self-limited disease and that what is done in the way of treatment merely reduces the intensity rather than curtails the manifestations.

Many of the nostrums recommended as cold preventives and cures contain harmful drugs and alcohol, the latter often predominating. Self-medication or prescribing by untrained persons is usually dangerous and as a rule much inconvenience and suffering will be obviated by consulting a competent physician promptly. What will the physician do? First of all the patient will be ordered to bed, kept comfortably warm and protected from drafts. If necessary, pains and aches will be relieved by the use of simple remedies. The patient will be kept in bed at least 24 hours after the fever has subsided and longer if necessary.

Probably no form of treatment other than rest is so soothing to a person with a cold as a hot tub bath lasting 15 to 20 minutes. As such a bath is debilitating because of excessive perspiration, delicate persons should be guarded against too lengthy an immersion. Care should also be taken against chilling and exposure during and after leaving the bath. Perspiration may be promoted by the ingestion of hot natural acidulated drinks such as those prepared from orange, lemon, and grapefruit. A hot bath soothes aching limbs, causes drowsiness, and frequently results in refreshing sleep.

At times the headache and general aching may be sufficiently severe to warrant the administration of sedative. It may be, too, that the mucous membrane of the nose will become sufficiently congested to make breathing difficult and interfere with drainage of the excessive secretion. For these conditions a physician can prescribe remedies that will bring relief. A popular home remedy for this condition is provided through the cautious inhalation of a vapour produced by a mixture of compound tincture of benzoin and boiling water. This vapour is soothing to the inflamed mucous membrane and may be provided by home equipment or by means of an electric vapourizer obtainable at small cost. Rather than take patent remedies or rely upon the uncertain suggestions of well-meaning friends, a person suffering from a cold should summon a physician. Moreover, when a drug is required for the purpose of affording relief, it should be obtained upon the prescription of a competent doctor of medicine.

There was an old saying, "Feed a cold and starve a fever", but it no longer holds good. The present-day conception is that a fever patient requires a nutritious maintenance diet while a person with a cold gets along best on light, nourishing, and attractive articles of food, adapted largely to the patient's inclination.

It is frequently advised that a patient with a cold be given a brisk purge, but there appears to be no good reason for adding to his inconvenience in this way unless there are pointed indications. If at the onset of the cold the bowels are normally active, the administration of a purgative may be omitted.

The treatment of untoward symptoms, such as cough, pain, lasting aches, earache, sore throat, and the like, call for the services of a physician, not only for treatment but for the establishment of a diagnosis, lest complications result.

In most instances, of course, special medical treatment for colds is unnecessary. The real problem is to distinguish between a simple cold and one that is complicated and potentially serious. Obviously it is not easy for a lay person to make such a distinction; hence the desirability, when practicable, of summoning medical aid.

COMPLICATIONS

THE common cold, comparatively simple and harmless in itself, is potentially dangerous because of its compli-

The Chinese Art of Eating

LIN YUTANG

The famous author of "My Country & People".

I

OFTEN I am asked what we eat. We eat everything that is edible, preferably crabs, but if we are forced to, we eat even tree shoots. Economic necessity is the mother of our gastronomic inventions.

We are constantly faced with the problem of overpopulation and famine in China. This is a well-known periodic phenomenon that forces us to eat whatever falls into our hands. It is perfectly natural that in our many experiences we have made notable discoveries in the matter of food just as, in certain instances, chance has brought about scientific discoveries.

We are the only omnivorous people of the earth and this is not surprising since we possess perfect teeth, a fact that will some day be recognized by dentists. Urged on by famine and good teeth, I see no reason why we should not have been the first to discover that broiled cockroaches and fried bee pupa are very appetizing tidbits. The only food whose possibilities we have not considered is cheese, despite the example set by the Mongols and the Europeans.

Naturally, in the face of actual hunger, there is no choice. In times of famine, some have found themselves obliged to eat little children but we have never eaten them raw as the English do the flesh of animals.

If there is anything in this world that we take seriously, it is not religion nor science but rather good food, one of the greatest pleasures of our terrestrial life. Our attitude toward food has its importance because if we did not confess frankly this weakness it would be impossible to elevate good food to the plane of art.

II

WITH respect to Europe, France and England represent different attitudes toward food. The French eat with enthusiasm, the English apologetically. In the matter of pleasures of the table, the Chinese are inclined to agree with the French point of view. The English national life in itself is a complete study of the dangers of treating lightly the matter of everyday eating.

Even the English language demonstrates that the people as a whole have neglected the culinary art. There is no English word to describe the French *cuisine*. The word *cooking* merely indicates the necessity for properly preparing food. Nor do they have the equivalent of *chef*, they simply say *cook*. They do not speak of *menu*, but merely refer to *dishes*.

There is no way of translating *gourmet*. The closest approach to it is "Greedy Glut", the villainous glutton who is usually referred to only in children's songs. The truth is that the English refuse to recognize the existence of the stomach.

When a Frenchman insists upon obtaining the opinion of an English guest, the latter just murmurs that the pastry is excellent without giving a definite reason nor attempting to discuss the subject. Is it not true that it is impossible to develop the culinary art if there is no disposition to exchange ideas on the matter? Only in a society where people open a conversation by inquiring into the state of health of their respective cooks instead of vague comments on the weather can the gentle art of the kitchen prosper.

For the complete enjoyment of a dish, it is absolutely necessary to be familiar with the method of preparation, to discuss it until the mouth waters, to taste it appraisingly and, finally, to comment upon it at length. Preachers should not hesitate to condemn a tough steak even from the pulpit nor men of letters to write dissertations on food as do the erudite of China.

III

IN China when a dish is placed before us, we think about it, anticipate its delicious flavour; we

enjoy it as one would a secret delight. Sometimes our invitations announce, for example: "My nephew has just brought us a special vinegar from Chinkiang and a salted duck from Nanking which came directly from Laoyucha." Or perhaps: "June is drawing to a close and if you do not hurry you will not be able to taste shad until next year."

Such a sage as Li Liweng confesses that long before the autumn moon he plans and economizes for the crab season and then seriously seeks the best place to go with his family to eat them.

We are not troubled by even the slightest suspicion of false modesty in this matter. We eat "pork a la Su Tungpo" or "bean cheese, Kiang style". Can one imagine an Englishman eating "beefsteak a la Wordsworth" or a "chop a la Galsworthy"? Wordsworth preached the simplicity of life and the elevation of thought but he failed to mention, for example, that bamboo shoots with mushrooms are one of the major pleasures of pastoral life.

On the other hand, Chinese poets have sung the praises of perch or "vegetable potage *shun*" in phrases of rare elegance.

One cannot deny that love of our native land is no more, in general, than the memories of sensual pleasures experienced in infancy. The fidelity to *Uncle Sam* is no more than fidelity to the American *doughnut* and the love for the *Vaterland* is closely related to *Pfannkuchen* and the *Stullen*, no matter what the Americans and Germans may say.

The importance which we Chinese bestow on food is very obvious. In novels there are frequent descriptions of menus. To a Chinaman good food is one of life's necessities. An English poet or writer of prose would consider it beneath his dignity to write a cookbook. However, the great dramatic poet Li Liweng did not feel it diminished his prestige to describe a favorite recipe. Another great sage and poet, Yuan Mei, left to posterity a book on the delights of the kitchen and a eulogy of his cook.

IV

TWO principles inspire all Chinese dishes. The first is appreciation for its nutritive value, the second its benefit to the teeth. On the other hand, we appreciate its aroma, taste and color. We combine aromas particularly. The culinary art is based on the science of associations.

For example, nobody knows the true flavour of cabbage unless he has cooked it slowly with chicken until the flavour of one has thoroughly permeated the other.

Celery can be eaten alone but when a Chinaman sees spinach and carrots that have been cooked separately and then put on a plate with pork or roast duck he smiles before the ignorance of the barbarians.

We are very temperate in matters of drink except with regard to tea. Rarely does one see a drunken person on the street.

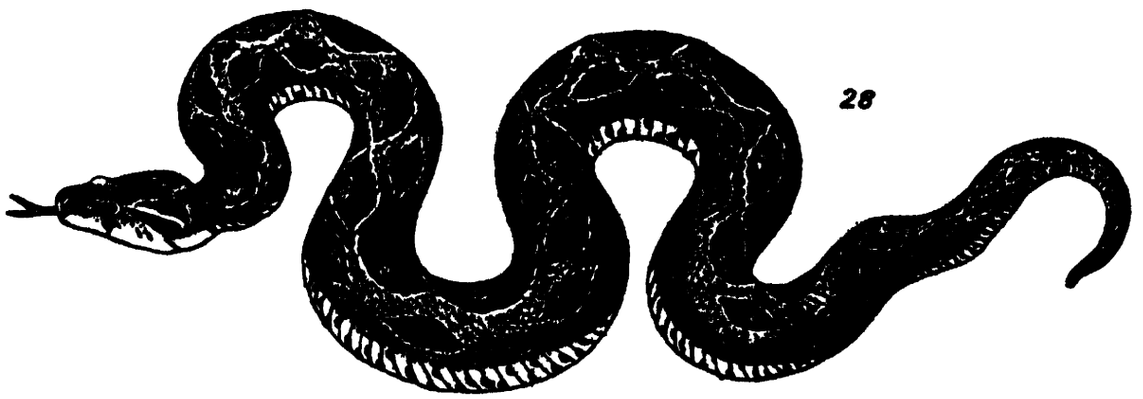
The 'tasting' of tea is in itself an art. Some people make a cult of it. There are books on tea and the manner of drinking it, just as there are books on incense and wine.

Tea, more than any other of man's inventions, brings pleasure to the daily life of a whole nation and has brought about the institution of tea houses which are as numerous as the "cafes" of the Occident. We drink tea at home or in the tea houses, alone or in company, in the councils of administration and sessions of conciliation.

COMMON COLDS—*Continued from page 35*

cations To appreciate the possibilities in this direction it should be known that certain bacteria normally inhabit the mucous membranes of the nose and throat without producing signs and without manifesting symptoms However, the normally inactive organisms appear to take advantage of favourable conditions such as are provided by inflamed tissues and produce the specific diseases with which they are associated

Very often, too, there is an extension of the inflammatory cold process to the air chambers and canals adjoining the nose and throat. In this way the middle ear and the sinuses may become unpleasantly involved. There may also be an extension of the inflammation to the trachea and bronchi, thereby setting up what is known as a "chest cold", associated with hoarseness, cough, tightness or pain in the chest, fever, and varying degrees of physical incapacity.



A common cold often precedes an attack of pneumonia However, the mechanism by which pneumonia organisms, often normal residents of the nose, mouth, and throat, are excited to detrimental activity can only be conjectured. It is likely that favourable soil is prepared by the filterable virus responsible for colds and a more serious disease is inaugurated. It is as if the quiescent bacteria act as a low pilot light to be spurred to intense activity by the spark-like filterable virus. This comparison accounts only too well for recurring attacks of sinusitis.

If for no other reason than preventing the onset of pneumonia, it is worthwhile to manage a common cold with intelligence and promptness.

One of the unpleasant accompaniments of a cold, due in all probability to unrecognized complications, is a prolongation of symptoms, particularly manifested by weakness, lassitude, and slow return to normal health. These are far out of proportion to the apparent severity of the disease.

A very important reason for securing the advice, counsel, and practical aid of a physician in the presence of an apparent cold is the possibility that the condition may not be a cold but a beginning infectious disease such as measles, whooping cough, scarlet fever, tonsillitis, diphtheria, or other serious acute affection. This applies particularly to the initial symptoms of such diseases in children when an early and accurate diagnosis is greatly to be desired if adequate treatment is to be afforded and isolation effected.

Snakes - - - and

—*Russell's Viper*

Snakebite . . . WITH SOME SUGGESTIONS *for* TREATMENT

By

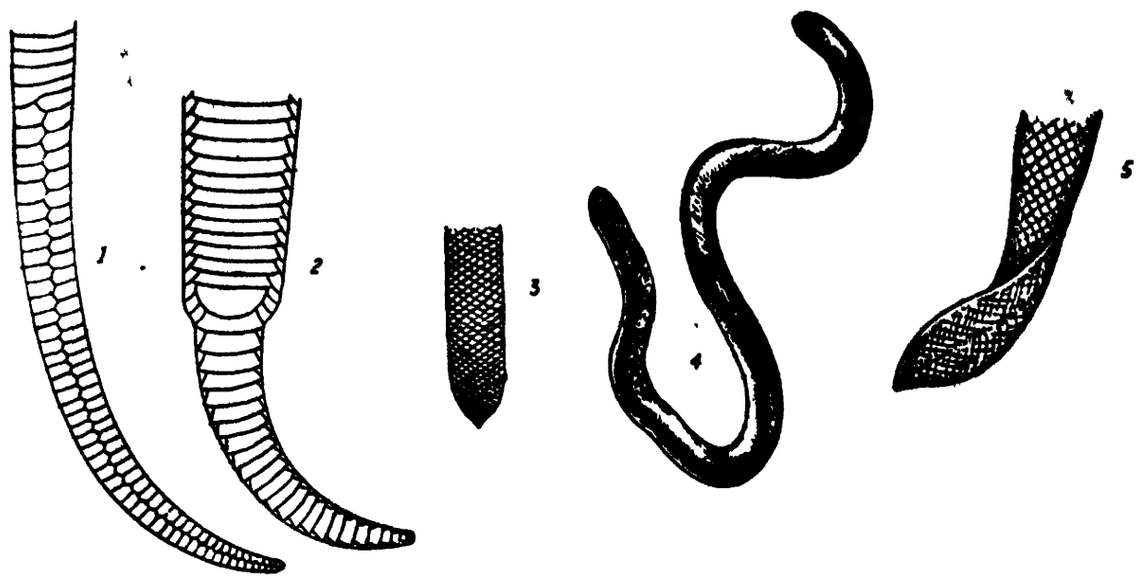
D. N. ROY, M.D., D.T.M.

Professor of Medical Entomology,

&

S. K. GANGULY, M.B., D.T.M., B.M.S

Entomology Department,
School of Tropical Medicine, Calcutta.



THE significance of the oft-quoted statement that about 20,000 people die of snake bite every year in India, was fully appreciated by the junior writer in his experience as a medical officer in several places in Bengal, particularly during his stay in a sub-division in the District of Midnapore. During the months of April, May, June and July, seldom a week passed without at least two snake-bite cases being brought to the hospital for treatment. Fortunately a majority of these bites were by non-poisonous snakes. This could be readily verified when the dead snake was brought along with the patient.

It can be stated, however, that only one in four or five snake-bites in India is a poisonous bite, of which only 50 per cent of untreated cases usually succumb. The amount of poison injected by a snake on which depends the progress of the case, is not the same in every instance ; the snake in question might have bitten any other animal immediately before, so that the poison sac is more or less empty ; or when the bite is through clothes, most of the poison is likely to be absorbed in the garment of the victim. This explains why a large number of people recover after snake-bite even when the snake is poisonous. The credit of cure, undoubtedly in many instances, goes to the quacks ; not to speak of the thousands of cures after bites by non-poisonous snakes. Cases of death have no doubt been recorded from bites by non-poisonous snakes, the death being due entirely to extreme shock from fright. These cases can only be diagnosed with certainty if the snake responsible for the bite has been caught and identified. It is necessary, therefore, that such patients must be assured that he has been bitten by a non-poisonous snake which is bound to have a reassuring effect on the patient. The question, therefore, which naturally confronts us, is whether one can readily distinguish a poisonous from a non-poisonous snake.

Classification and Characteristics

Snakes, as is well known, are classed with reptiles and include a large variety of animals such as crocodiles, tortoise, lizards and chameleons. There were also pre-historic reptiles e.g., Dinosaurus, Pterosaurus, Plesiosaurus, Ichthyosaurus etc Though snakes and lizards are easy to distinguish, yet at times considerable difficulty may arise when a legless variety of lizard is encountered.

The lower jaw-bone of a lizard is united in front as in many animals, whereas in snakes the two bones are attached by an elastic ligament which enables the creature to swallow a comparatively large prey. Unlike in a lizard (iguanas excepted) the tongue of a snake is long and bifid. All lizards have eyelids,

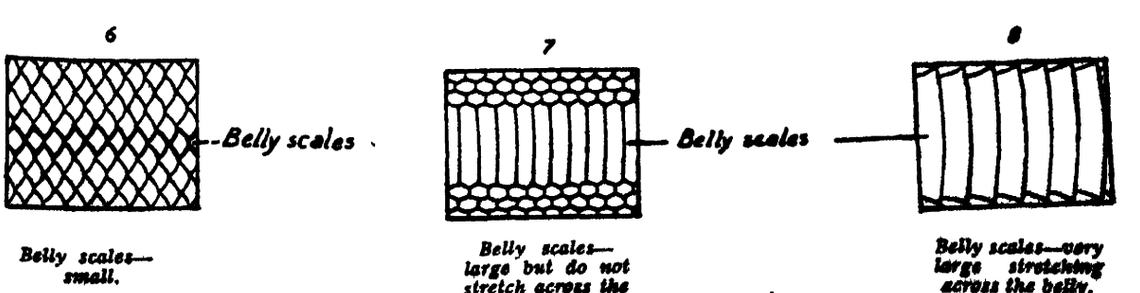
Long tail of a Colubrine snake. *Short tail of a Viper* *Blunt tail of a burrowing snake* *A burrowing snake (Typhops).* *Flat tail (oar-shaped) of a Sea-snake.*

whereas snakes have none. Snakes, unlike lizards, have no external ears. They can only hear vibrations of sound conducted through ground by means of their well developed internal ears. The popular belief that snakes are attracted by music has no foundation.

Snakes are elongate, scaly reptiles which are devoid of limbs except Pythons, where rudimentary hind limbs appear as claw-like processes. The body scales of snakes are different from those of a fish, in the former the scales are not detachable whereas they are so in the latter. The scales as well as the eyes of a snake are covered by a transparent outer skin and when the new underskin is completely formed, the outer one becomes opaque and loose; it cracks near the snout and is cast off inside out. A few days before the shedding of skin the snakes cannot see properly. This shedding of the skin is repeated 6 to 8 times a year by younger snakes and 3 to 5 times by adults.

Nine Families

Snakes are divided into nine families, among which only two, which include Colubrine and Viperine snakes, are really poisonous to man. Differentiation of these families are usually done by a study of the scales, teeth, bones etc. The colour of a snake is not an important distinguishing point as the colour varies in some snakes with age, with different seasons of the year and sometimes two snakes of widely different species may possess almost similar colour pattern, of which one may be highly poisonous and the other harmless.



The nine families of snakes including the Colubrines and Viperines contain some 2000 different species of snakes in the world of which 300 are poisonous. In India there are about 330 species of snakes of which only 70 are poisonous (40 land snakes and 30 sea snakes). All vipers and about 15 per cent. of Colubrines are poisonous. As the name implies, the vipers are viviparous, *i.e.*, the female gives birth to young ones whereas the Colubrine snakes (except the sea-snakes) and members of all other families are usually oviparious, *i.e.*, the female lays eggs.

Dentition.—Snakes possess four rows of teeth on the upper jaw (two rows on gums and two rows on palate) and two rows on lower jaw. The Colubrine snakes are placed under three distinct categories as follows according to the arrangements of their teeth:—

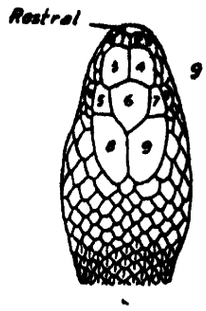
Series A.—Those which possess all solid teeth and no grooved teeth or poison fangs. These are all non-poisonous (figs. 19 and 22).

Series B.—Those in which small fangs are present on the back of the upper jaw. These are poisonous to small animals and are non-poisonous to man (figs. 20 and 23).

Series C.—In these, large grooved teeth or fangs, communicating with the poison glands, are present at the front of the upper jaw. In addition to the

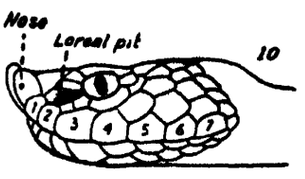
Belly scales—small. *Belly scales—large but do not stretch across the belly.* *Belly scales—very large stretching across the belly.*

usual sets of fangs, some reserve ones are generally present which grow when the primary ones are lost or broken. These are all highly poisonous to man and to general animals (figs. 21—24).



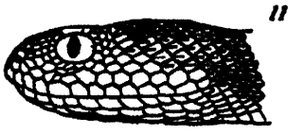
How to Know Snakes

Although outside characters often help to know if a certain snake is poisonous or not, it is only by examination of the character and arrangements of the teeth that one can pass a definite opinion on this point. The presence of fangs is the only sure indication of the poisonous nature of a snake. These fangs are considerably larger than other teeth; they are curved and cannaliculated for the passage of the venom which is secreted from the poison glands; these glands are really the salivary glands of the snake. For the study of other subsidiary characters one may proceed systematically as follows:—

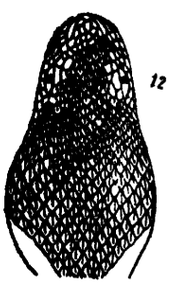


(1) *Tail.*—All sea snakes, which are highly poisonous, have flat or oar-shaped tail (fig. 5), whereas land snakes, including fresh-water snakes, possess cylindrical tails, either long slender (fig. 1) or dumpy (fig. 2) or blunt (fig 3).

(2) *Belly scales.*—In order to study the belly scales, the snake has to be placed on its back. The belly scales may be either small or large. When they are small, the snake is non-poisonous and is usually a burrowing snake (fig. 6). If they are large but do not stretch across the belly (fig. 7), it is also a non-poisonous snake, it may be a medium sized burrowing snake or a python or a boa. Lastly, if they are considerably enlarged and when they stretch right across the abdomen so that no lateral scales are visible (fig. 8), the snake is either a Viperine or a Colubrine snake. It has already been stated that all Viperines and only 15 per cent. of Colubrines are poisonous.



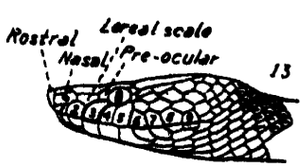
(3) *Back scales.*—Now when the snake is placed on its abdomen, one row of scales running along the middle of the back, the spinal scales, must be carefully examined. If they are enlarged than those of their neighbours, and are of hexagonal shape (fig. 16), it is a sure indication that the snake is a Krait which is a highly poisonous Colubrine snake.



Nine head shields of a Colubrine snake

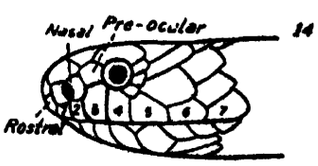
Side view of the head of a Pit-viper showing loreal pit.

Side view of the head of a pitless viper. (No loreal pit)



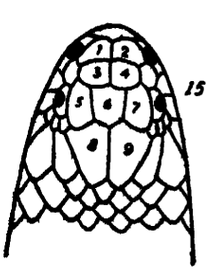
Head scales of a viper

(4) (*a*) *Head.*—If the head is long and triangular in shape and is distinctly marked off from the body by a constricted neck and if the scales on the head are of the same size as those on the back, the snake is a Viper (fig. 12). Some Vipers have a depression or a Pit between the nose and the eye—the loreal it; these are known as Pit vipers (fig. 10). All vipers are highly venomous.

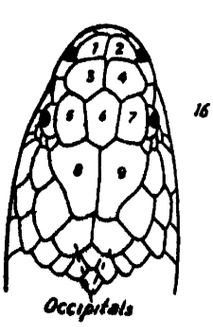


(*b*) If the head is not distinct from the neck and if the scales of the head are large, *i.e.*, shield-like, which are usually nine in number (fig. 9), the snake is a Colubrine one and may be either poisonous or non-poisonous.

(5) *Region between the eye and the nostril.*—If in a Colubrine snake a single scale*, *i.e.*, the 3rd scale on the upper lip touches both the eye and the nasal scale (fig. 14), it is certain that the snake in question is either a common Cobra, a King Cobra, or a Coral snake. All of them are highly venomous

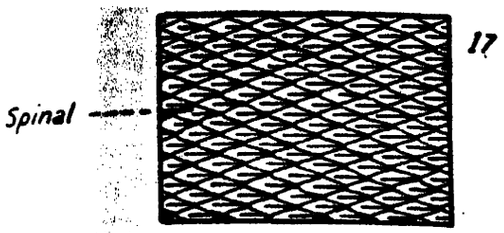


If in a Colubrine snake the 3rd scale on the upper lip does not touch both eye and the nasal scale (fig. 13), and the spinal scale is not large and hexagonal (fig. 17), the snake is for certain a non-poison-

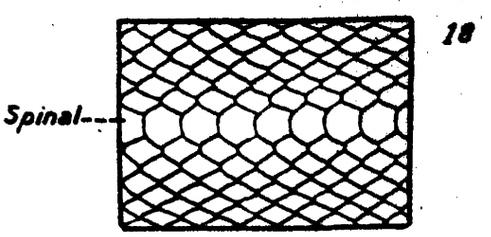


Side view of the head of a non-poisonous Colubrine snake (3rd scale of the upper lip does not touch both eye and the nasal scale.)

Side view of the head of a common Cobra (3rd scale of the upper lip touches both the eye and the nasal scale).



Head scales of a common Cobra. (No occipitals.)



Head scales of King Cobra. (Two large occipitals)

*In counting the scale of the upper lip, the scale situated at the tip of the lip, "the Rostral scale" should be omitted.

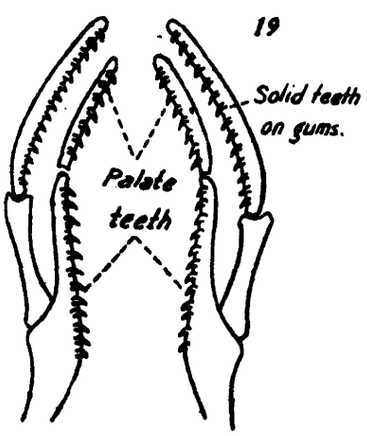
Back scales of a snake. (The spinal scales are not large)

Back scales of a Krait. (The spinal scales are large and hexagonal)

ous Colubrine snake. Moreover, in the majority of non-poisonous Colubrine snakes there are two distinct scales, the loreal and the pre-ocular interposed between the eye and the nose (fig. 13), whereas in all poisonous Colubrine snakes, *e.g.*, Cobras, Kraits, Coral snake, there is only one scale interposed between the eye and the nose. *i.e.*, the pre-ocular scale only (fig. 14).

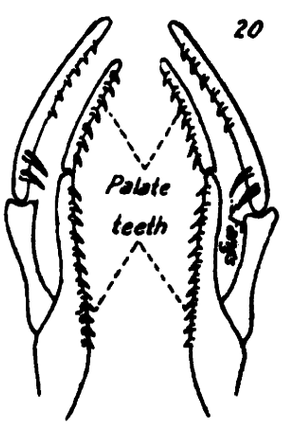
Common Poisonous Snakes

The common poisonous Colubrine snakes (Front fanged Colubrines) are :—



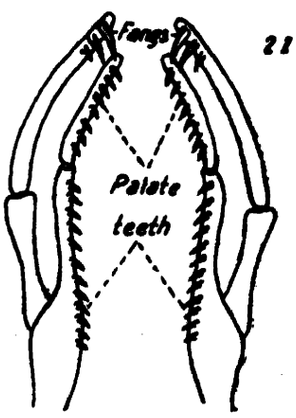
1. *Cobras*—(*a*) Common Cobra—*Naia tripudians.*
(Bengali—"Gokhurah", Keuntia, etc.).
(*b*) King Cobra—*Naia bungarus.*
(Bengali—"Sankhachoor").

Indeed it is a fascinating sight to see a cobra to raise its head with its expanded hood and hissing to overawe its enemy. The power to expand the neck into a well marked hood and to raise its head to about one-third its length of its body is possessed by no other common snakes in India. The usual length of Cobra is about 4 to 6 ft. Although scientifically speaking two types of Cobras are recognised, it is generally considered by lay people that there are really three distinct types of Cobras, such as, (1) *Gokhurah ;* (2) *Keuntia ;* and (3) *Sankha Choor.* The difference between the first and second lies in the colour markings. They are really varieties of the same species—*Naia tripudians.* While *Gokhurahs* are usually wheat coloured and have a mark on the back of their hoods which appears like a reversed spectacle (fig. 25); *Keuntias* are usually dark and have either no mark at all (fig. 26) or a circular mark (fig. 27) at the back of their hoods. The common cobra is ubiquitous all over India and there is seldom any one in India who has not seen a Cobra displayed by a snake-charmer. The Cobra especially the *Gokhurah* is found in places adjoining human habitations and very often inside old dilapidated dwelling houses. This accounts for the large majority of deaths from snake bites being due to common Cobras. Only about one-fourth of a grain of Cobra venom is sufficient to kill a man.



King Cobra or *Sankha Choor* is the largest of the poisonous snakes in the world and may attain a length of 15 feet. They can be easily distinguished from a common Cobra by the presence of two large shields—the occipitals (fig. 16) at the back of its head in addition to the usual nine shields of a Cobra (fig. 15). The King Cobras are prevalent in Sunderban areas of Bengal, the forests of Orissa, Assam, Burma, Thailand, Malaya, etc. Their only way of sustenance is by preying on smaller snakes. It is most ferocious in its habits and will attack even unprovoked. Men have been known to be killed within a few minutes after its bite, even elephants cannot stand the full dose of the venom of a King Cobra.

2. *Kraits.*—Common Krait—*Bungarus candidus.*
Bengali—"Karait", "Domna chitti".
Banded Krait—*Bungarus fasciatus.*
Bengali—"Sankhini", "Sankha mooti".



The Kraits comprise another group of highly poisonous Colubrine snakes. They are provided

Upper jaw of a non-poisonous snake. (Four rows of solid teeth)

Upper jaw of a mildly poisonous snake. (Four rows of teeth-fangs at the back of the gum margin)

Upper jaw of a highly poisonous snake. (Two rows of solid teeth—fangs at the front of the gum margin. Rest of gum bare)

with a single row of enlarged hexagonal scales running along the whole length of the back (fig. 18). Two types of Kraits are common, one unbanded or common krait, the other banded. In the banded variety there are alternate bands of bright yellow and deep bluish black bands on the body. The common Krait is black in colour with white narrow stripes at intervals. The Krait is of a sluggish habit and is usually not inclined to bite unless it is severely hurt or greatly annoyed. It is on account of this reason that bite from Kraits is seldom heard of, though all Kraits are highly venomous.

3. *Coral snakes.*—These poisonous Colubrine snakes are brilliantly coloured usually red or coral (hence the name), with black and yellow cross bands. They are usually small in size, and though their venom is very toxic, the amount of venom in each bite is not sufficient to kill a man. They are not commonly met with

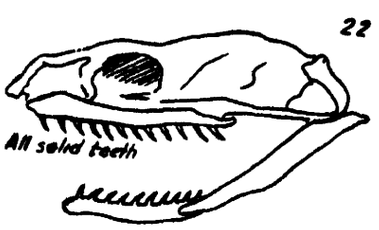
4. *Sea snakes.*—As already stated the sea-snakes have a flat tail compressed from side to side (fig. 5). They belong to the Colubrine family and all are highly poisonous. They are very common in the Indian Ocean. They die very soon when washed ashore and it is quite a common experience to find a dead sea-snake on the beaches at Puri, Gopalpore, Waltair, etc. They are caught in hundreds in the fisherman's nets and are again thrown out into the sea. They very seldom bite man.

Viperine Snakes

The viperine snakes (Pitless and Pit-vipers) are all highly poisonous.

1. Russell's Viper.—*Daboia russelli.* Bengali "Chandra Bora". Next to Cobra, Russell's Viper is responsible for a large number of deaths from snake bite. It can be readily recognised by the presence of large oval spots, on its brick-coloured body, which are arranged in three rows (fig. 28). It has all the characters of a Viper, *i.e.*, triangular head distinct from a narrow neck, very stout body and a short stumpy tail. It has no loreal pit, so it is a pitless or true viper. Unlike Cobra, a Viper with the approach of its enemy will immediately assume a defensive position by coiling itself and will make a loud hissing noise intended to frighten its foe. As soon as the enemy happens to reach within its striking distance, it will at once bite with lightening rapidity which is followed by fatal consequences.

2. *Echis carinatus* (Bombay—'Phoorsa').—It is another common pitless viper found in certain parts of the Bombay Presidency, in Rajputana and the Punjab. It is a small snake and rarely attains a length of more than 1½ to 2 ft. It can be readily identified by the presence of an arrow-shaped mark on the head. It is a vicious snake and bites readily with often fatal result.

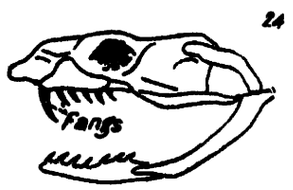


3. *Lachesis* or the common Pit-Viper.—(There is a depression or pit between the eye and the nose, fig. 10). It is greenish in colour and is found on trees. Its bite though dangerous to birds and other small animals is not so to man. It is known as "Gacho-bora" in Bengali. There are many other pit vipers in India but they are not often met with. The rattle snakes of America are pit vipers.

Mildly Poisonous Snakes

The back-fanged Colubrines are mildly poisonous (figs. 20, 23)—but non-poisonous to man.

1. Green whip snake—*Dryophis mycterizans* (Bengali—"Lau danga"). It is a long slender green-coloured snake with a long tail, and usually found on trees, bushes, shrubs, etc. It may attain a length of 6 ft. It moves very fast on branches of trees and is often found on the tops of cocoanut trees in Bengal. The green colour of its body helps it to conceal itself very deftly among branches of creepers and trees. It is capricious in habits sometimes docile at other times vicious. People when bitten by this snake usually get swelling of the part bitten but no constitutional symptoms.



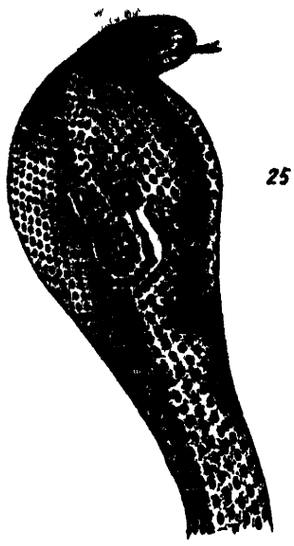
2. Brown tree snake: *Dipsas trigonatus* (Bengali—"Bethia samp"). Like other tree snakes it is a slender snake with a long tail. It is of sandy colour with a series of dark rings on the sides. It

Head of a non-poisonous snake.
(All solid teeth)

Head of a back-fanged snake.
(Mildly poisonous)

Head of front-fanged snake
(Highly poisonous)

superficially resembles a phoorsa. Its bite produces only local symptom in man.



3. Golden tree snake: *Chrysopelea ornata* (Bengali—"Knard samp" or "Kalnagini"). It is a long slender tree snake with beautiful display of black, golden and red spots all over the body. The Bengali name "Kalnagini" which means "Death snake" is a misnomer as its bite only causes local effect.

4. Besides the back fanged tree snakes there are two common back fanged water snakes found in brackish water of tidal rivers, creeks and estuaries

Common Non-Poisonous Snakes

The common non-poisonous Colubrine snakes are all with solid teeth (figs. 19 and 22).

1. Wolf snake: *Lycodon aulicus* (Bengali name "Chitti"). This is the commonest non-poisonous

25

Spectacled Cobra
(Gokhurah)

26

Cobra
(Hood with no markings
Keuntia)

27

Cobra
(Hood with one circular
—Keuntia)

snake found in this country and is usually 1½ to 2 ft long Its habit of eating cockroaches and lizards is responsible for its presence in human habitations The colour is usually deep brown with white markings at intervals It may be mistaken for a Krait

Rat snake *Zamenis mucosus* (Bengali Dhamna', "Danras") This is another common non poisonous snake in India It commonly attains a length of 5 to 6 ft and may be up to 8 ft The colour is greenish brown or greenish with black cross bars at intervals at the second half of the body and the tail It lives near human habitations and feeds mostly on rats If disturbed or annoyed it will bite with fury and the majority of non poisonous bites are from this snake The popular belief that *Dhamna* is a male Cobra is a myth

3 The Keelback or Grass snake *Tropidonatus stolatus* (Bengali—"Helia or Heley ') This is a graceful snake with a long tapering tail usually attaining a length of 2 to 2½ ft It has two greenish brown or yellow parallel stripes along the back from the neck to the tip of the tail Being non poisonous it is often being picked up by a daring village urchin and tossed about Keel means a ridge)

4 The chequered keel-back or common pond snake *Tropidonatus piscator* (Bengali Jal dhonra") As the name implies this snake lives in water It is rather stout and has a long tail The nostrils are placed on the snout to enable it to breathe without raising its head from the surface of the water This is characteristic of all marine and aquatic snakes The scales are ridged like the grass snake The colour is very variable from yellow to dark brown with chequered black spots on the sides and along the back Though it is vicious and bites readily when annoyed, it is non poisonous

5 Bronze whip snake *Dendrophis pictus* (Bengali—"Beth achra") It is a bronze coloured long slender tree snake. and can leap from one branch to another It is absolutely non poisonous The common belief that whip snakes can roll like a wheel by putting its tail into the mouth is so fictitious that it requires no further comment, neither it is possible for whip snake to whip its victim

Boas and Pythons are all non-poisonous The so-called double headed snakes or *Eryx Conicus* or *I Johnii* (Bengali—"Dumokho Samp") Both are boas and each have only one head The tail being blunt looks like a head and the snake-charmer passes these non poisonous snakes as highly poisonous doubleheaded snakes which change their mouth every six months

Finally the Pythons—(Bengali—"Ajggar", 'Mayal samp") are non-poisonous snakes of very large size In India *Python reticulatus* and *I Molurus* are the two large pythons The former may attain a length of 30 feet or more They can kill a man or a big animal within a few seconds by the pressure of the constricting coils thus stopping the heart beat

Burrowing Snakes

There are many species of burrowing snakes which all lead a subterranean life and feed on eggs, larvae and adult insects, worms etc The majority of them are small in size and all are non-poisonous A common burrowing snake, the *Typhlops* (fig 4) Bengali—"Puiya samp", "Telia samp" is often met with and contrary to the popular belief it is absolutely non poisonous

There are many other species of non-poisonous snakes, the description of all is not possible in the present article

The writers will be at the service of any one who intends to send snakes for identification The dead snake should be sent in 4 per cent formalin or spirit or methylated spirit in a glass jar or in a tin

Snake-bite and Symptoms

The mojority of the snake-bite cases occur at night. The usual story of a snake-bite is that a black lithe wriggling creature was trodden upon or kicked in the darkness and it bit the victim. A snake seldom bites unprovoked. The bite of a snake is like that of a rat or a cat and not a sting as is usually supposed. The snake leaves the marks of its teeth on the body of its victim. In accordance with its arrangement of teeth or fangs the bite of a non-poisonous snake produces a mark like the fig. 29, a back-fanged Colubrine snake will effect a mark like fig. 30, and a front-fanged Colubrine or a Viper will leave a mark as in fig. 31.

29 Teeth mark of a non-poisonous snake.

30 Teeth and fang marks of a back-fanged snake.

31 Fang marks of a front-fanged poisonous snake.

Symptoms on man or animal after bite differ according to whether the snake belongs to Colubrine or Viperine family. Whereas in case of poisonous Colubrine, *e.g.*, Cobra-bite, the venom mostly acts on the nervous system, in case of Viper-bite the venom acts on blood and the blood vessels.

Cobra-bite.—Immediately after the bite there is slight burning sensation at the place of the bite but within a few minutes the part becomes numb, and as the venom circulates in the blood, gradual weakness sets in and there is uncontrollable wish to lie down. Whether bitten on the hand, arm, trunk or leg, there is gradual onset of paralysis of the leg mounting upwards to the trunk, arms etc. In the meantime the face becomes blue and breathing becomes laboured, so much so that finally the victim dies of respiratory failure due to the paralysis of the respiratory centre in the brain.

The heart and pulse are not affected and the victim remains conscious to the last. Death supervenes within 5—6 hours after bite.

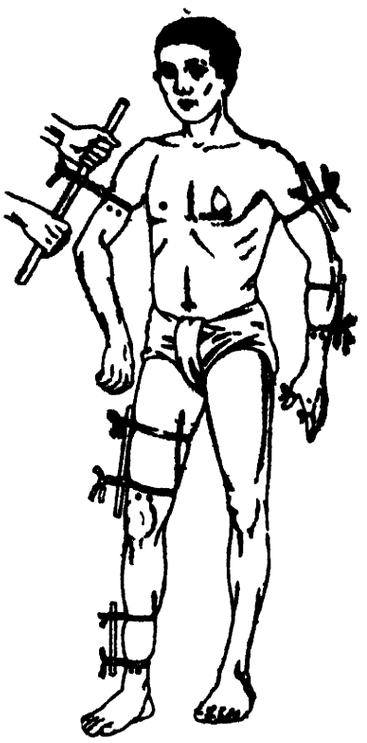
Krait-bite.—The symptoms are similar to Cobra-bite with an additional symptom of violent pain in the abdomen.

Viper-bite.—Immediately with the bite there is intense burning pain on the part bitten and the area around swells up, becomes hot and red and there is oozing of blood from the fang punctures. Pulse becomes rapid and weak, breathing irregular and rapid. There may be nausea and vomiting and the victim loses consciousness. After some time, there may be bleeding from nose, mouth, rectum etc. There is no paralysis. Death supervenes within 12 to 24 hours. In case of survival, the bitten part usually become gangrenous.

Non-poisonous snake-bite.—In case of bite from a non-poisonous snake the victim exhibits symptoms of shock due to fright, and usually faints after the bite. The pulse is feeble and rapid, breathing hurried and shallow, face pale. There is no paralysis, neither there is intense swelling of the part bitten. There might be burning sensation at the part bitten which is more or less mental in origin. If the teeth marks are seen or the serpent is brought there will be no mistake in coming to a conclusion.

First Aid

The success of treatment in a poisonous snake-bite case entirely depends upon the first aid given. Immediately following the bite a ligature or a rubber tourniquet must be applied above the puncture (between the heart and the punctures). Generally the bite is on the leg or forearm, and a second ligature must be placed above the elbow or knee where there is only one bone so that more pressure can be applied to prevent the venom from circulating (fig. 32). The ligature should be tightened by inserting a stick or a pencil through it and twisting it round and round and then fixing the stick to prevent unwinding. This process is very painful but should always be insisted upon. After tying the ligature the part bitten should be washed and cleaned in spirit or Tr. Iodine (if available). The teeth marks are now examined and if the marks give indication of a poisonous bite, wthout waiting for the doctor to arrive, deep cuts should be effected through the punctures (deeper than fang punctures) by means of a lancet or pen-knife sterilised by passing through a flame. The blood should be squeezed or sucked out of the wound, the operator being careful about cuts and cracks in his hands and mouth and good quantities of crystals of potassium permanganate should be forced inside the wounds. The crystals of Pot. Permanganate neutralises snake-venom. The wounds are to be squeezed again and again to get rid of as much venom as possible. The ligatures are loosened for 1 or 2 minutes every ½ hour to allow fresh blood to circulate, otherwise the part beyond the ligature will die and have to be amputated later. In all circumstances the victim should be calmed and no alcoholic drinks to be given and medical attention to be secured at the earliest possible moment. If the individual is himself bitten, he should sit down at once and tear off his cloth to tie



---

* Sucking of snake venom is not dangerous if the sucker has no wound in his mouth or the gums are not spongy and there is no ulcer in the stomach. The venom on entering the stomach is at once destroyed by the gastric juice.

the ligature [illegible] than cry for help He should on no circumstances run as the venom will circulate very rapidly due to rapid heart beat

Medical Treatment

Antivenum serum is the only effective treatment against snake-bite It is given intravenously in large doses of 100 cc or more Antivenin serum is produced by giving repeated injections of snake-venom into a horse starting from a very small dose which does not kill the horse Gradually working up the dose in the course of several months, large quantities of venom can be injected into the horse without killing it, because in the meantime the horse has produced in his blood antivenom to neutralise the venom injected The horse is then bled (10 to 12 lbs of blood) from time to time through its neck vein and the serum is separated from the red corpuscles This serum is issued in 10 cc ampoules by the Central Research Institute, Kasauli, where antivenin is prepared As already stated, the symptoms of Cobra venom differs from Viper venom and in consequence antivenin against Cobra does not act against Viper bite and *vice versa* So in case of doubt as to Cobra or Viper bite polyvalent antivenin serum is used Polyvalent antivenin serum is the mixture of Cobra and Viper antivenin serum

32

Method of tying ligature in Snake-bite

Sometimes local injection of 3/ solution of gold chloride or 2½ solution of bleaching powder is resorted to with a view to neutralising the venom but the injected area sloughs out after several days Symptomatic treatment such as intravenous calcium chloride injections in case of Viper bite to prevent bleeding or hypodermic injections of strychnine, adrenalin, cardiazol, veritol etc, to prevent shock and syncope may be necessary in either Cobra or Viper bite Artificial respiration should be started early in case of Cobra-bite The use of Iron lung (electrically driven artificial respirator), which has been very generously given free to many hospitals in India by Lord Nuffield has saved several lives after Cobra-bite

Indigenous Medicines against Snake bite — Experiments were conducted by two well known workers of Bombay and also in the School of Tropical Medicine, Calcutta with about 800 so-called medicines for snake poisoning All known plant remedies and their combinations were tested and was found that none of these have any neutralising or curative effect against snake-poison

Protection against snake —Surrounding the house with a path of coarse gravel prevents snakes from entering the house in open country Many people keep tame mongoose to kill snakes A dog or a cat usually gives timely warning when a snake is present in the vicinity The use of a light or a torch and a stick while going out at night in a village will bring down the number of snake-bite cases in India considerably, but unfortunately our people are too poor and ignorant to take even these simple precautions

शरीरमाद्यम् खलु धर्म्म साधनम्

The PSYCHOLOGY of EATING

By

S. C. LAHA, M.B.

Calcutta

TO a group of medical students I once put this simple question: "Why do you eat?" I received the following answers:

(1) To live.

(2) To give the digestive juices of the body material for digestion.

(3) To give nutrition to the cells of the body.

(4) Because God, the Creator, intended us to take food and live and propagate our species.

(5) To neutralise the poisonous material which generate as a result of hunger.

These answers are all correct according to the angle from which the question was reviewed, *i.e.*, biologically, chemically, physiologically or even from the point of view of religion. No student, however, gave to that simple question the simplest answer—"Because I like to eat when I am hungry. It gives me pleasure."

This is the psychological aspect of eating, the importance of which has been more or less completely ignored by the scientific mind. I propose to discuss the subject here not only because it is interesting but also because I consider the psychological standpoint to be more important than the other angles of vision.

The other aspects of the diet problem, already mentioned, have been exhaustively dealt with in medical as well as in general literature. These discussions are still continuing and will probably continue till the end of time. Articles about diet frequently flare up in medical journals. The eternal themes of proteins, carbohydrates and fats and the formidable array of vitamins, with the perplexing compositions and properties, may make you feel lost and forlorn in the maze of scientific intricacies and experiments.

Even poets, novelists and religious men have taken up the problem and boldly ventilated their views about this interesting subject. But why should these good men who are not physiologists or medical men speak so conclusively about diet? Why does a religious man do it more than the others? What has religion or politics to do with dieting? Why should you eat vegetables only to attain God or political independence?

Thus, at the very outset we note a rather disturbing state of affairs about diet. There is plenty of advice about proper dieting, coming from all possible sources; but there is hardly anybody to follow them. There seems to be a pleasure element in advising others as to what they should eat and a simultaneous disinclination from following the advice of others. Why? Why should I like to tell my friend what *he* should eat and refuse to listen to him if he tells me what *I* should eat?

Digestive functions are closely associated with the psychological make-up of a person. If you ask your friend in the street "How are you?", the chances are ten to one that he will speak something about his digestion. A normal man thinks more about his digestion than about his brain, spinal cord, muscles or glands. If you take a walk early in the morning round some residential quarters in Calcutta, you will find a large number of men, mostly office clerks, discussing with their friends about their digestive functions. These are all normal men whose attentions are unconsciously drawn to their own abdomen. This seems to be strange because the mechanisms of digestion and evacuation are entirely involuntary processes and no amount of worrying about them does any good. As a matter of fact, attention directed towards any involuntary activity of the body only upsets it. Still the fact remains that people do worry about their digestion. This tendency to worry about something or other of the bodily processes comes from some deeper layers of the mind over which the conscious mind has no control, or in other words, people just cannot help worrying about them. This is—anxiety

ANXIETY

IN ordinary anxiety there is always an outside cause to account for it such as litigation, epidemics, earthquakes, floods, etc. All these are dangers and anxiety is the reaction of the ego towards danger. The mind develops anxiety and with the help of the muscles of the body tries to protect the individual in the form of fight or flight The ego can accomplish this object successfully only when the amount of anxiety generated within it, lies within certain limits. If it exceeds that limit it fails to accomplish its purpose and instead of saving the individual, may actually help to destroy it. If you chase a rabbit too fast, it may overshoot its hole and the anxiety which ought to have saved it by giving it cover and shelter, actually exposes it to further danger. Even muscular paralysis may occur as a result of excessive anxiety. We all know this.

But the cause of anxiety may not lie always outside. The danger may threaten the mind from inside the mind itself. This seems strange; but nevertheless it is true. It should, however, be noted that the nature of this hidden danger is always unconscious or, in other words, the person does not know what the danger is which springs from his unconscious mind. He is only conscious of its physical effects

These effects are certain physical symptoms which are identical with those which are produced as a result of normal anxiety. These symptoms are mostly connected with the involuntary activities of the body such as rapid heart beat (palpitation) of which the patient is conscious, difficult and rapid breathing, frequent urination, diarrhoea, loss of appetite, pains in different parts of the body, etc.

Thus it is possible and quite frequent that a person may get an attack of difficult breathing or one of palpitation lasting for a longer or a shorter period

without any physical cause whatsoever. The real cause lies in the unconscious mind and is a form of anxiety. Such symptoms are technically known as "Conversion Symptoms."

I am not beating about the bush when I talk about anxiety while writing an article on food. I am presently coming to the connection between the two, —a very significant one which only can explain the mysterious peculiarities of human beings in the choice of diet

Anxiety thus may convert itself into some symptoms associated with the involuntary activities of the body Most frequently the anxiety attacks the heart as I have already mentioned It also influences the digestive system with which we are just now concerned

Diarrhoea, constipation, loss of appetite disgust towards food—all these symptoms may have a mental origin We have here to remember that *all* cases of diarrhoea or constipation etc, are not due to mental causes Most of them are not, but some undoubtedly are Let me give a few examples

In some chronic cases of dysentery and diarrhoea, where bland and tasteless liquid diet is prescribed for over long periods without the disease showing any signs of improvement, a rapid cure is frequently effected by gradually substituting a normal solid diet which the patient relishes Chronic dyspeptics always derive considerable improvement by a change of place Health-resorts in season time swarm with irritable old dyspeptics Most people believe that the drinking water in such health resorts contain some mysterious thing which improves the appetite and digestion As a matter of fact that mysterious thing is not radium nor ozone, it is the change of environment with the creation of new interests, and the absence of worries from the mind, freedom from the noise of town, from one's wife's nagging, children's yelling and the office-master's pestering A walk in the open fields in golden sunshine often does the trick where Sodium Bicarbonate fails The mind improves with the development of a peaceful and happy outlook towards life and the improvement of the body through better appetite and digestion follows in its wake The mind frequently in the form of symptoms rejects through the body the unpalatable food prescribed by the physician

DIETING

DIETING is frequently resorted to in certain abnormal physical conditions such as obesity or fatness. The restriction of diet occasionally does good, but as a rule it has no permanent effect. Most of such cases are not due to endocrine disturbances They are due to mental factors They eat too much and too frequently even when they are not hungry and thus put on fat They can not help eating, because if they stop eating they develop a kind of mental restlessness which can only be allayed by food The same is true of smoking The abnormal craving for food or smoke, resulting in chain smoking, is a mental factor They eat because they are bored, not because they are hungry Cutting down the quantity of food frequently makes the mental condition worse

I have myself experimented on the effects of dieting on the mental condition I lived for ten days only on milk and sugar and rice —a highly satisfactory diet so far as the physiological constituents are concerned By the end of that time I began to hate my colleagues who prescribed milk diet for patients and myself began recommending hot cutlets and fried onions to all my patients whatever their disease might be Orange is a good food, full of vitamins Live on oranges only say fo a fortnight and see what happens. You will see blood when you see an orange

FOOD-TABOOS

THEN comes religion, especially Hinduism which strangely enough, is intimately related with food Food-taboos are more common in this religion than in others This belief is so deep-rooted in this religion that vegetarians are regarded as good and holy men and meat-eaters as wicked and degenerated Great men in India always think about cows They call meetings, give speeches about cows, organise societies for cow-protection, raise funds, write books and send deputations to the Viceroy—all for the sake of cows This shows that the cow-question with its religious background has attained enormous importance in the Indian mind

Religion, which in itself is a kind of group-belief based on the passive attitude towards a higher being, seeks protection, comfort and love and comes to be associated with a particular type of diet through this attitude of the mind Activity is associated with the carnivorous animals, because most carnivorous animals are active Passivity likewise becomes associated with the bovine and the peaceful type of animals for the same reason It is but natural, therefore, that a passive attitude of the mind will select a bovine diet Most religions therefore favour vegetarianism. The Indian mind is particularly of a passive or *masochistic* type to the extent that even a passive attitude is believed to be a form of courage and activity Hence the special importance of vegetarianism in India.

RELIGION AND POLITICS

WHEN a very large number of men agree to develop a passive attitude towards some being, it is religion When a comparative smaller number do the same thing, varying in some detail with the other groups, it is political leader-worship or saint-worship As a matter of fact religion and politics are closely allied together Political leaders are very frequently designated as God Himself or an incarnation of Him Political and religious tendencies alternate in some character Many political leaders have turned into religious saints in later life These two tendencies may lie side by side in one's character, so that a religious man may become a political one as well, mixing religious and political creeds together and so providing religious grounds for political activites and political grounds for religious activities This apparent jumble should not surprise us if we remmember that both these tendencies originate from the same source

To come back to our food question That is the reason why, to attain God or political independence for that matter, you must eat vegetables Unless we investigate the problem on psychological lines, we can find no explanation of this strange belief

With vegetarians, a kind of mental restlessness, an anxiety or a feeling of guilt develops if they happen to take meat Some even feel sick by partaking of it They avoid meat and take to vegetables not primarily on the ground of physical health but mainly on account of their mental make up, as a defence against the development of mental anxiety, about which I have spoken earlier Just as a large number of fat men eat too frequently to avoid anxiety so others select a particular type of diet for the same reason It gives mental peace, a most valuable thing to maintain the stability of the mind and prevent the development of mental symptoms As a matter of fact, with a large number of mental patients, refusal to take food is a rather constant and a very distressing symtom One food-symptom which frequently appears in a certain type of mental cases is the belief that poison is being administered with the food to the patient In this connection it is well to remember that some normal persons even think that certain kinds of

food (meat or eggs for instance) are poisonous or injurious to the human system.

I have already drawn attention to the conversion symptoms, which are mental factors converted into physical symptoms. A typical example may be of a man who has a heavy responsibility to bear on his shoulders, to develop a pain actually in his shoulder without, however, any swelling or inflamation of fever or any other physical sign.

Let us now proceed a step further. A mental factor, like religion, may be converted into certain *actions* due to the same mechanism, so that these actions constitute the religion. These are religious rites which have the peculiarity that they *must* be repeated frequently. There is a compulsion and a repetition attached to them. Unless they are attended to and gone through systematically, the person suffers from restlessness and anxitey. These practices are also therefore defensive actions against the development of anxiety.

When most men go through the same type of practices, mostly religious, they are called religious rites and people accept them as such and do not question about them further. But when one persons develops a particular rite special to himself, a kind of private religion differing from others, it is a mental symptom. Let me give a very simple example. If you develop a compulsion to count beads or to burn so many candles before the Icon, it is all right, because it is a religious practice and may be commendable. But if, on the other hand, you develop a compulsion to count lamp-posts in the street, the [illegible] you may be regarded a lunatic.

FOOD FADS

LET us come back to the food problem again. A choice of food is made by the people, depending on the psychological make-up of the race and the availability of the food material in the land and this is incorporated with the religion. It is all right then, and everybody eats in peace.

Some other choice may be made by some other person, depending on his or her own unconscious mental factor. This choice may differ widely from others and results in a food-fad.

A pet notion or a craze is a fad which is not always connected with food. It may take any form, but food, being a desirable thing and a necessity biologically, a slightly unbalanced mind whose emotions and desires are not properly adjusted, springs upon a food-fad very easily. This fad, which is akin to a mental symptom, keeps him at peace with himself and prevents the development of mental anxiety.

The difference between a foodfad and a mental symptom is that in the latter, in some cases at least, the patient regards his symptom as something alien to his personality and tries unsuccessfully to reject it; whereas, a food-faddist believes that his fad is something very right and proper on grounds of health. The process of substituting an imaginary ground (in this case 'health') in place of the real but unconscious one which the faddist does not know, is known as Rationalisation.

[illegible] forms, [illegible] do. The [illegible] added fuel to the fire, as the [illegible] of vitamin-content, [illegible] some very extraordinary forms of diet *e g*, A likes to eat cabbage only, B only milk; C. prefers salmon diet, D eats only uncooked vegetables; E. likes to live on some kind of leaves, F advises frequent fasting; G. only one meal a day; H. seven meals at least I only bread and water; J. something which is not a food at all, according to the definition of food. And so on

Food-faddists as a rule show some abnormal character-traits as well or occassionally even some definite mental symptom. Other fads may be present besides the food-fad. Frequently one type of fad appears in a person, which lasts for some time to be replaced by another.

Some great men frequently show food fads. It is a mistake to suppose that the great thinkers of the world, who have contributed so much towards the progress of civilisation, are thoroughly mentally adjusted persons. I have no statistics to prove just the contrary It is probably true that such abnormalities are present more in civilised and cultured persons than in savages. Mankind seems, pays regular premiums to civilisation for the benefits it derives from it in the form of neuroses, fads, abnormal character-traits and insanity The psychological peculiarities of a man plays a considerable part in the choice of his diet. Grounds of physical health play only a small part. Physiology can recommend what a good and healthy diet is; but it cannot create a taste for it which mental factors can only do

---

AN accelerated method of applying Dr. Paul Ehrlich's chemical cure of syphilis, reducing the time of treatment to five days instead of the many months required by existing clinical procedure, was presented to the medical world at Mount Sinai Hospital, according to a recent report in the *New York Times*.

The new treatment, in which the administration of a massive dose of the curative drug is made possible by a technique called "the continuous slow intravenous drip", was initiated in 1933 by Drs. Harold Thomas Hyman, Louis Chargin and Will Leifer, all of the Mount Sinai medical staff. These doctors reported that 85 per cent of the patients had shown no recurrence after a single five-day treatment. Of the remainder some responded after a second treatment three months later.

The significance of the speeded-up treatment, it was pointed out, is that patients discharged after one week in a hospital no longer can spread the disease.

The Mount Sinai experimenters at first used neoarsphenamine or "914". After one death had occurred among 111 patients, however, it was decided that the toxicity of this arsenical compound was still too great for safety. The group then reverted to arsenoxide, one of the earliest preparations developed by Ehrlich.

Ehrlich discarded that drug because in his time it could not be produced commercially in stable form. Such production was now been accomplished, however, under the trade name of "mapharsen". With the use of this product, 286 patients were treated without a single death. Some experienced [illegible] but were, in general, otherwise comfortable during the treatment.

Dr. Hyman told the visiting physicians that the patients after leaving [illegible], read books and [illegible]

while the curative solution ran continuously into their bloodstreams. Some of the poorer patients who come to the hospital undernourished, he said, gain as much as ten pounds during their week of attentive care

By this "continuous intravenous drip" about ten quarts of the curative solution, containing dissolved in it about one gram of the powerful arsenoxide drug, is passed into the patient's blood during the five-day treatment Nothing nearly approaching that quantity of drug can safely be administered at one time by the usual method of injection

A scientific paper published in 1931 by Dr Hyman Dr. Hirshfeld and Mrs. Wagner showed that untoward effects were often the result of "speed shock" due to the sudden entry of the injection. They found that if they slowed down the rate of injection by means of the drop-by-drop method, large amounts of poisonous substances could be introduced without harming the patient. Dr Chargin proposed that this idea be applied to the arsenical drugs for syphilis.

As practised at Mount Sinai Hospital, the needle is inserted in a vein of the forearm at 9 a.m. the first day The drip is adjusted so that this diluted, sugary solution of mapharsen flows into the blood at the slow rate of approximately three cubic centimeters a minute

After eight or ten hours the day's entire dose is used up, the needle is removed and the patient may get out of bed.

By the fourth and fifth days the concentration of arsenic in the patient's blood rises to about one part in three million [illegible] concentration, physicians believe, that kills the

MOTHER INDIA

By

DR. SIR MANGALDAS V. MEHTA, KT., L.M.S. (Bombay), F.R.C.P. (Ireland);

Fellow of the College of Physicians and Surgeon Bombay; Hon. Dean and Principal, Medical Officer, Rukmini Lying-in Hospital; Hon. Principal, Medical Officer, N. M. Wadia Maternity Hospital, Bombay.

MOTHERHOOD is India's greatest problem. The India of tomorrow depends upon the assistance and training given to the future mothers today. The importance of this vital issue cannot be underestimated. Fortunately, there is a gradual and growing consciousness in both city and *mofussil* areas concerning pre-natal and post-natal care of mothers and children.

Over a period of twenty years, I and those who have worked with me in the Bombay Presidency have turned our thoughts to assisting the mothers and children of India. We have had to remember that whereas in England some 10 shillings are spent per capita, in India less than two annas are available on an average. Our problem has been to give the utmost care for as small a sum as possible. One thing is certain that the problem is too great to cope with, without the full co-operation of the Government, the Municipality and philanthropists. It is too big an issue for charity alone. Nor is money alone the main issue; it is also one of co-ordination and co-operation.

What should the municipalities and the governments in India do? I shall endeavour to outline what maternity welfare should mean.

Maternity welfare work is something more comprehensive than mere delivery of women which, in fact, is a minor issue. More important are pre-natal and post-natal care, health visiting and a consciousness on the part of the mother of the *role* she has to play.

Municipalities, governments and voluntary organisations should establish clinics which include all these functions. They should be centres for advice not for treatment, though, of course, treatment should be given when required. The point is to make the expentant mothers realise that the clinics are places for advice. They must not wait until they feel ill.

Care of the Expectant Mother

MOST expectants now begin coming to ante-natal clinics from the seventh month of pregnancy. We hope that the future may teach them to come as early as the third month. They should come at least six to eight times during the course of pregnancy,—once a month till the seventh month. In the seventh month, they should be seen twice; in the eighth month, thrice; and in the ninth month, every week if possible.

The initial visit should include a thorough abdominal investigation as well as a general systematic check. This should include urine test, blood pressure and measurements of the pelvis. Abnormalities should be noted and treatment be given when necessary. Former obstetric history should be noted. If indications of trouble in delivery are evident, precautions should be initiated. This should be further supplemented by X-ray. The ideal, of course, includes test for venereal disease but, unfortunately, this is too costly in most cases. It should, however, be undertaken as far as possible.

After this thorough examination, the expectant mother should be given instructions. These instructions come under the head of exercise, diet, general hygiene and danger signals.

Housework is good exercise, but women who are pregnant should be warned not to lift heavy objects, specially buckets filled with water. Going up and down the stairs continually is also bad. There must be at least eight hours of sleep per day. And just after birth, the clinic nurse must also advise the mother about care of her breasts and nipples.

More important even than exercise is diet. The grave ailment amongst Indian mothers is Anemia due to inadequate and improper diet. All too often Indian diet is deficient in proteins, mineral salts, vitamins and fats. Therefore, milk which is an ideal diet should be highly desirable. If the women cannot afford it, milk should be given on the clinic premises; if possible, the women should come once a day to receive it. If they cannot, then a preparation of cod-liver oil, to be taken in milk, should be advised. For these diet supplements, the clinic must pay. In any case, women should be advised to take as much of leafy green vegetables as possible, such as spinach and the leaves of drum-sticks. For protein, they should be told to take millet and wheat. Millet is specially good. Added to this, they must be advised to take a minimum of six glasses of boiled water daily.

Pre-Natal and Post-natal Work

GENERAL hygienic training is also a point of vital importance Clinic nurses should instruct expectant mothers in the basic principles of personal cleanliness This consciousness of filth is a saving grace for them and later for the child It also makes it easier for them to be aware of the danger signals of pregnancy The danger signals of pregnancy are swelling of feet, continual headaches, frequent vomiting and scanty urine Frequent vomiting may mean Toxemia If any of these troubles are noted, expectant mothers should know enough to go immediately to the doctor

When the period for confinement comes it is advisable for the woman to be confined as near as possible to the clinic which has served her This clinic should also be near her home so that there may be an adequate 'follow up' In fact the case should be followed through until the child is five years of age Post natal care is very important but its value is not yet fully realized

Post natal care must include not only care of the child but also of the mother For the first three months the mother must be advised to limit her exercise and avoid such jarring work or play as would injure her internally She must also be advised to wear a proper abdominal support for this period She must take adequate nutritious diet for her own health and that of her child Many internal minor injuries occur because the mother feeling fit insists on getting up and returning to work for her daily bread

She is Mother India
The real one that we know
Giving all her blood and sweat
For love and not for show
Her face is lit by house hold fires
Worn by the earth her palms—
Mother Mother India
With babies in her arms!

—FREDA BEDI

Much of the pre natal and post natal work can be and is handled by health visitors specially in *mofussil* areas These women serve as connecting links between maternity and child welfare centres and the home They spread knowledge amongst the latter and win them over by tact and persuasion and bring home the advantages of the services that the maternity centres can offer

A maternity service in fact must be all inclusive It should be composed of (*i*) a Pre natal Clinic (*ii*) an Intra natal Clinic (Maternity Home), (*iii*) an Infant Clinic (*iv*) Post natal Clinic (*v*) an Anti Venereal Clinic, and (*vi*) a Milk Depot

Unfortunately the Anti Venereal Clinics are greatly handicapped by both fear and want of money Moreover, the cost is prohibitive and information can seldom be elicited from patients due to the hush hush mentality

Confinement in a hospital is best Of course, this is impossible in rural areas In home cases a qualified midwife should be available She should visit the patient at least four times during the fourteen days of her confinement

During confinement Bombay women who go to the city's free hospitals cost us each around 6 annas a day for food They stay about 10 days Delivery, food and attendance are free Our large staff and equipment is expensive, but because these hospitals are also the training centres for medical students and probationer midwives, we do not feel that the cost is exorbitant All services are free to anyone with an income under Rs 100 a month Others pay about Rs 40 for a complete confinement In the Wadia Maternity Hospital, we have about 5 000 confinements a year with 150 beds Only a few of these are paying patients, we do not discriminate between rich and poor, legal and illegal births.

MOTHER & CHILD

The Story of Bombay

THE story of how Bombay has been able to offer such expensive but free service to so many women (last year 80 per cent. of the city's deliveries took place in hospitals) is the story of twenty years' hard work.

It all began in 1921 when the Midwifery Commission was sent out to India by the General Medical Council. At that time I took upon myself the task of collecting statistics for the Committee regarding confinements. I was amazed to find that only 20 per cent. of the women of Bombay were delivered in hospitals. I discovered, after considerable investigation, that out of the remaining 80 per cent. nearly all returned to their native places for confinement. Moreover, medical students were in need of cases. So I felt that Bombay must arrange for these women to remain in Bombay where they belonged. I obtained much of my information from the figures given by various mills, of which there were then 85 in Bombay. I found there were about 150,000 mill workers in Bombay of whom some 70,000 were women. Discounting widows and spinsters, I felt that at least 20,000 may avail themselves of the facilities offered by Bombay maternity hospitals

At that time there was only one maternity hospital where students also received their training. It was highly congested. So I approached Sir Ness Wadia, the Mill-magnate of Bombay, and requested him to assist me. I suggested to him to build a maternity hospital for the labouring class women. It should be begun as a centre for medical relief and later become an institute for the instruction and teaching of medical students and probationer midwives as well. I offered my services free if he would provide the necessary finance. To this he agreed. He wanted to begin with a 20-bed hospital but I dissuaded him and suggested that we start in a very small way and first discover if the plan could be made to work. So we hired a flat and began with six beds. We were to try this for one year but by the time six months had elapsed, it was already a success. We then shifted to a four-storey building and from six beds we went up to twelve, eighteen and, finally, to thirty-five beds. I told Sir Ness, the generous donor, that we should not stop there, but get the Government and Municipality to co-operate with us. In 1925, when Sir Leslie Wilson came as Governor of Bombay and, in his first speech desired to extend hospital accommodation, we approached him with the problem. We also got the co-operation of Sir Hugh Clayton, the then Municipal Commissioner (Chief Executive Officer) of Bombay. We bought land for three lakhs of rupees and the building and equipment was worth another thriteen lakhs. Sir Ness Wadia gave six lakhs, while the Bombay Municipality and the Government gave five lakhs each. Sir Ness also brought up the question of an endowment, and for this purpose gave 15 lakhs, and the Municipality and the Government contracted to give Rs. 35,000 each yearly. If more money were needed, it was to come from the latter two sources. Since December 1926, we have had 150 beds in this hospital.

Added to this the Bombay Municipality has organized five complete maternity units and the Bombay Presidency Infant Welfare Society have three to their credit. These eight centres relieve the pressure on the large hospitals, *viz.*, the Wadia, Motibai and Cama. There has also been encouragement given to private nursing homes. We have persuaded them to take urgent and needy cases free. But since the last five years we have not been able to cope with the demand.

Added to the civic interest in the problem of maternity, I have also been able to impress upon the Municipality the need for correct statistics in this matter. Now, every quarter of the year we can know where we stand. There has also been the problem of getting qualified midwives with good training. The Bombay Nursing Council has trained fairly good number of midwives ; but this problem is of greatest importance in *mofussil* areas. Schools have now been founded in many parts of India for the training midwives and there are several in Bombay Presidency.

Among the Indian States, Jamnagar and Mysore have given the greatest attention to the problem of maternity. It is interesting to note that Calcutta's efforts began with the Municipality as early as 1916 when two maternity units were opened. At present there are seven Welfare Centres carried on by the Red Cross Society with the aid of the Corporation. In 1937 the Central Government took over the model Child Welfare Centre which had been opened in 1933. It is now under the direction of Dr. Grant of the All-India Institute of Hygiene and Public Health.

What Calcutta Should Do

UNLIKE Bombay, Calcutta's maternity problem still remains unsolved. There are seven points to which she should devote her attention :

(1) Complete co-ordination of work and the co-operation between various maternity hospitals and homes either run by the Government or the Municipality or private parties, or other voluntary associations. Co-ordination is a vital necessity for effective maternity welfare work.

(2) The doctors in the city should strive for the common goal of establishing and organizing a first class maternity and child welfare service, which will

be a credit to Bengal. Rural areas and *mofussil* work must also be co-ordinated and insistence should be made that a decent amount of money be spent, so that an adequate number of well-trained midwives and health visitors can be available for the domiciliary service where hospitals are not easily available, or are very expensive. The doctors must assist in this training programme.

(3) The Corporation of Calcutta ought not to be content with only infant welfare centres but should concentrate on complete units. These complete units should be set up in different parts of the city so that maternity service (even hospitalization) can be brought to the poor man's very door. The centres must handle only normal birth cases. In the case of abnormal and septic cases, which form around 8 per cent. of the total (though the percentage is going down due to the system of pre-natal care), the mothers must be sent to the large hospitals. These large maternity hospitals should have teaching facilities for medical students, who will, in turn, be the future doctors of Calcutta.

The Bengal Nursing Council, which is established by Legislative act, ought to encourage all the large and small maternity hospitals and homes to train qualified midwives who may be available in large numbers.

(4) Wherever the Corporation of Calcutta opens small maternity homes in the various wards, they also ought to have complete units. It would be good to make them vaccination stations as in this way most of the children of Calcutta would ultimately be vaccinated. Vaccination should be compulsory.

(5) The step taken this year in organizing a Maternity and Child Welfare Exhibition in conjunction with the third All-India Obstetrical and Gynaecological Congress is a step in the right direction.

This propaganda work, I have found, can best be done by exhibitions, cinema and health visiting. In Bombay it is found that one of the most effective methods of advertising was to take a batch of women of the labouring classes to the maternity hospital for a visit. It might be well to do this once or twice a month. Let them see what can be done for them. They will not fail to be impressed.

(6) The Corporation of Calcutta should publish every quarter accurate statistics about births and infantile and material deaths. This information should be available to the literate citizens of the city in order that they may be made conscious of their obligations

SAFE MOTHERHOOD AND A HEALTHY CHILD

By

A DOCTOR-MOTHER

ONE of the main reasons for the high death rate of expectant mothers and new born children and for the ill health of mothers is the failure of many such mothers to place themselves early in the hands of a competent doctor. Every woman should consult a physician as soon as she knows she is going to have a baby. To know what may be needed to assure her safety and the health of her child, the doctor will make at least these examinations.

1. At the beginning he will make a general physical examination to assure that the woman is able safely to bear a child.
2. He will make frequent examinations of the urine, to make sure the kidneys are working well.
3. He will measure the "blood pressure", to test the condition of the heart and blood vessels, and other organs.
4. He will examine a specimen of her blood. This may show that the woman is "anemic" and needs treatment to make her blood "richer". Or it may show that there are dangerous germs in her body which will undermine her health and threaten the health or life of the child if the mother is not promptly treated.

Why is it important to examine a specimen of the blood?

II

THE one infectious disease which can pass from the mother to the child before birth and threaten its life or health is syphilis. When acquired before birth it is called congenital syphilis. Such infection of the child is very destructive and hard to cure. Many of the children of untreated infected mothers are born dead; many born alive die in early infancy; and those who survive are likely to be crippled in body and in mind. One of the commonest effects is blindness.

Syphilis is found among the high and the low, the rich and the poor. Among women who attend prenatal clinics an average of nine to ten per cent have been found infected. Among women who go to private physicians, from one to three and one-half per cent are found to have this disease, but if it were found in only one mother in a thousand it would be worthwhile to protect her child from congenital syphilis.

The ravages of congenital syphilis ran unchecked for many years, but at last the doctors discovered that it could be prevented by treating the infected mother during her pregnancy, then a healthy child free from the disease is born. Without treatment of the infected mother the child has but one chance in six of being born healthy. With treatment of the mother early enough the child has nine chances out of ten of being born free of the disease.

For a long time the prevention of congenital syphilis was difficult because doctors had no sure way of discovering the disease. At last scientists discovered a blood test for syphilis. The test shows syphilis in most cases even when all signs and symptons are slight or absent. This test is called the Wassermann test. Other such tests have since been discovered Today there is little need for any child to have congenital syphilis if prospective mother will cooperate with the doctors A

THE HEALTH STORY of THE AVERAGE BENGALI WOMAN

By

S. MUZUMDAR

Allahabad

IN contemporary Bengali society life's assaults seem to be avowedly more unforgiving and acute for women. I hasten to exclude from this account the happy minority of them whom life has given adequate protection, for I am only discussing the *average woman* whose Nemesis has denied her food, the help of the amenity services, medical relief and all that combine to make life whole in the modern world. To her life is nothing of a positive and conscious creation, but she is thrown amidst it to take her chance to hurdle across, and for her the journey forward is against tremendous odds. Considering the circumstances it is nothing short of wonder that he at all stumbles through

Her health story is amazingly clear. It stresses the negative aspect of her existence which but interests medical investigators and, perhaps, statisticians, while a whole race born of her is ignorant, by preference it seems, of how matters stand with her, and whither the race she has given birth to is repairing.

It has been said that the seeds of sin, sickness and inadequacy are laid in our infancy. In the case of the average Bengali woman the seeds of sickness and inadequacy are laid primarily in her heritage. The influence of devitalized stock surrounds her in the mother's womb. I am not again speaking of specific taints, the extent of which can only be seen but not duly ascertained. 24·5 per thousand births, the highest rate in the world, is the toll the mother herself renders. Born our woman may not be one of the 164 per thousand of live births making up the figure of infant mortality, as the girl baby has always the better chance of survial than the male.

She steps at once into the inexorable and vicious circle of poverty begetting illness and illness begetting poverty. She clings to the breasts of the mother of a population, 20 per cent. of whom are officially estimated as "very poorly nourished," and 41 per cent. "poorly nourished." If the mother happens to belong to the peasantry, the prospect indeed is too gloomy. The Director of Public Health, Bengal, observed some years ago that the Bengal peasantry were "taking to a dietry on which even rats could not live for more than five weeks." The baby therefore sucks no nurture from the mother's breasts but hungrily sucks and saps her vitality.

Weaned soon enough she is, of course, not put on "milk, the yellow of eggs, rusks and orange juice." For some time she is only cheated with a whitish liquid of metaphysical milk, for the working class hardly consumes "½ oz. of milk per head and the higher classes consume about 7 oz. per head leaving nothing for the infant and the mother." The money earned by the family is generally inadequate and the baby is fed on bulky, cheap foodstuffs. Bulk alone fills her gastric space and soon enough the baby toddles about with a dilated stomach and rickety steps.

As nothing can withhold her spurts of growth she grows at three, at five, at seven and at ten, but she hardly develops for her growth and development are in close relation with the food she eats. For her health anomalies the parents simply do not and cannot care, as they have not the eyes to see and the means to correct them. They can but inadequately take some care of specific illnesses.

If there is a certain precocity of development in adolescent girls it is not at all observable if they belong to the lower social classes, as the class like civilisation is a determining factor, and also if they have a continued inadequacy of food. Our girl is, therefore, half-grown and diminutive at ten years, when, approximately, pubertal changes first set in. The influence of the social class cease to operate when puberty must arrive, which becomes a positively common factor in the lives of all classes of girls of the same race, be they rich or poor, well-born or low-born.

The word 'puberty' at once unfolds before the mind the picture of a lovely girl in her first blossom filling out enchantingly in contours and curves. But that word 'puberty' speaks differetly in our case: it speaks of the vast disruption of something like an earthquake which happens continuously in the vital nature of the growing girl. A countless number of them are inadequate for the vital leap across the most acute and relentless of life's hurdles at this juncture, and completely disappear from the picture.

But, still, a woman's vitality is prodigious; quite a number of them do get across but bruised all over with pubertal anomalies,—of menstrual imbalance, ovarian insufficiency, pubertal constipation and dyspepsia, pubertal palpitation of the heart, hysteria, anaemia, etc., etc. We have it on the great authority of such an expert as Dr. Heinrich Kisch

MOTHER & CHILD

that if in spite of these deep anomalies there is sex consciousness in the already bruised and tired girl she discloses it in pubertal tonsilitis and goitre. It is within our bitter knowledge how these are generally overlooked and the girl allowed to suffer, or at best, how recourse is taken to cheap and very ordinary medical aid, when only the very best of medical experts can help. But doesn't poverty defy experts?

Our girls were doubly cursed in the age that is fast passing by when they were made to lead a married life of frequent pregnancies and childbearing because the curse of the two different periods combined together to make their existence altogether a matter of ruin and delapidation. More often than not they negatived the influence of civilisation, which has given an immense span to the youth of women. In that matter they climbed down to the lowest physical type of humanity, the Nicobarese, whose women become fully young at fourteen and old hags at eighteen.

According to accepted standards the real youth of woman begins approximately at eighteen and she matures at twenty. Our Girl also cannot escape the effect of this natural law but for obvious reasons her maturity is never full and her physique continues to be diminutive. Let us take it for granted that her marriage comes off at this stage. For a time it has a great beneficial effect upon her, enabling her to shed of itself menstrual anomalies, anaemia, etc. But soon a fresh upheaval comes with the coming of the child. Food inadequacy asserts itself again, and the chances are that the childbirth would cause a fresh but greater disruption. Most of the pubertal anomalies have a tendency to return with pregnancy and childbirth, which also collect newer residues in the shape of accentuated spinal curvature, varicose veins, etc. The story is particularly true of anaemia, which can always be taken as subterraneously present on account of unbroken ill and malnutrition.

The span of a woman's youth is from twenty to thirty-five approximately. She is fully young at twenty-five, and from twenty-eight to thirty-two she is in her sexual and youthful climax. But with the first childbirth our woman not only regains her anomalies paving the way for wasting diseases but seems to shed for ever her youth and, especially, her bodily elasticity and compactness, the greatest terms of youth. We are socially ignorant both about the repair and preservation of these particular feminine qualities. The greater the number of pregnancies and childbirth the more complete is the physical ruination and the recurrence of anomalies, very insidious in their influence.

Is it a wonder then that at thirty when the Bengali woman should be in her regalia of youthfulness, beauty and energy she is just a bundle of bones, a curiosity for the medical museum and psychologically quite fed up with the world! So far as I have seen the average Bengali woman of thirty is quite a tragedy, being a victim of avoidable anomalies and disrepair and a subject upon whom repeated pregnancies are heartlessly inflicted, very probably without her being the consenting party. It is she who suffers the consequences,—of everlasting ill-health, of starvation and of general and growing economic stresses. If health is greatly a matter of mental attitude, her upbringing and experience vitiate all her mental outlook, which eventually and preponderately rules her.

Her story does not end here for she has yet to face the upheaval of the climacteric, which can take place at any time between thirty-five and fifty-five, and, under circumstances of great physical drain and ill-nutrition, very much earlier. In good health it comes somewhere between forty-five and fifty-five, but where there is complete exhaustion of physical powers and resistibility resulting in premature old age the change of life, and especially its characteristic troubles begin earlier and become a long-drawn ruining and excruciating affair.

The climacteric is the normal cessation of a woman's biological activities. Well-fed and well-nurtured and if, basides, there is something like an absorbing interest in life, the climacteric comes and goes quite unobserved, but in the picture we have drawn the climacteric has a fearful influence. Most pubertal troubles and troubles associated with childbirth tend to return oppressively with the climacteric and spread vast ruin in the feminine being. On the top of that every ageing woman runs the risk of suffering from mental disorder characteristic of the change of life.

The picture above is indeed gloomy because it is drawn from the crushed and mangled heap of life which is unfortunately the outstanding aspect of our province, Bengal. For the individual and the sufferer amelioration is but possible on a very small scale by admitting more of hygiene into life and, where possible, by rationalising it. Beyond this margin the duty of amelioration is obviously of the State and municipal bodies. Municipal amenities are growing but the major portion of our women are outside their advantage and operation. Even when they are available to some, as to the city-dwellers, the amenities touch some essential fringes but not the very core of life.

The general economic capacity of the middle class Bengali to pay only for bulky foodstuffs and for the adulteration of the others, considered essential or luxuries, do not at all stabilise life but vitiate it. This economic capacity cannot improve but always tends to dwindle. But if the municipalities—to enlarge the amenities offered by them—act as the purveyors of protective and fundamental foods which even the daily wage-earner can have the advantage of, matters are bound to improve. This has been done in many countries where municipalities have the working of their fundamental aims in constant view. The State and the municipalities have no right to exist if a whole nation continues to feed upon garbage and ditch water.

The essential national reforms lie in the municipalisation of food, the socialisation of medical relief and the total abolition of the so-called "flats" and tenements for reason of air and space. Nothing else will shore up the tottering edifice of Bengal.

PREVENTIBLE INFANTILE MORTALITY

By

DR. LEILA GHOSH, M.B., D.P.H., B.M.C.W.

Professor of Maternity & Child Welfare,
All-India Institute of Hygiene and Public Health, Calcutta

I

IT is an indisputable fact that we seldom appreciate health until we lose it, or realize the perfection of our bodies until they are defective or diseased. That is true also of pregnancy. Pregnancy is certainly a physiological process; but there are likely to be as many departures from strict normality during pregnancy as there are diseases attacking the health of the body.

In pregnancy we have to appreciate the fact that what is harmful to the mother is 10 or 15 times more harmful to the infant. This can be easily seen by comparing the rates of deaths of mothers and the deaths of infants largely due to abnormal condition of pregnancy or delivery, that is to say still-births and deaths within 7 days of birth. Take, for instance, the figures of the Madras City. There, for every thousand live births registered, 8 mothers are known to die; but 44·8 still-births and 53 infantile deaths before 7 days occur in every 100. In Calcutta, the rates are even worse; for every 1000 live births registered, 24 mothers die, 80 infants are born dead and 85 infants die within 7 days of birth. It is, therefore, the duty of the family to realise that what may affect the mother very little, may affect the infant greatly and so they should arrange for her getting proper medical care, either from the city, free of charge or at small cost, or by employing an experienced privat[illegible]

II

LET us assume that the mother is healthy, but that she is very young, say 13 or 14 years old. She has just attained adult development, and, therefore, she has recently undergone a severe physical strain. She is now faced with the prospect of sustaining and feeding the infant for 40 weeks before it is born, and unless she is very carefully looked after, there is every likelihood that the strain may prove too much for her—for she must not only supply the nourishment for the child, but also eliminate from her system her own poisonous waste products and those of the child as well.

Quite recently, in Lodon, a woman doctor investigated the effect upon mothers and children of delivery at a very early age. Some of the mothers investigated by her were 13 years or less, so that their condition was very similar to that of young girls in Bengal. It was found that most of these very young mothers *had a safe and easy delivery*, but that the infants were very frequently small, underweighing and weak, and the number dying within the first week of life was higher than in the case of infants of slightly older mothers. It must be remembered, however, that the first pregnancy is usually less safe for both the mother and the child than the second or the third pregnancies, whatever the age of the mother. It is important, then, if we wish to preserve our infants, that we should not have a large number of young mothers under the age of 16 years.

Now let us suppose that the mother is not sick, but that she does not receive sufficient food.

For the normal development and growth of the infant during the 40 weeks before it is born, it is necessary that the mother should regulate her food, so that she maintains a good standard of health and at the same time provides for the child the materials needed for its growth and strength. The important items of her diet should be: plenty of drinking water, fruit juice, especially orange juice and lemon juice, cereals, ample green vegetables (raw or lightly cooked), a little "ghee" and at least *half a seer of milk*. The water is necessary to keep her system well flushed, so that poisonous products do not accumulate. Fruit juice provides vitamin and also helps to excrete waste materials. Milk and green vegetables supply her with body building materials and with lime for the bones of the

MOTHER & CHILD

child and vitamins which influence growth and development. "Ghee" provides protection against infection and is necessary for the development of a healthy child.

If her diet is short of milk and green vegetables, the child will extract lime from the mother's teeth and bones to make up that deficiency. This may have very serious consequences for the mother. It is obvious, then, that although pregnancy is a normal process and even if the mother is normal, it is important to seek medical advice at the beginning of pregnancy in order that the mother can be put upon the diet which is best suited to herself and her infant

III

WE will now consider that the mother is not healthy; but she has some form of disease At first no evidence of the extra strain of pregnancy may be visible, but as the child increases in size and its demands upon the mothers' strength consequently increases, it will become obvious that some abnormal condition is present. There are certain conditions, like active tuberculosis, which render it against the interest of the woman to become pregnant, on the other hand, there are certain types of healed tuberculosis which make it possible for the woman to have a child without danger to herself or the infant The only person who can decide this is the doctor. It is the same with disease of the heart or other organs. Under such conditions there is no possibility of the woman and infant maintaining the maximum amount of strength and health unless, throughout the pregnancy, the mother is under the care of a reliable doctor and follows his or her advice strictly.

When the mother is unable to cope with the strain of pregnancy and cannot dispose of the poisonous waste material of herself and the infant from the system, a condition is likely to arise in which the life of the mother and the child are endangered. Even if the mother's health is not in danger, it is possible that the child may be prematurely delivered, even when it is only 28-30 weeks old. The infant is seldom able to support life at this stage unless the greatest care is given and the best nursing skill is provided. It is known that, even under the best conditions, one-fifth of such prematurely born children will inevitably expire. To save the infant, therefore, it is important that the mother should be correctly dieted and that she should be examined at regular intervals throughout pregnancy to detect any accumulation of poisonous products in her system.

It sometimes happens that the ring of bones through which the infant has to pass during birth is too small to allow of an easy passage and, as a result, during labour the child may be so damaged that it expires even before birth or in a short time after birth This is not always due to the fact that the bony ring is smaller than normal it is sometimes also due to the fact the child's head is larger than normal Only an experienced doctor is in a position to tell, firstly, whether the bony ring is of normal size (this should always be decided early in the pregnancy), and secondly, whether the head of the fully grown child is too large to pass through the normal bony ring without trouble. This means that the woman must again be examined by an experienced doctor a week or so before delivery is expected

IV

THESE facts explain the chief purposes of antenatal care If a woman becomes pregnant, it is important that she be given a complete physical examination as early as possible At the same time she should receive advice about her diet and about how much work and rest she requires Then at intervals throughout her pregnancy she must be examined to make sure that the child is developing properly that she is maintaining good health and that there is no evidence of accumulation of poisonous material in her system. Should any abnormal condition arise, this arrangement makes it possible to have it detected and treated at once. Even the normal

—*Continued on page 60*

SAFE MOTHERHOOD AND A HAPPY CHILD —*Continued from page 54*

blood test early in pregnancy for every prospective mother is the key to the prevention of all congenital syphilis. When all such mothers who have syphilis are treated early in pregnancy, congenital syphilis will be wiped out.

III

THE treatment of the pregnant mother for the protection of her child is simple for the doctor, and it is almost sure to protect the child if treatment is begun not later than the middle of pregnancy. The earlier the treatment is begun, the more sure is the protection. While treatment began later may still protect the child, the protection is less and less sure as times goes by. It is important, therefore, that the prospective mother comes under the care of her doctor early in her pregnancy.

A good illustration of how a disease can sometimes be conquered is the eye infection of infants, called by the doctor, opthalmia meonatorun or "babies sore eyes". It is caused by germs from an infected mother, being rubbed into the eyes of her child during birth. These germs cause a violent inflammation of the child's eyes which will almost surely destroy the sight of the baby unless skilled treatment is given promptly. Then a doctor found that the eyes of a new-born infant can be protected by dropping into each eye, immediately after birth, a few drops of a certain harmless solution. By this means, blindness, caused by this infection, has been reduced from about twenty-five per cent. to six per cent. It can be entirely wiped out.

So also congenital syphilis, with all its tragedies, can be conquered when every woman, when she knows she is going to have a baby, at once places herself in the hands of her doctor, and when a blood test becomes a regular part of her early medical examination Then those in whom the infection is discovered may receive early protective treatment.

Congenital syphilis can also be *cured*, but often only with difficulty. It can be *prevented* with comparative ease and certainty In regard to congenital syphilis, an ounce of prevention is better than a ton of cure.

Urge all prospective mothers to ask their doctors for blood tests, so you may do your part to bring life and health to every unborn

SLEEP for THE BABY

DOES the child sleep long enough and soundly enough? Is he rested when he wakes or is he still tired? Does he go to bed happily every night at the same early hour or does he tease you at letting him stay up late? Does he play hard all day without rest so that he is too tired to sleep well at night or does he get a daytime nap as well as a long peaceful night sleep? Does he go to sleep soon after he goes to bed or does he lie awake tossing and tossing? In short is your child getting all the help from sleep that he should or is he struggling along on a starvation allowance of sleep?

Enough of sleep is one of the essentials for a child's health and normal growth other are right food and outdoor play in the sun These essentials depend on one another If a child gets plenty of simple food and vigorous outdoor play in the sun he is likely to sleep well If his diet is improper and he sits around indoor all day he may sleep poorly If his sleep is disturbed or too short he may be tired and unable to make the best use of his food and as a result may be undersized or under weight even though he is not underfed

If the child is well grown if he has firm muscles rounded outlines erect posture a rosy skin clear eyes a happy disposition and a good appetite he is probably getting the right kind and amount of sleep

II

YOUR child's night rest depends largely upon how he has spent the day An exciting day without a nap may leave a child literally too tired to sleep Especially should the end of the day be free from excitement The half hour before bedtimes should be devoted to quiet pleasures without romping exciting games or stories or any activities that are stimulating

Proper rest in the daytime helps to give the child a good night sleep The young baby gets plenty of day and night sleep As he grows older his waking hours are longer, and the mother should see that his main sleep is at night and that he gets also two daytime naps a long one in the morning and a short one in the early afternoon As a rule, by the second year only one nap need be taken in the daytime a long one at whatever time of day is most convenient for the mother such as 10 or 11 in the morning or after midday meal In winter the forenoon hour would seem best so that the child may have the midday hours for play in the sun The nap should not last later than 2 30 in the afternoon, lest it keep the child from sleeping at night Even if the child does not sleep he should spend the nap time in bed undressed The daily nap or rest period should be kept up until the child is 7 years

III

A CHILD grows most when asleep When he is awake the food that he has eaten used to supply him with energy for his play and other activities When he is asleep his activities are cut down to almost nothing and his food can be used to renew the tissues that have been worn out by the day's play and to build new tissues The building of new tissue is called growing If the child gets too little sleep his growth is hindered

The faster a child is growing the more sleep he needs (Adults need less sleep than children because they have stopped growing) A baby less than a year old grows very fast and therefore sleeps most of the time When he gets a little older he does not grow so fast and therefore does not need so much sleep After about a dozen years when the child enters the adolescent stage, growth speeds up again and this older boy or girl needs even more sleep than the child a year or two younger Many parents do not know this and permit these older children to stay up later than the younger ones As a result boys and girls 13 to 15 are often listless and tired They may be sleepy and tired most of the time, and unable to concentrate on their lessons.

Steady loss of sleep is bad for a child's mental and physical development. A full allowance of unbroken hours of restful sleep helps normal bodily growth and alert mentality.

Sleep required by the average young child
(Including daytime sleep)

At birth	At 6 months.	At 1 year	2-5 years
20-22 hours	16-18 hours	14-16 hours	13-15 hours

Sleep required by the average older child

6-7 years	8-10 years	11-12 years
12 hours	11 hours	10-11 hours

Sleep required by the average youth

13-15 years	16-18 years
10-12 hours	9 10 hours

IV

SLEEPING at regular hours is a habit that you must start for a new baby If you accustom your child to a regular bedtime from infancy you not only help his chances for normal development of body and mind but also simplify your own problems of child management for, as years pass, your child will continue to go quietly, unquestioningly to bed Almost all children who go to bed unwillingly or sleep too little have not been trained properly in early infancy

The habit of an unbroken night sleep from 6 p m to 6 a m can be established fairly early in the baby's life Most new born babies sleep all day and all night, waking only to be fed Give your child a good start by training him to sleep through the night without a feeding as soon as he can do this and still continue to develop normally. For the first nine months most babies need a feeding at 10 p.m , and for the first two months some babies need also a 2 a m feeding, but by the end of the ninth month the unbroken night sleep should last from 6 p m to 6 a.m. If a child has the habit of wetting the bed it may be necessary to wake him to go the toilet The habit of a 12-hour night sleep, with regular day-time naps or rest periods in addition, should be continued until the child is at least 7 years old

The early bedtime habit—6 o'clock during infancy and not later than 7 throughout early childhood—should be unbroken

Do not keep the child up to entertain visitors, and do not allow him to stay up because he begs to. It is unwise to give into a whining child, and permitting him to lose sleep in this way leads to a vicious circle Loss of sleep makes him irritable and overactive, and overactivity makes him restless and wakeful, so that on following evenings it becomes harder and harder to get him to go to bed. On the other hand, a child who goes to bed tranquilly is likely to sleep well and to be easy to manage the next day Clashes between parent and child are often due to the fact that the child is worn out from lack of sleep

A TIRED CHILD IS A TROUBLESOME CHILD.

PREVENTIBLE INFANTILE MORTALITY —*Continued from page 58*

woman should be thoroughly examined by her doctor a week before delivery is expected

It is also highly important to select the right person for helping in the delivery If the doctor says that all is well, he will usually recommend that a trained midwife be employed unless the family wish a doctor to be engaged, or that the delivery should take place in a hospital A suitable midwife will then be introduced to the family She will visit the woman several times before the delivery, advise her how to prepare clothing and other necessary things for the child's birth and make herself familiar with the ways of the household and the young mother s temperament and personal likes and dislikes

Should any unforeseen difficulty arise during delivery, the midwife will then be able to refer it to the doctor without trouble, whereas in cases where the midwife has not been so introduced by a doctor, there is often great delay in securing medical advice In many such cases, this delay makes it impossible for the infant's life to be saved

V

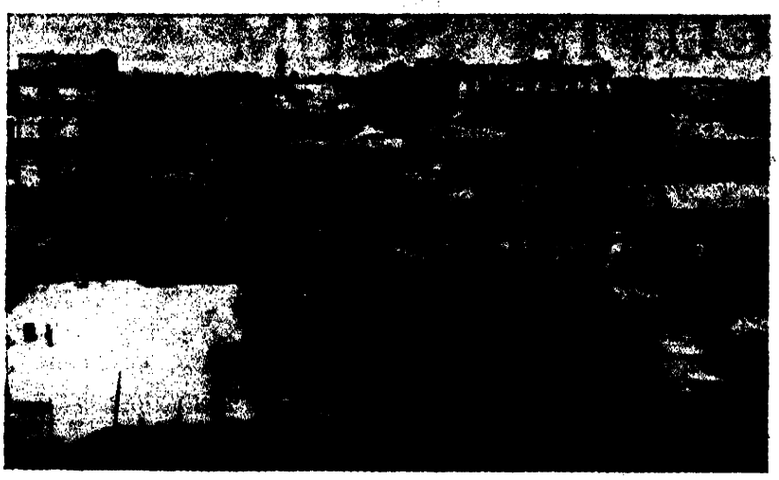
AFTER the child is born much care must be exercised to develop habits of good breast-feeding Here again, the diet of the young mother is very important Too much rice checks the supply of milk Milk, water, barley water, sufficient green vegetables and a little "ghee" are very helpful in providing a good supply of milk It is well known that experienced care of the infant during the first 48 hours after birth makes an enormous difference to the possibility of the child's surviving. Therefore the employment of an attendant who has no knowledge of infant care or of one who pays only one visit to the mother after delivery can make no useful contribution towards the protection of the child s life The attendant who delivers and never calls again does not in any way help the mother to rear her child For ten days after the birth, the infant needs special care and attention, it is then that the foundations of sound health are laid

No food is so good for new born infants as milk of a healthy and contented mother It is the duty of the attendant at the delivery to see that every effort is made by the mother to ensure the infant a sufficient amount of breast milk at regular intervals and also to see that it gets good water to drink during unbroken sleep

IN A CALCUTTA SLUM

Taking Care of MOTHER and CHILD

By LUISE GOMPERTZ



The following pen-picture of a European Lady Health Visitor's life and experience in a slum-area of Calcutta has an interest all its own This is but one of the numerous 'bustee'-areas that are dotted over the city and its suburbs With the various 'carriers' of infection—however clean and healthy one's own home might be, he is fully exposed to, and cannot escape, the infection of a dirty neighbourhood where Disease, Dirt, Destitution and Death run rampant with Ignorance as their great ally The Bengal Social Service League, which has a fine record of continuous good work for over twenty-six years to its credit, could not have done better than select this site for its service-centre and erecting thereon a four-storied Settlement House—unique of its kind in the city—right in the heart of this 'bustee'-land where its need was the greatest The Corporation of Calcutta made a free gift of the land, and the League was particularly fortunate in receiving the devoted services of a trained lady, who—leaving behind her the comforts of a rich home in Europe—came out to India and, after a short time spent at a Maternity Home of a well known Mission, took these underprivileged and children of a poor slum-land people to her bosom Seeing the excellent work that was being done at this Centre, Mr Tracy Strong, the General Secretary of the World Alliance of Y M C A s (Geneva), wrote 'I have seen no finer tribute to the One of Galilee who said 'In as much as ye do unto these the least of my children ye do it unto me' "—EDITOR, "C M G"

THE Maternity-and-Child-Welfare Centre connected with the Settlement House of the Bengal Social Service League is situated in the middle of a big *bustee* (slum), which consists almost entirely of huts built close together with bamboo and mud The roof is covered with tin or tiles there is no basement and only a ground floor in these huts Most of them are built round a narrow courtyard and all the rooms open out into this One family (father, mother, children) all live in one room as a rule During the hot season the men and also some children prefer to sleep outside on the street Most rooms are very small, often without window,—the only 'air-way" is through the door (when open during night it is closed) and through holes in the ceiling The floor is often made from mud, sometimes it is cemented Often one part of the room is partitioned off as kitchen, there is a mud-stove or *chula* on the floor, and plates, mugs, etc, are kept on a shelf The room behind this kitchen is, of course, very dark and often full of smoke Yet, in such rooms children are born and there mothers and babies remain (as a rule) for 40 days Sometimes confinements are done in a "special" room, which means a specially dark, damp and

The Settlement House of the Bengal Social Service League, which, with other activities, houses also the Child Welfare Clinic The building stands on a plot of land—the gift of the Corporation of Calcutta—in Raja Dinendra Street

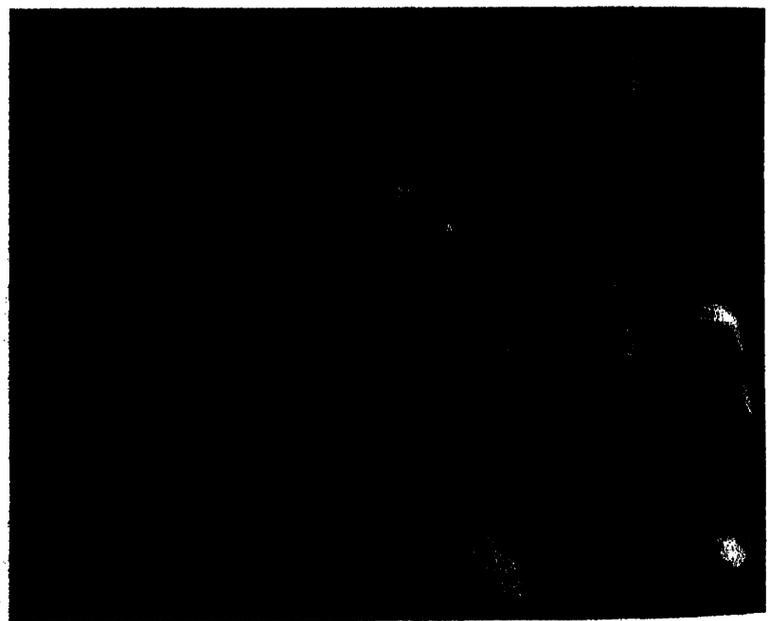
small room, which, otherwise, is quite unsuitable as a living-room and is therefore to "spare"; in there mother and baby also remain for 40 days. There are open drains in some parts of the *bustee*.

The population in this area is almost entirely Mohammedan. That means for the women: *Purdah* (*i.e.*, restrictions forbidding women to show themselves in public, before any men except their nearest relations). In Calcutta this *purdah* is fortunately not kept as strictly as up in the country, otherwise no mother would attend at our Centre. But, of course, when going there, they have to wear their *burkhas;* these are wide and long white capes, sewn round on to a tight cap; there are two 'windows' for the eyes, but even these small windows are barred, either with some net or croche.



The men work as shoe-makers, *dhobis*, cart-drivers; some make *biris* (Indian cigarettes), some are sailors; there are a few sales-men and bus-drivers, quite a number are out of work.

II

DURING day-time, when all men have left the house, the women can sit in the small court-yards, which often have a bad pavement or none at all, but some courts are cemented, a few even with red cement. At times these courts are "screened off" with clothes hanging there for drying. But often this "court life" looks very bright and happy with babies lying and small children playing about, mothers and grandmothers sitting there, sewing bright garments for them, and in between looking into the kitchen; *Sarees* (the women's garment) are beautiful and graceful even in *bustee*-huts. Many women also make *biris* as homework.

For the elder children there are some schools (some are "free", but not compulsory) where reading (Urdu) and a little arithmetic is taught. The children (almost only boys) who go to school are very proud of it, and sometimes read to me out of their Urdu-books. It was great fun when I did not even know that Urdu had to to be read from right to left. When not in school the children play about in the street, some naked, some clothed; most of them are very thin with shoulders sticking out. Yet, they are quite happy and would be so even more if only someone would stop and play and talk to them or tell them stories. They seem to be waiting there on the street for someone to understand and educate them; they enjoy their games, the sun-shine in winter, the first raindrops in the sticky rainy season, or they even stay outside in the rain and bathe in the flooded street. Both children and parents suffer from two great evils: poverty and ignorance; and that means for their bodies: malnutrition, uncleanliness, anaemia, tuberculosis, small-pox, eczema, sore eyes, etc. Though I had lived and worked before in slums in Berlin and in London, only here in our *bustee* I learned what real poverty was; for instance this: a dark and damp room, a rag on the floor, thereon a young baby, a mud-stove, some plates and mugs in one corner, another corner occupied by a heap of coal (necessary for ironing—mother and father are *dhobis*), a big table taking the rest of the room, used for ironing during day-time—as a family-bed during night.

At first women were very shy and children screamed when I came to visit them, but soon they got used to me and took my visits as a nice and welcome change in spite of all the strange and unheard of things I told them. The difficulty in teaching them healthy way of living is due to the complete ignorance of these illiterate mothers, ignorance also about the fact, that one can improve one's own living conditions, health, etc. Their first answer to any advice is: "What can we do? we are so poor". Teaching in this *bustee* has to begin with the fundamentals, with things which babies have to learn within their first days of life: cleanliness and punctuality. Not only that the new-born baby has to learn to take water from the spoon, but the mother has to learn to give water. There is no technical difficulty but such things never have been done, her mother will object to it, or, what is worse, the mother-in-law,

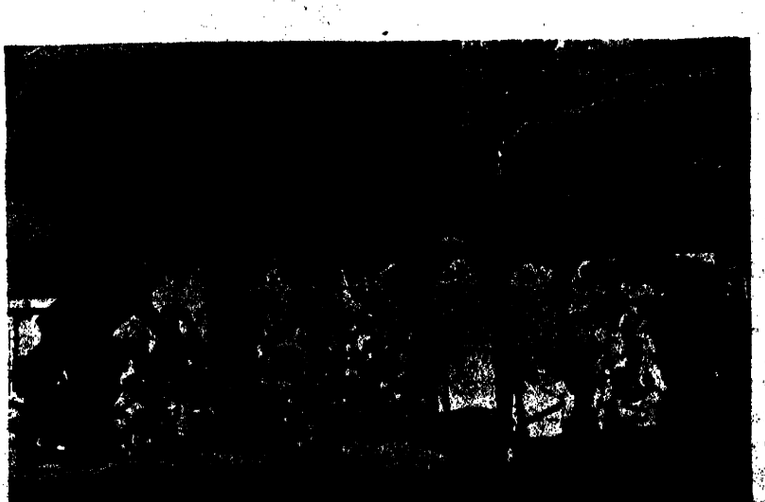
The Lady Health Visitor—the writer of the article—attending to the dirty nails of a baby.

A talk on the terrace of the Settlement House to bustee-mothers by Dr. D. N. Maitra, Hony. Founder-Secretary of the Bengal Social Service League.

or any old woman in the house, will not permit any new-fangled experiments; or they have frightening threats and prophecies should such methods be applied. For instance: when a baby gets water he will get a very bad cold—this is their first belief—though one cannot learn from them why and how babies who never drank water get such bad colds.

Families often are very big, *i.e.*, they consist of many families and the head at home is the mother-in-law. Some of them are very stubborn and hard. When they were young their mother-in-laws had treated them badly and now they think *their* time has come. Why should their daughters-in-law have a better time than they had and their grandchildren be brought up in a different way from their children's and their own upbringing?

III



THE Centre is open from 8—11 A.M. and from 3—4 P.M. In the afternoon only very weak babies attend to get a second dose of cod-liver-oil and milk. In the morning mother and babies and toddlers attend. That is to say, these get milk or *suji*, and if necessary some minor treatment (eyes, ears, etc.) but many more people come! The neighbourhood expects the Centre to be a kind of a club for women and a kind of Kindergarten for children. One mother sometimes appeared with seven or eight children. The children love to play in the entrance and on the staircase. Nowhere at home they have so much space for their play, and the Centre is a much nicer playground than the street! But they create such crowd and noise that we have to turn them out (but soon they are back). Their best time is on fast-days, when some mothers have not taken their milk. Then, after the clinic-work is finished, the milk left over is distributed to some children; there they sit on a bench, their faces first drowned in mugs and then all smiling and happy; afterwards they sometimes dance a bit and sing, just to show their happy mood.

On the top of our three-storied house is a flat roof, which shall develop into a roof-garden. From there mothers and children can look far into the world, and they can enjoy themselves in sunshine and fresh air. In winter we hold a sewing-class for mothers; some are quite good at sewing, some think it a nuisance; but they all were perfect audience, when, one afternoon, my assistant told them the story of "Hansel and Gretel", and they re-told the story in their huts.

We have tried to keep the Centre as much like a school as possible; the mothers have to report about their children and about their feeds; about feeding they often tell "tales"; they know there will be scolding for breast-feeding a baby all day and night; and yet, in the beginning, they think it quite impossible and cruel to feed babies only once in 3 hours (to insist on 4-hourly feeds would be aiming at an impossible standard). Once a mother thought this 3-hour starvation so incredible that she interpreted the feeding-rule (20 minutes every 3 hours) as 3 minutes every 20

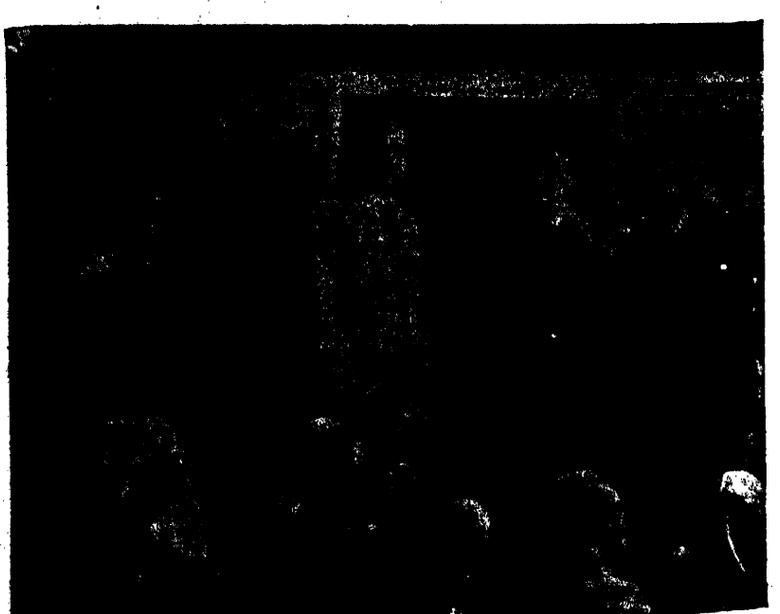
The bustee's women and children listening to talks and stories by the Hony. Secretary in the Lokenath Hall of the Settlement House.

Distributing winter garments to the bustee-children (The Hony. Founder-Secretary, the Acting Lady Health Visitor and Mr. R. C. Tata in the background).

MOTHER & CHILD

A dying infant was thus nursed to life.

minutes! But all the mothers who attend regularly soon learn and appreciate the rules and also learn that "tales" always will be found out because there are the babies themselves who give away the truth. Mothers who repeatedly were warned and yet do not improve, are not any more allowed to attend at the Centre. Those turned out often beg to be re-admitted, but this is only granted when the baby's looks and increase in weight show that the "exiled" mother followed the advice at home. These illiterate women need a strict teacher, and they had really learnt something during these nearly 1¾ years. When I returned to them after five months' sick-leave they thought me very thin and advised me to eat spinach and to drink fruit-juice, etc.—all the good food I had told them about. When a new mother turns up in the Centre she has to wait until the 'old' mothers have been seen to, and while waiting she is questioned by them about her and her baby's health. They even predict what I will tell her later on, and they often are right. The diet for diarrhoea is known by heart and believed in.



I have also to be strict about their economics. They easily will say: "We cannot afford fruit-juice (though fruit is very cheap) etc. and then they must be told to keep the pies (the smallest Indian coin) they spend on tea for buying fruits for their babies. This tea-drinking is very bad indeed, even small children drinking tea! People, of course, do not keep their fire going all day, that would be too expensive and too hot in Calcutta! So, naturally, it is very convenient and tempting to buy a mug of hot tea (but what kind of tea!) from one of the many tea-shops in the street, and, unfortunately, they also buy their sweets (not too clean of course!). The Bengal sweets are very heavy, sweet and oily and naturally upset small children. I wish we could introduce dates and figs and raisins to "replace" these street-shop-sweets.

IV

UNFORTUNATELY I have no time to do 'deliveries'. So the mothers are left to *dais* and Corporation midwives; they are very few in number, they even cannot pay full attention to cases they take on. There are plenty of *dais* (Indian untrained midwives) and they would be quite good as far as experience in conducting cases is concerned and as there hardly are any difficult labours—*if*—if only they were clean and apply and teach clean habits. Mothers often get fever but in most of these cases they recover most wonderfully, specially those mothers who attended at the Centre during pregnancy. They soon get well and strong on a daily dose of milk, iron, cod-liver oil and calcium, so that they are in a good state of health by the time the baby arrives. This, of course, only applies to those mothers who attend regularly and keep the advised diet. The mothers re-appear at the Centre about ten days after the confinement. The rule really demands that mother and child must not leave their room and house before baby's 40-day birthday (which is celebrated), but there are exceptions for attendance at the Centre. Up to the 40th day the baby must be brought along together with some pieces of iron (as a rule and an old knife) to keep evil ghosts and eyes off. On the whole superstitions are flourishing well. To say of a baby that he is well and beautiful (and there are the most beautiful babies here) means casting an evil eye on him, or calling for an evil eye. With bottle-fed babies (very rare) it is not allowed for anyone to see the milk in the bottle while the baby is drinking; therefore, the bottle must be wrapped in a cloth, which naturally makes proper feeding more difficult.

When fat and breast-fed babies cry from thirst—then mothers, grand-mothers and great-grand-mothers think that the mother's milk is not sufficient and the poor baby still hungry. So they buy some cows' milk in the bazar

NUTRITION *in* CHILDHOOD

By

TALIAFERO CLARKE

Surgeon, United States Public Health Service, New York

MALNUTRITION is a condition of undernourishment of the body. It is seen in boys and girls at any period after infancy or in childhood. It is an important condition, very often neglected, and when neglected may lead to serious consequences. It may lay the foundation for poor physical development or ill health in adult life, or may lead to some serious disease like tuberculosis.

How to Recognize Malnutrition

Children suffering from malnutrition frequently are not only much below normal weight for height but they gain much more slowly than they should. At the ages of 6 to 10 years, when a healthy child gains 4 or 5 pounds a year, they may gain only 1 or 2 pounds, or even none at all; from 12 to 16 years, when healthy children should gain from 6 to 10 pounds a year, they may gain only 2 or 3 pounds.

Children with malnutrition do not all present the same symptoms. Some are pale, dull, and listless, with dark rings under the eyes, tire easily, and have no ambition for work or play, their work in school is sometimes so poor that they must repeat their grades. Others are nervous and fretful, hard to please and hard to manage; they eat and sleep badly. Still others are overambitious, constantly active, restless; they find it difficult to concentrate.

Why Malnutrition Develops

When the growth of children is not watched, they frequently develop a condition of malnutrition before the parents are aware of the fact. To grow in height and gain regularly in weight is just as much a sign of health in a boy or girl of 9 or 10 as in a baby. Mothers have learned to weigh their babies; they must also learn that it is just as important to weigh their older boys and girls. When children do not grow or gain regularly in weight, something is wrong. If these boys and girls were weighed regularly every month, the fact that they are not gaining in weight properly would be discovered early and not allowed to go on to serious consequences.

The causes of malnutrition are in most cases not difficult to find. Among the most important are:

1. *The child does not get sufficient food.*
2. *He does not get the right kind of food. He spoils his appetite for simple foods needed for growth, such as milk, cereals, vegetables, etc., by excessive indulgence in candy, sweets, pastry, and other indigestible foods.*
4. *He eats irregularly, between meals, spoiling his appetite by cakes and sweets.*
4. *He bolts his food, never taking time enough at meals to chew his food properly, but washes it down with water.*
5. *He drinks tea and coffee instead of milk and water.*
6. *He does not get enough sleep; at 10 or 11 years he does not get to bed until 10 o'clock or after, when he should be in bed at 9 o'clock, and sleep with windows wide open.*
7. *He frequently suffers from habitual constipation.*
8. *He gets too much stimulation and emotional excitement—motion pictures and other evening entertainments.*
9. *He plays too hard ..too many hours or in too active and intense a manner.*
10. *He is overworked in school or out; sometimes he has too many extra lessons or classes outside school hours.*
11. *Malnutrition may also be caused or aggravated by such things as decayed teeth, enlarged or diseased tonsils or adenoids, and it may be the beginning of some serious disease.*
12. *In places where malaria or hookworm is present, malnutrition is often the result of these infections.*

Malnutrition Should Be Treated

Unless the condition is recognized early and measures are taken to correct it, the effects of malnutrition in childhood may last to adult life. It may show itself as prolonged ill health and feeble resistance to disease; the individual may grow up undersized and underweight, not strong enough to do the average work of a man or woman.

How common the condition of malnutrition may be is shown by the result of the selective draft, where nearly 1 man in 3 of the young men examined was rejected as unfit for active military service. Of those rejected, 40,000 were found unfit because of developmental defects, such as deficient height, weight, chest measurement, or muscular development.

Careful investigations which have been made show that an undue number of the children in our schools are at present suffering from malnutrition. Is your child one of this number?

What to Do

In order to prevent malnutrition, or at least to recognize it before serious consequences have followed, it is important to *watch the child's gain or loss in weight!* In the case of older children this can be done in school, where monthly weights of all children should be taken and recorded, and special attention to those who do not make a normal gain should be given by the parents, teacher, or school nurse or doctor if there is one. It is essential that every child of school age should receive a careful medical examination once a year.

A child who is steadily losing weight or one who is not making a normal gain should at once be taken to a physician and examined to see if any disease is developing. In the case of children residing in localities in which malaria or hookworm prevails, the physician should search for the parasites

of the parasites of these and similar diseases. The child's whole daily life should be carefully gone into, to see which of the rules of health he is violating and whether this pertains to his food, his habits of eating, his hours of play, of school work, or of sleep.

Malnutrition is cured by correcting the habits or removing the causes already mentioned upon which it depends. Often it is a matter of enforcing discipline in the home and making home life pleasant.

Suggestions for keeping Children well

Diet

From 1 to 2 pints of milk daily.

Cereal with cream, unskimmed milk, or butter for breakfast.

Green leafy vegetables daily.

At least four glasses of water daily.

Meat not oftener than once a day.

No fried foods.

Sweets in moderation and never just before meals.

Sleep

Ten hours sleep every night.

Open bedroom windows.

Physical

All physical defects corrected.

Daily bowel movement.

Some Hints on Feeding Children

In dealing with malnutrition the following suggestions regarding children's diet may be helpful.

A Dietary for Infants

During early infancy the diet should consist wholly of milk ; and since no perfect substitute for mother's milk is known, mothers should always nurse their babies at the breast, unless otherwise advised by a competent physician.

When the baby is about 1 month old he should be given orange or tomato juice. Beginning with a teaspoonful of orange juice given one hour before the second feeding or nursing time in the earlier months, the amount should be increased until at 6 months of age he is taking 2 to 3 tablespoonfuls

At first, orange juice should be diluted with an equal amount of cooled boiled water ; later it may be given undiluted. Tomato juice may be given in somewhat larger quantities.

Cod-liver oil should be begun by the end of the third week, and given as directed by the physician

About the fifth or sixth month, well-cooked cereals may be advantageously added to the diet Beginning with a teaspoonful daily of strained oatmeal jelly just before the second feeding, the amount is gradually increased until 2 or 3 teaspoonfuls of cereal, such as farina and the like, are taken twice a day at the tenth month.

About the sixth month, egg yolk and strained vegetables may be given before the midday feeding At 10 months baby may have crackers, toast, zwieback, and broth made from chicken, beef, or mutton From 10 to 12 months he may often be able to take baked potatoes and stewed fruits.

Weaning.—As a rule the baby should not be weaned until after the eighth or ninth month, except on the advice of a physician. It is usually better to continue nursing during very hot weather and defer weaning until it is cooler. During the period of weaning, and later, cow's milk should be the main article in the baby's diet.

At the age of 15 or 16 months scraped meat may be added to the baby's diet.

Simple desserts, but slightly sweetened, such as cornstarch, blancmange, custard, plain rice pudding, and junket, may be given at 18 months

---

IN A CALCUTTA SLUM—*Continued from page 64*

(which is very expensive and extremely bad), or a father who has been out on a boat prescribes tin, or dried milk-preparations ; they also buy a bottle (and there are all kinds of torture-bottles to get in the bazar) and then the baby gets ill

There is no need to induce these mothers to breast-feeding—but in some cases it needs force to keep them from doing so for years. I have seen here the worst cases of rickets, caused by constant breast-feeding for 2-3 years—and practically no other food, except perhaps—tea.

V

THE main diseases of small children are diarrhoea, especially in summer and fairly throughout the year and colds, even pneumonia during winter. The [illegible]'s main disease is anaemia. For [illegible] the people can get free treatment at the Medical College but as this is far away from the *bustee*, they soon drop off as soon as they feel better. There is practically no chance for free treatment of Venereal Diseases, and there cannot be any question about these poor people's paying for injections. For minor ailments there are some very good old home-cures.

Once a fortnight the Red Cross doctor comes to the Centre. All the new and exceptional cases are seen by her, and often the healthy mothers with healthy babies resent it that they cannot see her as well. During winter vaccination begins. A vaccinator comes to the Centre, and I often take her round in the *bustee*. The mothers and children attending the Centre get vaccinated before the small-pox arrives in March. But otherwise people are not so eager about vaccination until the small-pox are in, and even then there are objections When someone has died in the family or there is going to be a wedding, then a baby must not be vaccinated, and funeral and weddings are just the occasions for them to acquire this terrible disease. Many children die.

I don't know whether I give here a clear picture of the work and life in our Centre. I hope it does not sound depressing, for inspite of all difficulties, the work is full of joy. I often think of the flowers which, for so little care given, reward us with leaves and flowers; it is the same with the care given to these mothers and children they bloom and smile for almost nothing and are touchingly grateful Poor they are, yet they bring presents for my assistant (a very nice Bengali girl) and me: fruits, *charis* (bracelets) and flowers.

When the child is between 2 and 3 years of age finely chopped rare beef, chicken, lamb chops, and broiled or boiled fish may be given, but in general meat should be given very sparingly to small children during the hot weather. A few children are made sick by eggs, in which case the physician should be consulted before eggs are again given to the child.

The Feeding of Older Children

In considering the diet of older children it must be remembered that food not only supplies the materials essential for growth and the replacing of tissues used up by bodily activities, but that it also is the source of body heat and energy. To supply these necessities, the diet should contain fats, carbohydrates, proteins, salts, water, and certain chemically unidentified food substances known as "vitamines".

The facts are necessary for nutrition and are most readily converted into heat and energy. In addition to cow's milk and cream and butter, the following food substances are rich in fat: Cottonseed oil, peanut butter, oleomargarine, oilve oil, and bacon.

The carbohydrates comprise a large proportion of the heat and energy-producing substances in the diet. These are derived from food substances containing sugar and starches, such as the cereals, various forms of breakfast food, potatoes, rice, macaroni, spaghetti, and bread.

The protein substances are necessary for building new tissues and are of both animal and vegetable origin. The foodstuffs rich in protein are lean meat, eggs, chicken, fish, and milk and cheese, and among vegetables, beans and peas.

The salts are necessary for the growing skeleton. These are supplied by milk and are present in meat and eggs, and especially in green vegetables and fruits.

Vitamines.—It is now known that a diet composed only of meat, potatoes, bread, and cereals does not promote the best growth and development of children. Such a diet should be supplemented by an abundance of milk, butter, and the green leafy vegetables, such as spinach, kale, lettuce, Swiss chard, onions, cress, and beet and turnip tops. These articles of food are rich in the growth-stimulating "vitamines". Growing children should partake of them freely.

The diet of the child must be arranged with regard to his age and his ability to digest certain articles of food.

The following foods have been recommended for a child from 2 to 4 years of age:

Milk

This is the principal article of diet.

Fruits

Baked apples.	Oranges.
Stewed prunes.	Baked pears.
Apple sauce.	Stewed pears.
Stewed peaches.	Ripe bananas.

Cereals

Oatmeal.	Farina.
Cracked wheat.	Hominy, and other cooked breakfast cereals.
Samp.	

White vegetables

Potato (baked).	Macaroni.
Rice.	Spaghetti.

Green vegetables

String beans.	Spinach.
Asparagus.	Beet greens.
Lettuce.	Green peas.
Celery (stewed).	Beets.
Carrots.	Swiss chard

Bread

Stale bread (white, whole wheat, graham, oatmeal, rye, or corn) with butter, crackers.

Deserts

Custard.	Sago.
Tapioca cream.	Cornstarch pudding.
Apple tapioca.	Rice pudding (without raisins)
Prune whip.	Bread pudding (without raisins).
Cooked fruit.	Ice cream.

Protein foods

Eggs (soft-boiled or [illegible]ddled).	Mutton.
Fresh fish (boiled)	Steak.
Roast chicken.	Lamb (roast or chop).
Boiled chicken.	Roast beef.

Soups

Creamed vegetable.	Vegetable.
Mutton.	Chicken.

Fats

Butter.	Peanut butter.
	Olive oil.

For older children up to 12 years of age the following articles of diet have been recommended:

Milk.	French bread.
Mutton, chicken, beef broth.	Whole wheat and Graham bread.
Soft-boiled eggs	
Scrambled eggs.	Milk toast.
Broiled chicken.	Baked, mashed, boiled potatoes.
Sweetbreads.	
Boiled and broiled fish.	Plain macaroni and spaghetti.
Butter.	Tapioca.
Common cheese.	Sago.
Asparagus, spinach, beet greens.	Ice cream.
	Baked apples.
Peas.	Stewed prunes.
Plain omelet.	Stewed figs.
Lamb and mutton chops.	Raw apples.
Beefsteak.	Figs.
Roast lamb and mutton.	Apple sauce.
Boiled mutton.	Pears and peaches.
Roast beef.	Grapes and oranges.
Roast chicken.	Grapefruit.
Summer squash.	Bananas.
Winter squash and pumpkin.	Strawberries.
Celery, tomatoes, beets.	Raspberries.
Carrots, lettuce, onions, and green corn.	Blueberries.
	Blackberries.
Parsnips.	Junket.
Cocoa.	Baked custard.
Bread pudding.	Cornstarch pudding.
Rice pudding.	

THE CHILD'S FOOD—

In Relation to A STRONG BODY and SOUND TEETH

By

FRANK J. JIRKA

Director, Dept. of Public Health, State of Illinois, U.S.A.

STRONG, healthy bodies and sound teeth are built upon a foundation of good nutrition. Every effort should be made to provide proper food in order that this foundation may be strengthened.

The importance of diet in the control and prevention of dental decay is well known. The quality of a child's teeth is largely within the control of his mother. By wise planning of her diet during her pregnancy and the nursing period, and by careful supervision of the child's diet after he is weaned, she can provide him with the materials which he needs to build strong teeth.

The accompanying illustrations show the time in the individual's life that the various portions of the teeth are formed. Figure I illustrates the time of formation of the "milk" or baby teeth. These teeth start to develop as early as the fourth month of fetal life. Even the six year molar, the first permanent tooth, begins to be formed during the last month of the pre-natal period. It is obvious that the quality of these portions of the teeth depends upon the adequacy of the materials furnished from the mother's body.

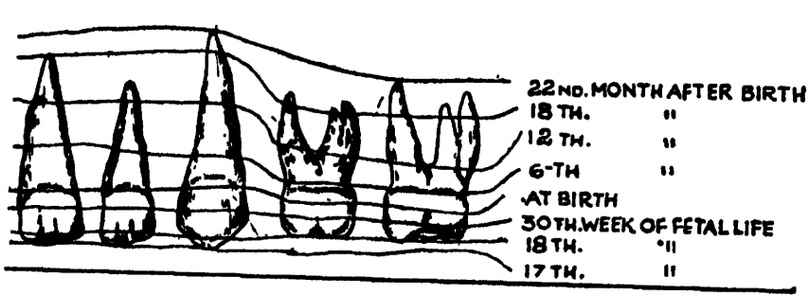

FIG. I.

This illustration also shows that a large proportion of each baby tooth is constructed during the first six to nine months of infancy. The temporary teeth are usually completely formed by the end of the second year. During the first part of this period, the infant is largely dependent upon either human or cow's milk for nourishment. Therefore, the quality of the milk has a direct bearing on the future soundness of his teeth.

Figure II shows the time of formation of the permanent teeth. These permanent teeth begin to form during prenatal life, with the formation of the six-year molar. Some formation takes place during infancy, but a large part of the building of these teeth occurs during the pre-school age. The major portion of the permanent teeth are completely formed by adolescence.

Upon the quality of these teeth depends the number of cavities the individual will have during childhood and adult life. The way to assure this quality is by food nutrition.

The same essentials appear in all diets planned for good nutrition. However, the character and volume of the food required for proper nutrition vary for each period of life.

PREGNANCY

DURING pregnancy every dietary and hygienic precaution should be observed in order to produce a healthy and well-built infant without sacrifice of materials from the mother's body. If the diet taken by the mother is not sufficient to provide for the developing infant, materials are removed from the maternal body. The mother may, however, by proper diet, protect herself from such losses and give birth to a healthy baby with well formed bones and teeth.

Some recent work in Norway has shown that pregnant women living on diets low in minerals and vitamins gave birth to infants showing poor bone formation. When others of this group of prospective mothers were furnished with diets rich in minerals and vitamins, they gave birth to children with well-constructed bones. The good diets contained at least a quart of milk daily, vegetables and fruits in abundance, and either egg or cod liver oil.

Duplicates of the good and poor diets of the women were then fed to pregnant dogs. This experiment was carried on so that the animals' bones could be chemically analyzed to discover the results of the diets. The bones of both the dams and their puppies from the poor diet group showed a low amount of minerals as compared to the bones of the animals on the adequate diet. X-ray examinations were made of their

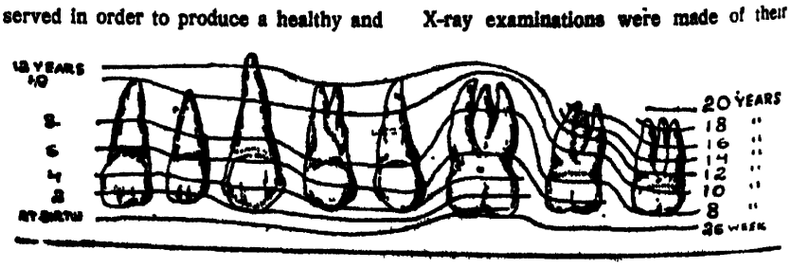

FIG. II.

teeth and jaws, which also showed a low amount of minerals in the poor diet group as compared to the other.

Dr. Russel W. Bunting of the University of Michigan has carried on an experiment with a colony of three hundred orphan children which seems to support his theory that dental caries, or decay, is a germ disease, caused by bacterial invasion. According to Dr. Bunting, a diet low in carbohydrates tends to promote mouth conditions favourably to sound teeth, even though it may be inadequate in other particulars.

Some physicians have observed that children whose mothers drank less than a pint of milk daily in pregnancy have twice as many decayed teeth as children whose mothers have lived during pregnancy on a high milk-vegetables-fruit diet This observation indicates that poorly built teeth decay easily. It may show also that an inadequate diet of a child during infancy may hasten decay in poorly formed teeth.

The six-year molar, which begins to form in fetal life, and for the soundness of which the mother is therefore partly responsible, shows the highest number of cavities and is lost by extraction more frequently than any other of the permanent teeth. This has been shown by the examination of a large number of children and adults. An example from a study made in two Massachusetts towns illustrates the value of a good diet for the pregnant woman. In town S, in a dairy town, where milk drinking was a general practice, 33 per cent of the school children had all four of the six-year molars free from caries, while in a non-milk drinking town only 13 per cent had these four molars free from decay. It was concluded that "the children reaped the benefits of the milk consumption of their mothers during pregnancy".

It is evidence that if children are to be provided with deciduous teeth and six-year molars resistant to decay because of their good structure, the pregnant mother must be provided with the best type of diet science can name.

INFANCY

A WELL-NOURISHED, healthy, and happy infant should be the product sought by any method of feeding.

Breast milk is the best food for the young baby. Every effort should be made to provide some breast milk daily, although it may be impossible to fulfill the daily food needs entirely by this milk.

The nursing mother should choose her food carefully so that she can provide good milk for her child. The vitamins necessary for his growth and for good development of his bones and teeth are carried into the mother's milk by a liberal intake of vitamin-rich foods in her diet. A daily diet including milk, vegetables, fruits, whole cereal and egg should do much to insure a breast milk carrying a goodly supply of vitamins. Sunlight on the mother's body will increase the vitamin D in her milk, which protects nursing babies against rickets and aids them in building good teeth.

The nursing mother may increase the quantity of minerals in her milk by including large amounts of them in her own daily diet The infant needs these minerals for his tooth and bone formation, and his mother's milk provides them for him in the form in which he can assimilate them best.

Again animal experiments prove the point. Experiments on puppies, whose nursing mothers were fed on diet low in minerals, showed rickets and evident signs of poorly formed teeth in the offspring. Puppies whose mothers had an adequate diet developed normally and showed teeth of good structure. Puppies whose mothers were poorly fed during *both pregnancy and nursing periods* showed more severe rickets and more poorly formed teeth than those whose diet was poor during the nursing period alone. Moreover, the bones of the mother dog showed greater losses of minerals when her diet was deficient in both pregnancy and the nursing period, than when it was deficient during the nursing period alone To translate these experiments into human experience, the diet of the mother must be rich in milk, vegetables and fruits during *both* pregnancy and nursing for the sake of the child, as well as the mother.

Human experiments have shown that losses of minerals from the mother's body during nursing occur on an "ordinary" diet. The addition of milk, vegetables, fruits, egg, and sometimes cod liver oil greatly decreased the loss to the mother. It ought to be possible to blot out the common saying, "A tooth for every child," by giving an adequate diet in both pregnancy and the nursing period.

In case where feeding an infant by breast is impossible, artificial feeding under the careful direction of a physician is relied upon to furnish the dietary essentials for the development of a healthy and sound baby.

To both cow's and human milk, additions are made as early as the third week in order to supply all the dietary essentials later described. Because of the variable content and almost complete absence of certain vitamins from both milks, these additions are necessary.

PRE-SCHOOL PERIOD

DEVELOPMENT of correct food habits is one of the greatest problems of this period. It is not the food which is offered to the child which makes his diet adequate, it is the amount which he actually eats. Good food habits mean that the child (1) takes all wholesome food; (2) eats only at regular mealtime; and (3) takes his food hungrily and without urging.

Parents should begin careful training in these habits during the weaning period when raw foods are being introduced.

Simple directions are:

(1) Introduce one new food at a time.

(2) Give small quantities until they are well taken, then increase the amount

(3) Have a matter-of-fact attitude during feeding. Don't let the child know that you think it is important that he eat any particular food.

The establishment of proper health habits in addition to good food habits is necessary. A tired and irritable child will not want to eat. Outdoor air and sunshine stimulate the appetite and are beneficial to the body for growth and health. Three simples rules for health habits of the young child are:

(1) Sleep the clock around at night.

(2) Have an afternoon nap or rest period.

(3) Play long hours out-of-doorr in the sunshine.

The records of the Parent-Teacher round-ups of children have shown astoundingly high numbers of decayed teeth in children who are just entering school. The condition of the baby teeth and the permanent six-year molars at this time is dependent upon many factors. The health and nutrition of the mother may have been poor during pregnancy and nursing, as well as that of the child during infancy and preschool life. An adequate diet will protect against decay during this period as in any other.

SCHOOL AGE

ALTHOUGH reports show that 80 to 90 per cent of school children show

MOTHER & CHILD

cavities in their teeth, experiments have indicated that good diets furnishing an abundance of milk, vegetables, fruits and eggs not only built good teeth but stopped decay in children of this age.

A study has been made in Michigan of six hundred children in orphanage and public schools during the period of a year. At the beginning of the experiment, the condition of the children's teeth was carefully recorded and even actual drawings of the sizes and locations of the cavities were made. Some of the orphanage children were taken from their usual house ration and given an excellent diet, including one quart of milk, green vegetables and fruits daily. A group of the children was allowed to continue on diets poor in these foods. At the end of the year, the dental condition of both groups was compared to the previous year's record. The decay had stopped and no new decay started in the teeth of the children on the good diet. The decayed spots increased in size and so did the number of decayed teeth in the children on the poor diets.

"Arrested decay" was discovered in an unusual number of children in the hospital at the University of Iowa. Dental examination showed gradual hardening of the areas around the decayed spots in the teeth and that decay was decreasing instead of increasing Study of the histories of these children showed that the decay began to decrease when a new dietary programme commenced. The new diet continued one quart of milk, one egg, one teaspoonful of cod liver oil, one ounce of butter, one orange, two vegetables and fruits, and in addition, the foods the children wanted. After this discovery, one group of children was deprived of this excellent diet and after several months decay spots began to increase.

During this fast-growing age, the school child should be offered a diet containing milk, vegetables, fruits, and eggs as described above, but good health habits should go hand in hand with diet. These habits do much to influence the food intake of the school child and thus his general health. To lessen the added strain of school life, the following rules are of value.

(1) Regular and adequate meals should be taken.

(2) Plenty of time should be allowed for eating.

(3) From 9 to 11 hours of sleep should be had each night. The younger and more active the child the more sleep he requires.

(4) Plenty of out-door exercise without over-fatigue is desirable.

ESSENTIALS IN THE DIET

THE following list gives the dietary essentials for good health. These essentials are the same for all periods of life, but the kind that amounts of food containing these essentials vary according to the age of the individual. At first glance the diet of the infant seems to be in great contrast to that of the child and adult, but the foods containing the essentials differ, not the essentials themselves.

The dietary essentials are :

I Energy furnished by carbohydrates and fats to meet the requirements of growth and activity

II Adequate quantity and quality and quality of protein for growth, reproduction, and usual life processes

III. Minerals, calcium and phosphorus for bones and teeth, iron for blood building, and other elements for bodily function

IV. Vitamins, all are necessary for health

A Vitamin A promotes growth and protects against infection

B. Vitamin B complex promotes growth by stimulating metabolic processes, increases appetite, protects against pellagra and nerve disease, causes better utilization of food

C Vitamin C promises good development of teeth and healthy bony structure, protects against scurvy

D Vitamin D promotes good bone development and thus protects against rickets It is important in formation and maintenance of good teeth.

A simple list of food which will furnish some of each dietary essential makes an easy measuring stick to use in evaluating any diet after infancy.

THE SKELETON OF A GOOD DIET

ONE quart of milk or its equivalent for growing children and pregnant and nursing women, one pint for non-pregnant, non-nourishing adults.

One raw vegetable.

One cooked vegetable other than potato (leafy are preferable).

One egg.

One citrous fruit or tomato.

One cooked fruit.

One serving of *whole grain* cereal or bread.

Some vitamin D from cod liver oil, irradiation, or sunlight.

This skeleton furnishes the essentials of a diet for any individual. The calories and protein will be made adequate when meat, fish, potato, bread, butter, sugar and dessert are included.

The reasons for placing the various foods in the basic diet are discussed as follows :

MILK : It is not necessary for anyone to drink, as a beverage, the entire amount of milk specified above The amounts used in cooking and served on other foods also count toward the total amount of milk consumed. Other ways to incorporate milk in the family menu are use of concentrated dairy products, such as evaporated or dried milk, and cheese. Skimmed milk, buttermilk and cottage cheese made with rennet may be used instead of whole milk if butter and cream are also used in the diet to supply the necessary fats

FRUITS . Fruits are included in the diet because of their mineral and vitamin contents. They are rich in nearly every mineral except calcium and phosphorus, which are furnished by milk, cheese, and eggs. Fruits, particularly figs, dates, prunes, and apricots are especially rich in iron

One of the most important reasons for including fresh fruits in the diet is to furnish vitamin C. This vitamin is necessary for normal development of teeth, and the health of their supporting tissue. Absence of vitamin C from diet leads to survy. Oranges, grapefruit, lemons, and tomatoes are rich sources of this vitamin. Raw fruits, other than those mentioned, may supply an adequate amount if given in large enough quantities.

VEGETABLES : Vegetables are needed in the diet for the same reasons as fruits. In addition, the leaves, shoots and pods of green vegetables contain vitamin A, which is important in promoting growth and building resistance to infections.

A raw fruit and vegetable, however are advised each day because other foods cannot be relied upon to furnish enough vitamin C.

WHOLE GRAIN CEREALS Whole grain cereals furnish minerals and vitamin B. Cereals are cheap sources of energy, but the highly milled products have been practically deprived of other desirable factors.

EGG : Egg, either separately or included in other foods, is a valuable food. It furnishes protein, iron, calcium, phosphorus, and vitamins A and D, all of which make for better growth and health.

The following table lists the particular foods which can be considered good sources of the dietary essentials:

PROTEIN.	CALCIUM	PHOSPHORUS	IRON
Cheese	Milk	Milk	Green vegetables
Eggs	Fruit	Egg yolk	Egg yolk
Meat	Vegetables	Meat	Dried fruits
Fish		Cheese	Meat
Milk		Whole cereals	
		Peas and beans	

VITAMIN A	VITAMIN B	VITAMIN C
Cod liver oil	Whole wheat cereals	Tomato juice
Butter	Vegetables	Orange, lemon, grapefruit
Milk	Milk	Raw vegetables
Green vegetables	Fruits	Raw fruits
Egg yolk		

The diet rich in milk-vegetable-fruit combinations will, if properly prepared, yield calcium, phosphorus, iron, and vitamins A, B and C. (D may be provided by sunlight or cod liver oil.)

PREPARATION OF FOOD

THE method of preparing food is nearly as important as the selection of food in maintaining good nutrition. Loss of valuable dietary factors results from cooking. It is also importaant to have a knowledge of ways and means of including milk, eggs and cheese in dishes to increase their nutritive value.

It will be noted that one raw vegetable and one raw fruit are included in the daily basic diet. Since cooking decreases vitamin C in fruits and vegetables, raw foods must be included in the diet freely to protect against a deficiency. Some raw vegetables, such as cabbages, lettuce and carrots are available throughout the year. Small oranges for juice may usually be obtained relatively cheap at all times.

VEGETABLES: No matter what method of cooking is used, they should be cooked only until they are tender.

(a) *Boiling.* Put the vegetables into rapidly boiling water to shorten the time of cooking. Concentrate the water and use it for soups and gravies afterward. It carries with it a large part of the minerals from the food cooked in it. Boiling seems best for cooking vegetables as onions, cabbage, cauliflower, Brussels sprouts and spinach. Never use soda in cooking, as it destroys the vitamins.

(b) *Steaming.* Fewer nutrients are lost in this way than by boiling in water, but some products do not look so attractive or taste so well. This method may be successfully used in cooking potatoes, carrots, beets and squash.

(c) *Baking.* Food prepared in this way loses practically none of its minerals, but the temperature decreases its vitamin content. This method is of value because it is simple and the results are appetizing.

After the cooking of the vegetables there are many ways to increase their nutritive value by adding other food factors.

(a) *Buttered.* A means of increasing vitamin A and energy value.

(b) *Creamed.* With whole milk, as in white sauce, this improves the flavor and increases milk intake. Since some people do not like to drink milk and feel that it crowds out other desirable foods, every manner of including it in food is to be sought.

(c) *Scalloped.* This also increases the intake of milk, and the addition of cheese increases protein, minerals and vitamins.

(d) *Creamed Soups.* When made with white sauce, evaporated or dried milks, these insure a good way to take the daily milk requirement.

FRUITS: The same principles of cooking apply to fruits as well as to vegetables. Short-time cooking carries less destruction of vitamins than long. If the fruits are cooked in too great a quantity of water, which is afterward drained off, it will carry away a large proportion of the valuable mineral salts for which these fruits are included in the diet. Canned fruits and dried fruits, as well as fresh, help to make the menu interesting as well as nutritious.

FOOD PLAN FOR A PREGNANT OR NURSING WOMAN

BREAKFAST

Fruit: Half grapefruit, whole orange or banana, tomato juice.

Cereal (well-cooked): Wheatena, oatmeal or other cereal with whole milk or cream and sugar.

Bread and Butter: Two slices, whole wheat preferably, and two pats of butter.

Milk: One cup, or one cup of cocoa made with whole milk, evaporated or dried.

Egg, bacon and coffee may be added to this meal according to the likes and needs of the woman.

MORNING LUNCH

Milk or fruit juice are frequently desired.

DINNER

Meat, fish, egg, or cheese dish.

Salad: Lettuce, cabbage, tomato, romaine, endive, cress, fruit, with or without dressing.

Vegetables: Baked, creamed or mashed potato. Spinach, kale, cabbage, or other greens, tomatoes, carrots, peas or beans.

Bread and butter: Two slices or two rolls and two pats of butter.

Milk beverage: Orange nog or spiced milk.

Dessert: Canner or raw fruit, custar or other milk pudding.

AFTERNOON LUNCH

Raw fruit or milk beverage may be taken if it does not interfere with the appetite for supper.

SUPPER OR LUNCH

Soup: Tomato, pea, celery, asparagus, or other vegetable creamed with whole milk, evaporated or dried. The latter is an aid in including large quantities of milk elements.

Protein—non-meat dishes: Macaroni or rice and cheese, green beans and cheese, scalloped vegetables.

Bread and Butter: Whole wheat or bran muffins and two pats of butter.

Desert: Cooked fruit.

Milk: Chocolate, orange, lemon shake.

(This diet will vary with the appetite, size, and activity of the mother. It should be approved by the physician, who may advise the inclusion of cod liver oil).

DIET IN INFANCY

THERE are many theories and practices in regard to infant feeding. The following suggestions are for the average child. Many children present individual feeding problems. In all cases, a reliable physician should be the mother's guide in the feeding of her baby during this important first year.

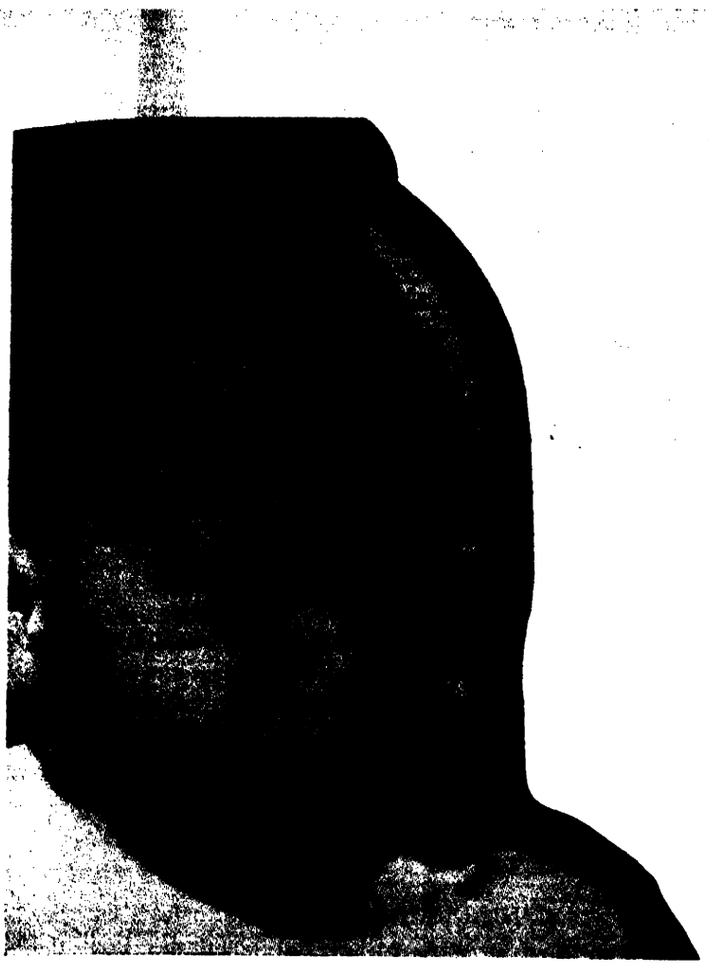
MOTHER & CHILD

Foods other than milk are added to all infants' diets during the first year, whether they are breast or artificially fed. The time of these additions is a matter of choice to the doctor. One acceptable schedule. is as follows :

1. *Orange juice or tomato juice* is given to furnish vitamin C in particular. It may be started at the end of the first month with one teaspoonful daily, and gradually increased until at the end of his first year the baby is drinking one-half a cup per day.

2. *Cod liver oil* is given to protect the baby against rickets through its vitamin D content. It is also rich in vitamin A, the vitamin which is believed useful in building up resistance to infections. Viokterol is not a perfect substitute for cod liver oil because it carries only vitamin D. The quantity of cod liver oil which should be given, and the age at which it should be incorporated in the infant's diet vary so much according to the type of cod liver oil used and the needs of the individual child that definite rules cannot be laid down.

3 *Egg Yolk* is given to furnish iron and vitamins A and D. Some doctors give it as early as the third month. It may be soft boiled, hard boiled and mashed, or coddled. Very small amounts are given at first and the amount is increased gradually.



4. *Green Vegetables* furnish minerals and vitamins, and are given beginning with the sixth month of the child, sometimes earlier One tespoonful of cooked, strained green vegetable is given at first, and the amount is increased gradually until the nine months old baby is getting three tablespoonfuls a day. After the baby is nine months old it is no longer necessary to strain his vegetables, but they should be finely mashed.

5. *Stewed fruits* are begun at ten months or earlier. The fruits most desirable for the infant are apples, prunes and apricots They should be strained.

6. *Cereals* increase the energy content of the diet. Whole grain cereals are preferable because of their mineral and vitamin B content. Cereals are introduced into his diet when the baby is five months old. They should be cooked from one to two hours. One teaspoonful is given at first, and the amount is gradually increased until at seven months of age the child is eating a serving of three to four tablespoonfuls at a time

By nine months or one year of age the child should be entirely weaned and eating solid foods at three meals a day

PARENTS AND THE HEALTH *of* THE CHILD

By

MILADA GANGULI

Calcutta

MOST educated parents know by now in what way to care for the bodily well-being of their children. We have learned that the child should have well balanced diet suitable to his age, that his meals should be regular, that the child needs many hours of sleep than the adult, that he should have an afternoon rest period up to at least six years though at that age the afternoon rest does not necessarily mean sleep ; that the child should wash his hands before meals and after coming from the lavatory, that he should bathe regularly, have exercise out of doors and all the rest of health rules.

But we have to recognise that it is just as important or perhaps more to have some grasp of the conditions which make for his psychic health, emotional freedom and happy mental growth free from fears and complexes.

The satisfactory development of a human child does not depend on the instructive drives of his parents. It depends on a careful and active understanding of the different stages of development through which the child passes. In this small space it is not possible to deal with the various interesting aspects of child's growth. I shall, therefore, confine myself only to some of his problems associated with this growth.

There are, of course, some parents whose problems are so complex that they can be solved only if suitable psychiatric treatment is undertaken. But these are relatively few. In the following lines will be found answers to some of the problems which are most frequent and within the "normal" range.

WHETHER the child should obey or not can hardly be asked. The call for obedience is apart of the biological responsibility of the parent. It is because of the child's inner need for security and guidance that obedience has been traditionally the first law. The child wants and needs to do as he is told.

The child's disobedience is, as a rule, not an outcome of his confidence that he knows better than the adult. It usually has its origin in conflicts with people around him or the need to assert himself.

Obedience comes quite naturally if we ask for it in the right way and at the right moment. If we ask the right thing and in a friendly manner the child is more likely to do what we want, and do it in the same friendly and cheerful way than if we shout at him "Do it at once" or "Stop it now". Shouting and scolding is useless and can lead to open rage and tantrums. What is worse, it may lead to permanent hatred or fear which is also a form of disguised hatred.

The most important thing is that we must be clear beforehand upon what we ask the child to obey and that what we are asking is reasonable and just to the child.

Just one example to illustrate the right way.

We know that we do not like to be suddenly interrupted in our work. But few of us have realised how difficult it is for the child to turn suddenly away from an activity he is absorbed in and to do

MOTHER & CHILD

something we want him to do. The child has very little sense of the past and the future. He lives in the immediate present. If we keep this in mind we shall give the child a little warning that he has to clear away his toys in 10 minutes or so because it is time to bathe or eat etc. He will appreciate our consideration and take our "requests" and "orders" quite willingly.

We must understand that obedience is a means of helping the child over certain stages of his development. Even the "contrary" child wants to be told what is right and what is wrong, how to do this or that.

But we also have to look forward to the time when the child can be trusted to make his own decisions and be responsible for them. It is important to give the child plenty of chance of exercising responsibility by honoring it, just as he learns to walk or talk. Even the little child can, for example, have the responsibility of arranging his own play things in his own cupboard, or the older child of deciding for himself in what way he should spend his pocket money.

The need for freedom and choice is just as important as the need to obey. Without it the child would grow only into a useless human being.

The Feeding Difficulty

ONE of the typical problems which crop up at all stages is the child's lack of appetite, little or no interest in food.

This difficulty may sometimes be physical, *e.g.*, lack of exercise or fresh air, overstrain, fatigue or some other remediable defects.

The child's interest in food may be encouraged by finding his interests, help him to play actively at them and give him companions of his own age who will stimulate his interests still further. This may help though it is not a direct attack on the food problem.

We, of course, still remember that the child's appetite will be better if he does not eat anything between his meals except perhaps fruit. He should not eat in a hurry and should not be forced to eat if he is not really hungry.

Some children like one kind of food but would not touch the other. In such cases mother should build up a diet upon the child's preferences of food. This is quite easy with a little ingenuity.

Sometimes the eating difficulty may be traced to be rather emotional than physical. It often happens that the child refuses to eat after the birth of a new baby.

What should we do when the child refuses to take food? In America experienced teachers, doctors and psychologists have made a scientific study of this and similar problems. They found that the best way to make the child eat is to leave him by himself or with other children at meals. If the child is not ill and the food is well prepared and attractively served he almost always will eat as much as his appetite demands. There are some few children who, though they are healthy seem to have less capacity for eating than others. Such children should be allowed to eat as much as they wish and be given food at more frequent intervals.

Nor should we tell the child "Eat it, it is good for you" for he may consider the milk or other things which are "good for him" as medicine.

It is especially important that parents should avoid transferring to the children their anxieties for his physical health. Mothers and nurses should present the food unemotionally and with at least reasonable indifference.

If we try to coax and force the child to eat, sitting with him and persuading him for an hour to have a "taste of everything" "to have just a little more" the result may not be the desirable one. He may develop distaste for food which may remain permanent.

The Child's Fears

CHILDREN are not born with fears but they have feelings, wishes and phantasies from the very beginning.

Fears, whether the fear of animals, the fear of the doctor or the fear of the dark may often be traced as a result of some unpleasant experience. But this explanation may not be the cause for fears in all cases.

There may be other factors responsible for the child's fear ; as for example the arrival of a new baby in the family, unhappy relation of the child to one of the parents or nurse, a brother or sister or a play companion who tends to overpower him.

What is the best way of dealing with fears?

We should, firstly, avoid the occasions of fears (but at the same time should not let the child feel too sheltered). When the occasions of fear do arise we must give the child protection and comfort

Fears very often pass away of themselves in a year or two if well handled.

If we want to help the child over his fears we must find his interests, provide for his success and satisfaction which will finally lead to a sense of security.

If, however, the phobias are too severe and prolonged we must seek the advice of a psycho-analyst experienced with children.

These are answers to very few of the everyday practical problems of the everyday parent.

Our interests to enter into child's own world with an informed sympathy and an understanding that these problems are problems of growth will help the child towards healthy and happy maturity

INFANT MORTALITY RATES *in* INDIA

By

DR. SANTIRAM CHATTERJEE, L.M.S.

Formerly Councillor, Corporation of Calcutta

"India has long been known as the land of teeming millions, where population and miseries have gone on multiplying with rapid strides. With poverty, illiteracy, epidemics, floods and famines becoming normal features of Indian life, the hand of death falls heavily on us. Unfortunately for us India's efforts against these death-dealing agencies have been conspicuously poor with the result that an interplay of life and death secures an increase of population at a tremendous cost in human sufferings."

—INDIA'S TEEMING MILLIONS: Gyanchand

MORTALITY experience in India has been heavy at all age-groups and specially so among infants dying within a year of their birth. Infant mortality in India, therefore, has attracted much notice and considerable opprobrium too. From figures in Table 1, it will be clear that the infant mortality rates in India, compares very unfavourably with those of the more advanced countries of the west In the Far East, Japan alone, inspite of being in the forefront of nations, makes a poor showing, while, on the other hand, countries like Australia, Sweden, New Zealand, reveal enviably low records. It is quite possible that the rates of different countries are not strictly comparable, as the figures widely diverge from country to country in the matter of accuracy.

Friends and well-wishers of India have considered the high infantile mortality rates to be a blot on our national life, deserving the most serious attention of the medical and health authorities, while others inimical to Indian aspirations, have used this as a rude pointer to India's extreme backwardness Politicians, biologists, public health and social workers in India have all drawn attention to this colossal waste at the threshold of life.

The study of Infantile mortality rates from a scientific and objective point of view and suggestions for suitable remedies have been seriously handicapped because of the defective vital statistics of India. The reasons for the same are not far to seek. The important national duty of recording the vital occurrences in rural areas rest in the hands of the ignorant village chowkidars. Steeped in ignorance, depressed in poverty, the poor village folks can never be made to feel that the recording of a new arrival in the family—one more hungry mouth—is a social necessity of the highest importance. Things are little better even in important towns and in large cities. The inherent carelessness or social apathy of the townfolks combine to keep the records of births perennially inaccurate and incomplete. Even the extension of compulsory registration have not been able to improve matters and the inadequate resources of the nation's public-health services have failed to rouse that much-needed sense of social consciousness.

Under registration of births is not unknown in other countries but nowhere probably are the vital statistics so conspicuously defective. Inspite of the fact that there are serious gaps in the matter of registration, and inspite of the repeated references to it by the Public Health and Corporation authorities, no concerted attempts have been made to remedy the evil. True, as in the case of Calcutta, the Municipal act makes non-registration a legal offence punishable in law, but the provisions of the law have never been known to be enforced to bring the offenders to book. In fact the regulation for getting the births recorded within a specified time has in many instances scared people from registering births after expiry of the specified period instead of stimulating the people to greater sense of social duty. The question of death registration has also been defective, but the evil in this matter is of much smaller magnitude. Nevertheless it is true that in the remote villages of India, it is quite as easy to find the 'exit' of life as quiet and inglorious as its 'entry', but then the cases are fewer.

Considering the vital importance of the matter, every effort should be made to secure a better registration. The vastness of the country, the appalling ignorance and poverty make it impossible to stimulate correct records by any simple appeal to civic duty unless backed by some more stringent measures which would ensure ready compliance. All the known avenues of knowledge of births should be scanned, insisting that in the case of registered midwifes or registered 'dais' or primary vaccinators it will be obligatory on their part to report any birth to the nearest recording centre. No method, however, can be considered exhaustively adequate, but it would be worth while to explore all possibilities, to attain as

*Statistical Year Book of the League of Nations, p. 40, Geneva, 1940.

large a measure of accuracy as is possible.

Several estimates have been made from time to time of the amount of under registration of births from Census figures taking account of the immigration and emigration figures over the period The estimates have naturally varied from province to province and from city to city and have been put anywhere between 25 to 50 per cent In Madras, for which a high standard of accuracy is claimed in the registration of births, exhaustive investigation has proved that the birth rate was in excess of the reported figures by about 45 per cent (Madras Census Report, 1941) Though all provincial reports indicate under registration in the case of deaths also, the defects are always smaller in the case of deaths and may be ignored without great risk of error, for all practical purposes in large cities and municipalities where public creamatoria or burial places are provided with arrangements for immediate recording

It may not be out of place to mention here, that though the case of such under-registration is a national shame, it has one aspect for our favourable consideration One may, however, reasonably claim that the ranking of India regarding infant mortality rates—bad as it is, —becomes all the more unfair because of the very likely serious inflation in the mortality rates due to the large number of births that go unregistered. That an adjustment for unrecorded births would materially reduce the rates is shown in Table 2, where the rates have been calculated

TABLE II

INFANT MORTALITY RATES IN CALCUTTA
Actual rates and adjusted rates compared

Years	Actual rate (on the basis of registered births)	Adjusted rate of Mortality	
		on the basis of 30% under registration	on the basis of 40% under registration

1936	230 51	161 35	138 30
1937	236 24	165 37	141 75
1938	237 70	166 39	142·62

for Calcutta on the assumption that 30 and 40 per cent of the births go unregistered—an order of inaccuracy that certainly unreasonably large to assume.

The object of the present article is not to show that India's infant mortality figures, the rates as they stand are very making allowances for exaggerated figures the rates as they stand are very high, and every attempt should be made to seriously tackle the problem from the eugenic and public health point of view. Infantile mortality rates in India, however, have been painted a little more black than they actually are for reasons stated With better social sense, medical facilities efficient public health services, fuller development of productive resources and above all with an eye to progress, India may be confidently expected to give a much better account in the coming years as regards infant mortality rates.

The writer is deeply grateful to Prof P C Mahalanobis M A and Mr Sadasib Sen Gupta M Sc , of the Statistical Laboratory, Presidency College Calcutta for their very valuable help in getting up this article

DIPHTHERIA

DIPHTHERIA is one of the most serious diseases of childhood The onset is insidious and a young child may be seriously ill before the parent is conscious that he has contracted anything but a slight cold or is suffering from an upset stomach

Diphtheria is caused by rod-shaped organisms known in the laboratory, where they can be seen through a microscope, as Klebs-Loeffler bacilli It is spread from person to person by close contact and through the use of common materials such as pencils toys and dishes The child usually becomes ill two to five days after he has taken the organisms into his body

The bacilli or germs grow very rapidly in the human body and give off a toxin or poison which the average body finds hard to fight

TREATMENT

SCIENCE has developed a treatment for diphtheria which is known as antitoxin The treatment assists the body of the child to overcome the toxin or poison from the germs If the treatment is given early enough in the course of the illness, the chances are that the child will recover. If the disease is not recognized for several days, the treatment may not save ceseful in preventing death, the poison may have damaged the heart or kidneys leaving the child handicapped for the rest of his life

PROTECTION

IT is possible through immunization to so stimulate the child's body that it will develop a protective immunity against the disease Toxin-antitoxin was first used to develop this protection In most places today toxin-antitoxin has been replaced by toxoid for immunization purposes The toxoid treatments are given in one or two doses, and for varying periods apart Every physician approves of diphtheria prevention treatments.

It usually requires a period of three to six months for the child's body to develop this immunity. Some children require more than one series of treatments Diphtheria prevention treatments should be given when the child is nine months of age or soon thereafter

If the child was not protected during his early years, the treatments may be given at any time In order children (six years and over) a Schick test should precede the treatments

THE SCHICK TEST

THE Schick test is a simple skin test usually done on the forearm to determine the child's protection against diphtheria It should be done six months after the protective treatments are given or any time later and should indicate to the physician the protection at that time If the test shows that the child requires further treatments, the parent should have them given at once The Schick test is the only means of knowing whether your child is protected Without it you may be enjoying a false sense of security regarding your child's safety

Diphtheria immunization is a relatively new process Sufficient time has not elapsed for science to say which definiteness how long a child may remain protected, but the present information indicates that about three-fourths of the children remain immune for many years A Schick test should be repeated whenever there is an unusual outbreak of diphtheria in the community

PARENTS *should be* SEEN *and* NOT HEARD

By

GEORGE KENT,

New York.

A NEW YORK nursery school teacher had an attack of laryngitis and could not use her voice for a day It wasn't serious enough to keep her at home so she carried on with her group of five-year-olds as usual She did not utter a word, but she later confessed, a bit sheepishly, that it was one of her most successful school days

When Michael squatted at the top of the slide and wouldn't let anyone pass him she started the others excitedly building a large boat out of blocks, isolating him on his perch Before long he joined his classmates When two boydens commenced smearing walls with tooth-paste, she put a record on the phonograph All the other children started dancing and the two scamps were swept back into the group rhythm And so all day she achieved harmony *without* words

You cannot lecture a child under six into good behavior At this period speech is a relatively unfamiliar tool Words are unreal and remote, far less important than things that can be touched Children learn and develop by using their bodies They are *muscle* people What matters to them is action —muscle talk

My grandmother knew this When one of us became obstreperous, she sat him in a high chair, covered his hands with molasses and gave him a feather to play with Between trying to get rid of the feather and licking the blackstrap, the boy was kept busy most of any afternoon

Words won t make Johnny come home in time for lunch but an alarm clock on the handlebars of his tri-cycle which rings at 12 o'clock will A tirade will not cure Junior of his passion for candy But give him a large box to stuff himself, and his interest will become normal Such stratagems work because they are *action* —the language children speak and understand

Give the child work to do, a place in which to do it—and talk becomes unnecessary A busy child is a happy child and, chances are, he is developing along the right lines.

A day of parental laryngitis might be helpful in any family with young children When your vocal cords are inflamed, you can't nag, scold, threaten, bore, wheedle or say any of the words which create antagonisms. Parents, rather than their offspring, should be seen and not heard.

Talking to children has its place, of course, but the language should be simple, positive and impersonal Children respond best to positive suggestions: you don't take the child to the doctor to "see if he is well", you take him to "see how fine he is."

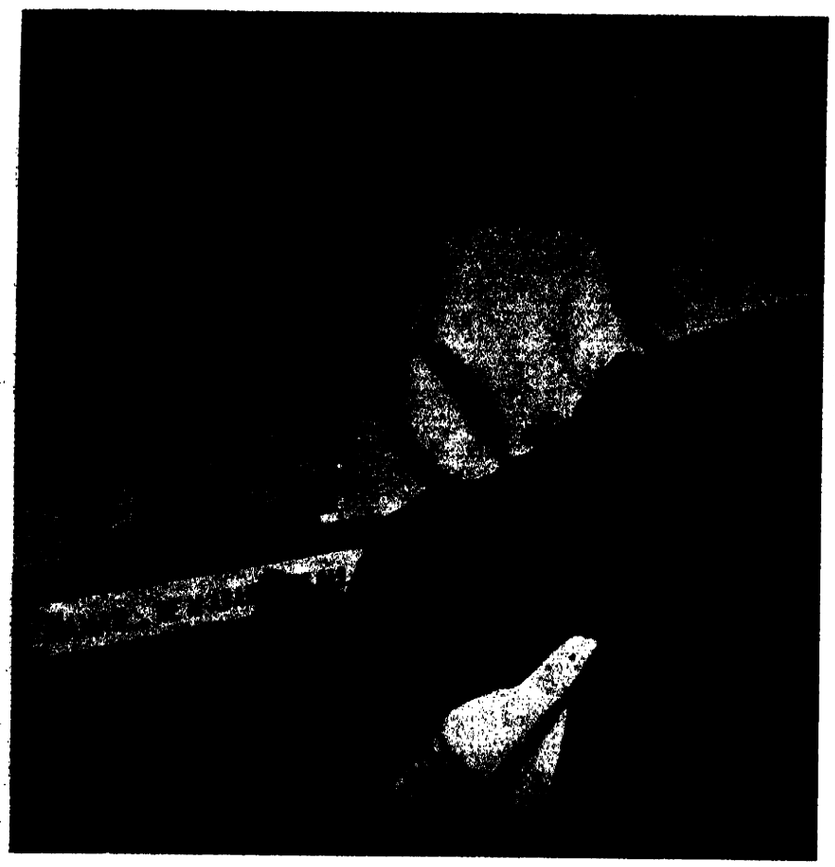
A child is not drinking his milk The mother says, "Bobbie, no dessert until you finish your milk" The child retorts, "I will too have my dessert!" Whereupon the uninstructed parent snaps back, "Oh no you won't, not unless you drink every drop!" If the boy has any spirit, he will insist, and the war is on To avoid conflict, the mother can say, ' Certainly, you'll get your dessert But first empty the glass ' There you have the child's ego satisfied and a mother who has stuck by her guns without anger or unpleasantness

Children get overtired and out of sorts One drops his hat on the floor and asked to pick it up, says, "I won't" The mother wise enough to sense the child s nervous state will not force the issue, but will say, "All right, I ll pick it up for you you must be tired" Not later than the next day she makes sure *he* gets a chance to pick up things for her

If you say to a child, "Please be quiet ' he will obey you more readily than if you groan ' You're driving me crazy with that racket" Also ineffectual is the sarcastic, "I hope you're having a good time" The positive command gets results where the indirect or personal appeal fails

Likewise, questions are poor tactics Ask a child, "Do you want to wash your hands?" and he'll go right on doing what he's doing. But say as if you expect to be obeyed, "Wash your hands before you sit down to dinner," and though he may dawdle, he will ultimately do it

The children are making animals out of clay Seeing gobs of clay on the floor, you wail, "Try not to get it all over everything" Another parent says, "Keep the clay on the table." Which gets the better result? The latter, because children are direct and simple, unimpressed by sarcasm, questions, or your annoyance.



Baby talk and subterfuges are a mistake. The mother says to the little boy "Does mama's little man want to be a horsey and gallopty-gallop home to his lunch?" Nothing doing. "Lunchtime, home we go," cheerfully uttered, is more likely to do the trick; and this approach really helps the child grow up into a decisive individual.

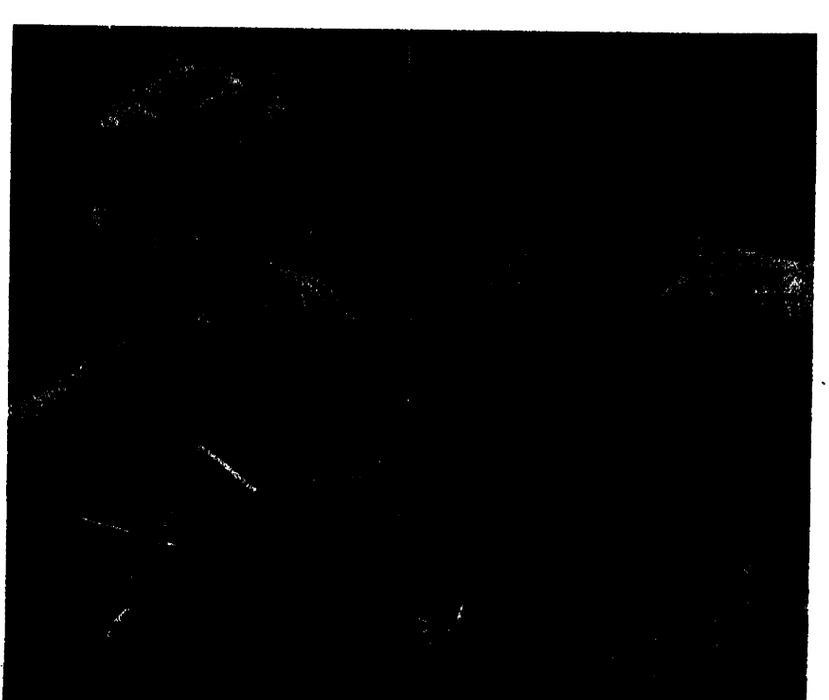
In a child's life there are certain chores to do, certain adaptations to make, and no good comes of evading them or wrapping them in whimsy One nursery school expert describes them as the "of courses" of life Of course you scrub your teeth Of course you eat spinach Of course you put your toys away. The sooner these jobs are finished, the sooner come the "times to" Time to go swimming Time to sail Time to ride the scooter A sort of stop-and-go system under which the child learns painlessly what is expected of him in an adult world

Tell a child, "You can do it," and he will try harder and longer than if you pallidly inquire, "Is it hard for you?" By actual test it has been shown that a child does better work if you pass over his failures without comment and hail his triumphs And brief convincing approbation works better than gushing

We hector childen far too much for their slowness They travel at their own tempo and you might as well accept it, giving them a hand and a help, and only an occasional hurry-up Nursery schools accept this child pace and get things done by a system of warnings "In five minutes, it will be putting away time," the teacher sings out at least 15 minutes before Later "Time is up—everything away." In most cases the children cooperate—not like little soldiers, but like human boys and girls under six. If a youngster is especially intent, he gets this from the teacher, "That's a wonderful house—you have time for perhaps five or six more blocks. You'd better hurry"

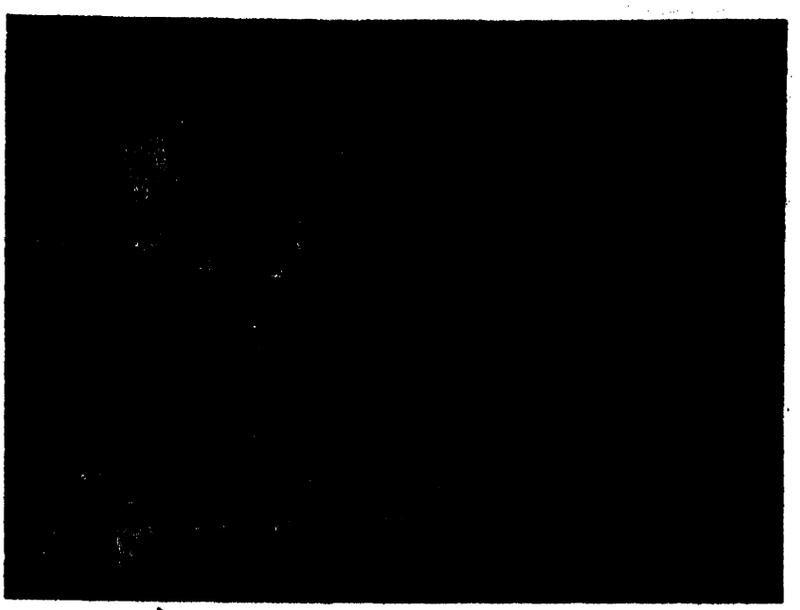
—Continued on page 80

At the gate of the Asylu for abandoned children run l the Public Assistance Organis tion, where children are left l their unfortunate mothers is picture of a mother caressir her baby ; below the picture written "Mummy, don't lea me here alone". A mothe with the intention of leaving h baby in the Asylum, arrives the gate ; the picture attrac her notice at the outset an she seems to be highly move by this pathetic appeal writte below the picture.



ABANDONED INFANTS

PUBLIC ASSISTANCE ORGANISATION IN FRANCE

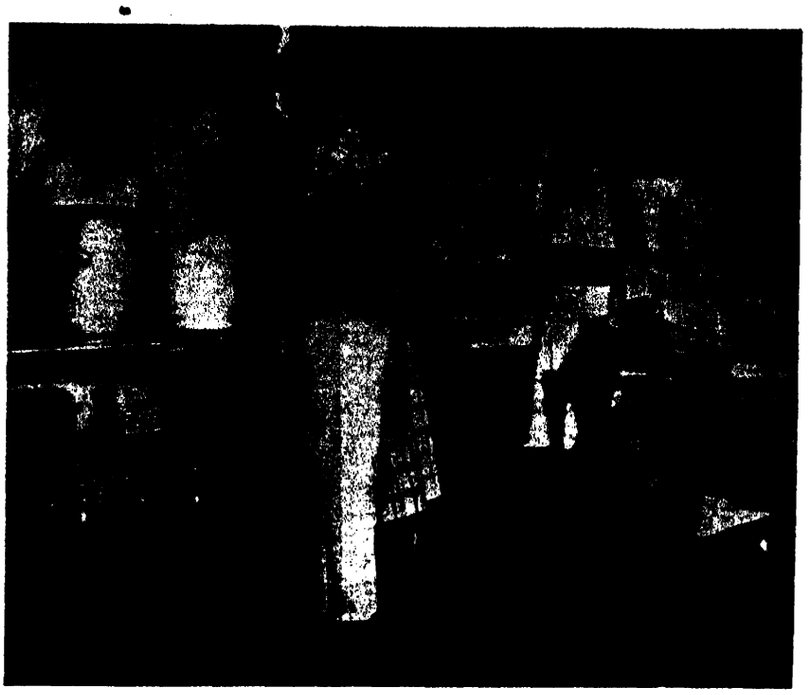


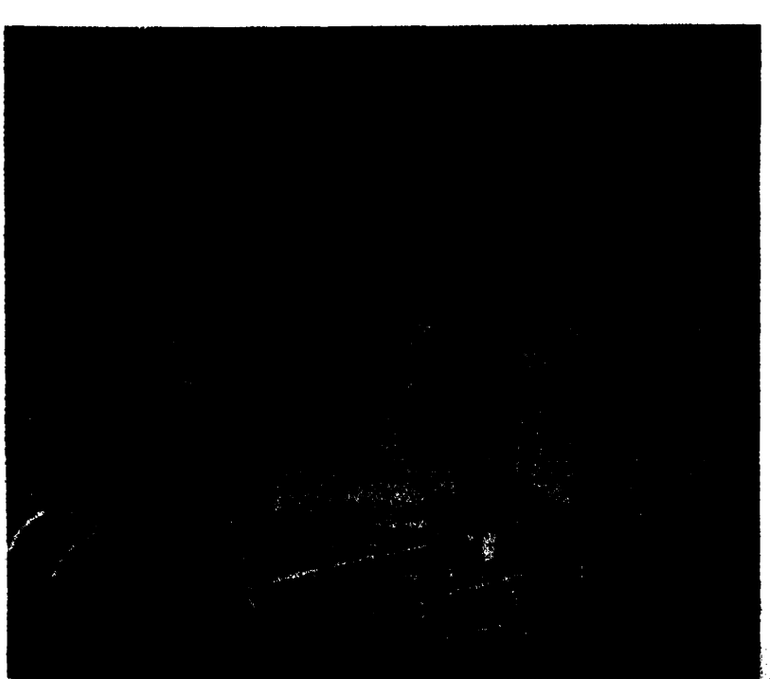
By

DR. S. DEB, D.SC. (Paris)

Calcutta University

Some of the children residing in the Asylum. The mother is given three days' time to think over, whether she would leave her baby in the Asylum for ever. After three days if the mother does not turn up any more to see her baby, a white collar is put around the neck of the child which means that he may be considered as one of the permanent inmates of the Asylum.





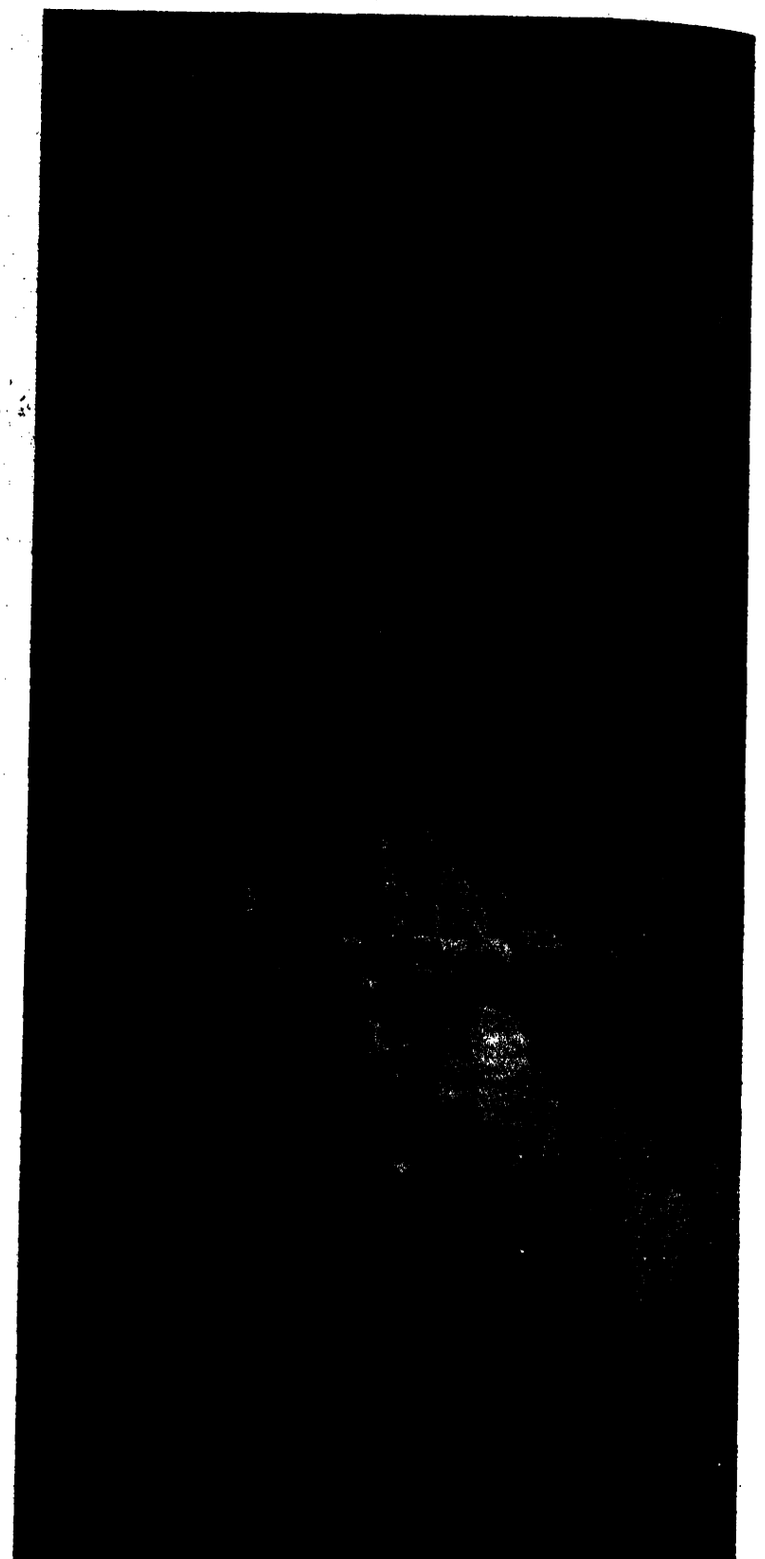
One of the most important Municipal buildings in Paris, used by the Public Assistance Organisation for receiving and helping the unfortunate mothers. The small door on the right leads to the Office where all cases are recorded. Every day many a mother gets in by this door with a child in her arms and comes away with a pathetic expression on her face.

I

THE service rendered by l'Assistance Publique is multifarious. It is principally a social organisation aided mainly by the Municipality to help the citizens in their numerous social and economic difficulties and to render aid and relief to the people suffering from the tyranny of the existing unbalanced social order, generally noticed in big industrial centres.

L'Assistance Publique in France organises two most important humanitarian services. One is the 'service d'enfant abandonné', an organisation to bring up children whose parents are either dead or due to some reason or other ashamed to bring up their unwanted children under the existing conditions of the present-day society.

In the Domestic Science Training School for girls at Dreslingcourt, cooking lessons are given regularly to these girls so that they can be self-supporting very soon and can take up responsible work of 'bonne cuisiniere' in Hotels and Restaurants



How to take care of children is specially taught to these girls. This sort of training imparts tenderness, affection, homeliness to these girls who never had their mothers' affection in life.

MOTHER & CHILD

Another most important organisation is the 'service de prostitution' for hygienic control of the business of prostitution existing in big cities and prevention of venereal diseases from spreading by careful and strict prophylactic measures enforced in all the houses of ill-fame inside the Municipal area.

II

THIS organisation of orphan and unwanted children was established in the year 1904. Previously, before this service was started, this type of children was brought up by some generous philanthropic institutions and subsequently put under the control of the Minister of Marine, who was responsible for bringing them up and afterwards to make them to take the profession of cabin-boy and deck-assistant. Sometimes, at the age of twelve, they were sent to the coal-mining centres of North France as miners and sometimes as common labourers in the glass factories around the city of Paris.

Sometimes wet-nurses are engaged by the authorities of the Asylum to feed these abandoned babies who cannot live without mother's milk.

PARENTS SHOULD BE SEEN AND NOT HEARD

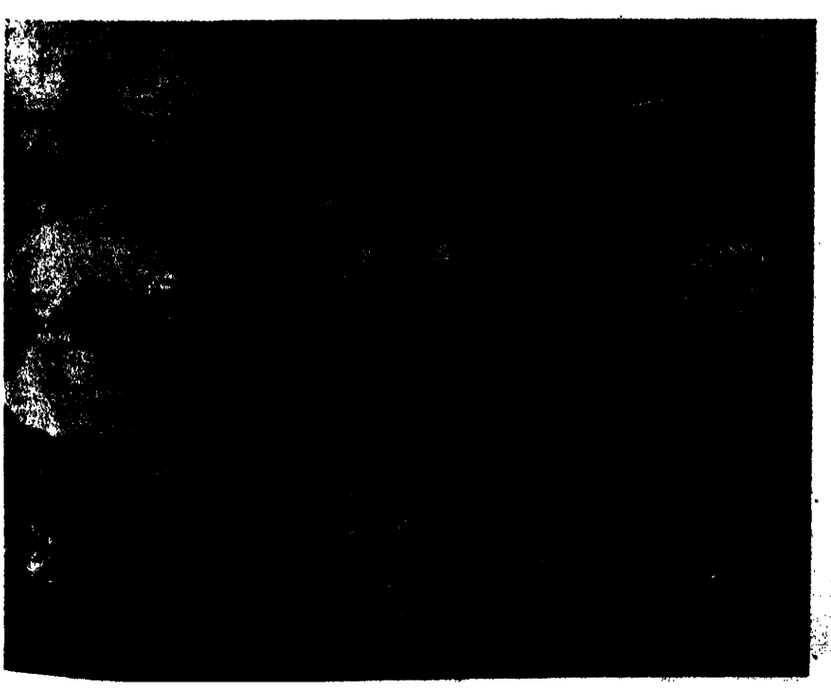
—Continued from page 77

Often what an adult says is an important influence in shaping a desirable attitude in the child. Two fathers were walking with their sons along a pebbly beach. One boy said, "These stones hurt my feet." His father replied, "Nonsense, they don't hurt!" The second boy also complained. His father said, "Yes, they do hurt, don't they?" The first boy complained for the rest of the walk, the second didn't complain again. Both parents wanted in their sons a stoical attitude toward minor hurts. But the first had adopted a false attitude himself. The second succeeded by frank but casual words that set an example.

My little girl hurts her finger with a hammer and runs howling to her mother. "Ah, and your best finger too," Mother says in commiseration. "Well, all carpenters do that once in a while." The worst possible mistake a parent can make is to laugh or be offhand at a child's pain or sorrow.

On the living-room carpet, the youngster erects a monument out of soap, milk bottles and a funnel. You stumble over it and demand: "Why must you leave your junk right in the middle of everything?" Junk to you, perhaps; to him it is a strange, wonderful tower. And you trampled it without so much as an excuse-me. If later the boy cuts one of the bowers out of a new chintz curtain, you weep and call him "a little vandal." Not at all. Chintz curtains to you, junk to him. You set the example, by a word, a gesture. Only by respecting what is valuable to him can you teach a child to respect the property of others.

Children are creative, active, imaginative. There is neither mystery nor magic in dealing with them. Precisely as with adults, it is the spirit of your approach that counts. Techniques of language and action don't mean a thing unless they are inspired by a continuing friendliness and love. The child must know, beyond any cavil, that you are on his side. The rest is smooth sailing.



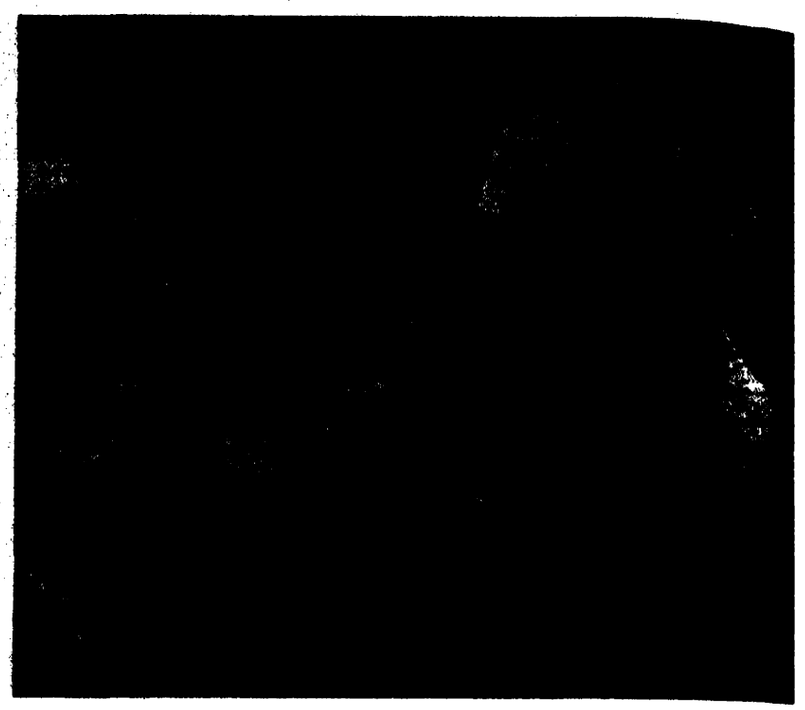
Girls are taught practical household duties so that they might adopt the profession of maid-servants, governness, and invalids' companion.

In France approximately there re altogether 150 thousand people ho are children brought up by his important humanitarian organisation, and every year it absorbs bout three thousand homeless hildren. The first and foremost ning which l'Assistance Publique oes is to distribute these children t a very young age, to couples ithout any issue. These children re very well looked after, and it as been noticed that these hildren grow quite normal and ealthy habits and the parents who dopt them are always satisfied nd contented. L'assistance Publique keeps a record of the conduct and behaviour of these children distributed to different families and by looking at the annual report of this organisation it can be seen that 95 per cent of cases of distribution prove to be successful.

In recent years, legislation concerning natural children in France has been considerably changed and modified. The social pressure, which led the mothers to leave their children in the Asylum, has been much reduced and inspite the catholisism existing in the country, children get normal status if the parents get married even after the birth of the child. It has been found from the records of reformatory Schools and from the convict-prisons that about 80 per cent. of the inmates are children left by their mothers.

III

WHEN a mother arrives at the Asylum to deposit her baby, she is always advised not to do it for the interest of her child. Sometimes the authorities find out ways and means so that she can maintain the baby without much difficulty. If she is without a



They learn how to look after poultry and are given scientific lessons on methods of incubation, diseases of birds and animals to enable them to take up the work of farm-assistants.

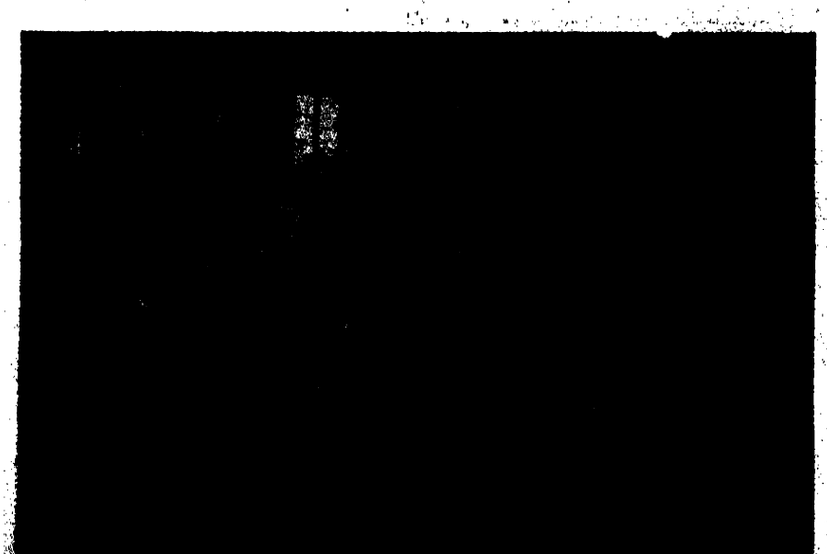
MOTHER & CHILD

suitable job, they try to find out one for her ; if she wants to get married to the man who is responsible for bringing the child into the world, the authorities of the Assistance Publique make proper arrangements for doing so and subsequently the child is considered to be a legitimate child.

So, at the first instance, after the advice is given to the mother, she is requested to think over the matter for three days and her baby is admitted to the Asylum provisionally for this period. The new-commer is first of all enrolled in the register of the Asylum, and for these three days he is placed in a separate cradle in the big hall where he is allowed to stay with the other children.

It is difficult sometimes to put the name in the cradle. The unfortunate mother often refuses to disclose her name. So a number is often put in the cradle where

They are also taught elementary Botany and afterwards taken to the agricultural experimental station attached to the School where they are given practical demonstrations on the growth and nourishment of various kinds of plants.



Some of the boys on their study. They look hard-hearted and devoid of tenderness.

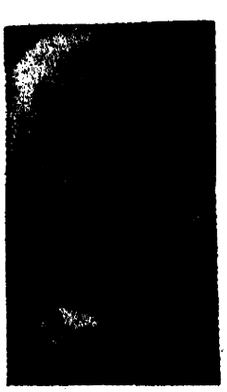
even the mother's name is not known. This number is also put in the clothings of the child. For these three days, the child wears a coloured apron on which a number is engraved.

If the mother does not turn up on the fourth day, the child's apron is changed from coloured to white and he is considered as one of the inmates of the Asylum.

IV

THE Public Assistance Home keeps these children upto the age of forteen. Within this period, they are given various professional training in different branches. Generally the boys are trained to become firm-boys, to work as labourers in factories and girls are trained for domestic work and for the nursing profession. For the training of boys, an agri-

A part of the Dormitory of the Boys' School at Rouvroy les Merles.



cultural firm-training school has been established in Rouvroy-les-Merles, and for the girls, a domestic science school, attached with a nursing school, has also been founded in Draillncourt. In this school, girls are given cutting lessons, ironing, cooking, gardening, and nursing is taught, very carefully. As a visitor to this school, it seemed to me that the girls are very happy to stay in this atmosphere, I heard them always singing and chatting while at work.

For boys, the life is quite different upto the age of fourteen. They are given primary education like other boys. A primary school has been established inside the premises of the Asylum run by the Public Assistance organisation for the education of these boys. The organisation is wonderful, educating so many helpless children and making them fit for any vocational work, taking care of their health and giving them proper facilities to develop their intellectual quality.

Boys are taught how to keep clean. Every morning and evening they get a thorough wash.

Any child suffering from any hereditary disease, or any sort of abnormality is at once segregated and sent to a special school for abnormal children. When patients-

pupils are cured, they are allowed to come to this firm-school at Rouvroy-les-Merles to begin their normal studies.

There are many illustrious personalities among the Ministers, Members of the Chamber of Deputies, Academicians, and Advocates, who owe their preliminary education to this vocational school. First of all, they had to work as common workers in factories and other places and gradually, by merit and perseverance, they rose to such high positions in life.

DIABETES *in* INFANCY & CHILDHOOD

By

DR J P BOSE, MB, FCS (Lond)

In charge, Diabetes Research Department, School of Tropical Medicine, Calcutta

ONLY about ten to twelve years ago, diabetes in infancy and childhood was looked upon here as a rare condition It is quite evident now that this is not so Though the incidence of diabetes among children is comparatively insignificant to the overwhelming proportion amongst the adults, particularly in Bengal, it appears that the incidence of diabetes amongst children is on the increase One of the reasons of this apparent increase appears to be the improved methods of diagnosis another is the general public has become more "diabetes"-minded than they had been ever before

Before the discovery of insulin the average duration of the life of a diabetic child was about two years and the mortality was nearly 100 per cent but, today it is inconceivable but true, diabetes as a cause of death in children has disappeared nearly to the vanishing point

If we divide the Diabetic Era into the following three important periods, the above statement will be evident at once

		Death rate amongst diabetic children
1898-1914	Naunyn period	98%
1914-1922	Allen ,,	72%
1922-1941	Banting ,,	7%

The diabetic child is of more than usual interest to those working on this disease, not only because it provides them with pure diabetic lesions unaccompanied and uncomplicated by any degenerative changes due to age, but also because it gives them a better opportunity of following up the effects of treatment. The prognosis in cases of diabetes in children was always thought to be a matter of considerable seriousness in the past, but it is not reasonable to take such a pessimistic view at the present day There is no doubt that, since the advent of insulin the outlook in these cases has been much brighter a great deal may be done now to improve the condition of the child and to make his life more comfortable This is possible because in a child the regenerative powers are at their highest, and hence under proper care and suitable treatment there is much greater opportunity for the regeneration of the islet cells of the pancreas The literature on the subject is replete with evidence that there is a much quicker regeneration of the islands of Langerhans in children than in adults Boyd (1925) has reported an interesting case of diabetes in a boy who recovered but subsequently met with an accidental death On autopsy, the pancreas was found to be more or less *normal* and there was a very large number of island areas at the periphery of the pancreas, sometimes twelve or fourteen, in a low-power field Bensley, in commenting on Boyd's paper, said that these small bulbous islands resembled those produced in experimental animals by the regeneration of newly-produced islands.

II

IT may be stated with a certain amount of definiteness that, taken properly in hand, the diabetic child should make considerable improvement within a comparatively short time Such improvement in the general health and in the proper growth and development of the child takes place quickly if the case is properly managed from the beginning. The improvement is sometimes so marked that the child becomes scarcely recognizable within six weeks from the commencement of the treatment The photographs of a few of the author's cases reproduced here lend support to the above statement.

Age of onset—The youngest diabetic child amongst the author's series of cases was a boy aged 1 year and 4 months The youngest diabetic child in Joslin's series of cases was a baby 8 months old. Ashby (1923) described the case of a four-months-old diabetic boy with gangrene of the toes Curran (1925) reported a case with diabetic cataract in a baby 11 months old

Causation—This is still very obscure According to many observers heredity is an important factor Amongst most of the author's cases however heredity could not be traced as playing any important part in the aetiology of the disease It should be noted here that unlike diabetes in adults obesity does not seem to be of any importance as a causative factor in diabetes in children The author is inclined to the opinion that some inherent defect in the endocrine balance of the child leading to a disturbance in its normal mechanism is the causative factor though the exact nature of this disturbance is still obscure

Onset—In some of the author's cases, the onset was sudden and the course was rapid One of the cases was diagnosed for the first time while in a pre-comatose condition—the child having suddenly become ill with an eruptive fever three days previously In other cases, the onset was slow and insidious diabetes being wholly unsuspected in the beginning The usual history in most of these cases was that the child began to lose weight without any apparent cause and became peevish and sickly The polyuria and unusual thirst which the child manifested was attributed to causes other than diabetes One of these patients was treated for intestinal worms, off and on for about 6 months, till he was brought to a miserable state of existence, when luckily the urine was examined and found to be loaded with sugar, acetone, and diacetic acid.

General considerations—Diabetic children are usually found to be taller than normal children of the same age and they are usually mentally alert sometimes verging on precocity but at the same time these children are undeveloped in other respects This peculiarity has been noticed in most of the cases that came under author's observation.

Before Treatment *After Treatment*

A DIABETIC BENGALI HINDU CHILD—AGED 2½ YEARS

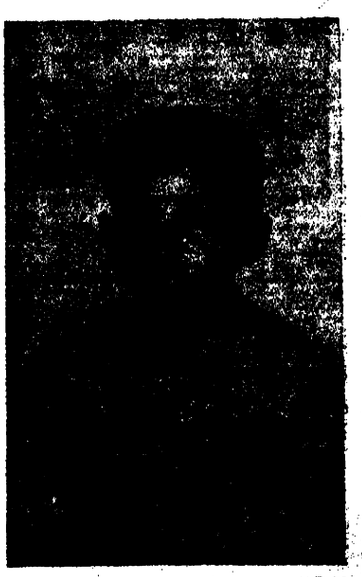
Management and general outlines of treatment.—Though the principle underlying the treatment of diabetic children is more or less the same as that of an adult, yet there is a considerable difference in many essential details. For instance, it should always be borne in mind that the food requirements of growing children are proportionately much greater than those of the adult, and a diet which is insufficient in its total caloric value or inadequate as regards the protein ration may cause serious harm. The growing child requires a generous diet which should not only yield the total caloric value needed according to the age of the child but should contain the proper amount of protein to maintain health and vigour and to promote growth. It should also be borne in mind that children, as a rule, cannot take the same proportion of fat per kilogramme of body-weight as an adult, and they are more liable to develop acidosis.

The essential difference between the dietetic treatment of diabetic children and adults lies in the fact that, whereas in the case of adults the protein requirement under basal conditions is approximately about ¾ gramme per kilogramme of body-weight, in the case of diabetic children the protein requirement varies inversely according to the age—*i.e.*, the younger the child, the greater is the protein requirement per kilogramme. The same rule holds good in the case of the carbohydrate as well as the total caloric requirements. The fat requirement by diabetic children is also essentially different from that of an adult. The ratio of fat to carbo-

III

THE following note, as to the special peculiarities of the diabetic children in her charge, was prepared for the author, by an observant staff nurse in charge of the children's ward.

(1) Children suffering from diabetes are more intelligent than other children of the same age.



(2) They are very precocious and quick at understanding.

(3) They are inclined to be very cunning and sly in their ways.

(4) *Their nature is very sensitive,* and great kindness and tact is required in dealing with them.

(5) At times they are depressed, irritable and hysterical, and need a little firm handling which usually brings them round quickly.

hydrate in the diet of the former should be much less than in that of the latter, because diabetic children are more liable to develop ketosis on a diet disproportionately rich in fat, at the same time, it should be remembered that the fat-content in the diet should not be too low because fat serves as an important carrier of the fat-soluble vitamin A, which is essential to growth The following table gives the approximate carbohydrate, fat, protein and the caloric requirements of diabetic children in the different periods of their lives It should however, be borne in mind tha the proportions given below are only average and have to be varied at times according to the nature of the case and according to complications present or arising

Age of the child	*Requirements per kilogramme of body-weight*			
	Fat	Carbohydrate	Protein	Calories
1—2 years	3 gms	12 gms	4 gms	90
3—5 ,,	3 ,,	9 ,,	4 ,,	80
6—8 ,,	3 ,,	6 ,,	3 ,,	60
9—12 ,,	3 ,,	3 ,,	2 ,,	50

IV

IT will be seen from the above table that the caloric requirement per kilogramme of body-weight, as well as the protein and the carbohydrate requirements, increase inversely according to the age—*i.e* the younger the child the greater is the food and the caloric requirement per kilogramme of the body weight The fat requirement however has been kept at an arbitrary figure *viz* 3 grammes per kilogramme but the ratio between the fat and carbohydrate in the diet has been altered by proportionately increasing the carbohydrate quota of the diet For instance it will be seen that the proportion of fat to carbohydrate in the first two years of life has been kept as low as 1 to 4 As the age increases, the proportion of fat has also been increased in relation to the carbohydrates, so that, at the end of the table, a child between the ages 9 to 12 years gets a proportion of 1 to 1 which somewhat approaches the normal adult proportion

It should also be remembered by the doctor prescribing diets for diabetic children that he must take into consideration the suitability of the food stuffs according to the age of the child For instance, the diets of infants under 2 years should mainly consist of milk For bigger children eggs fish potatoes, bread butter vegetables (those without much roughage) etc should be prescribed

Insulin therapy —The principle of the treatment is the same in children as in adults If the case is an uncomplicated one and of mild nature and if the blood-sugar is not excessively high the effect of dieting alone should be tried for a few days, in order to see whether this alone has an effect in reducing the blood and urinary sugar and in improving the general health of the

child If dietetic treatment, continued for about a week fails to improve matters or if the child loses weight, insulin should be commenced. Of course, if the case is of a severe nature, or if there are complications, insulin treatment should be started at once

It must be remembered that in treating cases of diabetes in children not only must the urine be kept sugar-free and the blood-sugar kept within normal limits but very careful attention must be given to the proper growth and development of the child The child must grow in height and gain in weight like other normal children In cases where the urine is made sugar-free but the child does not grow or gain weight, the diet must be raised and extra doses of insulin given to keep the urine sugar-free on the other hand, if the gain in weight is abnormally rapid, the diet should be cut down and the dose of insulin adjusted accordingly

Complications—Amongst the chief complications of diabetes in childhood may be mentioned acidosis and coma, juvenile cataract and hypoglycaemia If untreated they may prove fatal The usual degenerative process which occur in the adult chronic diabetes may also occur in the child, but only in those patients whose diabetes is of long duration and in whom under-nutrition forced unnatural nutrition without insulin or diabetic decompensation have played a part

V

IT is regrettable that the social aspect of the disease has not received that much of attention in the past as its importance demands it Any one, who has come into intimate association with the diabetics, particularly the child diabetic, who has looked upon them as friends and the objects of his true sympathies and earnest good wishes, cannot but feel sore at heart at the great social disadvantages which fall to their lot This fact alone, apart from many others constantly keep them reminded of their disabilities and their short-comings and makes them feel at times that they are social outcasts The psychical

Before Treatment *After Treatment*

AN ANGLO INDIAN GIRL PATIENT—AGED 12 YEARS

effect of this factor no doubt has a great detrimental effect on the progress of the case and it is the duty of the parents and the family physician to combat this

It has occurred to me many a time that if it was possible for the diabetics, specially the young diabetics, to form a colony of their own where they could live in the congenial society of equality and fraternity, the progress of their case would receive an added impetus from the happier state of mind in which they would naturally be under those circumstances They would not then realize what they miss, they would not then feel how and why they are different from other children, the perpetual self-control which is destined to become a habit with them will not then appear to them as any thing enforced or extraordinary

It appears to me that attention to the social environments of the diabetic child is as important as attention to his physical environments He should always be given encouragement that he is not different from other children and that he can lead a normal life If this is not done in the adolescent period, the child may decide to lead a short life and a merry one He should always be shielded against the dangers of leading such a life His parents must realize themselves and make the child believe that he is no better and no worse than the other children Diet-breaking should not be made a grave moral issue. Promises which are not likely to be followed must not be exacted and, above all, neither the family nor the physician must put the child in a position where he is almost forced to cheat, steal and lie to maintain his existence

In conclusion I want to emphasize very strongly that the goal of treatment of the diabetic children should not only be to make the child live and live comfortably without complications but every effort should be made to improve his physical and moral bearings so as to make him an useful member of the society

On HYPOCHONDRIACS

By

BUDDHADEVA BOSE

Calcutta

WHO is a hypochondriac? Rather ask: who is not? The city streets swarm with them; they glare at one another in restaurants and cinemas; they spend sleepless nights of agony in cosy little flats, and, when they meet, revel in long harangues on diseases and their symptoms. They are to be found chiefly in cities, among the cultured, well-to-do classes, for it is a luxury the poor cannot afford, and the ignorant cannot have. Popular science is one of the crazes of this crazy age, every layman has a smattering of physiology and anatomy, and moreover, our cities are of course paradise for diseases, both epidemic and endemic. And, moreover, the cultured classes have more time to read, talk, ponder and worry. For these reasons, hypochondria is an urban, and a typically modern disease.

Myself, I am only a moderate hypochondriac. Fortunately, my several occupations impose on me certain wholesome checks, but for which my case might have been far worse. My daily work carries me to a place infested with lepers; they dart at me the moment I alight from the bus, they stretch at me their fingerless, stump-like hands, fishing for alms, and I have to take all the care in the world not to run against one of them. Away from home, I have to drink vile tea and vile water; I have to knock about in buses and trams all over the city and in all seasons, inhaling foul malodorous breaths and coming in physical contact with extremely unsavoury types of humanity. Perhaps this generous exposure to infection has stimulated my power of resistance; perhaps some day I shall catch something fatal and whisk off. Anyway, if I were to take all the necessary precautions, life would be quite impossible. So I leave it at that.

Every age has its superstitions; in our age, superstitions are naturally 'scientific'. We believe in microbes with the same fervour as the orthodox Hindu believed in the Cycle of Births. We have an almost superstitious faith in science, and often we do not care to inquire what science really means. What passes by the name of hygiene and personal cleanliness sometimes leads to a type of insanity which we look upon with an approbation mingled with awe. For instance, I know of a family who practise hygiene to the point of frenzy. The daily foodstuff is washed with a germicidal lotion, including salt and sugar, vegetables and *pan*. Clothes fresh from laundry are washed once again at home before they are worn; love of cleanliness takes on the form of mania. This is nothing but a modernised version of the frenzied Hindu widow's touch-me-not cult, and hygiene itself demands that this misconception of hygiene should not spread. If parents wash their hands with antiseptic soap before touching their child whom they have put on to a highly selective diet, they should be told that they are doing more harm than good to their tender care. A friend of mine once argued that biscuits, chocolates and all other kinds of sweets are bad for the liver, and should never be given to a child. All that I can say to this is that I am glad that I am not born his son.

II

THERE are many forms of hypochondria. Some are crazy about food and cleanliness, and some have just a morbid terror of diseases. Of course, the two overlap, intermingle, and there are, too, many intermediary stages. Very frequently, these absurd fears are rationalised by scientific clap-trap. A mania is, by its very nature illogical, and all hypochondriacs are inconsistent, but to point that out would be useless, for to realise one's inconsistency is to be cured I have a friend who, while at home, would not sit down to a meal before he has washed his fingers with a germicidal liquid, but who would eat at any restaurant in town without insisting that the crockery and cutlery should undergo the same treatment as his fingers. A man who, when he has pricked his finger with a pin, will not rest till he has applied tincture iodine, will with equanimity eat food laid open to dust in the bazars and, what is more, survive it. And so on

I know, however, of one who is perfectly consistent. He is an elderly gentleman, rather severe in nature and inclined to asceticism. He always carries with him his own flask of water, and will never touch any water or glass except his very own. While travelling (he has travelled extensively), he either cooks his own food or eats next to nothing, he has never seen the inside of a restaurant, never accepted an invitation to dinner, nor eaten anything not made at home under his personal supervision. According to more normal persons, he has deprived himself of many of the pleasures of life, and one cannot even help admiring him a little for his rigorous abstinence. All the same, men who have been far less rigid in their selection of food have been known to be equally healthy. It is just being unnecessarily fussy.

Then there are those who live in constant terror of diseases. One cuts a toe in the street and is haunted by the sceptre of tetanus.

Are TONSILS *Useful?*

By

T. SWANN HARDING

New York

I

WRITING in *Minnesota Medicine* for September, 1931, a doctor actually used this title: "The American Rite—Tonsillectomy." He was in a mood of penitence. He held that the operation was rarely performed on adults without full and sufficient reason, because they were big enough to fight back. But children were deprived of tonsils ruthlessly and often unnecessarily.

Broadly speaking, said this physician, tonsils should be removed if they are greatly enlarged and amount to throat obstruction; if they are the seat of prolonged inflammatory disease; also if they can be proved to secrete poisons which brings up the theory of local infection. Many children lose perfectly good tonsils which have swollen only temporarily while waging defensive warfare against infection, a congestion that can recur without permanent enlargement. The tonsils of infants should seldom or never be removed that's what the Minnesota doctor said, take it or leave it.

The British journal, *The Medical Officer*, has also commented on the recent fashion of tonsil removal. In October, 1932, it remarked that a mere temporarily enlarged tonsil did not merit removal, and that it was impossible to divide tonsils into septic and nonseptic. Indeed, it said, we really have no way of settling whether they should or should not be taken out. In October, 1938, it was even more emphatic. A Dr. J. Alison Glover had just presented to the Royal Society of Medicine "strange facts" to speak for themselves. From 1929 to 1931 almost four per cent of the children in Derbyshire had had their tonsils removed, but in 1933 the number had dropped to one tenth—yet there was no deterioration in child health. In two neighbouring districts in London the respective removal rates were four per cent and two tenths of one per cent, without discernible differences in the health records of the children.

True, the idea that tonsils should go is an old one. Hindu physicians have removed them for ages—at least as early as 1000 B.C., but the theory of "focal infection," as it is known today, stemmed from articles by Dr. Frank Billings published between 1912 and 1914. In them, Billings ascribed arthritis, nephritis, and later a wide variety of ailments to infected teeth. In his Lane Memorial Lecture in 1915, Dr. Billings defined a focus of infection as a circumscribed area of tissue infected with pathogenic micro-organisms that could spread not only to contiguous parts but to parts of the body not nearby at all. As such foci of infection, he cited particularly tonsil abscesses, chronic sinus infection, gall bladder and appendix infections, and bad teeth. E. C. Rosenow and others further developed this theory mainly by work on animals.

In 1938, Dr. David Riesman began to speculate as to whether painless, decayed teeth also might not cause ailments elsewhere in the body. Nor is there anything wrong with this theory, within strict scientific limitations. When it can be proved that a focus of infection definitely is causing disease elsewhere in the body, the focus tonsil, teeth, gall bladder, appendix—should be removed. Often, however, the removal takes place in the absence of good evidence to indicate that the result will be good. And so many "preventive" removals do not act preventively. Too often the operation has not good, but bad, after-effects.

II

CONSIDER bad teeth. In *The Journal of the American Medical Association* as long ago as October, 1919, you will find an article by Dr. Walter C. Alvarez entitled "A Protest Against Reckless Extraction of Teeth" which is as true today as it was then. Too often removal of the teeth or of any other supposed focus of infection has no beneficial effect upon the patient's health. "In view of the fact that the most thorough removal of focal infections often fails to cure arthritis and other diseases, let us be more honest and conservative with our patients," wrote Dr. Alvarez.

In the same journal, in May, 1923, the same doctor wrote on "Lessons to Be Learned from the Results of Tonsillectomies in Adult Life." He demonstrated, after following up more than 300 cases, that the resultant improvement in health supposed to follow the tonsil amputation often did not occur. Those who had tonsillitis were almost always helped, but those who had no sore throat or tonsillitis were rarely pleased with the result of their operation. It paid best to remove tonsils for tonsillitis or sore throat. It paid less well to remove them for frequent colds. It did not pay at all to remove them on general principles, as a preventive measure in the hope of helping headaches, deafness, enlarged neck glands, rheumatism, halitosis, and so on. In many such cases health became definitely worse after that operation than before. In two thirds of the rheumatism cases there was no benefit.

In many cases, Dr. Alvarez continued, repeated operations had been undergone because certain physicians attributed symptoms to tonsil fragments left behind by others. Some had had three and four operations with no benefit. Many had had tonsils removed for most trivial reasons. Another man decided to have his tonsils out because of one mild attack of constipation. He nearly died of pneumonia following the operation. Two others succumbed to the temptation because they had physicians as personal friends who would operate gratis. Another had his removed because he blinked his eyes; he still blinked after his tonsils were subtracted. Another thought the operation would cure his insomnia. As a whole, nearly one in ten victims of tonsillectomy had bad results.

Some nearly bled to death in the operation or died of pneumonia afterwards. Some had recurrent bronchitis, difficulty in swallowing, odd feelings in the throat, loss in weight, nervous breakdowns, increased frequency of colds, sinusitis, ear noises, or no relief from the original symptoms leading to the operation.

It should be emphasized that, according to an editorial in our leading medical journal in 1926, both tonsil operations and mass extractions of teeth ought to be classified as major operations. Broncho-pneumonia and lung abscesses can and often do follow tonsillectomies under ether. Very severe and sometimes fatal complications have also followed an occasional tooth extraction. Tonsillectomy under a local anesthetic is relatively safe. In other words, these are operations that should be undertaken only when the indications clearly justify such drastic procedure.

In short, the entire literature on tonsillectomy is convincingly consistent in showing that too many tonsils are sacrificed and the expected beneficial results too rarely occur.

Go back to 1927. In *The Journal of the American Medical Association* for December 24, you will find Dr. Albert J. Welch giving a statistical report on 1000 pairs of tonsils excised. In nearly half the cases no benefit to health resulted. Bacterial studies were futile because any organism having access to the mouth—and that means myriads—can be shown to be present in the tonsils. Only four bad infective or malignant lesions were found in the lot. Only 70 showed ulceration.

In 1928, a Public Health Bulletin, No. 175, appeared and the work of Dr. Kaiser of Rochester was also being discussed. Kaiser found that tonsil removals did nothing to remedy rheumatism, chorea, or heart defects in children but did reduce sore throats and head colds. The Public Health Service bulletin indicated that tonsillectomy did not reduce the frequency of sore throat among children. But it added that the words "normal," "diseased," and "enlarged," as applied to tonsils, were meaningless because so differently interpreted by different people.

III

IN the December, 1928, *American Heart Journal* you will find a report on 413 tonsillectomies which had no effect on rheumatic infection. Neither were they beneficial in heart disease.

In the *Archives of Internal Medicine* for April, 1931, Dr. Ruby L. Cunningham discussed "Normal, Absent, and Pathologic Tonsils in Young Women," making a most careful study of the entire literature on this subject. She showed that all sorts of unproved hypotheses were held on the basis of poorly controlled and interpreted clinical observations. Careful statistical studies were made of 12,530 white female students, one third each with normal, absent, or diseased tonsils. The incidence of measles, mumps, chickenpox, whooping cough, scarlet fever, diphtheria, pneumonia, pleurisy, chronic colds, chorea, appendicitis operations, mastoiditis, and nasal operations was the same among the normals as among those with diseased tonsils. The group with absent tonsils actually had a higher incidence of all illnesses and operations than did either the normal or pathologic groups. Indications were that the removal of tonsils had had little helpful effect.

"A review of the literature relative to the effect of the condition of the tonsils on general health reveals a great lack of accurate information on the effect of tonsillectomy, when one considers the number of operations that have been performed," said Dr. Cunningham.

—*Continued on page 93*

ON HYPOCHONDRIACS—*Continued from page 88*

One gets a razor scratch while shaving, and immediately begins to ponder exactly when the symptoms of blood-poisoning will appear. The terror of small pox, cholera, typhoid and meningitis comes one after the other, each in its appointed season ; and then there is the year-round and ever-growing apprehension of tuberculosis. There are many who every year take as many inoculations as available, and who in summertime cannot be persuaded to eat a *sandesh* till they have taken the cholera inoculation. I know of men who, through long, sleepless nights, feverishly count their heart-beats, anxiously awaiting the moment when the heart would miss a beat and—perhaps—stop. I have seen highly strung men conjuring up nightmares of auto-intoxication simply because they have been a little constipated. In fact, many of our little illnesses are, at bottom, psychic. We think we are ill: therefore we are ill.

III

CONSTANT pondering on diseases may also lead to disease-snobbery. This brand of modern snobbery has been brilliantly satirised by Aldous Huxley in his famous essay on snobs. The man—more commonly it is a woman—whose chief passion in life is the disease he has somehow managed to contract is not rare among us today. That is his main topic of conversation, he gloats over the exquisite details, his sighs and groans are ecstatic, his face beams with a heavenly light when describing the last attack, and he would be positively furious if you are so indiscreet as to suggest that he is cured. He does not *want* to be cured, for he has fallen in love with the disease. Sickness makes a man more important than he actually is, and the disease-snob wants to prolong that feeling of being more important than others by the simple device of being constantly sick. He must have extra big doses of sympathy, and he cannot have that if he is declared cured. It would seem that many of these require the attention of a psychiatrist rather than that of a physician.

On the whole, the very process of avoiding diseases is leading many to new and more complicated perils. Health may be defined as the state in which one is completely unconscious that one has a body, but in these days most of the upper-class people cannot for a moment forget the existence of their bodies. This body-consciousness is in itself a disease: B. C. is even more dangerous than B. O. Most of us are frightfully body-conscious, disease-conscious, victims of anxiety-neurosis. When the death of somebody we knew is reported, the next few days are passed in trying to detect in ourselves the symptoms of the disease which caused the death. If we hear of a case of typhoid across the street, a nervous depression immediately sets in. This is not preserving health, this is ruining health. Constant anxiety undermines vitality, and perhaps makes us easier prey to those very diseases we shudder to think of. By all means, take every reasonable precaution, but do not worry. Caution is one thing, and mania quite another. One *can* be too careful. If one spends one's days cooped up in an antiseptic ivory tower, if one scrupulously follows every little rule of health every day of one's life, one will inevitably become quite unfit for the rough-and-tumble of life. And what's the point in being healthy if your healthiness does not serve your community in any way? It is important to remember that health is not an end in itself: it is desirable that you should be healthy so that you might do the utmost you are capable of. Health is really a social problem, the responsibility of maintaining our health should rest on the State: it is quite unfair to ask individuals to take all possible care and too much trouble, anyway.

MENTAL CLEANLINESS

By

IRENE R. RAY

Calcutta

I

THERE is a well-known advertisement which seeks to popularise the slogan "Inner cleanliness comes first." In this special issue of the *Municipal Gazette* devoted to Health the subject of "inner cleanliness" doubtless ought to have a place—not only the physical inner cleanliness of the mind. It is the latter aspect that I wish to deal with in this short article, for mental cleanliness, cleanliness of thought, is one aspect of hygiene, which it is most difficult to maintain under present world conditions.

We live in a world at war—and war breeds hatred. And hatred is surely one of the most poisonous elements known, for its recoils on the hater even more than on the hated. If mercy is "twice blessed" hatred is twice cursed. Evil thought has a power of its own and the Zoroastrian conception of a continuous struggle between the powers of Good and the powers of Evil is based on fact, for this struggle is an ever present reality in the life of each one of us.

II

AT the beginning of the present war in Europe there was much talk of making this a hate-free war. At least it was urged that hatred should be confined to the leaders of Germany and not to her people. Now, however, this qualified attempt to keep the war "clean" has failed. In articles and in news sarcasm and hatred find a ready place ; while successful action against German individuals is acclaimed with joy. No matter how strongly one believes war to be justified, to *rejoice* at the death of a human being is a definite sign of deterioration of mental inner cleanliness. Not that death, in itself, is a thing to be sorry about ; it is the *taking* of human life which is tragic. It is neither wicked nor unreasonable nor against the law of any country to regard human life as sacred, and those who sacrifice so much in order to further the ends of war should not be asked or encouraged to sacrifice also their own mental health ; to do so would be nothing less than insane on the part of any government or propaganda machine. Incidentally, it is well to keep in mind the relationship between the words 'sanity' and 'health'. In the French language *la sanite* does not mean 'sanity', but it means 'health'. Sanity and *'la sanite'*, obviously have the same root, in other words sanity *is* health. The same root has also given us another word, 'sanitary', and the three together make obvious the connection between cleanliness and health—mental as well as physical.

III

IT is not only in wars between nations that hatred is engendered. During the past few years we in India have watched intercommunal hatred develop into undreamed of proportions. That this hatred has a political and, therefore, an artificial background and foundation does not make it any the less dangerous. What did and did not happen during the recent Dacca riots it is impossible for any but a few, besides the actual victims, to know, but it is obvious to all that further hatred is the one sure outcome. Let us in India be aware of this great threat to our mental inner cleanliness. Let us be aware of it and let us guard against it. By calm analysis of the root causes of intercommunal troubles we can direct our energies to their removal. But by indulging in personal animosities and retaliations we do but pour poison into our own wounds. Let "Sanity and Health" be our slogan, for by these alone can we counteract the disintegrating forces which are at work today to divide the communities of India.

IV

LET us also remember the children and their mental health. The words of Jesus, "Except ye become as little children, ye shall not enter into the kingdom of heaven," contain an inexhaustible fund of meaning. For children have a natural mental cleanliness, and those adults who are truly great are those who have been able to carry over into their adult lives the simplicity, the naturalness, and the grace of their childhood's mental make-up. For this reason it is of the utmost importance to preserve these mental qualities in children while they still have them. Children must not be taught to hate. To destroy their natural feelings of kinship by exclusive communal or national view points is a crime against the individual as well as against the future welfare of society as a whole. Communal and national divisions must be there of course ; we all owe loyalty to one as much as to the other. But our loyalties should be visualised as an ever-widening circle—the home, the town, the community, the nation and the world. Children who are taught to confine their loyalty to any one of these, excluding the others, can never be good citizens either of their own country or of the world. At present those who are good world-citizens are comparatively few in number and herein lies the secret of the present unrest. Peace will never come to this earth until and unless the citizens of individual nations develop world-consciousness. And with world-consciousness will come a wider realisation of man's kinship with man. With it too will come realisation of that great thought which has been expressed by many prophets, and of which the Buddha was a living exemplification :

"Never does hatred cease by hatred ; hatred ceases by love. This is an old rule."

How to Keep Fit

By

MAJOR DABIRUDDIN AHMAD, O.B.E.,
K.-I.-H.-M., A.I.R.O., F.S.M.F., F.C.U.,

Professor of Forensic Medicine & Mental Diseases,
Medical College, Calcutta.

VERY few of us understand or know what it is to have good health and to be fit and to have real enjoyment of life. Most of us in Bengal simply exist, live a life full of struggle for existence in every sense of the word. We simply bridge along the road of our life and die without knowing what is real life. Our average length of life is only about 29 or 30 years.

Most of us are dyspeptics and therefore bad tempered and of poor stamina; while the amount of work we put in compares very unfavourably with other nations of the world. We are generally delicate and cannot stand any severe test for endurance, for hard, prolonged and sustained physical labour. The nature of our food is faulty and unscientific, our habits are too easy and pleasure loving. In the following few lines I shall try to tell you how you can also be healthy and live a fairly long life and derive enjoyment.

The question is now raised: what is it? What is to be healthy? A healthy person means one who can sleep soundly and feels fresh and full of life on waking in the morning, has a good motion every day, who can eat and enjoy food and digest it properly, who gets an appetite before meal time, who can work hard for at least 8 hours and is not dead tired at the end of it, who has good temper and can laugh a hearty laugh and enjoy jokes, etc., etc. Such a man is, if I may say so, like a good and mechanically perfect motor car.

A car of that description is like a perfectly healthy man. She is a beauty to look at, it is a pleasure to drive her. She starts easily and runs smoothly, does not make any jerking noise and allows one perfect control on her while driving. Now supposing the car is badly used and recklessly driven, not rested or cleaned up properly, proper kind of fuel oil, etc., are not used in it, it is inevitably a torture to drive or ride in her. She is like an unhealthy person.

In order to have good health we must, first and foremost, have a good and healthy mouth, with a set of sound teeth in it. Secondly, we must eat proper kind of food in a proper way and not eat too much of it. Thirdly, we must be clean inside and outside; that is to say, we must well evacuate our bowels regularly every day and also see to it that our kidneys function properly, and we must have *sound and proper skin.* Fourthly, we must have sufficient rest in between working hours. Fifthly, we must live in a well-ventilated and well-lighted house with plenty of sunlight in it; and last, we must take some kind of exercise regularly every day, if possible in the open air, and so on and so forth.

FOR all these my advice to you is:

First of all take care of your mouth and gums. You must have a clean and healthy mouth. Consult a dentist forthwith if you have not. And then, after the dentist has treated you and restored your mouth to healthy condition, try hard and keep it so. A diseased mouth is the most dangerous condition to have. We sometimes come across individuals whose breath is simply nauseating and whose company is most distressing. These people little realise that their mouths are nothing less than cesspools and every minute they swallow pus and blood and dangerous germs from their own mouth which ultimately destroy their health. It is marvellous to observe how some persons will spend money in the most extravagant manner for outward show and pomp or wear away the best part of their lives in the hoarding of wealth, and yet never give a thought or a farthing to keep their mouths well and clean. Let me tell you how you can keep your mouth healthy. Always clean your teeth well after meals. Use some kind of tooth pick (the best is "Khorkay" or "Khilat" as sold in the Indian bazar or a match-stick shaped into a tooth pick) to clean out all the spaces in between the teeth, wash the mouth with plain and clean water several times, rub with the forefinger on the gums and teeth and wash again. Chewing of one or two small pieces of bettle nut is good after cleaning the mouth. You must brush your teeth properly with some kind of tooth paste or tooth powder, especially in the morning and the last thing at night before going to bed. I would recommend the use of salt water or very weak condy's lotion for gargling, the last thing at night after cleaning the mouth as advised above. If you follow this simple advice your mouth will remain clean and healthy and you will enjoy sound and robust health

Next do not eat rich food or food which contains too much of spices and *never eat too much.* Always finish your meal with your hunger just not fully satisfied. Some great man once said, "Leave your table with an appetite and you will always come back to it with one." This is very true and you should follow this advice Eat slowly, chew your food very well before swallowing, do not have too much fluid with your meals, see that your food consists at least 30 per cent of vegetables and fruit of some kind or other. Take some salad, curd and milk every day, if possible. Drink plenty of water in between the meals If possible, hare your meals at regular hours. If you do these, you will not suffer from constipation and your bowels would move naturally every day.

This brings us to the third point If your bowels move regularly your inside will be clean and healthy. You will not suffer from liver troubles, rheumatism or gout or other constitutional diseases.

REMEMBER that your skin plays a great part in removing some of the waste products of our body. A clean outside means that your skin is healthy and functions properly. That is why you should look after your skin Have a bath daily, rub and clean your skin well while bathing and rub it dry with a dry towel or *gamcha.* You must feel fresh and buoyant after your bath.

Drink plenty of water in between your meals. By doing so you remove lots of waste products of your body through the kidneys. A good practice is to have a tumbler of ordinary pitcher-cold water first thing after leaving your bed. Rinse your mouth with a mouthful of water and then slowly drink the rest. Then have a glass of *sharvat* at about 11 A.M. (one whole lemon juice and 1 teaspoonful of sugar is enough in a tumbler of water). Take a glass of water, say, an hour or an hour and a half after your

midday meal and [illegible]y, a glass of water an hour before [illegible] night meal. You can also drink a [illegible] water after cleaning your [illegible]uth at [illegible] before going to bed

Now about [illegible] rest Remember that all the time [illegible] are up and about, your organs your [illegible]scles and brain are all working and, naturally, they get tired by the wear and [illegible] of incessant work Unless they are fully recouped and recovered they cannot give you 16 annas of work on the next day, therefore, have at least 7 hours of sleep at night and rest a little in the day after your midday meal or after coming from office Make it into a habit and you will be surprised how much more work you can do

The next point is about your dwelling house You may not be rich, but your sleeping room can be neat and clean and have windows and doors for ventilation Always sleep with the windows open at night Remember that you require fresh air for the proper functioning of all the organs of your body Even during winter sleep with the windows open You cannot get a chill if you cover yourself during sleep Arrange your bed in such a way tha the bed is not in the direct line of draught Let in as much sun s rays in the room as you can in the day time Direct sunlight is antiseptic and will destroy lots of germs in your room

Now we come upon the last item, that is to say the question of exercise Remember, it is absolutely necessary for the sake of keeping fit that you take some kind of systematic exercise in open air You can always find and give yourself an hour for the sake of your health To my mind morning is the best time for it. If you cannot find time in the morning, then evening will do But, unfortunately, the radio and the war news keep us occupied indoors in the evening The best form of exercise is a good long walk in an open place, like the Calcutta Maidan, for an hour or so For younger people physical jerks, dumbells or Indian forms like the 'Daun' or 'Baitaky' in addition is good Do your exercise in the open air, say, on the roof of your house, in the early hours of the morning A small piece of ginger and a little salt and 30 to 40 soaked sprouting grams chewed before exercise is good for your health Lastly, do not worry over anything, be cheerful and look at the bright side of everything, never be down hearted and I am sure that you will have a long and healthy life.

ARE TONSILS USEFUL?—*Continued from page 90*

Opinions were widely variant But, even at that time, there was a sharply growing sentiment against taking the tonsils out for preventive or prophylactic reasons

The trend of these investigations shows an unvarying consistency We shall note but two more of them Glover and Wilson reported in *The British Medical Journal* in September 1932 on the end results of removing tonsils and adenoids from adolescents and, in general found that they did not justify the great number of such operations The incidence of sore throat might thus be slightly diminished, but colds were just as frequent otitis mastoid disease bronchitis, and pneumonia also No one could claim that the operation helped in acute rheumatic or heart ailments The conclusions of Dr Cunningham (above) were considered fully supported and a large proportion of the tonsillectomies now done in children are unnecessary entail some risk, and give little or no return

Finally, in *The American Journal of the Diseases of Children* for August 1932 will be found reports showing that the removal of the tonsils affects neither susceptibility to diphtheria nor the incidence of scarlet fever Meanwhile there is always a possibility that the tonsils actually perform some useful function as Dr Ivor Griffiths of London suggested in *The Lancet* for September 25 1937 In some cases, said Dr Griffiths treatment of the sinuses would give the relief expected from tonsil removal Removal of tonsils does not improve cases of middle ear disease, nasal catarrh or acute explosive snoring He then propounded the theory that the function of the tonsils was to excrete into the pharynx certain organisms that pass into them from the sinuses *via* the lymphatic glands Hence tonsils should never be removed for nasal catarrh Various experiments on dogs were offered in evidence Dyes did pass into the tonsils via the lymphatics Moreover Dr Griffiths did not think the helpful results commonly attributed to tonsillectomy usually occurred as hopefully predicted He found discharging ears and mastoid disease in many of 5000 tonsil-less children He held that many objectionable living bacteria are routed to the tonsils to be excreted into the alimentary tract for destruction Hence it appears probable that tonsils are of some use They may not only perform regular lymphatic functions but they have this special bacterial-destroying function also (such is this theory) because of their anatomical position And advertising to the contrary notwithstanding it should be emphasized that germs swallowed are rapidly destroyed by the stomach acid and the intestinal juices Infection via the oral route cannot so easily occur, nor is gargling a very effective preventive measure

Despite all this mass of evidence, discarded teeth continue to rain into the dentist's garbage pail and discarded tonsils to make flames roar in the hospital incinerator

What, then, may we conclude to be constructive with regard to tonsils?

An editorial in the *Journal of Laboratory and Clinical Medicine* for May, 1933 said essentially that doctors should not regard the discovery of infected tonsils as sufficient cause to neglect the rest of a complete physical examination. Bad tonsils are potential factors in producing generalized diseases and infections far from their site, but people should not be led to expect miracles from tonsillectomies

The removal of tonsils does tend to decrease the recurrence of sore throat, but you can have sore throat without tonsils and many do Respiratory infections and most other ailments are about as frequent after as before the operation Anyway it takes about ten years fully to demonstrate benefit from the operation in case of serious ailments

IV

THE removal of tonsils under ether should be regarded as a major operation always undertaken in the light of its possible hazards and never in the lack of complete justification Laymen should stop shopping around among doctors as so many of them do now, trying to persuade them to do an unnecessary tonsillectomy

Undoubtedly the operation, when its need is properly indicated, can be very beneficial It is frequently advisable in children but is rather rarely of real value to older people It is doubtful whether the removal of a focus of infection has a particle of influence on dozens of diseases for which it is done Practical help occurs oftenest in arthritis, but in case of older people this is too often like locking the barn 50 or 60 years after the horse was stolen

A person having a lot of tonsillitis and sore throat gets definite benefit from the operation, a person with none gets none. That, according to one of the best informed doctors the writer knows, is the most important thing to remember in connection with tonsillectomy.

The writer superintending the preparation of a new dish for diabetics in the open air where most of her work is done

DIET for DIABETICS

By

CATHLEYNE ST NIHAL SINGH

Dehradun

WHEN the doctor diagnoses the disease as *diabetes mellitus*, the mind is filled with disquiet The regimen laid down for the patient means the reorientation of life for him or her It in fact, affects the whole family—more especially the women folk Apart from anxiety as to the welfare of the loved one there are culinary complications There is need—immediate and insistent need—of more or less drastic change in the habits of eating of the person affected This adjustment is bound to put a certain amount of restraint upon the others, because they would feel guilty if they were to eat in a manner that may prove over-tempting to the one whose dietary is strictly regulated—and not only regulated, but, in some respects, severely attenuated

Eating in Isolation

I well remember one instance that made a great impression upon my mind I was spending the day with a highly cultured family in Eire (it was then known as the Irish Free State) The surroundings were peaceful, beautiful and salubrious The company was restful to jangled nerves yet intellectually helpful and uplifting and withal amusing

Even though the summer sun disappeared lingeringly, as it does in that latitude, we were loath to turn indoors We had however, to make ready for dinner, and tore ourselves away from the emerald lawn where the atmosphere of old Irish song and dance was being re created, for my benefit

The moment I sat down at the table I noticed that one of the boys was missing I realized simultaneously that there was no unoccupied chair, no serviette, no plate, no cutlery, that had not been claimed

"What has happened to Risteard (Richard)?" I asked in my frank, American fashion Only a few minutes before he, along with the other children had been entertaining me It occurred to me that he may have been naughty and was being punished by banishment from the dinner table

"He has his food separately my host replied 'You will hardly credit the fact that the little fellow has diabetes Since he may be tempted to eat food that would be harmful to him if he ate with us, we deem it best to let him have his meals by himself in another room Why lead him into temptation?"

Inwardly I thought "Half the joy of eating is in companionship at the board"

And I wondered if it was absolutely necessary for a diabetic person to forego it altogether Was there no other escape from temptation?

Is Diabetic Diet to be Dreaded?

OTHER similar incidents set me thinking furiously Why should diabetic diet be so dreaded? Unless one is too far gone that the kidneys are seriously affected or the carbuncle stage has been reached, there is only one type of food that is severely reduced—potatoes rice, bread, sweets and the like, or carbohydrates, as the scientist calls them generically All the rest of the dietary is open to a diabetic—meat, eggs, fish, milk most vegetables and many fruits

Why should not the diet be made so attractive that there need be no fear of temptation through seeing others eat?

In most cases, it is more a question of regulating quantity than restricting variety There is no compulsion for keeping to predigested or easily digested invalid food On the contrary, strange as it may sound, food that takes a long time to digest is actually to be preferred in the case of the diabetic unless, of course, it is of a nature that may upset the digestion Scientists have found, indeed that when the process of assimilation is not rapid, the entry of the sugar content into the patient's blood stream is slow and the body is better able to deal with it and suffers less from it than from quickly digested food

Benefit to the Non Diabetic

THERE is another aspect to consider, moreover People who regard themselves as healthy and are so regarded, usually overeat and often their overeating, when analysed, consists chiefly of potatoes rice, bread and sweets So if they were to help the loved one who through compulsion, must severely cut down such substances or even eliminate some of them from the dietary, they not only do him or her a kind turn but themselves benefit enormously from it

The case of my "other half" is an instance in point When, after being fed on starches during an attack of acute dysentery, sugar was discovered in my blood and I was placed on diabetic diet, he decided to forswear certain articles of food of which he had been very fond He was, of course, prompted by the desire that I may not be tempted to eat them while sitting at the table with him Within a few months the tendency to corpulency that was becoming pronounced was arrested To date he has lost about three stone in superfluous fat This reduction has not sapped his strength but has given him increased vitality

Overweight is a Severe Handicap

THE diabetic patient is generally overweight Persons not thus handicapped seldom contract the disease The adjustment of diet has a tendency to slenderize the person suffering from it towards the proper standard in his or her particular case, based upon the height

This process should be attempted only under the watchful eye of a competent physician He will prescribe the exact amount of intake of carbohydrate protein and fat one may consume He will say how many 'calories can be taken into the system in 24 hours

That term forbidding, to the uninitiated merely means the amount of heat required to raise the temperature of one kilogramme (a little more than two pounds) of water one degree Fahrenheit It is used as a standard measure of food values

All except advanced cases of diabetes are generally permitted to consume 25 calories per kilo of body weight If a diabetic patient should, in proportion to the height, weigh 10 stone (140 lbs. or 64 kilos), the doctor will more than likely prescribe something like 1,600 calories a day These calories must be divided among the two, three or four meals, that one may be accustomed to take

Heat producing food is not the only kind the body needs We must have body building and body repairing substances as well Heat may be partly derived from fats and partly from carbohydrates Fats, especially fresh butter and good *ghi*, have vitamin value as well—that is to say, they keep up vitality Proteins that are derived from meat, *dal* and the like are body-building—body sustaining So our dietary has to be a judicious blend of all these

The person permitted 1,600 calories a day may be allowed, roughly, three ounces of protein, about three and a half ounces of carbohydrate and a similar quantity of fat, in 24 hours There, in a nut shell is the dietary

Culinary Complications

THE question remains as to how and what to prepare for the diabetic patient that will afford exactly these constituents in their respective proper proportions and yet have food that is palatable—attractive The doctor will give only general instructions The details must be worked out by those who are responsible for preparing and serving the diet

Kabab for tea Weather and flies permitting The writer likes to have her tea in the garden and often special dishes for it are cooked on a "chula" out of doors

This is not easy, by any manner of means. The person unused to food analysis soon gets swamped in a sea of calories. The trial menu worked out seems to be perfect in respect of the various constituents it contains: but when the calories are counted up it is found to be shockingly above the required number.

Fortunately, there are certain articles that are great in bulk but are almost negligible in caloric value—in plain speech are harmless or nearly harmless to the diabetic. If these are eaten in quantities sufficient to fill the aching void in the stomach accustomed to repletion, the problem may be easily solved. The foods reckoned as low in caloric value will satisfy the appetite while reliance for nutrition is placed upon others that must be eaten sparingly.

Comparatively Safe Foods

THERE are actually more than fifty green vegetables that may be eaten with more or less perfect safety by the diabetic patient. Among them are asparagus, string beans, brinjal (egg-plant or aubergine), Brussels-sprouts, broccoli, cabbage, cucumber, endive, French beans, gourds of every description—white, bottle, club, sponge, bitter (*karela* and *uchay*); "snake-gourd"; lettuce, plantain-flower, green papaya, pulval, radish, rhubarb, spinach, all kinds of green-leaf vegetables (*sag*), pith of the plantain stem, tomato, vegetable marrow, beet leaves, beet stems, borecale, cauliflower (the flower, green leaves and inner heart of the stem), celery, chard, chicory, horseradish leaves, kale, kohlrabi (*gutha gobhi* in Hindi), mustard leaves, purslane (*kulfa* in Panjabi), radish leaves, the green tops of young onions, turnip leaves, water cress, green gram leaves and *bathua* (in Hindi). Some are available in one season, some in another.

These vegetables consist mostly of water and fibre and give bulk without having much caloric value. In addition there are many others, which, however, must be eaten much more sparingly, as they contain more carbohydrate content than one can afford to consume.

In the matter of fruit, too, the list is long enough to give a good choice. I eat, in small quantities, blackberries, melon, water-melon, pomegranate, roseberry, lemon, lichees, peaches, strawberries, pears, plums, and occasionally a very small bit of apple.

There are other foods that provide bulk besides green vegetables. They may be worked up in numerous ways to add to the quantity consumed. Mushrooms, for instance; and gelatin, isinglass and agar-agar. The last-named, being purely a vegetable product, is suitable for strict vegetarians.

The details must be worked out to suit individual requirements. In this connexion the books mentioned at the end of the article will be of assistance.

My own Dietary

This is what I do! To begin with, I do not have "early tea," as it is called, but soon after rising drink a cupful of plain water as hot as I can bear it.

A little later I have breakfast. It consists of porridge of my own devising. I have bran (*chokar*) made into thin *chapatis*. I break up two or three of these in a soup dish and add to it four or five ounces of skim milk. Or I have the bran made into a porridge like oatmeal. This, of course, is eaten without the addition of sugar. When travelling I have bran flakes, easily carried in the original carton in which they are brought from the stores. In addition I have two cups of unsweetened tea with skim milk. I taboo all cream and butter fat or wheat bread in any form.

At noon I have *dejeuner* (lunch)—a habit formed on the Continent of Europe which fits in very well with Indian conditions. It begins with about eight ounces of vegetable soup, usually made in the form of a puree, without, however, the use of any starchy substance to give it extra body (which it does not really need). This soup is very satisfying to the appetite and after partaking of it one does not feel the need of much else. I give the recipe for it later. This is followed by small portions of fish or meat and two or three vegetables such as spinach, cabbage, asparagus, green beans or cauliflower. For a change I have cutlets made of vegetables considered by experts to be largely innocuous from the carbohydrate and caloric point of view. To finish off I have a cup of unsweetened tea with skim milk.

Tea-time was, in a sense, the hardest problem I had to solve. At this meal I have discontinued all the usual tea-dishes. These ordinarily consist almost altogether of carbohydrates in one form or another. I have instead some kind of *kababs* or a few small *pakoras* (fritters made of cauliflower, spinach, or some such vegetable); or once in a while *suji* ("cream of wheat", we call it in the United States, and "semolina" in England), first made into a very thick porridge, then spread out on a flat plate to a thickness of about half an inch, allowed to cool, cut into narrow strips and fried. For the sake of variety I sometimes make a filling with spinach or some other vegetable pounded to a paste, tastily seasoned and spread between the two halves of a bran *phulka* to make a sandwich. With this I have one or two cups of unsweetened tea with skim milk; and sometimes, for a special treat, a thin slice of ginger or other cake. The latter, I must note, is usually forbidden.

My evening meal consists almost invariably of a very thin rasher of bacon (I doubt if it weighs, on an average, a quarter of an ounce), one egg fried in the bacon fat and salad made with lettuce or raw spinach, tomato and a small onion, cut fine and mixed with French dressing made with mineral oil (I give the recipe later). This, with a half or a whole bran *phulka* and two cups of tea completes my evening meal.

For the sake of variety, I sometimes have bacon and egg in the morning, and one ounce of whole-wheat bread made into toast with a quarter of an ounce of butter, and tea. At lunch I may have an

ounce and a quarter of white fish and helpings of low caloric vegetables perhaps an ounce of plums or a slice of melon or watermelon and tea At tea the sandwiches may be made with a small quantity of [illegible] paste prepared at home (so you know just what it contains) and a cup of custard sweetened with saccharin. At dinner I may have an ounce of mutton or lamb, following clear soup, and accompanied by salad, asparagus, mushrooms and green-leaf vegetables

"Hungry Spells"

IT is inevitable that when the ordinary food ration has been cut in half or even more seriously reduced, the patient has hungry spells In the old days I would have nibbled at biscuits or sweets, or eaten a slice or two of bread and butter, or some such titbit, now forbidden entirely

There are fortunately several things that can be kept handy for consumption at such a time One may munch a stick of celery, or a cucumber, or stalks of asparagus or radishes I have found, moreover, that the inner hearts of the stems of cabbage, cauliflower, kohlrabi and similar vegetables, when the woody outside has been carefully removed, can be eaten raw with great relish, if dipped in salt, as you would a radish, this only, of course, by persons gifted with a strong digestion Crisp, raw cabbage leaves or lettuce leaves, rolled lengthwise, are also good to eat Any of these articles fills the aching void and keeps one going till meal time They may usefully be served at every meal also, in the form of *hors d'oeuvres*, when they will prove good 'fillers" With the reduction in weight I no longer have recourse to any of these Now for recipes

Soups

This is how I make soup First, I fry a small onion, minced fine and a bit of garlic (*lassan*) in say a quarter of an ounce of *ghi* Then I add the vegetables, chopped coarsely—a tiny carrot, a little turnip (if in season), five or six leaves of cabbage or the coarse stems of cauliflower, a small tomato; and a handful or two of any kind of green leaves *sag* (spinach preferred) that may be in the larder When these are boiled soft and rubbed through a puree sieve, water is added to bring the substance up to eight ounces, and it is seasoned to suit my taste with salt and pepper Sometimes I add an ounce of skim milk to make it a little different

Or, if preferred, one may make a clear stock or broth that may be taken in quantity almost to satisfy and yet have very few calories Celery, carrots, spinach and parsley should be shredded on a vegetable grater or put through a food chopper If half a cupful of each kind of chopped vegetable is used, then a seer (a quart) of water will be required Boil for 20 minutes or half an hour—not longer Add salt to suit the taste, or *soy* sauce, if you are in Calcutta or some other place where it is obtainable, and a little marmite or other vegetable or meat extract for flavour This makes a very refreshing drink between meals as well as with them

If your cook boils your vegetables, instead of cooking them in their own juices as he should do, have the water in which they are boiled carefully saved and seasoned with salt and pepper to suit the taste Drink this as a broth when hungry

To make cream soups that will not require flour or cornflour to thicken them, put the vegetables through a soup sieve, heat up the puree thus made with a cupful of skim milk Meantime, in a separate basin, beat up an egg very thoroughly Slowly pour the boiling puree over the beaten egg, stirring it all the time Then return it to the saucepan and bring to the boiling point—but do not allow it to boil else the egg will curdle—once more

Any kind of stock you may wish to turn into a thick soup may be treated in the same way Made simply with milk seasoned with pepper and salt and, say, a dash of celery salt or a little marmite, and poured over a beaten egg, it will form a very valuable item of the menu Bulk may be supplied with plenty of cabbage, greens (*sag*) of any kind, asparagus, celery, cauliflower, scarlet-runner beans, cucumber, boiled brinjals, cress, radishes and similar articles.

Savouries

EGGS are most useful in planning the menu for a diabetic. There are numerous ways in which they may be served Some are suitable for breakfast, others for luncheon, tea or dinner. A study of egg recipes will disclose any number of dishes as attractive and appetising as they are harmless. —relatively, of course

Baked in tomato, for instance Cut a slice off the top of a tomato, scoop out a little from the centre, drop a raw egg, yolk and white, into the hollow thus made, dot with a tiny bit of butter and season with pepper and salt Bake in the oven, or grill under the *chula*, till the tomato is soft and the egg is cooked Serve piping hot with a thin piece of toast (not more than one ounce of bread)

Or you may like egg and asparagus, for luncheon or dinner Open a small tin of asparagus (Carefully save the liquid in it, using it in the soup) Place the asparagus in a baking dish Beat an egg thoroughly, add salt and pepper to suit the taste and a cupful of skim milk Pour this over the asparagus and bake in the oven till the egg and milk mixture has formed a custard and become brown on top

Devilled eggs come in useful for tea, or for making *hors d'oeuvres* There are numerous ways of preparing them For instance, cut hard-boiled eggs in two, remove a thin slice from the white end so they will stand, and mash the yolk along with any seasoning you may choose A little mayonnaise may be used for this purpose, or some French salad dressing, or lemon juice, or a little worcestershire or other spicy sauce for flavour, or minced tomato or a small onion minced Stuff the white with the mixture. Serve on thick slices of raw tomato For a change, the egg-halves may be dipped in *basan* (gram flour) and fried as *pakoras*

Salads

SALAD is made for me with highly refined, almost tasteless mineral oil (liquid petroleum,

medicinal), instead of olive oil. Lime, lemon juice or vinegar, salt and mustard, tone down the oily flavour or consistency. There is hardly any food value to pile up calories and, in addition, the bowels that, owing to the bulk of the bran used for bread might become congested, are kept in good condition.

It is as easy to make mayonnaise dressing with mineral oil as with salad oil. The same recipe may be followed, substituting the non-caloric liquid petroleum for the highly caloric olive oil.

Gelatin, agar-agar and isinglass may be used for making solid salads. They are filling and have very few calories. Salads of this description can be made to appeal to the eye as well as the palate by serving them on or surrounded by tomatoes or cucumbers.

Fish salad is especially tasty served thus. Peel the cucumber and cut it into thick slices and then, with a sharp, small knife or a vegetable scoop if you have one, cut out the centre. Place the cucumber slices on thick pieces of tomato, fill the centre with flaked fish or mixed chicken or meat, and cover with mayonnaise. Or serve in a scooped out tomato, using the portion removed from it in the salad.

Some of the raw fruits permissible may be used instead of the vegetables. In that case, sweeten the water in which the gelatin is dissolved with saccharin.

Sauces

Sauces are another problem for the diabetic, since most of them ordinarily depend upon flour (*maida*) or cornflour for thickening. But they may be made in a way that renders them quite innocuous. Take Bechamel Sauce for example.

In a saucepan fry slightly a minced small onion, using one-fourth of an ounce of butter. And a bit of mace and cayenne pepper. When tender, pour into it a gill of milk. Bring to the boil. Pour it gradually over a well-beaten egg in a basin, stirring constantly while doing so. Return to the saucepan and reheat but do not boil it.

Hollandaise Sauce can be made by putting a teaspoon of vinegar and half a teaspoon of tarragon vinegar, the yolks of two eggs and two tablespoonfuls of cream, into a basin over a saucepan of boiling water. Stir slowly with a wooden spoon till it thickens, being careful not to let it boil lest it may curdle. Draw it to one side. Stir in one ounce of butter cut up in small pieces, one at a time, letting it melt and blend with the mixture before adding another. Finally add a teaspoon of lemon juice, cayenne pepper, and salt to taste.

A useful foundation sauce that may be turned into caper or piquant sauce (with chopped pickle), or even may be used as the finishing touch for sweets, may be made by boiling together in a double boiler half a pint of milk, a teaspoon of lemon juice, one egg, salt and cayenne pepper (or saccharin, if for a sweet). When it has boiled stir it into a basin containing a well-beaten egg, return to the fire and heat gently but do not boil, for five minutes before serving.

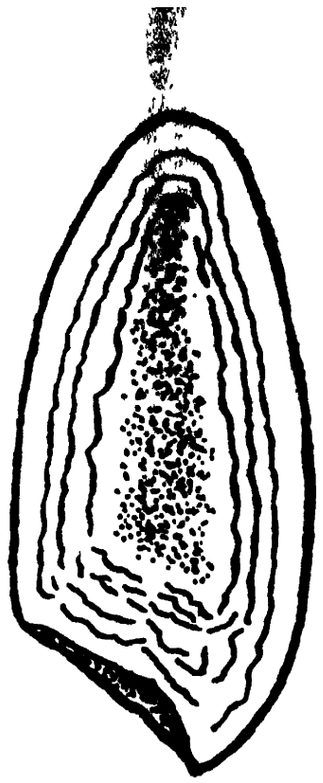
Sweets

As for sweets, aside from eating the fruit permitted in a raw or stewed state, they may be made into a gelatin mould, either unsweetened or sweetened with saccharin. Gooseberry or other fool can be made with saccharin, boiling the berries first, pressing them through a sieve into a bowl and when cold dissolving the saccharin in milk in the proportion of half skim milk and half cream, and mixing with the fruit pulp.

Ice cream may be prepared with a pint of milk (preferably skim), one egg, one-fourth ounce of gelatin, saccharin to taste, colouring and flavouring. Put the mixture, minus the gelatin, over the fire, stir well till it becomes clear but do not allow it to boil. Remove from the stove and add the gelatin, stirring till dissolved. Strain through a fine sieve add the desired flavouring extract and colouring and freeze in the ordinary way. By adding crushed fruit such as strawberries, raspberries, peaches, ginger or pineapple, or a little lemon juice, to the custard before freezing, different natural flavours may be produced.

Junket is another sweet that can be prepared for diabetics. Make it with skim milk. Flavour it with grated nutmeg. It may be served, if desired, along with sliced or crushed fruit in season.

It is possible to buy marmalade and jam specially made for diabetics. It may be made at home with saccharin, pectin or gelatin, but it is easier to buy it ready made.



Conclusion

A diet such as I have described keeps me perfectly satisfied. I, in fact, look forward to each meal with keen anticipation of good things to come. The food keeps me in health—my diabetes, as test after test has shown, is in control and I have plenty of strength for my multifarious duties that keep me occupied from the moment I wake to the time I go to bed, with intermission for food, recreation and exercise.

The regimen has, moreover, freed me from many minor but nevertheless nasty ailments, such as heartburn, sluggish liver and costiveness, that I, with my nearly two years' study of medicine in younger days, should have attributed to unbalanced diet—really excess of carbohydrates Knowledge was not lacking in the old days—only the will. My resolve to hold diabetes in effective cheque through dieting must have stiffened my will power.

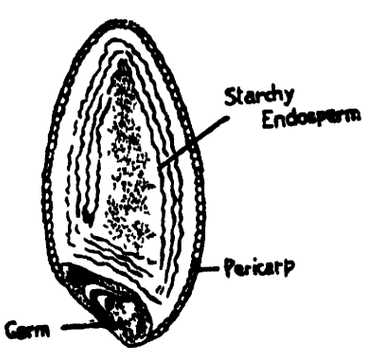
Books and Accessories I have found Useful.—I have found four books specially useful in my own case. They are Dr. J. P. Bose's "Handbook on Diabetes Mellitus and Its Modern Treatment"; Rai Bahadur Dr. Shyam Manohar Lal's "A Guide to Diabetes in India"; Dr. R. D. Lawrence's "The Diabetic Life" and McCarisan's book on Indian food-stuffs. The chapters on the dietary treatment of the disease are helpful.

In the way of accessories, the person who is cooking for a diabetic will require scales that weigh down to fractions of an ounce; a graduate that indicates quantity of liquid down to quarter-teaspoonfuls; cellophane or waxed paper for use in weighing food-stuffs; and some very small cooking utensils such as saucepans and frying pans. A few custard cups will also be useful and a casserole to hold one pint of materials, or at most two pints.

RICE as a FOOD

Its Defects and How to Improve Them

By



DR. B. GANGULY, M.B.

Editor, 'Swasthya',
Member, Nutrition Board, Bengal

Section of a MILLED GRAIN

Germ and outer layers removed

CONTRARY to the pet theories of our sanitarians, recent researches at the Nutrition Laboratory at Coonoor have proved that parboiled rice (সিদ্ধ চাউল) is superior to the raw rice (আতপ চাউল) as a food. Rice is the common food of over 700 millions of people, nearly half the population of the world, out of which only in the two Indian provinces of Madras and Bengal parboiled rice is used. The general opinion is that the weak constitution of the people of these two provinces of India is mainly due to the use of this boiled rice. Experts have now found that during the process of parboiling (boiled with steam or a small quantity of water in a covered pot) the important and useful minerals and vitamins present in the germ and outer layer (pericarp) of the rice get dissolved and pass into the body of the rice (the starchy endosperm). This parboiling also makes the hard, corny outer covering of the rice, the husk, easily removable. It is, perhaps, for this very advantage that the parboiling of rice came into use. In the process of preparing rice from the parboiled variety, the thin shiny covering of the rice (pericarp) as well as the germ does not get detached, as it is bound to be so in the case of hard, unboiled, raw grains, due to the extra force necessary in removing the husk. The most essential procedure, however, in bringing out the grains of eatable rice is the removal of the hard, corny outer

Section of an UNMILLED GRAIN

Germ and outer layers complete

covering—the husk Under this layer is the actual rice, which consists of several layers of edible substance as shown in the illustration reproduced here. The inner starchy kernel (endosperm) provides a store of food for the growing embryo.

The germ and the pericarp of all cereal grains are richer in nutritive materials than the endosperm. The composition of these two important sources and nutritive factors are altered, in this process of milling for removal of the husk, as a part or whole of these are also removed. The ease with which any cereal grain is deprived of these factors depend on the shape, size and other things. The shape and consistency of rice is such that complete removal of the husk can easily be brought about by simple mechanical means. The parboiling of the grains makes it much more easy. Machine milling, as ordinarily practised, deprives the grain of almost all rice of the pericarp and the germ. The *Dhenki* (ঢেঁকি) pounded rice retains 50-70 per cent of the pericarp, although in most of the cases the germ is lost. In hand-pounded rice, the force used being not very great, considerably less percentage of the pericarp is lost, and the germ also in most cases, is retained. Hence, the hand-pounded rice is the most, while the machine milled rice is the least, nutritious rice; and the Bengal *Dhenki*-husked rice is next best to the hand-milled. It has also been proved that the usual custom of soaking the rice, and washing it several times to make it clean before cooking, takes away a great portion of the nutritive value of the rice. The water that is thrown off carries with it most of the precious vitamins and minerals that are mostly found in the shining outer covering and germ of the rice.

II

IT is needless to say, therefore, that our custom of throwing away the water in which rice is boiled,—so that when the meal is served each individual grain of rice shows separate and makes the food good to look at—allows a major portion of the useful nutriments in the rice to be drained off. It has been proved by experiment that if rice is washed three times and thus cooked with a liberal amount of water, about 75% of the germ and 50% Phosphorus and Vitamin B, and other Vitamins of the B_2 Group, originally present, are lost. It is the first washing which causes most of the loss. A great deal more of nutritive element passes into the wash water, instead of soaking into the water used

in cooking. Beri-beri (not the epidemic dropsy which is a prevailing disease, Bengalis suffer from) is due to the deficiency of vitamin B_1 in the food; and it has been definitely shown by experiments among Chinese coolies in Singapur, that rice, cooked in plenty of water and well washed, caused this disease. But as soon as unwashed rice was used and the water used in boiling the rice was retained in the rice (and not thrown off, as is usually done in Bengal) the persons affected began to improve and their symptoms of Beri-beri gradually disappeared.

The presence of vitamin B_1 in the different processes of milling (as found by experiment) is given below. The figures represent parts of Vitamin per million parts of rice:

Only husked (hand-pounded)	4
Once polished	1·8
Twice polished	1·0
Three times polished (ready for the market) ...	0·7

It was noticed in examining the samples of the above varieties, that milling removed more than 75% of the vitamins originally present in the husked rice. The milling has very much the same effect on certain vitamins of B_2 group, deficiency of which leads to serious diseases, retarding developments.

When rice is previously parboiled, the effect of milling is much less serious. Even thrice-milled rice will retain as much as 2 to 2·5 parts per million of the vitamin B_1, which is enough to prevent Beri-beri.

Storing of rice for a long time, after removal of the husk, causes severe loss of the vitamins in it. Hence rice which is freshly husked should only be used. This is very easy for persons living in the villages.

To sum up, to obtain best nutritional values out of rice, we must take

(1) Parboiled rice (সিদ্ধ চাউল)
(2) the rice must be hand-pounded or *Dhenki*-pounded, used fresh—that is within a week of the pounding. We must never use machine milled rice, or rice stored up for a long time;
(3) rice should not be much washed before boiling;
(4) rice should be boiled in just sufficient water consistent with boiling, so that the water is retained in the rice (ফেন না গালা) and there should be no excess of water, which could be thrown off—as is the usual custom.

III

THE League of Nations Inter-Governmental Conference of the Far Eastern Countries on Rural Hygiene held in Java in 1937 took up this problem of nutrition from rice. They were very emphatic about the use of under-milled rice. It was found by them that in many countries, the poorer classes consume foods other than rice in small quantities, and it was very difficult, for economic reasons, to increase the amount of supplementary foods in their list. In such circumstances the nutritive value of rice, the main article of their food, which is influenced by the degree of milling becomes of great importance. This conference strongly recommended that "the Government concerned, should make a thorough investigation of nutritional, commercial and economic and psychological aspects of the problem, special attention being given to the possibility of checking the spread of mechanical rice mills in rural areas, with a view to conserving the healthy habits of consuming home-pounded rice and to means of making under-milled rice easily available for those who wish to purchase it."

Dietary surveys, that have been carried out on samples of group of families in various parts of India, widely separated from each other, from Kashmir in the North to Trichinopoly in the South, have shown that the diet of the poor rice-eater is astonishingly uniform throughout India. Rice provides about 90% of the energy value of their diets. Only relatively small quantities of other foods such as pulses (*dal*), vegetables, fruits and fish and meat are included. Milk and milk products are taken by the poorer classes in rice-eating areas in negligible quantities or not at all. Under the circumstances special attention must be paid to the nutritive value of their staple food—rice itself.

Every one is aware that protein is the most important constituent of our food. It supplies to us the elements necessary for the growth, maintenance and repair of the tissues, besides producing the hormones, so essential for us As compared with other cereals, the protein contents of rice is low. The table given below shows the percentage of protein and fat contents in certain cereals:

Cereals	*Protein*	*Fat*
Whole Wheat Atta ...	11·8	1·5
Refined Maida ...	11	0·9
Barley	11·5	1·3
Maize (*Bhutta*) ...	11·1	3·6
Oat	13·6	7·6
Rice (hand-pounded) ...	8·5	0·6
Rice (milled) ...	6·4	0·4
Chira	6·6	1·2
Khai	7·5	1·0
Muri	7·3	1·0

Experimentally it has been found that rice proteins have a fairly high "biological value", *i.e.*, they are better assimilated and can fulfil the needs of the body with reasonable efficiency. A lesser quantity of these proteins are required to keep the body in the same condition than proteins of lower "biological value". For this reason amongst others, deficiency of protein is not one of the important defects of typical rice eater's diets as compared with the wheat eater of the same economic status

Like other cereals rice has very little fat. A typical rice-eater gets more or less 20 grams of fat daily, whereas the normal requirement is at least three times that amount. The main function of fat is the same as that of carbohydrate The one is easily converted into the other in the human body. It has not been proved that low consumption of fat produces any ill effects. Therefore rice must not be condemned because of its poor fat content.

In the field of mineral and vitamins the typical rice-eater has to be specially careful. Rice has got a good store of vitamin of the "B" group, and of the mineral Phosphorus. It is deficient in vitamin A, which keeps the body healthy The rice-eater must depend on the other sources for adequate supply of this vitamin. Diseases due to the vitamin A defect are quite common in India This vitamin maintains the normal structure and function of the epithelial tissues It is also concerned in the formation of visual purple. Gastric and duodenal ulcers, so common in our country, may be due to the want of this vitamin in our food. Xerophthalmia, an eye condition common in children in India Phrynoderma (Toadskin), a dry and hyperkeratosis of skin, and Night Blindness are some of the other diseases caused by deficiency of Vitamin A

Iron and calcium are the chief minerals which are not adequate in rice Unfortunately, whenever a rice-eater suffers from diseases like Malaria, Aukytootoma (Hook-worm) so common in our country, causing destruction of corpuscles and loss of blood, or similar condition due to pregnancy and child birth, it becomes difficult for the patient to recoup the blood lost owing to the want of adequate quantity of iron in the food consumed The disease *Shutika* (সূতিকা), from which a large percentage of our women suffer after child-birth, is only a variety of anaemia. Adequate supply of food containing this mineral should be supplied to these persons, at the convalescent stage, after malaria and other diseases as well as during pregnancy and after child-birth. The following foods contain iron—the essential constituent of

Hemoglobin—w[illegible]s found in the red blood cells :—

ANIMAL FOO[illegible]*t, Liver, Kidney, Brain* and *Hea[illegible]o lean muscles of Lamb, Beef, V[illegible]ork, Egg (specially the Yolk)* and [illegible]*p*.

VEGETABLE [illegible]—*Green leaves : Beet, Dandel[illegible], Mustard greens, Spinach.*

DRIED FRU[illegible]—*Apricots, Peaches, Currants, Dates[illegible], Prunes, Raisins.*

LEGUMES—*Beans, Peas,* dried or fresh.

WHOLE GRAIN CEREALS OR FLOURS—*Wheat, Barley Oat, Rye.*

SYRUPS—*Molasses, Cane.*

NUTS—*Almond, Cashew Nut, Hazel Nut, Walnut.*

Calcium is very essential for the formation of bone and teeth. In fact, over 90% of the calcium in the body are found in these. The rice-eater must supplement his diet with milk, cheese, *chhana*, eggs and vegetables—specially cabbage, cauliflower, spinach, and *sagas* (শাক) to get a good supply of calcium.

IV

LET us now turn to other defects of the poor rice-eaters' diet and see if these defects can be remedied.

Most of the poor people can afford to add very little food-stuff complementary to their rice diet. The middle class people also, in most cases, due to long-continued habits and social customs and prejudices, do not take other foods rightly balanced with a properly cooked rice diet.

We have seen that if the rice is properly cooked (*i.e.*, parboiled hand-pounded rice boiled not in excess of water but in just sufficient water to avoid the extra water—ফেন—being thrown off) contains the mineral phosphorus, necessary for healthy growth and living. It has quite a sufficient amount of useful water-soluble Vitamins of B_1 and B_2 groups. It is deficient in proteins, Vitamin A, C and calcium and iron. The diet of rice-eaters, therefore, must be supplemented in such a way as to contain these missing factors.

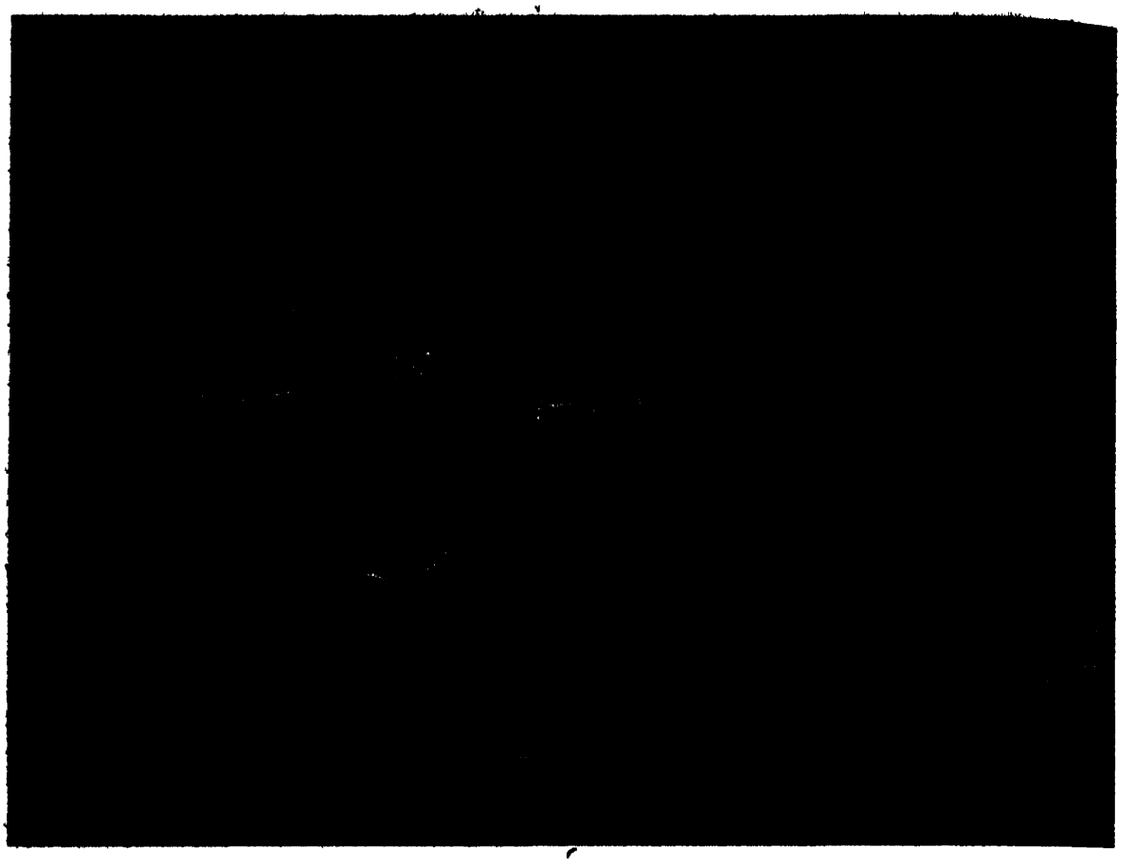
To be brief, I am concluding by giving here a table showing what is the usual constituent of the food which the Bengali middle-class people usually consume and what should be done to make it a proper well-balanced diet.

Before concluding, I must point out that in Bengal at present over 80% of the rice-eaters are forced to eat milled—in most cases highly milled—rice. The number of rice mills are increasing every year. According to the Government statistics in 1938, there were 453 big factories in Bengal. Of this the biggest number, 295 (about 66%), were rice mills. In this year of grace 1941 the number must be nearing 400. The number of small rice mills are to be counted in thousands, these being invariably found in villages containing a population of 2,000 or even less.

Articles of food.	Amount usually taken (chhatanks)	Amount which should be taken to make it a well-balanced diet. (chhatanks)
Rice ...	8—24	16
Pulses (*Dal*) ...	0·25 to 0·5	2
Milk ...	negligible amount	4
Leafy vegetables	0·25 to 0·5	2
Non-leafy ,,	1 to 2·5	3
Fruits ...	negligible	1
Oils & fats ...	less than 0·5	1
Fish, meat egg (animal protein)	0·25 to 0·5	2 (If milk is taken this can be reduced to 1·5)

This extensive growth in the number of rice mills is bound up with other changes in the economic life of the people, particularly as the development of roads and transport facilities enables paddy-growers to bring their grains to the mills. Besides, internal combustion steam engines have made it possible for the middle class people to start small mills, in far off places on their own. This has played havoc and led to the ancient practice of hand and *Dhenki* pounding of rice being totally abandoned.

V



LAZINESS or love of ease on the part of the villager is the chief cause of the popularity of the rice mill. Home-pounding of rice is not hard work. Three to four hundred strokes of a pounder, which weighs about 2½ to 3 seers, will pound five *poas* of paddy. About 10 minutes' work with this quantity of paddy will produce about 3 *poas* of rice. Allowing for time occupied in winnowing, it can be safely taken that two women can, in each home, pound enough rice for the daily requirements of an average family. If each person pounded the rice he takes daily, the task would take less than 10 minutes to do. The average villager has plenty of leisure, and it is not unlikely that the time which the village women used to spend in pounding rice is at present spent in doing nothing.

Again, by storing for household consumption quantities of paddy husked at the mills, the peasant not only has to pay some extra charge, but has to carry the paddy to the mill, loses the husk which, by the way, is quite a good fuel, and high nutritive values in the germ and pericap of the rice.

Machinery was invented to save labour. In the case of rice mills, however, it has decidedly gone against healthy living of the average people. For, in the milling processes, the paddy is deprived of very valuable nutrition, and the villager is economically weakened in the bargin. It will be useful to remember that the husk removed by hand-pounding can be used as fuel and any bran removed by pounding may be used to make cakes (পিঠা) for human consumption or as cattle food. The loss of these by-products is a great disadvantage attributable to the spread of rice mills.

The well-to-do and middle-class people usually prefer white, well-polished rice simply because they are more pleasing to the eyes, and perhaps, more palatable than coarse varieties of rice. The poor always try to imitate the fashionable rich. It is, therefore, the duty of the educated people to take to the use of hand or *dhenki*-pounded rice, chiefly for their own benefit and to influence their less fortunate neighbours.

To my mind, the spread of rice mills must be prevented by legislation. Our politicians should bring up this factor of deterioration in the nutritive value of milled rice to the serious notice of his constituents and influence them to go back to the old habit of hand-pounding the rice. In this way, a good deal of educative propaganda could be done which will gradually force the present mill-owners to close down and thereby check the alarmig spread of an obvious health evil. The propaganda should also be carried on by all available means, by every educated person and organisation to create a popular demand for the rice which has the outer layers in tact. This demand can be met either by some pounded rice or undermilled rice produced by the mills. This demand will encourage the growth in the villages of "cottage industry" which is one of the accredited aims of the rural reconstruction organisations in Bengal and elsewhere. Government may also adopt the practice of using such home-pounded rice for all institutions under their control; the hospital and educational authorities controlling school and college boarding houses may also insist on the use of this rice only. This will go a long way in creating a good demand for the hand pounded and better rice and thus afford facilities for getting a little food to the poor and needy and also ensure better health for the consumers.

—*Pichola Lake*

Where HEALTH *and* EDUCATION *Go Hand in Hand*

A NOVEL SCHOOL AT UDAIPUR

By
ADRIENNE MOORE

Illustrated with photographs taken by the writer

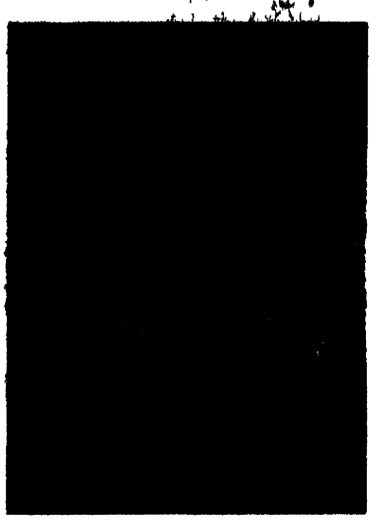
A soft veil of early morning mist clung tenaciously to Pichola Lake, the pearly water-palace—where Shah Jahan as Prince Khurram, fugitive from his father's wrath, once spent restless nights—slept with shut eyes awaiting the rising sun, the stern opaline walls of the Maharana's castle rose majestically from the shores—white plastered houses clustering around their base like chicks around a mother hen In the distance, near and far, the naked hills rolled like dunes towards the lake, and on the highest sat Sajjangarh Palace, pointing its finger towards the sky This is Udaipur—blue, white and gold—under the hot rays of the sun, a dreamy land of long ago in the soft half light of morning and the lingering rays of evening, the Never Never Land of India where medievalism sleeps awaiting the touch of the fairy prince like Sleeping Beauty in the old fairy tale And he is at the threshold though fair Udaipur knows it not

In India's most medieval kingdom is one of India's most progressive and modern schools Slowly but surely the Middle Ages are being pushed back, modernisation is coming to give a new life to this lovely memory of the past Like Pandora and her box, the *Vidya Bhawan* is letting loose the ideas of another era into a beautiful but static world

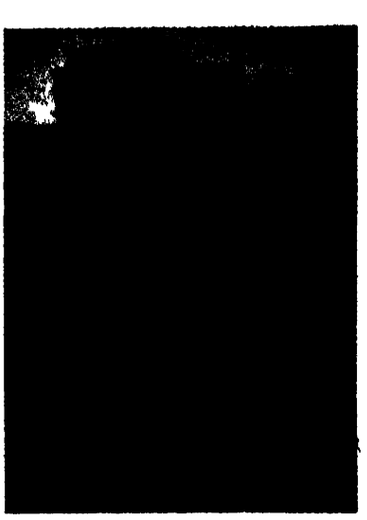
Needless to say it was a surprise to find such a school as *Vidya Bhawan* at Udaipur It is further ahead in its ideas of education than 99 percent of the schools of India It is a school with a purpose The motivating force behind the scene is Dr Mohan Singh Mehta, descendant of a long line of State administrators Dr Mehta himself was formerly Revenue Officer at Udaipur and also Prime Minister of a neighbouring State His interest in education was first stimulated by the Boy Scout movement *Vidya Bhawan* is, as a result, a combination of scouting with its work plan and out-of-doors life and modern progressive methods of education plus a wholesome

—*In India's most medieval kingdom*

amount of discipline and fixed curriculum.

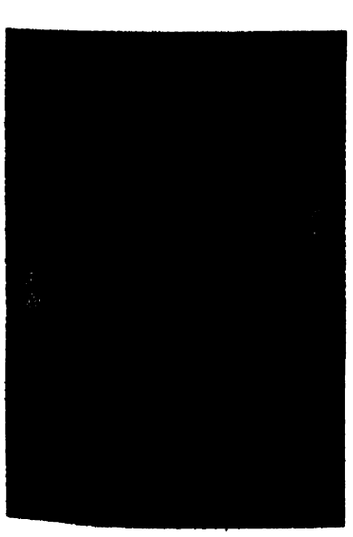


II



VIDYA BHAWAN is the anomaly of Udaipur It is co-educational amid one of India's most *purdah*-conscious spots Only this February the *purdah* ladies of Udaipur got together for the first time in the history of the State The common cause was war work the scene, the Residency And this after weeks of preparation The gathering was finally made possible, in spite of the trepidations of worried husbands, by the stamp of approval of the Maharana Some of the anxious spouses even went so far as to demand assurances that none of these new fangled ideas would be suggested to their wives There is a deadly fear of change in the *status quo* in Udaipur but the approval of the ruler went far towards quieting their fears

The school aims at creating good citizens in a State where citizenship is still a word belonging to another world It tries to develop personality in each and every child and create a feeling of fellowship, and this in a community so class-conscious that a man or woman of standing dare not go to the bazaar to make a purchase without losing face There is a constant endeavour to handle children in this school in the most up to-date manner Problem children or children with problems are given careful tests and handled by Mr Shrimali, the Principal, who is an expert in psycho-analysis —and this in an atmosphere where scientific research is yet a myth The institution caters not primarily to the rich or the educated but to the middle and lower middle classes To obtain such students—those who really form the State of Udaipur and the backbone of India—the tuition fees are kept amazingly low —and this when throughout India modern educational facilities are so costly that only the upper classes can afford them. And last but not least there is stress on health not only of body but of mind and heart,—and this when the majority of schools in India do not even have playgrounds



III

IN Udaipur, if not in India, *Vidya Bhawan* is revolutionary And it has paid a dear price for its very existence. For nine long years it has struggled not only financially but also against the almost overwhelming forces of retrogression and *status quo* There has been official opposition, social prejudice and even active suspicion to fight Certain members of the official circles classed the school as radical and, therefore, dangerous But this feeling of distrust has now passed with the advent of an enlightened Prime Minister, Sir Diwan Bahadur T Vijiaraghavachariar, who, in his own way, is also pushing back the Middle Ages

—*The stern walls of the Maharana's castle*

—*The pearly water-palace at Pichola lake*

THE VIDYA BHAWAN AT UDAIPUR
Where Nature shares the teacher's task

Already during his one year of Diwanship he has passed an anti-child marriage law, which not only forbids marriage under 13 but also forbids marriage between girls under 25 with men over 50. And this while modern Bikaner has not even considered such a law. Moreover, he has just recently announced the formation of a Legislative Chamber, which will allow for public expression of opinions which were previously suppressed. Through his efforts a small State grant has been given to *Vidya Bhawan*.

The storms which have blown around the generous open verandahs of the main school building lying next to Nature in the Udaipur sunshine, have been weathered not only because of the founder but also the Principal and the staff, who, inspired by their work, have refused to sacrifice their ideals. *Vidya Bhawan* is an idealist's dream.

IV

IN summarizing the work of the school it is correct to say that the school ideal is Health, not the passing of certain examinations, which is the ideal of 99 per cent of schools in India. Not that *Vidya Bhawan* boys do not pass,—far from it. But examinations are looked upon in their correct bearing and the teachers do not forget that the prime aim of education is not a degree but health—health of mind, heart and

THE FOUNDER OF THE SCHOOL

body,—a health which means balance, a sense of proportion and self-reliance. In line with this also is the school's refusal to give any political bias to its principles, either national or anti-national. It aims solely to build up citizens who can think and choose for themselves.

The most important factor in the building of health is the individual child. To reach each boy a group system has been brought into use. All the children are organized into several separate groups. The children themselves do the organizing. Each group plans its own social functions, camping and short outings. Each group has a teacher-supervisor. Groups also arrange public functions, and each group is responsible for one important function of the year. Supplementing this is the School *Panchayat*. Here certain teachers join with the boys in settling school problems and disputes. School events are also planned by this council.

Those few children whose problems cannot be reached through the group are given special care. Kinks are ironed out after careful mental tests. The school often endeavours to enlist the help of the parents in solving home problems which may be inhibiting a child. Normalcy is sought at every turn. Individual cases of difficulty which might later develop into something serious in the adult have not infrequently been traced and cured. Citizenship "talks" further help to develop

healthy mind[illegible] habits During the course of [illegible] year some 29 or 30 such "talk[illegible]" are usually given, and the subje[illegible]re so varied that the wireless and the sex difficulties in adolescence recently found themselves in the same schedule of lectures These "talks" are given by members of the Faculty

Study Hm in the Open Air Session

V

PHYSICAL well-being as well as respect for the dignity of labour is cultivated in the child at *Vidya Bhavan* through a Labour Unit Scheme Each student is assigned some manual labour about the school In fact, it is through the teaching of respect for manual labour that the school has been able to create a type of student not usually found in India And certainly the departure is unusual in a medieval State where manual labour definitely labels a man But such citizens will be capable of handling the tasks which lie ahead of the young men of this State where everything is yet to be done in order to bring it into the modern world Quite typical of such work is the planting and care of plants in the school grounds Sometimes these activities extend to the mending of stone walls and the erection of barriers to keep cattle from straying into the school grounds Manual training is further extended by many during the hobby hour At such a time one can find boys busy in the carpentry shop, painting, drawing, doing handicrafts such as leather work, raffia etc, or strumming on the strings of some beloved instrument Other hobbies are also indulged in during the free period set aside for this purpose Even after school hours I saw several boys fooling around amid the carpentry tools as only boys can, and one young fellow was admiring an elegant wicker chair he had made during the open air session when craft and manual labour are strongly stressed He was all unaware that its legs were very rickety indeed

Physical Training in Vidya Bhavan

VI

WITH Nature always in the background and fresh air and exercise aplenty, there are still the regular sports and exercises Unfortunately, or fortunately, the playgrounds of the school are not as perfectly developed as in some other institutions due to lack of funds This has caused the curriculum to include more natural activities such as walks, camping etc There are plans however for the development of a sports field Most of the children, thanks to the clean life, severely plain way of living and simple but wholesome food, gain weight A careful record is kept of this, and physical tests are made twice a year No young body is allowed to be impaired by excessive bookwormishness though the library is a popular rendezvous

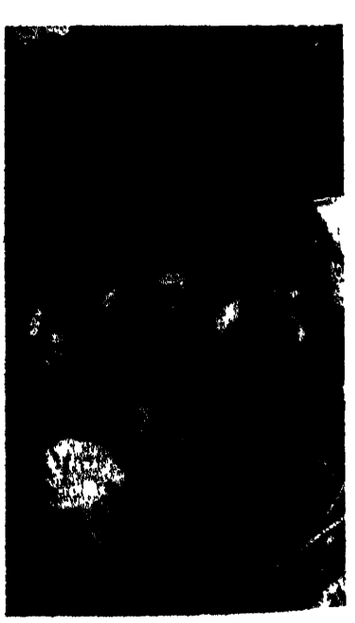
The high point in *Vidya Bhawan* life and health development is the annual outing For two weeks the school curriculum is completely disarranged for the satisfaction of youthful curiosity

Labour Unit Scheme, watering young plants

The School Orchestra at practice

Mathematics and all the stuffy subjects which harass youth are temporarily abandoned. Some ideal camp spot is chosen where fresh water is obtainable and where history lingers. The children and teachers usually walk to and from the camp, most of which are from 20 to 30 miles away from the school. The walking is done in easy stages early in the morning and late in the afternoon and early evening. Udaipur abounds in delightful camping spots. Sometimes it is the high land near the tank of some passed "descendant of the sun", for the rulers of Udaipur claim descent from this ruler of the heavens. Other times some old mine is near by to explore. The village of a criminal tribe was once in the agenda. The Bhils are everywhere interesting and have not escaped the attention of the students. They are to be seen everywhere in Merwar. The women can be recognized by their numerous brass anklets which cover their legs from ankles to knees and are effective in protection from snake bite. Those who still live in the hills go semi-clothed. The children have several times turned their attention during an open air session to the study of their habits and traditions. Folk songs and dances have not been overlooked.

The whole school is divided into four *Shrenis* or groups composed of from classes III to IX. Those under the third form are considered to be too young to benefit by the excursion. Each group consists of about fifteen children and three teachers.



VII

NOT only do the students walk to the camping place but when they get there they must care for themselves,—wash, clean and mend. Each day begins with a ten-minute talk on some subject of interest and ends with a period of meditation at sunset. After the evening meal the children sit around the camp-fire and learn folk-dancing or weave some plan for the Visitor's Day, which comes on the last day of the session.

As a rule exercise and sunshine are combined with interest. The *shrenis* are divided into study groups. The locale is always borne in mind. On a recent trip to Jawar, the older boys confined their interests to Literature, Social Science and Art. Those who chose Literature collected folk songs, wrote essays, noted dialects etc. The Social Science group studied the economic and social problems of the local aborigines—the Minas. When they visited nearby points of interest, lectures were given on the history and interpretation of the monuments. The art group drew the children of the neighbourhood and studied folk-dancing. Exhibits were planned. Each child chose his or her own particular phase of the locale which appealed. In some form or other, old and young were made aware and interested in the local peoples, their problems and forms of self-expression as well as the history of the place in relation to Udaipur. The whole scheme not only stimulates a love of the out-of-doors, imagination and sympathy but also, through the boy scout tactics, develops leadership. In all capacities, the children are made responsible for the venture. Here a sense of reality and health are developed side by side.

VIII

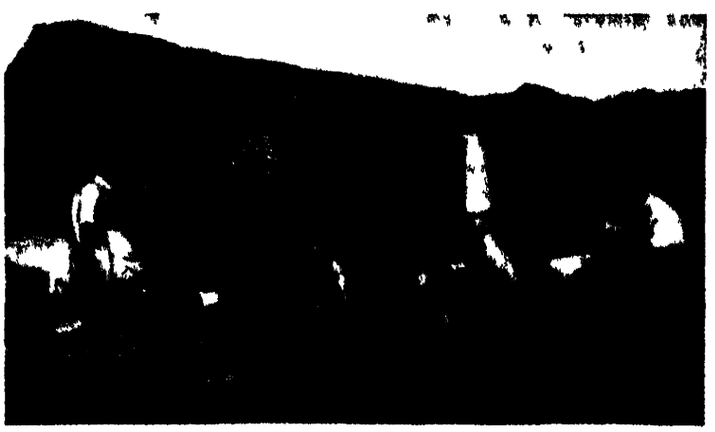
WALKING eight to fourteen miles a day to reach the camp spot and to return to the school, the children of *Vidya Bhawan* cannot help but can be made aware of the world in which they live. While city children go to school in buses and closed conveyances, these boys and girls commune with Nature out-of-doors. Through the cool of the evening and the early hours of the morning their cheery voices can be heard. They can hardly wait to reach the camp spot. For arrival means the beginning of a series of fascinating ventures. Some times they go to see an old hand loom on which the local people weave their primitive cloth ; or, perhaps, it is a local mine or some village to inspect. In one session they made a model of an ideal village much to the amusement of the villagers, who good-naturedly listened to the children describe to them the advantages of their planned utopia. The last half of the session is spent in preparing reports of what they have seen and done and sharing their discoveries with their fellow-students

At cane and bamboo work

The last day of the session is the big event when some 100 visitors friends, parents, residents of near about towns, gather to see the programme staged by the ungsters.

IX

THE Open Air Session crystallizes what this school desires to [illegible] Whereas formalized health routines are undoubtedly advantageous as all too often they have become a substitute for genuine outdoor life All the joy has been taken out of health routine by this formalization Children quite frequently have come to think of it as a routine of vaccination specialized exercises and tests Not even organized sports give what the natural life out of doors can contribute The emphasis is too frequently put on competition rather than sheer enjoyment and the body only is the gainer or loser while the mind and heart remain fallow Exercise taken in its natural form and in connection with some interest has almost ceased to exist in modern school routines In this return to natural child development *Vidya Bhavan* is cutting a new trail across Indian education Its contribution to well rounded health of mind body and heart cannot be underestimated



Nature Study

The School goes to Camp

X

WHERE the mighty Rajput warriors once rode the barren hills and plains and watered their horses in the cool lakes, a new type of educational venture is being worked out Udaipur may be modernized but not without understanding she may be changed but not without appreciation of her beauty she may be developed but not without regard to her needs —at least such is the hope of the founder of *Vidya Bhavan* This school well may be the pebble which is needed to be dropped in the all too-stagnant waters of Indian education

HEALTH & SANITATION

Duties of A Citizen

By

AMULYARATAN CHAKRAVARTI, B.SC., M.B. (Cal.), F.R.C.P. F.R.S. (Edin.)

Calcutta

IN order to live in good health and enjoy all possible amenities of life, one should develop civic consciousness and must also be deserving of the amenities that one looks for and enjoys; and, at the same time, one should lend personal and active co-operation in the faithful discharge of mutual civic obligations. It is not enough to pay certain taxes, or to go, once in every three years, to the election booth to vote for a certain city father. Every individual, big or small, rich or poor, should be educated in the broad principles of personal and public hygiene, the elementary principles of prophylaxis against preventible diseases, the value of pure air, pure water and pure food, and, above all, *cultivate* cleanliness in personal habits and in his home and surroundings.

This, in fact should be the universal and primary lesson compulsory for every progressive individual resident in city, town or village.

Education is, therefore, the first item of life of a citizen, and the education given in schools must incorporate these elementary principles of civic life. Apart from school teaching, there should be organised village-to-village propaganda, by demonstrations and lectures by bands of volunteers well-equipped with facts and figures. And, above all, the children should be taught at home by their parents, with the help of suitable picture books and other Kindergarten methods. It is, of course, a big job and the responsibility for achieving this does not rest solely upon the city municipality or the Government, but every individual must contribute his personal quota to build a happy and healthy corporate life.

THE HOME

IN order to *clean your own home* you should see that you do not throw the refuse on the street or inside your neighbour's compound! Such carelessness and callousness on your part amount to criminal viciousness. For, what is a nuisance to you, is also a nuisance to everybody. Herein lies your civic duty. You must not only be content with making your own little home hale and happy, but you should work to make every home of your city or village like yours. This is the contribution demanded of you.

You must, of course, be very careful about your health. If your village is *malarious*, would it be enough to cry for free distribution of quinine by the Government or the District Board? You should realise that an annual expenditure of 35 lakhs of rupees is involved, according to satistics available, to cure malarial attacks and prevent relapses It is your plain duty to help to stop this recurring drain on your poor country.

DISEASES

THIS is the problem of Bengal in particular Here, help from every individual is as much necessary as State aid in the matter of overcoming Malaria. Jungles have to be cleared, ditches and tanks filled up and mosquito-breeding prevented by joint co-operation of villargers, municipality with bigger *schemes of drainage* and *water supply*. Many of the Bengal rivers are silted up and, during the major part of the year, exhibit their skeletons in the shape of shallow beds of every conceivable shape and size, to serve as good breeding media for mosquitoes. All these dying rivers must be made alive, and shallow wells and dirty tanks must be replaced by tube-wells. This would incidentally also solve the problem of cholera and other water-borne diseases as diarrhoea, dysentery and typhoid. Good and edible water in larger towns and cities must be adequately provided by municipal corporations.

REFUSE

HOUSE refuse in the *mofussil* should be trenched daily in dug-outs adjoining garden spaces available in almost every house. They will provide very good manure next year. In cities, these, along with street refuse, should be collected in covered pits at suitable distances and quickly removed and burnt or trenched. The pits must, of course, be daily cleaned and disinfected to prevent filth, flies and nuisance. Regarding the disposal of night soil, good sewerage, of course, is ideal; but even in a century, Calcutta, which claims to be the premier City of India, could not have it done throughout. It is a pity indeed. But this nuisance must be stopped at once. Where very costly sewarage is not possible, septic tanks sewerage is not possible, septic tanks the well system or trenching at every home should be followed. A point to be considered is that in a short time to come, the *methar* class will be almost extinct due to the success of the Harijan movement. The *surface drains* in many parts, specially in the *bustee* areas, are another nasty blot, and need wholesale overhauling All surface drains must be made *pucca* and effective drainage obtained. And all these could not be done a moment too soon, even if done to-morrow.

SMOKE

THE Smoke Nuisance is another evil which needs ruthless eradication with strong measures. Due to large areas of *bustees* occupying a good part of this "City of Palaces", and also due to the growing number of 'flats', each with open and portable hearths using cowdung cakes for igniting coal, Calcutta, specially the "native quarters" becomes a veritable smoke-pit, particularly in winter, when smoke starts gathering from 5 P.M and gets denser with the approach of darkness By 7 P.M one cannot so much as take a full breath without choking, nor look without the eyes burning. It is the plain duty of the Corporation to enforce that every house, new or old, should be provided with smoke-proof kitchens or use wood-coal instead of cakes of cowdung Similarly, all oil mills and other mills within residential areas must be electrified.

FOOD

LASTLY, I would once again repeat the warning against *bad food dirty sweets and adulterated food* materials More watchful care and stringent measures must be adopted by the Corporation to ensure the supply of pure food Better do without milk or *ghee* than eat dirty white mixture sold as milk or

Paper Protection

By

SUMANTRA MAHALANOBIS
Calcutta

I

APART from the fact that dissemination of health knowledge, like other information, is largely done through the agency of paper, paper has a more direct bearing on health. Paper to-day is largely used for wrapping foodstuffs among other articles. Since even a hundred years ago paper was not a very common article, the practice of using it as wrapping material must be a comparatively recent practice.

In present times there is a much greater distribution of foodstuffs and over a wider area too. And in order to preserve them in good condition they have to be properly wrapped. Almost every article of food bought from a shop to-day, is wrapped in paper before it is delivered to the customer. Even in this country *sal* leaves are gradually giving place to paper wrappers, especially in the cities. Attractive cartons are rapidly replacing the baskets made of split bamboo and Sal leaves of old. These cartons, in addition to being more secure and therefore giving better protection are also more portable. Moreover they are excellent from the point of view of advertisement, as they bear the name of the manufacturer or dealer. The public also, naturally, prefer to purchase articles that are properly and perhaps attractively packed. The cost of wrapping however is to be considered as it is often a predominant factor in the matter of sales. But since an attractive packing more often than not induces a greater sale, the extra cost and trouble are certainly worthwhile.

II

THE indiscriminate use of paper in wrapping articles of food is however not to be encouraged. In this country the poor vendor of foodstuff uses old and certainly not too clean paper for wrapping purposes. And it is far better to use *sal* or other leaves as they could be easily cleaned by washing.

The mere ability to keep out dirt is not the only requirement to be looked for in wrapping paper, and therefore any and every paper even of good quality is not suitable for wrapping foodstuffs. Different articles of food need different kinds of paper for their proper preservation, and a few words about their manufacture will not be out of place here.

One of the essential requirements of wrapping paper for foodstuffs is, that it should not support mould growth inside, in addition to preventing the ingress of dust from outside. Again as a protection against the latter danger, it should not be too brittle so as to crack easily, especially at the corners. Another difficulty is often noticed in the matter of wrapping articles like bread, for bread like many other substances of delicate flavour, is apt to absorb the aroma of any substance in its vicinity, especially when it is freshly baked. This however could be avoided if a self sealing paper of good quality is used and sufficient care is taken against overheating. Investigations have proved that the wrapping of bread has no deleterious effect on its quality, moreover it has the added advantage of preventing contamination and also preserving it for a prolonged period, in a reasonably good condition.

Wood cellulose is chiefly used in the manufacture of paper, though a great deal of paper is also made from rags and esparto grass. Old rope and cordage are also used for very strong high grade cartons and these are classed as rags. The cellulose raw material is first reduced to a condition of loose fibres and mixed with a large quantity of water. The fibres are then compressed in a hollander to give the desired degree of hydration and cohesiveness; resin and alum are added at this stage to stiffen it and give it a smooth surface. Finally, the mixture is dried and calendered and cut up to required sizes. The above may be described as the essentials of paper making. Strong paper like kraft paper or weak newsprint, both may be made this way. It could be made of any colour too and is also waterproof to a certain extent, due to the sizing.

Further waterproofing may be done by waxing or lacquering the paper. Waxing may be done by passing the paper through a bath of molten wax or bringing it into contact with the waxed surface of a roller. There is also the method of hot pressing by which a greater penetration of wax into the paper is achieved. Lacquering is done by cellulose lacquer, analogous to the lacquers used on motor vehicles, without the pigment.

III

WATERPROOFED paper is especially suitable for certain articles of food. Salted nuts and fried potatoes are wrapped advantageously in waterproof paper. It prevents the grease from contact and facilitates carrying and, which is more important, it keeps fresh and retains the palatability of the contents.

Materials like butter which are more wet, need a stronger and more water-repellent paper. Vegetable parchment is used for such purposes, and its great strength even when wet is due to the parchmentising process. The sheet of paper is passed through a bath of cold sulphuric acid solution for a short time, as a result of which the fibres of the paper swell up and become gelatinous, and then it is pressed between rollers. The "gelatinasation" is finally stopped by washing it in plenty of water.

Vegetable parchment, at this stage, could hardly be called paper, because after undergoing the above procedure the structure of the fibres completely disappears and in its place there is a continuous film of cellulose which gives it its required strength. Afterwards it is treated with some deliquescent agent, to prevent it from becoming hard and brittle when dry. In the case of wrappers for foodstuffs, glycerine is the best deliquescent as it is quite harmless.

In addition to waterproofed paper, there is a growing demand for transparent wrapping paper; this permits the customer to see the contents and is thus of advantage to both dealer and purchaser. This paper is also, of course, film, where the process of gelatinising is continued even farther than it is in the vegetable parchmenting process, as described above. The earliest brand of this is familiar to many of us under its registered name Cellophane.

IV

IT is not within the scope of this article to go into further details of manufacture. Suffice it to say that great attention should be paid toward scrutinising all wrapping material for purity. Substances like lead, arsenic, copper etc., are apt to enter the material in the course of manufacture; and unless wrappers are freed from such toxic substances they would defeat their very purpose by becoming a source of disease, instead of a protection against it. It may be added, however, that proper care could easily prevent the ingress

MENTAL HEALTH
THROUGH
CONQUEST *of* HAPPINESS

By

DR. D. N. MAITRA

Health Lecturer, School of Tropical Medicine,
Founder-Secretary, Bengal Social Service League
Calcutta

IF a discourse on Mental Health be considered appropriate to the Annual Health Number of the *Calcutta Municipal Gazette*, our approach to the matter in this article may be considered as laid on rather unorthodox and unconventional lines.

MENTAL MALADIES

MAN is made up of Body and Mind. Whereas every effort is being made to prevent and cure physical ailments—be it a cut or a cold, are any such efforts made to prevent or cure mental maladies, except perhaps in Churches and through Scriptures; or, at the other extreme, in the Mental Hospitals, to tackle a few lunatics and imbeciles, who are too far gone to feel unhappy and have become open disturbers of family or social peace?

Many indeed are our Mental Maladies that daily, nay hourly, disturb individual, family, social and, specially to-day, communal and international peace and happiness. To name a few: Abusiveness, aggressiveness and greed; anxieties and worries that are baseless and useless; feelings of boredom; careless, irresponsible talks, vicious habit of calumny; callousness of heart; sufferings from disappointments and disillusions; egoistic pride and vanity; envy and jealousy, idle baseless fears or nervousness; depression from failure; hectic, high-tension life of rush; ignorance; intolerance, lust of passion, palate and power; mistrust and misunderstanding, or lack of understanding, quarrelsomeness; narrow-mindedness and meanness; selfishness; habits of prying into others' affairs, of gossip and scandal-mongering, lack of self-control, untruthfulness, or habit of exaggeration; unpunctuality and unreliability; and so on, diseases of the mind that are not merely the "business" of a particular individual only, but they disturb or dislocate the peace and happiness of the family or the society.

Where are, then, the Doctors and the Directors of Mental Health? Where are the recipes for its attainment and preservation? "The hygiene of the Nerves has been much too little studied".

Half-a-century ago a book used to be a popular light reading: "How to be happy though married". To-day the problem is: "How to be happy though alive". It is by the Conquest of Happiness, through the "Joy of Living" of the British, the "Lebens Freude" of the German, the "Joei de Vivre" of the French, the *"Anandam"* extolled in our Scriptures.

THE PHYSICAL BASIS

BUT the very first question that we must ask ourselves is,—Do we really seek to conquer, *i.e.*, acquire this joy and happiness in life, in a mental balance and serenity; and not to go under or suffer from the many causes that disturb that balance,—be they real, or—as is often—imaginary, physical or mental, economic or political, circumstantial or environmental, etc.? Strange as it might seem, many of us do not. These 'do-nots' seem to be rather unhappy unless they have some sufferings to nurse,—much or most of which is generally imaginary (please do not take offence!)—and to narrate, parade and even exaggerate them (excuse me!) mainly to enlist the sympathy of others. We do not feel happy unless we are told that we are not looking well; we even resent being told otherwise. Dare one tell a mother that the child in her arms is looking fine and healthy? You would be "casting an evil eye"! *This mentality has to be changed.*

The Health, Strength and Beauty of our figure and complexion, or, the "Character" of our body must be as much an object of pride, praise and solicitous care in their preservation, as we seek or claim for our Character or the "health, strength and beauty" of our mind. A constant and honest effort to attain and maintain a physical fitness through control and regulation of our ways of living, in the light of biological and eugenic laws and of sanitary science, would ensure the physical basis or foundation for the Conquest of Happiness or the Joy of Living.

But our discourse is mainly concerned with the Health of the Mind, call it, or separate it from, the Heart or the Soul,—Mind, which largely dominates and controls its physical counterpart.

Here we shall seek to prescribe a *practical* day-to-day recipe, related to our daily life in this world, not touching those higher metaphysical paths laid down in the *Geeta* and the *Upanishads*, which might undoubtedly be helpful in their own way, for the attainment of that absolute serenity and peace or "Nirvana", which, however, is not our immediate objective.

The Recipe for Mental Health

OUR Recipe is made up of a dozen ingredients, of which some are 'Don'ts' or Avoid, and some are 'Do's' or Cultivate.

THE FOUR 'SHIELDS

1. Avoid *too much occupation with or concern for small matters* and 'accumulations' that are not selected 'collections'. They load and worry the mind far too much, and usurp time that could be released for better and greater objects. Taking a larger or bolder view of life these smaller things sink away and disappear in their own small holes—and they do not matter.

2. Similarly, Avoid *too much occupation with Self*: either with one's beauty and a desire to be admired; or with a sense of too much self-importance; or even with a sense of sin and feeling of repentance, where the so-called 'sin' has been more imaginary—or related to a certain custom, tradition or superstition or unenlightened teaching,—than real. The antidote to all these is the development of an Individuality and Personality (see below) which gives one a backbone and does not make one ever-solicitous to 'curry' others' praise or favour.

Under this 'Self' comes the problem of Money which is almost a part of

one's self [illegible] need and value of money are underrated, as may be those of right and power, but only to a certain extent One should be strong and balanced enough to be able to cry halt to an *endless pursuit of wealth* whether in the Turf or in the share market, at a certain stage, and feel "rich" in the ascendancy thus gained by conquest of this craze With the besetting feeling of want—however well-off they may be, a relative feeling of morbid poverty, with its worries and anxieties, frets and fears excitement and depressions, these 'rich poor' could not be so happy as those 'poor-rich' who having conquered the craze are relatively rich, and above want and worries, they can thus enjoy the happiness and the joy of *giving* according to their capacity a Conquest of Happiness. Does not "the greatest happiness lie in making others happy?"

3 Allied to above,—Avoid (*unnecessary*) *fears, i e*, cultivate the spirit of courage physical and moral With more courage there would be less fear, less worry, less fatigue, less unhappiness in life Fear or 'Nervousness' is a distressing mental disease, cause of much mental suffering and annoyance to others Its cure is a matter of will and practice, the result is great

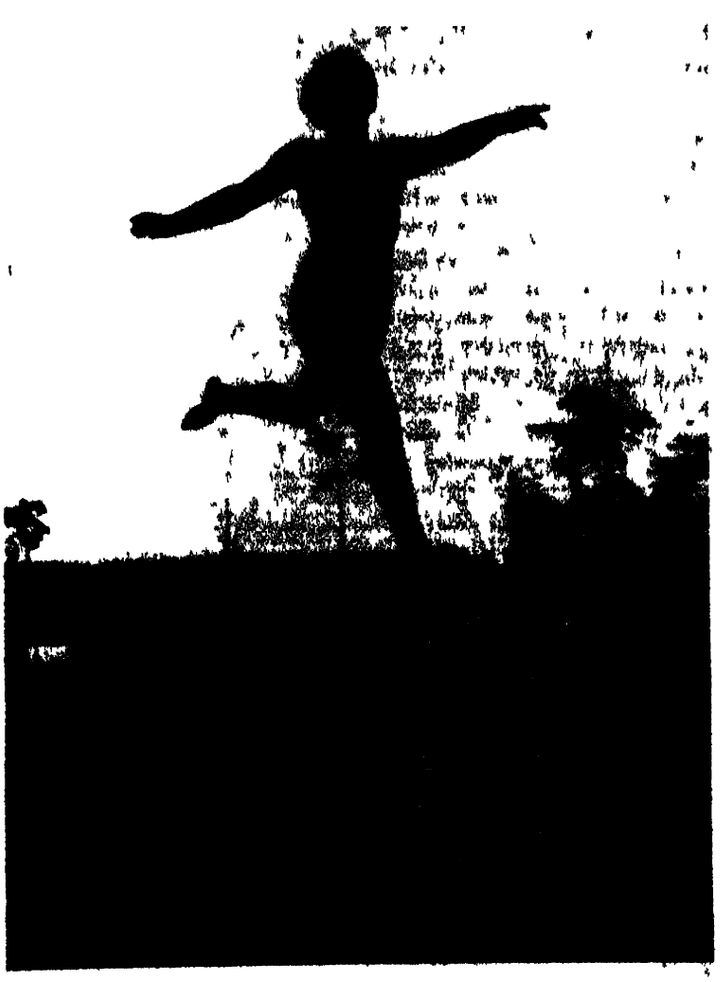
4 Avoid *envy and jealousy* It does not pay On the other hand, it kills the peace of one's mind and makes one very unhappy Antidote practise looking for, and praising, the good points in others Try to feel glad and not jealous, of others' success It lifts you as well as the other It makes the world we live in happier and sweeter Is it not worth while?

These are briefly four 'shields' of avoidance of unhappiness in life

THE EIGHT 'WEAPONS'

THE eight main 'weapons' for the Conquest of Happiness, or broadways to the Joyland of Life, are the eight 'Do's'

1 Cultivate the spirit and habit of CHEERFULNESS—a glow and scent that irradiates and perfumes your surroundings "Laugh and the world laughs with you" Have you a loud and hearty laugh? or your lips just twist a little at a corner? "Laugh and grow fat" says the proverb, meaning the opposite of a surly bony creature



2 Cultivate INTEREST IN YOUR WORK In any act, co-operation of the mind is a most important factor Should that interest be lacking, explore and find something even in that work to occupy your interest. Refuse to feel bored when you cannot possibly escape the situation This feeling of boredom is a cause of much unhappiness. The exercise of a little imagination, penetration, understanding, sympathy and adaptability will neutralise it Or, cultivate, as an antidote and balance, some special recreational hobby, be it a literary, musical or artistic pursuit or political or social work, photography or sports philately or collection of curios, travelling, which is as good or perhaps better than any, or any of the numerous pursuits, that without harming your health, purse or morals, may recreate you

3 From this comes the suggestion "KEEP YOUR HEART YOUNG" That was the only advice on the lips of the 70-year-old dying Professor to the young Prince in that well-known play of years ago, "Old Heidelberg" How early indeed do we get old, in body and mind, in energy and outlook, in the spirit of search and enterprise, in keenness for knowledge and endeavour—which, when lively, add so much to the Joy of Living

4 Allied to this is the other ingredient BE HUMAN—yes, humane too, but, be just a man without artificial kinks and reservations Such an attitude dissolves the barriers of Class and Caste, of intolerance and suspicion that divide man from man This humanity is a talisman that helps one at once to *be a friend and make a friend*. Hence comes what widens and broadens this step: the gift of FRIENDSHIP. How it enriches life and adds tremendously to the Joy of Living,—to be able to give and get love. This love of friendship breaks the shell of Ego. On how many real and dependable friends can you count who are actively solicitious and sincerely glad of your welfare and success? Who feel as strongly indignant of any attack or insinuation against your reputation, vehemently defending you and snubbing the backbiter, a friend who is prepared to make some sacrifice for you?

INNER STRENGTH

5 MAN is assailed on all sides by many malignant agencies of jealousy and envy, breeding malice and gossip,—"be thou as chaste as ice, as pure as snow" There is, again, the public opinion or even the criticism of every 'Tom, Dick or Harry' against your speaking or doing what you believe to be right and true, just and fair We feel upset, and like the father and son in the Donkey's fable of Aesop, we lose our backbone and feel unhappy Thus the fifth big step towards the Conquest

THE JOY OF LIFE

By Prof Senger, a typical specimen of contemporary German sculpture.

of Happiness is that sense of inner strength and satisfaction of conscience which comes from INDIVIDUALITY AND PERSONALITY supplying one with the right backbone. For the true Joy of Living, one must develop this backbone of personality which makes you "true to thine own self so thou canst be false to other men". "Be what you are", said Goethe; and be your truest and best. Such Personality needs that most important asset of character: Moral Courage.

6. Now we come to what is perhaps the most important constituent of the recipe that enables us to Conquer Happiness or serenity in life. It is what you may call a PHILOSOPHIC VIEW OF LIFE AND THINGS—a philosophic acceptance of an inevitable Truth—a philosophic interpretation of the Dispensation of the Providence—a philosophic attitude of Understanding and Toleration. This is not a book-knowledge of Philosophy, as a religious attitude or approach to life is not the same as erudition in the Scriptures. Our great Poet sang: "Tell your mind this to-day: Come weal or come woe, be prepared to accept the Truth easily with a grace." This philosophic attitude of mind, imbued with a spirit of UNDERSTANDING AND TOLERATION, helps one perhaps more than anything else, to overcome those unavoidable or insurmountable sorrows, mishaps, failures, or disappointments in life which we face so often. If there be one word that need be writ more boldly than any other in our heart for the attainment of Peace—whether individual, domestic, political or international—it is the word Understanding, with its adjunct Toleration, governed by one of the loftiest maxims of life—the greatest perhaps in the practical field of human dealings—*"Do unto others as you would they should do unto you"*.

7. Now let us ascend a little further up, on to the next great step: the ideal of FULLNESS OF LIFE, balanced by its FULFILMENT IN SERVICE. This fullness enriches life, contributes to a life more abundant: makes us LIVE, and not merely exist as birds and animals do. This fullness means living our fullest and highest, truest and deepest, in our body, mind and spirit, through all the doors of our senses, partaking,—and here mark the words—in BALANCE AND HARMONY, of all that God is ever spreading out and holding before us, on the 'table' of His Creation But that would be a miserly hoarding, a mere accumulation of the wealth—of knowledge, Joy, or earthly riches. The true Joy of Living demands that in fulfilment of our fullness we should almost empty ourselves out in the service of Humanity, for its peace, progress and happiness. Perhaps the highest practical concept of Religion,—a religion that regulates our conduct in this Life,—lies in that balanced harmony of approach that bridges or alliances our multiple 'self's, or desires, on the one hand, and the enjoyable objects of Sense on the other. There is Joy in such *complete* living, in this music of the Harmony of Life's Orchestra of many instruments of many notes and many tunes.

THE KEYNOTE

8. NOW we come to the top—to find the *keynote* by which to set all the keys of this Orchestra of the Joy of Living to get the grand and beautiful Music of Life. I one word it is to FIND AND FEEL HIM in our daily thoughts and activities to illumine, enliven and invigorate them—even as you fee' in the case of your earthly Beloved God is always there in our mind—call it your Soul; all that is needed is to feel Him, to turn on the 'tap', fully or even lightly of His perennial grace and blessing to 'irrigate the fields' of our daily life—and make it 'evergreen'! For ever we shall find in Him the strength in our struggles, and the solace in our sorrows, the support when all desert us the one True Friend, Philosopher and Guide who never fails He is as easily within reach and surrounding us as are light and air. With Him in our Soul, all efforts become sweet and easy

The numerous strings that compose the Harp of our Life, through constant conflict and friction of our modern daily life, get out of tune, the harmony of the music of our life suffers This spiritual Communion with Him, as our Supreme Beloved, will set these to tune and endow us with that Mental Health which, based on Love, Understanding Charity, a Richness of mind and a Philosophic outlook on Life, will ever enable us to Conquer Happiness for a Fuller life of Joy and peace and of sweetness and Service.

We have tried to give in this article as best as we could, the recipe of a Physical and Spiritual "cocktail", which can never intoxicate nor harm any, why not try it, and share with one another the Joy of Living?

HEALTH AND SANITATION

—Continued from page 108

gross animal fat or lard skilfully prepared to look like *ghee* by unscrupulous and wily traders. There should be Health Visitors to go from house to house to bring home to citizens their paramount duties in the matter of personal and social health and hygiene. The co-operation of citizens is essential to eradicate certain dirty practices which have become habits, merely due to carelessness. For instance, one still finds educated gentlemen and ladies *throwing litter* anywhere and everywhere, spitting promiscuously anywhere and everywhere, chucking dirt and filth, right in the streets and sometimes over the passers-by without the least thought or care.

Unless we take ourselves in hand; unless we wake up and destroy the sickening sluggishness which permeates our individual and civic life; unless we step out of the morbid mischief of the foul flippancies with which we deny ourselves even the primary wherewithals of healthy, normal existence; unless we, the citizens of Calcutta, shake off lethargy and languour and create a civic corporation, successfully coping with the enemies of healthy progress, mere bluff and bluster will not stop the terrible fate to which we are obviously foredoomed.

SWIMMING FOR WOMEN

In reply to an invitation for contributing an article to this Health Number of the *Municipal Gazette*, Dr. Edith Ghosh writes:—"I have only one suggestion to make and that is, it is high time the Corporation should provide an open air swimming pool, together with a smaller closed-in pool (for teaching purposes and use in the heat of the day and in the cold months) for women irrespective of race, caste or creed! It should be centrally situated—*e.g.*, in Wellington Square so that it is easily accessible to all. This would do far more to improve the physique of the women of our city than any other form of exercise, and it can be done throughout the year and by all ages. The up-keep of such pools could easily be met by small subscription and the whole thing managed by a Committee of ladies. Our city is a century behind all the big cities of the world in this respect. The addition of a few more 'mothers' to that body might give the necessary stimulus."

Accidents in the Home

—Adopt These Emergency Measures

By

DR. P. N. RAY, B.A., M.B., F.R.C.S. (Eng.)

Surgeon, Medical College Hospitals, Calcutta

WHENEVER an accident occurs at home, there is usually a great deal of useless rushing about, shouting and general panic. No one *knows* what is the right remedy—but all have their own ideas on the subject. And while each onlooker eagerly airs his or her own view, the patient gets very little real treatment. All too often this has very serious consequences because in many injuries, such as burns, all hope of a cure depends entirely on the first aid given. If the correct treatment is carried out *at once*, even very serious injuries will follow an uncomplicated course to recovery; but if the wrong treatment is given, injuries which may appear to be trifling, may develop dangerous complications.

This article intends to give you clear instructions as to what should be done when someone in your house has met with an accident. The remedies which will be suggested will be home remedies. They are not meant to take the place of your doctor: they are simple remedies which you can yourself apply *before the doctor arrives*. Throughout this article you will see small paragraphs containing brief hints and instructions. Cut out these paragraphs, stick them on strong paper, and keep them in a place where you will often see them. Do not wait till an accident has occurred but memorise them now and keep them handy.

BURNS AND SCALDS

DO not play with fire!

Fire is probably the greatest discovery of man: yet how destructive it can be! And how glibly we advise others not to "play with fire", when, as a matter of fact, in our own homes, even if we do not actually play with it, we treat it ever so lightly and carelessly. Smouldering cigarette ends, fireworks and match boxes have been the cause of many deaths and injuries. Spirit stoves, kerosine lamps and even our old friend the *chulah* (oven) are all potential sources of great danger in every home. Children are always easy victims and so are their mothers! Flowing hair and the loose *sari* end, which is used for holding hot *dekchies* over the *chulah*, are often the cause of very tragic accidents.

A human being on fire is a sight which will unnerve even the bravest of us. But such an accident often occurs in the home when effective aid is not available.

WHEN AN ACCIDENT OCCURS

1. Do not shout or show any panic
2. Find out what has happened and send for the doctor.
3. Control bleeding and treat shock.

What to do First: There is no time to be lost; but *avoid all excitement*. Do not throw buckets of water over the patient as this will cause large blisters. Make him lie flat on the ground at once with the burning side uppermost and the head placed away from the smoke, which may choke him. Next cover him with wet blankets, *chudders* and *durries* in order to put out the flames.

If the cause of the fire is a spirit lamp or stove or burning oil, the surest fire extinguisher is sand or ashes. On no account use water.

When the fire has been put out, remove the patient from the scene of the accident and make him lie down well-covered and protected from draughts. Loosen all tight clothing. If breathing is difficult, due to choking by smoke, artificial respiration must be resorted to. As soon as the patient can swallow give him a hot drink in small sips.

It is very important to give the patient this 'comforting treatment' before treating the burns. Whenever an accident occurs the patient naturally feels very frightened and the sudden fright has a very bad effect upon the normal functioning of the body, particularly the blood supply. This condition is known as *shock* and should be regarded as no less serious than the accident itself, for more cases of serious burns die of shock than of the actual burns.

BEWARE!

1. Guard against unprotected lights and fires.
2. When cooking secure sari ends and loose hair.
3. Remember that children are easy victims.

BURNS

1. First control the fire: make the victim lie down with the burning side uppermost; prevent choking from smoke. Smother the fire with wet sheets, etc.
2. Do not throw buckets of water.
3. Keep the patient warm and protected from draughts. If able to swallow give sips of hot drinks.
4. Apply strips of lint or clean white cloth soaked in Tannic Acid solution (2½ per cent. half a teaspoonful of tannic acid in six tablespoonfuls of boiled water).
5. Alternative. Strong infusion of tea applied with three thicknesses of lint or linen.

Shock may appear soon after the accident and is largely due to the nervous disturbance resulting from the accident. It cannot be completely prevented once the accident has occurred. Shock is most marked in children and nervous individuals. Even if shock is not present immediately after the accident, it is necessary to treat the patient as if it were present, for in this way it can be mitigated to a great extent.

Treatment of Burns: Having reassured the patient and made him as comfortable as possible, attention must next be paid to the burns. DO NOT APPLY OIL OR CREAM ON BURNS. This simple warning cannot be repeated too often. Oil is a most dangerous substance to put on burns, and remember that once put on it cannot be easily removed from the burnt area. That is why burns caused by burning oil, are particularly troublesome.

SHOCK

1. Signs of shock are faintness, paleness, weak pulse and breathing, and cold limbs.
2. Keep him warm with blankets, sips of hot drinks, hot water bottles.
3. Put the patient flat on his back and loosen tight clothing.
4. Relieve the patient's fears.

First Aid Dressing: The ideal dressing is one which will seal off and coagulate the damaged parts by penetration into the deeper tissues. This will relieve pain and prevent the oozing of serum (clear fluid part of blood) which gives rise to early shock and subsequent collapse. A *freshly prepared* solution of tannic acid (2 or 2½ per cent.) will serve the purpose. Two ounces of this solution is enough to soak thoroughly a compress of three thicknesses of lint, 8 inches by 4 inches in size. This solution must be freshly prepared and obtained from a reliable chemist. *Old or stale solutions are inert* and therefore of no use.

In the *moffussil*, where a solution is not readily obtainable, *a strong infusion of tea*, cold or warm, makes an efficient substitute. Put 4 or 5 heaped teaspoonfuls of tea into a small *dekchie*, half fill it with water and boil well until the liquid is a dark brown colour. Boil also with it some strips of clean white cloth and, when cooled, place these strips, still wet, in three layers over the burnt area and bandage firmly in place. You may wonder how tea can possibly be of any use for burns. The *answer is that tea contains tannic* acid. When tannic acid is applied to a burnt area, it forms a firm leather-like protective covering over it. By this treatment, the chances of blood poisoning and wound contamination by infective

PAPER PROTECTION —*Continued from page 109*

of these toxic substances and this should not be made a case for undue alarm.

Provided necessary precautions are taken, the practice of wrapping foodstuffs will not only ensure greater freedom from contamination during delivery but also better preservation of the commodity through the retention of its freshness and palatability. It will also assist sales by gaining the confidence of the public through their increased feeling of security.

Now-a-days the use of paper is not confined to protect foodstuffs alone but also to protect our person against disease and the inclemencies of weather as well. Paper sunshades are not only pretty but give excellent protection from the heat of the sun; and the day is not far when paper unbrellas will be as effective against rain too. Paper serviettes are very popular these days. and it is quite usual to find paper used for table cover in big Indian dinners, in addition to paper doilies. Paper handkerchiefs again are also very useful but are unfortunately not so widely used. The ubiquitous influenza, not to speak of many other infectious diseases, would cease to spread so rapidly if paper handkerchiefs were more freely used. The utility of paper articles for personal use lies in their easy disposability.

The practice of using wall-paper instead of paint for house decoration is no longer so popular, though windows are still dressed with coloured paper to give a stained glass effect, and paper lamp shades are also extensively used.

Recently, however, safety measures against air raids have considerably increased the use of paper. Paper lampshades and curtains are being widely used and form a necessary adjunct to the other essentials for the protection of life and property against raids from the air.

V

THE utility of paper in our everyday life needs no further mention; and the important part it plays in the protection of our health has also been evident. It is a matter for great regret that our country has to depend almost entirely on foreign products for its paper. The little that is made here could never meet the naturally huge demands. As we have seen above, different uses need different kinds of paper and the demand for every kind is increasing by leaps and bounds. That there is a huge scope for the paper industry, goes without saying, and industrialists would do well to pay it a little more attention.

Certain raw materials are available in this country and paper is already being manufactured from them, though the quantity is small, compared to demands. Another advantage is that India is capable of absorbing an enormous quantity of paper so that manufacturers will not have to look for a market abroad for quite some time to come. Of course like many other industries this will also probably need protection in the beginning, but once it has grown strong enough to stand on its own legs, it will in its turn protect us, not only in the various ways mentioned above but also economically.

Fig. 1
Tannic acid solution has been sprayed over the burnt area. Note the tanned or leathery appearance

germs are minimised. It has the added advantage that permanent disfigurement due to scarring is not so common.

Final Treatment : This is to be arranged as advised by the family physician ; and he will decide whether the patient is to be treated at home or in a hospital. The final treatment is comparable to a big surgical operation. In all severe degrees of burns, an anaesthetic will be necessary : the first aid dressing is first removed, all the blisters are cut and all dirt and damaged areas carefully cleaned. The tannic acid solution is then applied over the whole area either by the spray or the compress method. Once the tannic acid has formed the black scab, no further application is necessary. (Fig. 1).

TANNIC ACID

Buy tannic acid in SEALED BOTTLES only.

It becomes useless when exposed to air.

Use only FRESHLY PREPARED solution.

Artificial Respiration : The object of artificial respiration is obviously to fill the patient's lungs with air and then empty them again as in normal breathing. The method of doing this is quite simple but it requires some practice to be able to do it at the correct speed. The normal rate of breathing is 15—18 complete breaths—in and out—in one minute. Unless you have practised performing artificial respiration rhythmically and at this rate you will be sure to do it too quickly, when faced with an emergency.

In case of extensive burns, *Silvester's Method* is probably the best. The patient is laid on his back with the head and shoulders raised by placing a small hard pad between the shoulders (Fig. 2). In order to prevent the tongue from slipping into the back of the throat and choking the patient, a safety pin should be passed through the tip of the tongue and fastened. This sounds very drastic treatment but it is very necessary, because it is useless to perform artificial respiration if you allow the patient to be choked with his own tongue. If the jaws are set firmly, the mouth may be prised open by inserting the handle of a spoon between the molar or back teeth. Now stand at the head of the patient and grasp his arms just above or below the elbows, then fold the forearms over the chest and firmly press so that the chest is compressed and the air is thereby forced out of the lungs. Then pull the arms *very slowly* over the head of the patient so that the chest is expanded and air is forced into the lungs (Fig. 3). Continue this manoeuvre rhythmically and steadily until the patient is able to breathe or until your doctor arrives.

Fig. 2
Silvester's method: Phase 1. Inspiration

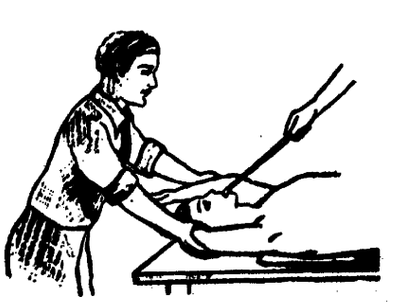


Fig. 3
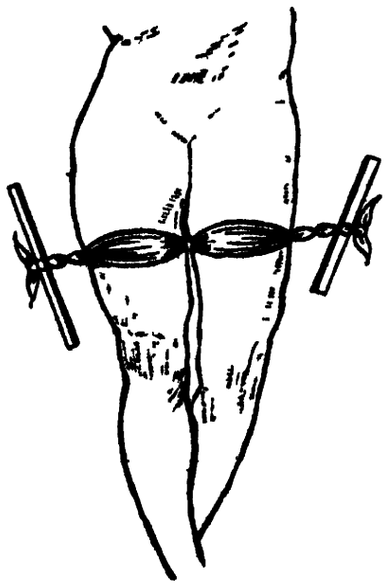
Silvester's method: Phase 2. Expiration

Foreign Bodies



A FOREIGN body is anything which becomes lodged in any part of the body to which it does not belong. A thorn in the finger, a fishbone in the throat and a fly in the eye are all foreign bodies.

In the Hand and Foot : Thorns and splinters of wood often get imbedded in hands and feet. If they are near the surface they can be easily removed with a needle which has been sterilised in a flame. When the foreign body has been removed apply iodine liberally to the injured part. But if the foreign body is more deeply seated, or if it is something particularly dirty, *e.g.*, a rusty nail, you should visit your doctor at once and have the part thoroughly cleansed. Broken needles are very dangerous and it sometimes happens that small pieces of needle enter a hand or finger when the needle breaks. When this happens consult your doctor at once. Do not try to remove it yourself.

BROKEN BONES

1. Do not remove the patient. Support him with pillows, cushions and folded sheets tucked round the body to make him comfortable.
2. A broken arm should be supported by a sling from the neck.
3. A broken leg should be tied to the other leg at the ankles, calves and thighs.
4. If a bone is sticking out through the wound, do not try to push it inside.
5. Treat the shock.

In the Eye : Foreign bodies in the eye may vary from a particle of coal dust to a fragment of red hot iron. Immediate removal is

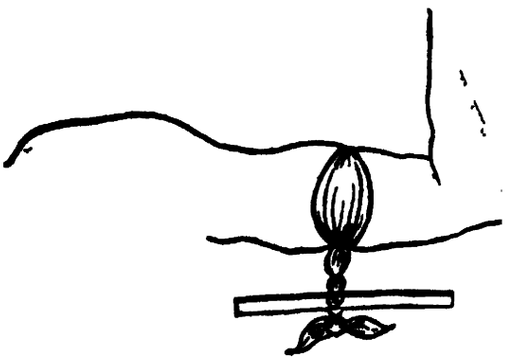


Fig 4
Improvised Tourniquets

absolutely necessary Remember that rubbing the injured eye will not expel the foreign body , on the contrary, it will most likely cause serious damage to the eye For small particles, like eyelashes, coal dust etc , the following manoeuvre may succeed Close both eyes and rub the healthy one the resulting tears may wash out the particle In some cases, the foreign body can be removed by drawing the upper eyelid over the lower one But if the foreign body can be seen by opening the eye, *e g* , an eye lash, it may be removed with the corner of a clean handkerchief If a sharp particle, *e g* , broken glass or steel, is embedded send for the doctor at once Before he arrives boil a little liquid paraffin or olive oil and allow it to cool When ready put a few drops into the eye by means of a clean glass dropper or fountain pen filler, but do not attempt to remove the foreign body *Lime in the eye* is a serious accident and it requires immediate attention It should be removed with a dry camel hair brush, or with a twisted point of cotton wool The eye should then be thoroughly washed out with boric lotion When this has been done, go and see your doctor

In the Ear Children often introduce small bodies like peas, *cowries, dal* etc into their ears If the foreign body is visible, well meaning relatives are unable to resist the temptation of attempting to remove it As a result, if the foreign body is hard and spherical it is almost certain to be pushed further inwards It is generally necessary to put young children under an anaesthetic in order to keep them quiet and still while the object is removed In case of beads, *cowries* and similar bodies, the simplest and safest plan is to syringe the ear gently It is intended to expel the foreign body by the returning fluid The head should be turned on the opposite side and the warm water gently injected into the ear A small kidney tray is placed under the ear to catch the returning fluid For small insects and objects which may swell up in water, warm olive, mustard or cocoanut oil may be used instead If the foreign body cannot be dislodged in this way, the doctor should be consulted

TREATMENT OF WOUNDS

1 Control bleeding By pressure Elevation of limb or an improvised Tourniquet firm bandage small stick and twisting (Fig 4)
2 Cover the wound with clean dressing and bandage Do not touch a wound with your finger

In the Nose Little children often introduce similar objects into the nostrils Unfortunately the accident is seldom witnessed by others but if the patient can be taken to the doctor at once the removal of the foreign body will not be difficult A persistent nasal discharge from one side only is as a rule due to a foreign body The removal of an object that has been impacted for some days usually gives rise to some bleeding

KEEP HANDY

1 Liquid paraffin
2 A glass dropper or a clean fountain pen filler
3 A small glass syringe
4 An electric torch
5 A magnifying glass

Fig 5
X-ray plate showing pin in the first part of the large gut (Ascending colon)

SWALLOWING OF FOREIGN BODIES

AN astonishing variety of objects form the foreign bodies which are sometimes swallowed. The list includes anything from fishbones to knives and safety pins If a fishbone is stuck in the throat, never attempt to dislodge it with your fingers Try swallowing small lumps of rice or bread If this is ineffective, induced vomiting may succeed in removing the bone But if these fail, it can be easily removed by a doctor who has the necessary instruments

In the Windpipe or the Gullet If the accident is attended by a persistent cough, difficulty of swallowing or breathing, remove the patient to a hospital without delay

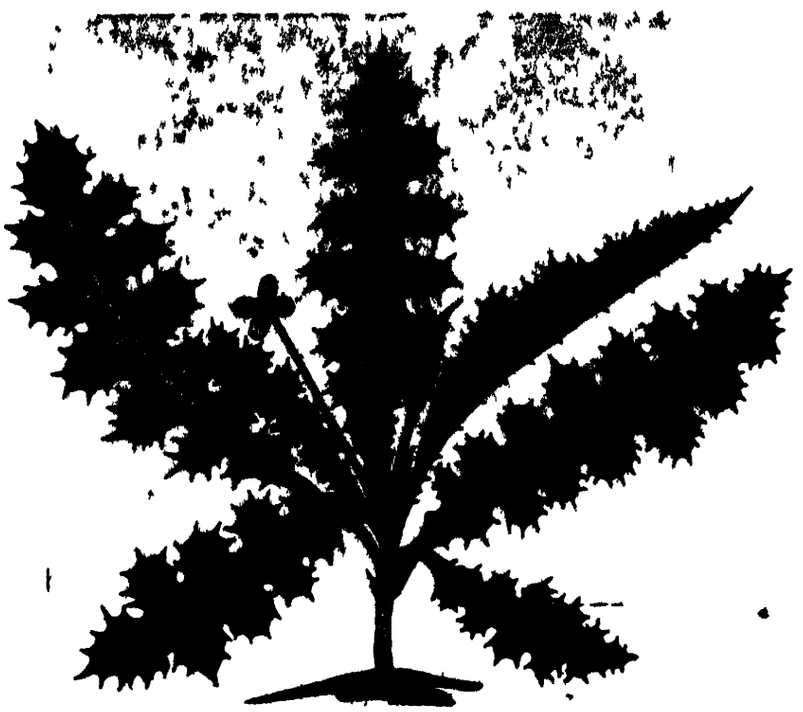

Fig 6
X ray plate showing pin in the distal part of the large gut (Descending colon)

In the Stomach Small coins and similar objects, if swallowed, are usually passed out naturally But if a needle or some other sharp object is swallowed great care is needed The patient *must* be kept in bed Purgatives are prohibited and a special diet consisting of brown bread husks and small wisps of cotton wool in gruel or soup should be freely given Such food will form a protective mass round the dangerous object in the stomach In the majority of cases it will then be expelled naturally But frequent X-ray examinations under your doctor's supervision are essential The expulsion of such a foreign body is a comparatively slow process and may take several days The two X ray plates shown here will explain the dangerous movements made by such an object in the intestines The actual size of the pin was about three inches (Figs 5 and 6)

Always remember that a minor accident can easily lead to major complications No wound is so trivial as to be neglected In case of injuries caused by rusty nails etc or injuries in the garden, one has to remember the possibility of tetanus Give the doctor full particulars and follow his advice carefully If any anti-serum is injected for protection against tetanus and gas gangrene, particularly in a child, it is important to make a record in your diary so that it may be available for future reference A second injection of serum at a future date, even after an interval of many years, may be attended with severe reactions With proper precautions this danger may be avoided

FOR YOUR FIRST AID BOX

1 One packet of Absorbant Cotton wool
2 One packet of Sterile Lint
3 Two Triangular Bandages
4 Roller bandages 3 and 4 inches wide These may be made from clean sheets etc
5 A pair of scissors
6 One dozen safety pins
7 A bottle of Smelling Salts
8 Tincture Iodine
9 Potassium permanganate crystals

Argemone Mexicana Plant

EPIDEMIC DROPSY and ARGEMONE OIL

By

DR A K SEN, B SC, M B (Cal), M R C P (Edin), D P H (Lond)

Director of Bengal Public Health Laboratory, Calcutta

THE purpose of this article is to emphasize the importance of the work done in recent years showing the etiological role of argemone oil in epidemic dropsy

Epidemic dropsy in the past — Epidemic dropsy has been defined in recent times as an acute disease of disputed etiology characterised by oedema, particularly of the lower limbs, and occurring in an epidemic form It is difficult to say for certain if the disease, the reported first outbreak of which was in Calcutta in the year 1877, was the same as that which has been widespread in both the rural and urban areas of Bengal since 1926, for the last 15 years

Epidemic dropsy and beri-beri — The disease has been confused with other diseases with which it has a number of symptoms in common The principal of these is beri-beri Vedder in *Byam* and Archibald's *Practice of Medicine in the Tropics* defined it as a deficiency disease closely related to beri-beri Not very many years ago even in Government departmental publications, beri-beri and epidemic dropsy were taken as synonymous and in popular phraseology this use of the word beri-beri still persists

Mustard oil as the etiological agent —Ever since outbreaks of the disease have been frequent, the association of mustard oil in its causation has been suspected by experienced medical men. A rather significant observation was published by Dr S L Sarkar in the year 1926, in the *Indian Medical Gazette*. He reported the accidental poisoning of a "Kolu" family, which occurred in the district of Malda in the year 1922 as a result of consumption of mustard oil which had been accidentally contaminated with argemone oil The prominent symptoms reported were gastro-intestinal and swelling of lower limbs and the similarity of symptoms to those of epidemic dropsy was stressed In recent years Lal and his assistants, from epidemiological observations has had attention focussed once again on mustard oil as the causative agent of the disease These workers also showed by a number of human experiments that incriminated samples of mustard oil collected from epidemic dropsy affected households could produce in the human subject symptoms similar to those of epidemic dropsy This pointer to the etiology of the disease was undoubtedly very important

II

WORK ON ARGEMONE OIL

In August 1938, the Bengal Public Health Laboratory having received a supply of argemone seeds from the School of Tropical Medicine, studied the characters of the oil The paper of Dr S L Sarkar published in 1926, was recalled in this connection The Laboratory had also been referred to off and on, for the analysis of many samples of mustard oil collected in connection with outbreaks of peidemic dropsy The specially important samples which were received at about the time when the above-stated work on argemone oil was being carried out were the following —

(1) One sample sent by Dr R B Lal, said to be a sample of potent oil, which was collected from an epidemic dropsy affected area of Rangpur

(2) A sample sent by the School of Tropical Medicine collected from the Port Commissioners steam launch, *Gloster* This was also a very important sample because a number of men on board the vessel using the same food and living closely together under the same conditions had been attacked with the disease

(3) Samples received from the Health Officer, Khulpara Municipality from epidemic dropsy affected houses

All the above samples were tested and showed that Argemone oil was present approximately to the extent of 1 to 5 per cent

Seeds of Argemone Mexicana
(Enlarged)

Work of Chopra et al —This rather important observation led to the experiments on human volunteers which was carried out in 1938 by Chopra, Pasricha and his assistants and Sen, an account of which was published in the *Indian Medical Gazette* of April 1939

Lal and his assistants had been doing continued research work on the same problem which they reported in several papers published in the *Indian Journal of Medical Research* in the years 1939 and 1941

Argemone Mexicana plant —Argemone Mexicana the Mexican or prickly poppy is an American plant of the natural order *Papaveraceae* which now grows wild nearly all over India The plant is known in Bengal as *Sial Kanta*, the Hindi name being *Makhoi* or *Fringhi Dhantura* The plant bears yellow flowers and develops pods which contain when mature, large numbers of the characteristic small black seeds

Argemone seeds —The seeds are small black and round showing, when examined with a magnifying lens, a surface covered with ridges and depressions and a stalk-like protuberance The yield of oil from the seeds is considerable, being about 30% It was reported by Dr S Dutt of the Allahabad University that the black mustard seed of the United Provinces was most commonly adulterated with this seed

Argemone oil :—The oil is pale yellow in colour. The samples of oil present out at the Bengal Public Health Laboratory from seeds coming from different sources appeared to have an unpleasant sickening smell and was bland to taste.

The constants of the oil as determinded at the same Laboratory were as follows —

	1938	1939
Butyro-refracto-meter reading at 40°C	62 0	62 8
Saponification value	193 2	189 2
Iodine value	125 3	121 0
Specific gravity at 15 5°C	9331	9249
Relative Viscosity at 40°C		44 37

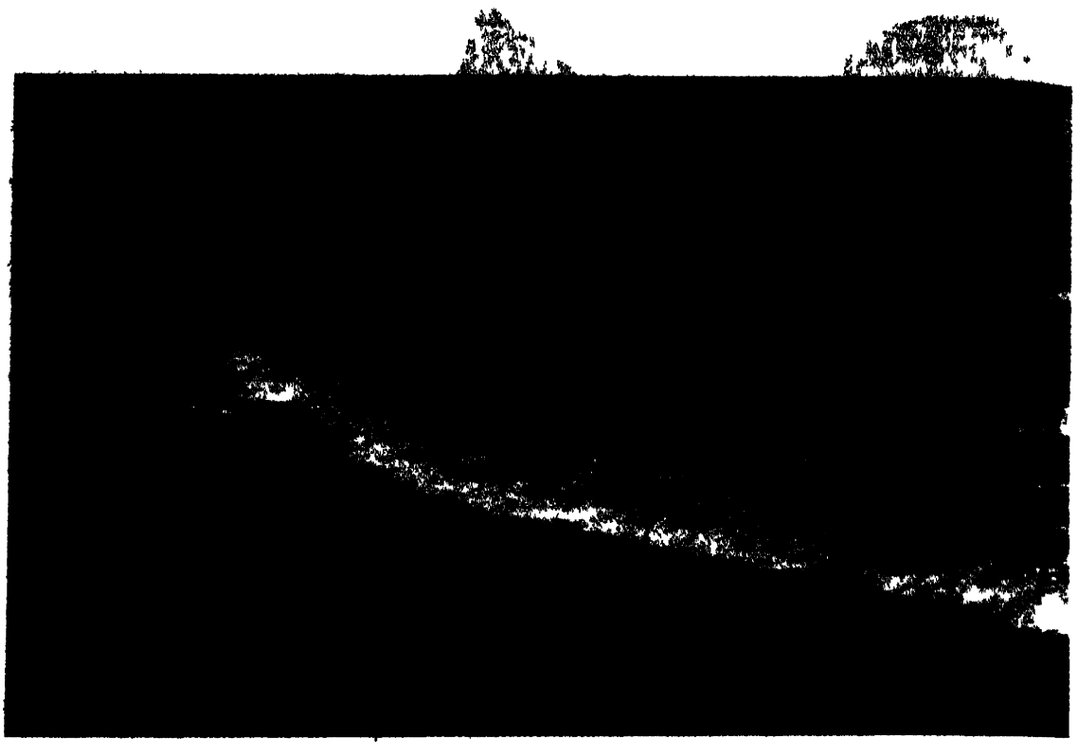
The oil gives the well-known colour reaction with Nitric Acid The colour as obtained when small quantities of the oil is present in mustard oil is, however, not the same as that obtained in the case of the pure oil

Many medicinal properties have been attributed to the oil but it is commonly used as an application to herpetic and indolent ulcers in cattle

III

ADULTERATION

The adulteration appears not to be of mustard oil but of mustard seeds It has been said that the adulteration is not purposive but accidental *This however does not appear to be true* Inferior kinds of oil seeds are marked which contain mixtures of various edible oil seeds and contain besides—though it may not be always—a fair proportion of argemone seeds It goes without saying that such mixed seeds would be sold at much cheaper rates than picked mustard seeds If the comparative prevailing prices of the mixed seeds and picked seeds be 1 1½, the yield of oil being the same, the temptation of the mills, for the sake of profit, to use a certain proportion of the mixed seeds in the manufacture of mustard oil can be very well understood. Similar mixed seeds may be used to adulterate the other common edible oil seed, the sesame seed. Such adulteration would explain the outbreak of the disease among people who are non-users of mustard oil, as reported by Smyth in the *Indian Medical Gazette*, [illegible] year 1938.



The Bengal Public Health Laboratory has to examine samples of foodstuffs, including mustard oil, from 11 out of the 28 districts in Bengal. When outbreaks of the disease have occurred, the districts which do not ordinarily send samples of food-stuffs for examination to the Government laboratory have made special reference to it. Argemone oil has been nearly always found in samples collected from affected households. The quantity of Argemone oil present in such samples is not large, the maximum in the adulterated samples examined at the Government Laboratory being not more than about 5 per cent. and the quantity usually found being about 1-2 per cent For this reason the symptoms appear insidiously, when the use of the oil has gone on for some time When, however the symptoms are manifest the consumer may not be using any longer oil of the same manufacture as was having a deleterious effect on his system This will explain the rare negative findings, the rare absence of argemone oil in samples collected on suspicion

THE PRESENT POSITION

FOR completely proving the etiological role of argemone oil, it is necessary to produce by experiments on human volunteers all the important symptoms as have appeared during accidental consumption No proper susceptible experimental animal has yet been discovered The very poisonous nature of the oil precludes the continued use of it on human volunteers Such proof, therefore, as will be irrefutable from a scientific standpoint may not be forthcoming for the time being

Health workers, however, who have carefully studied outbreaks of the disease and have been painstaking in their investigation can hardly have, at present, any doubt about the causative agent of this peculiar disease which has been rampant in Bengal during the last one and a half decade I shall conclude by quoting the following observations of the Health Officer forwarded by the Chairman of the Burdwan Municipality, where an epidemic occurred in the month of March, 1938. The adulterated seeds received in the

A Visit to Vizag

By

DR AJIT MOHAN BOSE

Calcutta

LAST December (1940) during Christmas holidays a few doctors from Calcutta, headed by Dr K S Roy our President, went to attend the All-India Medical Conference at Vizag We left Calcutta by the Madras Mail and reached Waltair at about 1 P M the next day There we were received very cordially by a band of Medical students and doctors Dr P Gurumurti the Chairman of the Reception Committee was there in his picturesque Andhra dress in a sea of hats, coats and ties It was a pity that owing to his preoccupations with other pressing duties we were not able to see more of him A genial personality, with a frank open face he would be conspicuous in any crowd There was also Dr V V Krishna Rao, the General Secretary, of whom a few words will be said later on

I will not tire you with a report of the proceedings of the Conference, but I will tell that we the Bengal delegates felt very proud of our President-elect, Dr K S Roy who conducted the proceedings of the Conference in a masterly way His ever-emiling face, his subtle humour, his sweet ways smoothed away many a stormy situation May he live a long and useful life a worthy son of Bengal!

II

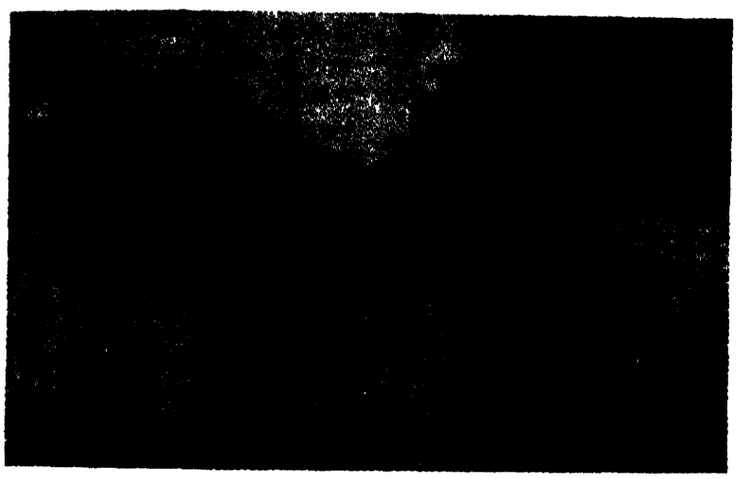
THE beauty of Vizag—that charming city—cannot be described I have seen many beautiful sea-side places of India but none can compare with Vizag for sheer beauty Adding to the charm of the place are the green everlasting hills which form a picturesque background with the deep blue sea as the foreground Let me relate to you a small incident to illustrate the effect of Vizag on my mind

On the last day of our stay, I was to have read a paper about the hot water spring its place in the treatment of chronic diseases I had taken some trouble over the preparation of the paper and had collected a number of photos of Indian and European hot water springs further I had also taken cinema pictures of such places to illustrate many of the points which I had emphasized in my paper As I was sitting quietly amongst a fairly large gathering of doctors and students waiting for my turn to speak, suddenly, about half an hour before my turn came I felt an overwhelming desire to leave the stuffy, knowledge-laden atmosphere of the assembly hall I felt an imperative and thrilling call in me to get out and enjoy the beauties and glories of Vizag—out in the open air, under God's sunshine Very naturally I strove to quieten the urge thinking it to be the after-effect of the sumptuous Andhra dinner partaken the night before, but that feeling could not be silenced, and I had actually to leave the Hall As a matter of fact, I simply dashed out of it The relief I felt was instantaneous and marvellous I shall never forget the glorious time I had for the next three hours I described the incident at length to show that when a man can so lightly throw away the result of his strenous labour for something else you would understand the relative value of each in his mind

III

I SHALL not give you a description of Vizag, its population, its civic and political activities its commercial possibilities, its strategic importance They are no doubt very important and significant, but I will leave them for more competent pens, and simply tell you about the things that impressed me These were —(1) The scenery (2) the women, (3) the Maharajah of Jeypore (4) Dr V V Krishna Rao (5) the Vizag food, and (6) the fisher folk

I have already told you something about the scenery. I must give you warning about sea bathing here The sea beach looks very attractive and the sea quite tempting for a dip But be careful! The waves have a strong back wash As they recede after striking the beach, they seem to have a strong



suction action. If you are not very careful you may find yourself dragged away from the shore—a very uncomfortable and painful position as I found to my cost! So be a little cautious about sea bathing here.

As regards the women of Vizag, I will not say anything about the female folk of Brahmin and other aristocratic classes. They are the same all over the world: a shapeless mass of adipose tissues, measuring more round the equatorial region than from the vertex of the head to the sole (By contrast, a few of them are walking lamp posts). I will not talk of them

Years ago while walking through a Roman museum I saw the sculptured figures of a few classical beauties done in marble. Most of them were female figures As I walked through Vizag, I saw those Roman beauties in flesh and blood! The same poise, the same grace, the same perfect proportion. I did not know which to admire more, the beauties of Nature as manifest in the hills and the sea or those female forms divine. To see these Harijan women—balancing gracefully big shinning copper jars on their heads—is a scene which, once seen, can never be forgotten. If we return again after death, I pray that I may be born among Harijan women in the "Andhra Desa"

Reception at the Station of the President of the All-India Congress Centre: Dr K S Roy, Left: Dr. Gurumurti, Right: Dr. Krishna Rao

Harijan Women waiting at the water tap

The Maharajah of Jeypore—I saw His Highness for the first time as he was sitting on the *dias* in the opening day of the All-India Medical Conference—is well-known for his vast learning and his generous grants to many nation-building activities. Later on I had the privilege of meeting him, in close quarters, at a tea party. It was then I had the first glimpse of the personality and character of His Highness. Beaming through a kindly face, I saw a towering individual full of love for Humanity. I did not even talk to him and yet I came away with a feeling of joy for having met a real Man.

IV

NOW I am going to tell you of one who typifies in himself all that is best in the Andhra people, I mean the educated and cultured middle class people. In the midst of his thousand and one urgent duties as the Secretary of the All-India Medical Conference I never heard him say a rude or unkind word. He met and solved all possible and impossible situations with same sweetness of temper. Nothing seemed to upset him. I take this opportunity of recording our heartfelt gratitude to one who made our short stay at Vizag so comfortable, pleasant and educative. Dr V. V. Krishna Rao recalled to my mind very vividly of a few of my old Madrasi Edinburgh friends. Their vivacity, their keen intellect, their kindness and their smiling face left an undelible impression on my mind. In Dr Krishna Rao I saw my old Edinburgh friends again. I salute a race that can reproduce so many Dr. Krishna Raos.

Now about Andhra food. Whenever I think of it copious tears of repentance stream down my cheek. In one rash moment of my life I was persuaded to sample a few dishes. I was told that the cooks had been specially instructed to make the dishes as mild as possible. A few mouthful of these "mild" dishes made me feel as if I had swallowed a dozen torch-light processions. It seemed to be fire both inside and out. I ran out from the dining hall seeking for an alarm post to call the fire brigade. I was told that there was none. May I here suggest

Maharajah of Jeypur with his heir

to the city fathers that for the benefit of rash and raw strangers like me, foolish enough to sample a few Andhra dishes, an emergency fire brigade should be kept in readiness? I am sure they would pay any special tax for the upkeep of such a useful institution.

Like all enduring pieces of art the preparation of Andhra dishes is simplicity itself. All that you require is—a little water and a few tons of chillies, pepper, ginger and salt. You take one seer of water, to this you add 3 tons of the special Andhra variety of chillies, 2 tons of pepper and one of ginger—to this you add ½ seer of salt. Boil over slow fire for 24 hours, until you have reduced the mass to one *chittak*. Prepare 200 *chittaks* of this exquisite preparation. Bottle up in jars as stock preparation. This is the basis of all Andhra dishes.

You want to make vegetable curry? To the above stock preparation add your favourite vegetable Boil it and add some *ghee* or linseed oil (Caution—do not use petrol in the place of *ghee* or linseed oil Yes, you may use Dynamite) To make Andhra pudding add to the above stock preparation one teaspoonful of Benares sugar, 10 drops of honey and half-a-seer of jaggery Boil and serve boiling hot But I am not writing a cookery book For further information apply to Dr V V Krishna Rao of "Andhra Des..

V

AS I was walking along the beach one morning about 3, I saw some ghost-like figures flitting about On going closer I found about three people two of them elderly and one a mere boy carrying or pushing two pieces of logs They bound these pieces together with ropes, and, lo, it was changed into a sea-going vessel My curiosity was thoroughly roused by this time With my heart in my mouth I saw the intrepid and fearless set of men set out to face the huge threatening angry waves

Thirty years ago while a medical student in Edinburgh I would sometime during the summer vacation, go out in small 10 to 20-ton fishing boats to Dogger Bank in the North Sea I shall never forget my experience as a sailor in these frail boats bobbing helpless in an angry sea It was often difficult to keep standing in these boats so fierce were the tossing and joltings

What I saw that morning three frail fishermen balancing themselves precariously on small pieces of wood it took my breath away. The scene I have just described was not an exception. I saw a few dozen of "catamaran go out to sea under similar conditions In utter amazement and with heart full of pride for the unostentatious ill clad, uneducated, shivering fisher folk I raised my clasped hands to my forehead as salutations and homage to these unsung heroes of the sea It seemed to me then, as it seems to me now that the Epic of Modern India has yet to be written and sung Another Valmiki will arise to chant the glories of such humble folk of my country—unknown, unsung, neglected and persecuted Whenever I feel despondent of the future of my country I think of these poor fisher folk of Vizag my despondency passes away and I see a glorious future A nation that has such courageous set of men, need never despair I salute thee, Vizag!

EPIDEMIC DROPSY & ARGEMONE OIL

—*Continued from page 119*

nection with this epidemic contained a good proportion of argemone seeds The symptoms, therefore, were quick to appear and gastro-intestinal symptoms were much in evidence

> "On getting information that a few cases of epidemic dropsy had occurred all of a sudden enquiries were made and the cases were traced out Dr S N Bhattacharjee, B Sc, M B of this town was one of the victims and much help was obtained from him The common source of mustard oil was detected It was from a *Ghani* shop belonging to Narayan Chandra Garai of Shyambazar, Burdwan He purchased black seeds of mustard from a godown shop at Nutanganj, Burdwan, belonging to Babu Nanilal Dey Narayan Chandra Garai himself suspected the mustard seeds in his stock probably on getting complaints of diarrhoea etc, from the consumers He returned his stock of mustard seeds to the said godown shop and purchased fresh seeds A sample of mustard oil from the shop of N Garai was sent to the Public Analyst for examination and report A sample of mustard seeds from the shop of N Garai as well as samples of oil and seed from the shop of Nani Lal Dey were also sent to him The sample of mustard oil and the sample of mustard seeds taken from Babu N Dey showed the presence of argemone oil and argemone Mexicana seeds respectively
>
> "House to house search was made, and it was found that almost all the customers of N Garai were affected with epidemic dropsy and the number of houses thus traced out was 15 Almost all the members in each house except the breastfeds were found to be affected and 68 cases were detected as suffering from epidemic dropsy
>
> "The symptoms started with diarrhoea with repeated tendency for stool and peculiar gargling in the intestine from the left colic flexure down to the rectum Heaviness of the abdomen and anorexia were complained of Gradually came on heaviness of the extremities with slight redness and vaso dilatation Lassitude and giddiness were present and legs pitted on pressure In a few cases, there was slight cardiac embarrassment"

LIEUT.-COL. E. COTTER, I.M.S.

Public Health Commissioner with the Government of India, Delhi

THE Oxford Dictionary describes environment as the "conditions or influences under which any person or thing lives or is developed" That of course is a very wide definition, and covers every factor exercising an influence on the human being from conception to death In discussing the effect of environment on tuberculosis it is, therefore, necessary to pick out those factors which research has shown to be definitely associated with the incidence of the disease

It seems clear that the disease is concomitant with civilisation and its attendant factors, since in primitive peoples living in their native countries tuberculosis either does not exist or is comparatively uncommon. This freedom from tuberculosis, however, rapidly disappears when primitive people leave their countries and take up their residence in civilised areas. We have a close example of this in India. In the Army it is known that the incidence of tuberculosis is definitely higher amongst Gurkha soldiers who are recruited from their homes in Nepal and are brought to live under conditions markedly in contrast to those in which they have been brought up.

Over 70 years ago a masterly study on the epidemiology of tuberculosis was published by Villemin. In the light of the knowledge then existing he enumerated the principal features of its prevalence and spread. Shortly summarised they were as follows

(1) It is uncommon in mountainous areas

(2) It increases proportionately to the degree of overcrowding and is specially common in the capitals and great commercial and manufacturing towns.

(3) It attacks particularly persons who live in closed communities. (Villemin was referring to prisoners, soldiers and religious communities)

(4) It spares those people who live in small communities, in the open air or in a savage or nomadic stage.

(5) It was at that time very common among troops living in barracks, while it was known to be uncommon among troops living in the field

(6) Close contact in small badly ventilated dwellings leads to the development of the disease

(7) Though at one time unknown in Australia, New Zealand and North America, it became a scourge in those countries with the advent of civilisation.

(8) Bovine tuberculosis like human increases with close contact and overcrowding.

It can safely be said that these features of the epidemiology of the disease described so long ago continue to be generally true.

Factors of Incidence

IN certain countries in the West, where for some years the disease has been on the decline, the history of its rise and fall is complete enough to permit of a study of the factors associated with its incidence. The history of tuberculosis in these countries is fairly [illegible] In each of them the disease increased [illegible] with the development of uncontrolled urbanisation which inevitably led to the production of slum conditions Added to this urbanisation was the factor of industrialisation, again uncontrolled. Long hours of work, low wages, overcrowding not alone in the homes but in the factories themselves, the absence of arrangements for proper heating and ventilation, the general

lack of sanitary conveniences, all produced a state of affairs favourable to the spread of the tubercle bacilli.

In the case of England and Wales the history of the disease shows that the mortality has steadily declined since 1851 which is the first year for which standardised death rates in regard to tuberculosis were recorded. It is correct therefore to say that the decline started before any recognisable efficient organisation was set up in regard to the health administration of the country. The decrease over the whole period has been ascribed to several causes such as in the earlier part of the fall, to a higher standard of living with a rise in the rate of wages and resulting improved social habits, diminished drunkenness, and, later in the period of decline, the provision of better housing and sanitary conditions, earlier diagnosis, the segregation of advanced cases, sanatorium treatment and the developement of a racial immunity.

While it is extremely difficult to assess the individual importance of these factors, it is possible, however, to group them under certain main heads which are now generally recognised as exerting a considerable inifluence on the spread of the disease and its control. They can be summed up in:

(*a*) nutrition,
(*b*) housing and
(*c*) education.

Nutrition

Firstly, with regard to nutrition, the experience of the last war and the post-war period gave abundant proof of the effect of malnutrition on the tuberculosis death rate. Striking figures recorded at that time were an increase of 13 per cent in the Netherlands, 35 per cent in Italy and even higher increases in other European countries where, during and after the war, the population suffered from a grave lack of nourishing food. The Registrar General of England and Wales in his Statistical Review for 1935, makes some interesting remarks on the effect of impaired nutrition in phthisis mortality. Having pointed out the steady decline in tuberculosis mortality for all age groups between 1851 and 1925 he draws attention to the check that occurred in particular age periods in the years 1926 to 1931 and again in 1930 to 1933. The following is an extract from his report:

> "Stationary periods of arrested fall occurred both for male and female rates at the ages 15-20 between the years 1926 and 1931, it may be significant that the persons concerned had been children between the ages of 0 and 12 during the period of food shortage in 1916-18. Similarly stationary or rising periods occurred in the rates at the ages 20-25 between the years 1930 and 1933, the persons comprising these groups of the population having been children of ages 3 to 12 during the 1916-18 period. It may be that these temporary arrests in the decline of phthisis mortality of young adults were delayed results of the effects of the food shortage of 1916-18 upon children, producing in them a lowered average resistance to active tuberculosis of the lungs as they reached the dangerous period for the development of this disease."

The important part which improved nutrition plays in improving the health of the people, and in strengthening them against infection, has been abundantly proved by experiments carried out in India and abroad. Recent work in this country has shown that even a small addition to the dietary of children of certain foods, particularly milk —even skimmed milk—causes a rapid improvement in their health and in their physique. It is therefore evident that improved nutrition cannot possibly be left out of a campaign against tuberculosis, which purposes to be effective.

Housing

We now come to the question of housing. The incidence of tuberculosis, like that of other infections, depends on the virulence of the organism, the strength of the dose, the period of exposure to infection and the resistance of the individual in contact with the infection. The presence of an open case in the house is therefore an important factor favouring the spread of the disease, in view of the fact that the other inmates of the house can be exposed to relatively high doses of infection for prolonged periods. It is difficult to assess the influence of housing alone on the incidence of tuberculosis, because bad housing is usually associated with other conditions injurious to health, such as poverty, malnutrition, and ignorance on the part of the people in regard to hygienic modes of living. In order to assess separately the effect of bad housing on the spread of the disease, it is necessary to examine the problem in communities among whom the other harmful factors operate in a similar way and among whom the differentiating factor is a variation in housing conditions. Detailed investigations of this type have naturally not been many. However, attention may be drawn to a few enquiries in which the question has been studied with care.

An important investigation was that of F. C. S. Bradbury during 1930-31 into the incidence of tuberculosis in certain Tyneside districts in England. The enquiry established that over-crowding was an important factor associated with the incidence of tuberculosis in the areas investigated. Other environmental factors which were shown to be possible contributory causes, although their influence was not so pronounced, were insanitation, bad ventilation and dampness of the house. Dr. Bradbury stated "Unfavourable environmental conditions in general are considered to be an important cause of the high incidence of pulmonary tuberculosis in children."

In a report published in 1932 by the Health Organisation of the League of Nations entitled "General principles governing the prevention of tuberculosis" the effects of hygienically constructed houses and of unsatisfactory dwellings on the incidence of tuberculosis were studied on the basis of figures which had been carefully collected. In that

report a 'healthy dwelling' was defined as one possessing 700 cubic feet of air for an adult and 350 for a child, a minimum ratio of 1 : 10 for window space to the area of the house, a water closet for each family, no bed in the kitchen and a rent not exceeding 20 per cent of the wages earned by the family. Houses falling short of these requirements were classed as 'unhealthy dwellings'. In respect of children in contact with open cases of tuberculosis, 84 per cent became infected by the end of the first year among those living in these dwellings classified as unhealthy, while the corresponding figure for the healthy dwellings was only 50 per cent. At the end of four years only 21 per cent of the children remained uninfected in the unhealthy dwellings, while the corresponding proportion for healthy houses was as high as 50 per cent. It is stated that, when persons at all ages are considered, the results were equally striking. Only 1.3 per cent of those in contact with tubercular patients in healthy dwellings developed the disease, while the percentage for unhealthy houses was as high as 4.9. The difference in these rates are striking ; nevertheless a cautious interpretation of the figures might suggest that the lower incidence of the disease in the healthy houses might be associated with other factors such as a better economic status amongst their inhabitants. It seems, however, more probable that a large part of the difference in the incidience rates might still be due to the housing factor alone. This probability is strengthened by the fact that tuberculous persons when transferred from an unhealthy dwelling to an airy dwelling with a small balcony to assist their cure, showed an improvement, it is stated, to the extent of 75 per cent in respect of subjective symptoms and 53 per cent in regard to objective physical findings.

A more recent investigation may also be cited. A statistical study entitled "Tuberculosis and social conditions in England, with special reference to young adults" by P. D'Arcy Hart and G. Payling Wright was published last year by the National Association for the Prevention of Tuberculosis in England. The authors came to the conclusion that "differences in housing inadequacy, implying differences in closeness of personal contract, are playing an important part in determining the present differences in levels of phthisis mortality between one English county borough and another."

In India the question of spread of the infection in tuberculous homes has been under investigation for the past few years by Dr. A. C. Ukil. One of the findings recorded by him is that the mortality from tuberculosis among children, who are contacts of patients in these houses, is 50 per cent higher than the mortality due to causes other than tuberculosis. It has also been shown that closeness of contact and its duration exert considerable influence on the spread of infection.

These facts should suffice to set in its proper perspective the importance of the relation that exists between unsatisfactory housing and the prevalence of the disease.

Education

With regard to education, reference will be made only to education in Health matters. The question of the general education of the people is one on which health workers can hardly hope to exercise any appreciable influence. Education schemes have been working in this country for many years and the curricula include a large and varied number of subjects. It is only in recent years, however, that the necessity for educating the child in the elementary principles essential for the maintenance of his health has begun to receive some attention. In the different provinces the subject has received various degrees of support from the authorities but speaking generally the movement for developing health education in schools has made but limited progress.

The importance of the problem has been recognised by the Central Advisory Board of Health, which body was established by the Government of India in 1937 to co-ordinate health policy in the Provinces and States. The subject was discussed at the meeting of the Board which was held recently in Poona, and it was decided that a Special Committee should investigate and report to the Board on the best lines on which health education in schools can be developed, so as effectively to remove from future generations that ignorance about the causes and prevention of disease which unfortunately today contributes such a large share to the existing rate of morbidity in the country. The success of a modern tuberculosis scheme will have to depend to a great extent on the intelligent co-operation of the people for whom it is designed, and in the absence of a reasonable appreciation by the people of the *raison de'etre* of the measures which are being carried out, advice regarding even elementary steps to prevent infection will fall on stony ground and valuable effort will be wasted.

Improvement of Conditions

IN the light of this discussion of the cardinal environmental factors which influence the incidence of tuberculosis, it is necessary to examine how far constructive suggestions can be made for the improvement of environmental conditions in this country.

Nutritional Research

Firstly, in regard to nutrition, India, through its research workers financed by the Indian Research Fund Association, has been one of the pioneer countries in advancing scientific knowledge regarding this important subject. But it will be poor comfort, and there will be little cause for congratulation, if our accomplishments stop at the discovery of scientific facts having such an important bearing on the health of the people, and if extensive measures are not taken to apply such knowledge towards im-

proving the dietary standard of the great majority of the people in the country.

Just as in the tuberculosis campaign, so also in the movement for better nutrition, if has been recognised that, before measures can be designed for improving nutrition in a particular area, it is necessary to have as accurate a picture as possible of the deficiencies in the people's diet in that area. A reasonably satisfactory advance has been made in this direction in the last three to four years. In addition to the surveys carried out by the field nutrition staff of the Nutrition Research Laboratories, Coonoor, a number of Provinces and States have appointed wholetime nutrition officers who are filling in the picture of nutritional requirements in various parts of India. The data collected have already been published by the Indian Research Fund Association in a booklet entitled "A Note on the Results of Diet Surveys in India" and cover areas in the Provinces of Madras, the Central Provinces, Orissa, Bengal, Assam, Bihar, Delhi, the Punjab, Bombay and the States of Travancore, Mysore, Hyderabad and Baroda. It will surely be to the advantage of those furthering tuberculosis schemes in these areas if they are acquainted with the nutritional state and deficiences of the inhabitants.

In the light of the information brought out by these enquiries, it is now up to the Provincial authorities concerned to formulate measures for the development of agricultural activities on lines designed to supply local deficiencies in diet ; and to bring this about close co-operation between the agricultural and health authorities in the Provinces and States is essential. It is recognised that there are difficulties, climatic and otherwise in the way, but these difficulties have not yet been fully studied, while a concerted effort towards their solution has yet to come into being.

The Housing Problem

The term housing should not be construed as referring to the building alone but as including the surroundings also. The housing problem in general is, of course, one of great magnitude and complexity. The position is that up to now the question of trying to remedy the results of the faults of the past, and of planning for the future on proper lines, has received inadequate attention from the authorities concerned. The responsibility for action lies primarily on Provincial Governments and on Municipalities and District Boards.

The problem can be roughly divided into three, viz , the problem of the large city, of the small town and of the village. Housing conditions vary to a considerable extent in these three different types of areas while financial resources also vary.

In the big cities, the difficulties have been considerably accentuated by the haphazard manner in which industrialisation has been allowed to develop without any proper zoning of residential and industrial areas. The consequence has been that adequate provision for community needs, such as parks with playing grounds, schools, markets, etc., has been ignored. Much damage has been done but many areas are still capable of being remedied provided prompt and bold measures are taken. To remedy such conditions, Improvement Trusts are required in the major cities. The efficient clearing of congested areas and the development of open spaces in their place can be seen in Calcutta where for some years an Improvement Trust has been active. Now that the cleared areas have been handed back to the Corporation, it is to be hoped that effective use will be made by that body, of the Municipal bye-laws which govern new construction, and that any possibility of reverting to the standards which previously characterised the areas will be scrupulously and effectively avoided.

As a matter of fact this very point was dealt with in a general way by the Central Advisory Board of Health at its Poona meeting. In their resolution on the subject, the Board referred to the failure on the part of local bodies in many parts of the country to enforce bye-laws relating to health matters, a failure which has been a subject of constant reference in public health reports for many years. The Board stated that while the rectification of defects in an existing slum area may be difficult, there can be no excuse when, after costly slum clearance operations by Improvement Trusts and other bodies, the cleared areas are permitted to be built over without due regard to the requirements of light, ventilation and sound hygienic construction. It is now for the Provincial Governments to take action to implement the resolution of the Board.

Under our present constitution, the local bodies can make or mar to a great extent the success of any efforts at improving housing conditions and here is an opening for Provincial Tuberculosis Branches, for they can exercise their influence, both in the Provincial Legislatures and on local bodies, towards raising the standard of administration of laws relating to housing.

Wanted Town Planing

For future expansion in cities, a Town Planning Act is essential if development is to be on sound lines. Town planning is a very specialised subject and for that reason a Provincial Government should certainly have on its staff a Town Planning expert.

In Delhi a development of considerable importance took place during the year 1939 in regard to urban housing conditions in the old city. The principle was accepted by the Government of India that assistance should be given to persons dispossessed by slum clearance schemes to enable them to obtain not only alternative accommodation but also accommodation of suitable standards from the hygienic point of view. The minimum rent for houses fit for human habitation was assessed by the Delhi Improvement Trust at Rs. 5 per month and the lowest income which could afford to pay this rent at Rs. 30 per month. It has been accepted that a family with its income less than this amount can-

not pay for a house fit for human habitation and that it therefore needs assistance for rehousing. Three types of houses have been adopted, namely, one-roomed, two-roomed and three-roomed. Not more than three adults (counting two children as one adult) are to be permitted to live in a single-roomed house, and not more than five adults in two-roomed houses, while larger families will be permitted to live only in three-roomed houses. Standard plans have been prepared for these types of houses on the basis of a plot of land of 100 sq. yards, the houses having been so designed as to make it possible for the one-roomed house to be converted, by the addition of rooms, into a two-roomed or three-roomed house. The cost is approximately Rs. 450, Rs. 600 and Rs. 750 for the three classes of houses respectively.

The experiment proposed in Delhi is to make it possible for the poor class families to own their own houses on the hire purchase system. The average capacity for rent of the families to be dispossessed is estimated at Rs. 2/13/- per month, while a return of Rs. 5/3/6 per month is stated to be necessary to meet the total cost on a non-profit basis, including the charge for equated instalment payments over a period of 20 years. Any dispossessed family which can pay the rent of Rs. 3/8- per month will be admitted to the benefit of ownership through the hire purchase system, the difference between this amount and the minimum rent for covering the cost of the scheme, being met by grants from the proceeds of a special entertainment tax imposed by the Government The scheme has everything to commend it, not the least being the stipulation of certain minimum hygienic standards of accommodation.

The accomplishment of the Delhi Improvement Trust is one which may with advantage be copied by the Municipal Committee of other large cities in India where conditions similar to those in Delhi city continue to prevail

Building Bye-laws

In the small towns the problem is of less complexity. Urbanisation and industrialisation have not proceeded to the same extent, and the problem is usually one of adopting suitable building bye-laws and of enforcing them strictly without fear of favour. An adequate health staff is rarely employed in these small towns, and still more rarely is an official employed with training and knowledge to enable him to examine and advise on building plans and specifications The employment of sufficient staff qualified for the purpose is a great and urgent necessity.

For rural areas the measures to be adopted must necessarily be on simple lines. While in the average village the house is kept scrupulously clean in accordance with traditional ideas of hygiene, yet the villager sees nothing objectionable if refuse accumulates in the vicinity of his house, nor does it enter into his mind how the health of his family and himself is at the mercy of poluted soil and water. Here of course, he is no different from the agricultural peasants of other and in some cases more advanced countries. The work which has been done during recent years in the Punjab, and with which the name of Mr. Brayne is associated, has proved that in regard to environmental sanitation, ventilation of the house, lighting and other improvements, many of the existing defects can be remedied through friendly advice and persuation. In regard to new construction, simple type designs suited to rural conditions should be prepared by the Public Health Department and rural health authorities should try to ensure that these are complied with as far as possible.

Health Education

With regard to a constructive suggestion on the development of health education, it has already been stated that the subject of health education in schools will be studied by a special committee which will be nominated by the Hon'ble the Chairman of the Central Advisory Board of Health. The appointment of that Committee is an important step and it is to be hoped that its report will give a lead towards a quick and marked advance in the teaching of hygiene in schools. With regard to propaganda work on tuberculosis in particular, the Tuberculosis Association has inherited an active propaganda unit from its predecessor the King George Thanksgiving Fund and education of the people will undoubtedly form an important part of the programme of the Association.

Before concluding reference may be made to the important part in the designed tuberculosis clinic, and domiciliary treatment are sure to play in the fight against the disease in India. The three elements in the compaign for an improved environment, with which this article has dealt, are intimately part of home conditions, and will have a marked influence on the degree of success which the tuberculosis orgnisations will be able to achieve. By keeping their importance in mind and by co-operating with other health workers towards improving conditions under these three heads, tuberculosis workers will be helping towards striking a vital blow at their particular enemy.

IS GOOD HEALTH A PROTECTION *against* TUBERCULOSIS ?

By

DR. P. K. SEN, M.D., PH.D., T.D.D.

Indusrial Tuberculosis Research Worker, Tuberculosis Inquiry, Indian Research Fund Association, All-India Institute of Hygiene and Public Health ; Junior Visiting Physician, Chest Department, Medical College Hospitals, Calcutta

IT is widely known that poor general health predisposes one to tuberculosis and good general health protects one from the same disease. This impression gained weight from the consideration that poor health implies poor resistance ; and when the resistance is weak, disease can establish itself easier in the human body. The opposite is true for good health. Let us consider what we mean by 'health' and how far the foregoing statements are true. This is an important consideration : because if the impressions are not wholly or partially true then they will either produce a false sense of safety or fear as the case may be.

'APPARENT HEALTH' : FORM AND FUNCTION

TO an onlooker the impression of health is mainly given by the 'form' of the human body. A beautiful form, both in its growth and figure, is a great appeal and we are generally carried away by this strong stimulus and judge health in terms of 'form'. But there is another factor which is not so apparent but no less important. This is the function of the body organs. The body organs are mostly situated internally and their function cannot be directly visualised. But though this functioning cannot be directly seen, it leaves an impress on the exterior human body. When the function is carried on well it may be reflected in the general form and look. This is what is known as 'bloom of health' on human figure. When the figure is good and the function of the organs is physiologically optimum—it may be termed as 'good health'. Though both are somewhat interdependent and make up a healthy body yet in many cases they are not associated with each other. The number of such cases are so great and they cause so much anomaly in the judgment of health that it must be stressed that form and function are not always a reflection of one to the other.

Anybody who is dealing with the sick and sufferers knows it well that a body almost perfect in 'form' may have many chronic diseases which must have deranged the 'functions' of many organs. On the other hand, it is not infrequent to see how lean and weary bodies, without any impress of health, functioning beautifully – devoid of disease, strong, hardy and full of the zest of life. As 'form' has greater appeal to a casual onlooker, the former type of body may be classed as healthy; whereas the latter type, as unhealthy. This is so frequent and so misleading that no body should lightly sit in judgment on matters concerning health. Though function is to a great extent masked and eludes casual observation it is much more important than 'form'. That must be remembered in judging health.

TUBERCULOSIS IN RELATION TO 'FORM' AND 'FUNCTION'

WE would now consider Tuberculosis in relation to health —form and function. It may be generally stated that it has not been established that Tuberculosis is the more frequent in the lean and thin looking body than in the nicely fleshy one. It is true that Tuberculous patients are generally poor looking in health ; but that is an effect of the disease. The poison circulating through the body will cause emaciation both in the stout and lean body. But that does not show that tuberculosis occurs in the lean ; it shows only the effect.

It has long been held that a fair, beautiful body with long eyelashes, shining skin, long neck, bright eyes and intelligent look is a special prey to Tuberculosis. The test of time has not, however, verified it. Both the beautiful and the ugly are prone to this disease and it is hard to say for whom this fell disease has any special predeliction.

Thus 'form' gives us no clue as to the probability of the disease. If 'form' does not, does 'function' throw some light in this direction ?

A well-functioning body is that which is adequately satisfying the physiological needs of the body. That is to say, the performance of the body, so far as physiological health is concerned, is good. Such a body is usually geared to such sensitiveness and alertness that when an invasion by harmful germs occurs it reacts powerfully and adequately, provided the specific reacting power is not inherently absent. In other words, if the inherent power to resist an infection is present in the body, a good functioning body will be able to produce these resisting substances against a harmful attack in sufficient quantity, in good quality and in a short time. An ill-functioning body is not likely to generate these in such tempo or in such quantity. Thus, a well-functioning body is expected to resist an infection better than an

ABOUT TUBERCULOSIS

ill-functioning one. This expectation will be justified only when the body has inherent power to mobilise the forces. If the body is lacking in this respect, however well it is functioning in other respects, good general health will be of no avail to resist that particular infection. It must, therefore, be well noted that good general health brings along with it an expectation for better resistance—no more and no less.

Insufficiency of Form and Function

THAT good general health both in regard to form and function may fall short in preventing Tuberculosis had been very clearly shown in the Senegalese soldiers. These men were brought to France in the last Great War to fight against the Germans. They were splendid specimens of human health. In fact their general health was even better than the Frenchmen. But a very peculiar thing happened with the Senegalese. Soon after their arrival in France, a very large number of these men began to be attacked by tuberculous disease. It was an epidemic with them. The disease in them proved to be of a very acute type and they died very, very quickly. This was not the type of disease met with in the French people. A Frenchman almost always showed a chronic disease in him, that is, his disease was slowly progressive or gradually healed. This was a definite proof that Frenchmen were more resistant to Tuberculosis than the Senegalese though the latter possessed a far better physique. How could we account for this apparent anomaly?

An "Invisible Health"?

BORREL, a French Pathologist, marked this important difference that men of superior health belonging to one race might be invariably weaker in resisting Tuberculosis than men of inferior health belonging to another race. His work and that of Prof. S. L. Cummins and of others, throw enough light to conclude justifiably that there are other factors no less important than general good health to protect a person from the ravages of Tuberculosis. In further investigations of Borrel it was known that Tuberculosis was not prevalent among the Senegalese in Africa and that the Senegalese had no previous tuberculous infection. Their bodies, therefore, were of the type of 'virgin soil' so far as tuberculosis was concerned. In France, on the other hand, Tuberculosis was widely prevalent and most men in France were already infected. They represented contaminated soil. Thus the French people, infected and inferior in health, showed better resistance against tuberculosis than those who were non-infected and superior in health (the Senegalese).

When a virgin body is first infected with the tubercle bacilli it will either die of the disease if the infection is heavy and virulent, or resist and ultimately heal the disease by the natural resistance of the body. This natural or inherent resistance may not be equal in all persons. Those who can resist the first infection generate in themselves a special kind of resistance known as "acquired resistance" or "acquired immunity". After the body has acquired this special kind of resistance it can withstand with impunity a far larger dose of infection which, when it falls on a virgin soil, would surely have produced disease. Thus, a previous infection successfully dealt with is all to the advantage of the person. The Senegalese had no experience of previous infection. Therefore, they did not acquire any special resistance. When they were brought to France they were suddenly exposed to Tuberculosis infection which was widely prevalent there. They fell an easy prey to this disease. The French had previous experience of it and thereby had acquired resistance. They, therefore, resisted the inroad of the disease better. It will be evident that this special type of fighting power was not reflected in the general health and was yet a very potent factor in the protection against tuberculous disease. It is this *invisible health* not always running parallel to general health which had caused the apparent anomaly or paradoxical results in the French and the Senegalise soldiers.

Tuberculosis Heritage

SUCH power of resistance, or lack of it, as in the French or in the Senegalese, has been shown to be present in different degrees indifferent communities. This resisting power varied remarkably parallel to the period a community had been in association with tuberculosis. In the United States of America, the Negroes and the Whites live in the same climate They are both settlers. Tuberculosis is known to be present in the mother countries of the Whites for a long time. Not so, however, in the mother countries of the Negroes. In America the death rate amongst the Negroes is much higher than in the Whites This shows that the longer a community has been in association with Tuberculosis the greater is its resistance to the disease. This difference according to association is not only present in the different colours but is also remarkably shown amongst the different communities of the Whites of U S A Drolet found that in 1930-31 the average death rate in the Whites was 72 per 100,000 of the population. But there was a very wide variation of death rates in the different white races, as for example—144 in the Irish , 90 in the Scandinavians ; 69 in the Italians ; 63 in the English , and 46 in the Polish. All the different communities live in the same country. There is not much difference between the environmental and financial factors of one community from the other. Yet the difference is remarkable and more remarkable it is for the fact that this variation seems to go hand in hand with the kind of heritage of Tuberculosis. Irish and Scandinavian ancestors were used to agricultural pursuits, living in sparsely settled areas. Tuberculosis was not prevalent in them till recently and they showed the highest death rate.

Italy has a long civilisation to boast of, and England has long been industrialised ; widespread Tuberculosis in these countries has

been recorded for a long time. The stock of these people also showed better resistance. The Polish in U. S. A. are mostly Jews. Tuberculosis is known amongst the Jews for a very long time and, because of their wandering life, they had the chance of acquiring widespread Tuberculosis in the community. Their stock in U. S. A. is resistant to the greatest degree. Thus it seems that a long heritage of Tuberculosis is good, for the duration of the heritage goes hand in hand with the amount of resistance shown by the community against the disease.

The Death Curve

THIS phenomenon of a community gradually becoming resistant to Tuberculosis in course of time is also shown in the graphic markings of the death rate of Tuberculosis in a community. This takes the form of a curve—rising at first and then falling. When Tuberculosis enters into a community it meets, in the beginning, people who had no acquired resistance in them as Tuberculosis was non-existent in the community. It is, therefore, likely that Tuberculosis will take a heavy toll amongst such people. The death curve, therefore, sharply rises. The disease spreads gradually in the community and more people get infected. Some, who are infected with small doses, heal the disease in them quickly ; others, who get progressive disease, die of it. It can be reasonably imagined that as time roll on more and more people get the infection and more people develop acquired resistance. Gradually, when more people are resistant than the susceptibles, the Tuberculosis death rate begins to fall.

That such a curve actually occurs has been shown in England, Germany and U. S. A. The Tuberculosis death curve rose for a long time and now it is falling. In Philippines and Porto Rico the curve is still rising. Enough data are not available in India. Yet it may justifiably be said that Tuberculosis is on the increase. Prominent and good workers like Dr. A. C. Ukil have thrown some light in this direction, their conclusion being that the curve is now on the uprise in India.

It may be questioned that in India Tuberculosis was known for a long time. Even if that be true, it was only limited to places of congregation and culture. As the conveyance system did not develop for a long time, tuberculosis could not, therefore, spread. Major parts of India, therefore, remained free from Tuberculosis ; or, in other words, the community or race remained more or less of the type of 'virgin soil'. Hence, when Tuberculosis is spreading in this community through urbanisation and industrialisation and by the help of modern conveyances, it is taking a heavy toll.

Heredity in Resistance

IF it is true that Tuberculosis in a community runs in a curve of the type described above,—and this seems to be true by the findings in England, U. S. A. etc. — is it then possible that the offspring of a resistant people are also born with some resistance not present in the offspring of a non-resistant people? I am aware that this is a very controversial problem and many factors must be considered before such an opinion can be justifiably given. I shall introduce only one or two general phenomena to show the possibility of such a happening.

Let us consider the curve. It has been proved beyond doubt that Tuberculosis is not a hereditary disease ; that is, a child is not born tuberculous even when one or both of the parents are tuberculous. It has also been proved that not only such a child is not born with tuberculous disease but also remains free from infection in the womb. Therefore, a newborn infant can be regarded as virgin soil

Consider now the tuberculosis curve in the community. At the crest of the curve, there are the greatest number of tuberculous patients in the community and therefore the infective potential is also the highest. Those who are new-born members of the community are naturally of the 'virgin' type and, at this stage, have more chances of being fatally infected by heavy doses. The curve will, therefore, never fall but will go on continually rising unless we assume that even a newborn child of such a community is born with resistance to protect it from the level of usual infection present in the community. Otherwise, the nature of the curve cannot be explained.

A new-born child, whether of an infected White or of a virgin Negro, is alike virgin soil to Tuberculosis. The great difference in them is that tuberculous disease nearly always ensues in the Negro infant when infected, whereas a White infant resists the disease in most cases. There must, therefore, be some inherent difference of resistance between the two. Neither of these had any previous experience of infection so far as the individual is concerned, but one belonged to the community with previous experience and the other to the one without it. It seems that the presence of Tuberculosis in the White community imparted into the body of the White infant something which protects it from the disease, while the absence of Tuberculosis in the Negroes makes the infant very susceptible when exposed to infection.

"Inherited Immunity"

THE problem is: What is that which the White child inherits to make it more resistant? As yet there is no clear cut answer to this. Prof. S. L. Cummins, a great and critical student of Tuberculosis, believes in the likelihood of 'inherited immunity',—not the inheritance of immune substances but "the inheritance by our European races of a power to respond to infection in a more favourable way than primitive man". In his African report he suggests "that the power of actively producing antibodies may be transmitted to the offspring in varying degree".

Such words from such a person carry weight. A man in a community where Tuberculosis is widely prevalent is always exposed to infection. His body resistance is always endeavouring to ward off this invasion and in course of time

his body forces may be trained to become so alert and so effective as to resist the usual level of infection present in his society. This may be a possible reason why many of us remain free from Tuberculous disease though living in the midst of very heavy infective conditions. Long and continuous association with this danger trains the body how to avert the danger. This is a common protective phenomenon of life, and it may be quite possible that this tendency or this trained faculty may be transmitted from parents to children. The faculty may very well be the power to generate resisting substances in the body in shorter time and in more optimum quantity than in the offsprings born of parents not trained gainst the tuberculous danger. This transmitted power saves a White infant, and the lack of it kills the Negro. This, therefore, points to the fact that there is inherent constitutional differences so far as resistance against Tuberculosis is concerned ; and that the constitution, weak or strong, may be inherited. There is, of course, no conclusive proof to establish it as a fact but the considerations stated above make the likelihood a great possibility.

The Point at Issue

THIS weak or strong resisting capacity, be it inherited or inherent in a human body for any cause, is neither manifested in the outer form or in the ordinary functions of the body. This is a dormant quality roused only by the invasion of the germ. The quality may be strong in a thin-looking person and weak in a healthy-looking one. This is likely to be the reason why so many weak-looking persons resist tuberculous disease all through their lives and many strong people fall a prey to the disease.

It may be argued at this stage that it is not the constitution but the amount of infective germs that determines the disease. A strong man will get the disease when infected with a massive dose, whereas a weak man will escape it when infected with a small dose. It is quite true that the dose of infection is important for the production of the disease ; but if that were all, then from the crest of the tuberculosis curve when infective potential is highest there would have been no decline in mortality in England. To grow a plant, the seed (the tubercle bacilli) is certainly required but the soil (the body) is no less important. The condition of the soil may favour the growth or hinder it. Similarly, whether the human body, according to its type, will favour or hinder the growth of tubercle bacilli, cannot be judged by the mere appraisal of general health. It is a special faculty not reflected in the general health of the person.

How to Detect?

IF an assessment of general health provides no clue, does anything else throw some light on the resisting capacity of a person?

There is a test known as 'Tuberculin test'. When this test is negative, it usually shows that the body has never been infected and, therefore, gained no "acquired resistance". It, of course, throws no light on the inherent capacity of the body. If the test be positive in a healthy man, it shows that the body had been infected, had overcome that infection from producing progressive disease and has now acquired a special fighting power known as 'acquired resistance'. This resistance is likely to protect the patient from subsequent infective doses heavy enough to produce progressive disease, had it occurred before acquiring this resistance. Thus by applying this test we can select out these two types of individuals in a community and arrange the preventive measures accordingly.

Tuberculin Test : not a Harmful Procedure

I SEEK here a little space to dwell upon the Tuberculin Test as there is an impression among the public that the injection of Tuberculin (for Tuberculin Test) is harmful and may even give rise to Tuberculosis. Tuberculin contains no living germs and, as such, cannot alone produce Tuberculosis. Given in the doses as is being used in the Surveys it has absolutely no harmful effect. At most it produces a little inflammation at the spot of injection, but it causes no inconvenience to the person. Given in a very high dose (which could only be done by an ignorant doctor) it may have some bad effects ; but that is never used in a Survey work. Practically, therefore, Tuberculin test breeds no danger. But, on the other hand, it tells us the very important fact about the type of the body and a person may be adequately guided and advised in the light of the findings from such a test. It is, on the whole, a far greater advantage for the person, and there is, therefore, no sense in the widespread notion of its harmfulness, which only goes to create false alarm and needless unwillingness to submit to the test.

Why Improve General Health?

AFTER all these discussions it may pertinently be questioned —Why improve health to prevent or heal Tuberculosis? Why should the "Improve General Health" propaganda be a major part in the antituberculosis campaign? Why are Tuberculosis workers all the time advising their patients to have good health? Even in the light of what has been said before, the answer is clear enough. Good general health is a safeguard against Tuberculosis within certain limitations. It has been said before that good general health implies an optimally functioning body, and as such it can produce optimum resistance in the shortest time when required of it and when it has the inherent power to produce it. A physiologically weak functioning body may not be able to mobilise optimum resistance even though it may have the inherent power to do it. This is, therefore, a great advantage of a healthy body over a non-healthy body. It is, of course, self understood that a healthy body inherently lacking in the power of resistance to tuberculosis stands almost at the same level as an unhealthy body.

Health, therefore, is a motive force to mobilise the defences When defensive substances and machineries are absent, good health alone can play no part. Good health, backed by the inherent power (invisible health), is both a protective and a curative factor in Tuberculosis.

LEGISLATION *and* TUBERCULOSIS

By

DR. A. C. UKIL, M.B.

Calcutta

IN the evolution of human society, as we proceed, with the help of our knowledge about factors which influence our environment and with the improvement of social sense, and as group conscience develops in a community, we begin to realise that we have to follow certain common principles which react to the common good or well-being of the society and whose transgression reacts prejudicially to the contrary Thus has developed social science with the aid of specialised social education regarding matters of personal and public health. It is, therefore, that the evolution of social science has induced man to define certain codes of law for the guidance and preservation of the material, physical and mental well-being of society, be it tribal, feudal, totalitarian or democratic, and to codify them in certain rules of conduct which we call *Law*. But since the force of conscience of man in relation to sanitary conventions, customs and habits of individuals cannot always be depended upon to strictly follow these principles, it becomes necessary to introduce mandatory and punitive clauses in sanitary legislation to safeguard community health.

As the mental equipment and sense of subjugation to a code of law vary in proportion to the rate of progress of education and civilization in a community and to a gradual realisation of the dictum of "the greatest happiness of the greatest number" (Bentham), the codification and enforcement of law, sanitary or otherwise, has naturally to be in stages in a given country. If it is conceded that the State represents the equilibrium from the resultant of the forces which govern the individual opinions in a country, the latter have to rise up to a certain level before a smooth working of legislation can be expected or ensured. If the State decides to intervene and enforce a certain piece of legislation, it has to see whether the enactments are likely to be followed, without intensive or extensive turmoil, by the community, which is, after all, an aggregate of individuals. In any community, therefore, a piece of legislation must have the approval of the bulk of the people so that a smaller number of possible delinquents may be brought to book and either prevented from committing what is harmful for the community or forced to follow the desired mode of life. But in this matter, the legislator as well as the administrator has to take into consideration the heritage of a nation in regard to its religion, customs, traditions, status of education and socio-economic structure before making provisions for enforcing legislation.

THE FIRST INITIATIVE

LET us look at the problem of control of tuberculosis from these standpoints. The history of the campaign against tuberculosis shows that the first initiative in public health protection has always been taken by private agencies, which had pointed out the need for action by demonstrating facts about its causation, prevalence and prevention. The State has come forward later on to support, extend, regulate, and co-ordinate this action. In no nation has the State directly and completely taken over the whole task of the campaign against tuberculosis, except U. S. S. R. In most countries, a joint action has been favoured, as it has been realised that private initiative cannot be sufficiently far-reaching, methodical or generous to control the campaign without State aid as regards finance and legislation, whether enabling or coercive. Legislation regarding matters of public health, founded on facts and science, forms the basis for the unified control.

Ever since the infectious nature of phthisis was announced by Robert Koch in 1901 at the International Congress at London, the control of the "open" case has been considered as the alpha and omega of a tuberculosis campaign. In a disease which comes stealthily and which is transmitted chiefly by personal and family contact, it is necessary to break up this intimate contact, if we are to prevent the transmission of infection. The resolutions passed at this conference laid the foundations for the organized control of the disease in England.

It was soon found that State action was needed for certain types of legislation; technical guidance and supervision of the work of doctors, public health workers and institutions; recognition of certain institutions as being of public utility ; co-ordination between the different units of organisation; and financial assistance. Later on, the introduction of social assurance greatly facilitated the campaign. I shall now confine my remarks to legislative aspects only.

LEGISLATIVE MEASURES

1 *Notification of cases.*

IN England, legislation has followed stage by stage the progress of the science of public health. At first voluntary notification was tried, requesting private practitioners to report only infective cases, for which a fee of one shilling to half a crown was paid per case, discouraging the notification of persons *in extremis* at the same time. In Cardiff, as far back as 1903, a Woman Inspector was appointed to visit all cases notified, the bacteriological examination of sputum was carried out *free of charge* and spitting in public places or vehicles was made punishable by law. Gradually confidential notification of all types of tuberculosis was made compulsory. According to English Law (1930), notifications in both urban and rural areas must be sent to the M. O. H. "forthwith on becoming aware" of the disease by (*a*) the head of the patients' family, or (*b*) the nearest relative, or (*c*) the occupier of the house, and (*d*) every practitioner attending or called in to visit the patient. The first and last-named *must* notify, the others escape if they have reason to think notification has been made. For the purposes of notification, ships, vessels, boats, tents, vans, and sheds used for human habitation are treated as buildings. The admission of cases in hospitals and sanatoria is also to be notified. Upon notification, the M. O. H shall take such steps as may be necessary to ascertain the possible source of infection, methods of preventing the spread of infection, etc. The notifying practitioner is paid a fee for co-operation.

The rule is, however, not uniform in all countries. In Switzerland, confidential notification is obligatory for doctors for "all cases in which the nature of the disease and the conditions under

which the patient is living involve danger to others" Swedish law does not require notification In France and Netherlands this is optional Notification is still, however, badly carried out in most countries The subject of notification raises various questions which are far from uniformly dealt with For example, who is to make the notification? To whom should it be made? How is professional secrecy to be guaranteed? What is the definition of an infective case? What are the penalties? etc , etc

In these matters it is very necessary to secure the co-operation of the private practitioners The patient must be preserved for him and it should be seen that reporting does not cause him either lack of income or lack of dignity The doctor must be given some service either in fees, or in facilities for diagnosis and advice about treatment, or in making arrangements for his post-graduate training, in recognition of his spirit of civic consciousness in reporting This applies in the case of school medical or maternity service as well A campaign of publicity should concurrently be carried out to encourage help both from the public as well as doctors The tact and personal contact of the Medical Officer of Health go a great way to facilitate success

IN ENGLAND

THE English Public Health Act of 1925 makes the following provisions in clause 62 for the compulsory segregation of infective cases, but the local authorities have seldom found it necessary to take action under this Act as the majority of patients are only too glad to avail themselves of the institutional facilities offered —

'Where it is proved to the satisfaction of a court of summary jurisdiction (*a*) that any person suffering from pulmonary tuberculosis is in an infectious state and (*b*) that the lodging or accommodation provided for that person is such that proper precautions are not being taken, and (*c*) that serious risk of infection is thereby caused to other persons, and (*d*) that a suitable hospital or institution exists for the reception and accommodation of that person, the court, upon the application of the County Council or of the local authority, may with the consent of the superintending body of the hospital or institution, make an order for the removal of that person to that hospital or institution and for his detention and maintenance therein for such period not exceeding three months as the Court thinks fit"

It must be remembered that the ultimate object of notification is isolation and control of the infective case Where this cannot be secured in the house, removal to an institution is implied Where, therefore, hospital facilities and financial assistance to the patient and his family cannot be offered, isolation will remain, to a great extent, a dead letter In most Western countries, the campaign has advanced through 3 phases that of sanatoria, that of dispensaries and, lastly, the advent of insurance State aid has been lavishly bestowed For example, in Wales 50% of the total cost of tuberculosis control is paid from the Treasury, 40% by Local Authorities and 10% by the National Tuberculosis Association Denmark has provided for 138 beds per 100 deaths from tuberculosis, Sweden has 112 beds per 10 000 inhabitants, and so on

2 *Provision for anti-tuberculosis campaign*

It devolves on the central power and the local authorities to see that compulsory provision is made for the component parts of the anti-tuberculosis campaign In England anti-tuberculosis measures are carried out by County and County borough Councils the expenditure being met from local rates aided by the general grant from the Government Exchequer In Denmark the State pays 75% of the cost of tuberculosis patients In France the State subsidy is 22 million francs (1930) in Germany it amounts to 13 million marks

The English Law lays an obligation on the Local Government Board to supply treatment in institutions and to provide for after-care The French law (1916 and 1919) compels the institution of regional dispensaries and obliges departments to have a sanatorium The Norwegian law provides for isolation not for treatment

IN OTHER COUNTRIES

IN some countries, the State delegates part of its power to voluntary institutions, as regards social hygienic offices, national and local anti-tuberculosis committees, national anti-tuberculosis associations and their branches For example, Italian law entrusts the organisation of treatment to the anti-tuberculosis insurance and the organisation of preventive measures to the *Consorzi* (provincial anti-tuberculosis Committees or Associations) while the State retains the technical direction and supervision of the whole The United States of America prefers a joint organisation with a strong voluntary central association, backed by autonomous local organisations

Every advanced country has however, found it necessary to encourage or to compel social assurance institutions to subsidise treatment and to restore the working capacity of the patien with a view to prevention The English National Health Insurance Act of 1911 at once entitled 14 million people in England to medical and sickness benefit and the Public Health (Tuberculosis Act of 1921 made the insured entitled to come under the tuberculosis schemes on the same footing as the res of the population

3 *Co-ordination of administrative machinery of the component parts*

The decline of tuberculosis in the West has followed a raising of the standards of living, particularly in the matter of housing, food and personal cleanliness education and social discipline greater security in the matter of health and employment to isolation of infective cases and to administrative drive and co-ordination, as applied to preventive measures for the whole population The State must remain responsible for the technical direction and supervision of institutions and should delegate such functions to local authorities representatives of State, private agencies technical experts and insurance organisations where such exist, as are considered to facilitate and co-ordinate work in the best possible way There must be legal sanction behind all these measures The State must be prepared to contribute the necessary expenditure if these measures are to bear fruit It may be pointed out that in countries in which anti-tuberculosis measures are most effective, the total expenditure on tuberculosis amounts to approximately 2 shillings 2 marks or two gold francs per inhabitant Without special taxation, such a high contribution is hardly possible

IN INDIA

LET us now turn our attention to India with regard to some of the points raised in the preceding paragraphs

1 *Registration of cases and of deaths and the collection of statistics*

The classification of the various forms of tuberculosis for registration and the methods of registration are extremely defective These only require administrative action for the necessary rectification

2. *Notification and restraint of infection.*

Medical practitioners (not always well defined) have been enjoined to report cases of tuberculosis to the M. O. H. in municipal areas in Bengal, Madras, Behar, Orissa, U. P., Punjab and New Delhi. The head of the family is required to report in C. P. and Bombay. Nowhere is it notifiable in rural areas, except recently in Madras. Notification has not been placed on the Statute books of the Indian States as yet There are no penal clauses attached to the relevant sections in any provincial Municipal Act, except in the Punjab one.

The relevant section (56) in the Madras Public Health Act, 1939 reads thus—"Every medical practitioner (which includes a *hakim* or *vaidya*, registered or not) who in the course of his practice becomes cognizant of the existence of any case of enteric fever or tuberculosis in any private or public dwelling other than a public hospital shall, if the case has not been already reported, give information of the same with the least practicable delay :—

(*a*) in municipal areas, to the executive authority, the Health Officer or a Sanitary Inspector; and

(*b*) in non-municipal areas, to the Health Officer, a Health or Sanitary Inspector of the Village Headman."

The manager of a factory or public building, keeper or a lodging house, head of the family, owner or occupier of a house has been enjoined to notify all the diseases declared as such, in case of illness or death.

The Madras Public Health Act, 1939, is a most comprehensive piece of legislation in which notification has been enjoined and exposure of healthy persons to infection from various sources has been prevented by legislative enactment. The decision for executive action has been left with the municipal commissioners, in some cases, with the Health Officer or Sanitary Inspector in others. The Madras Act gives this power to the Director of Public Health and the officers under him.

DEFECTS OF INDIAN ACTS

NOTIFICATION and other clauses for the restraint of infection no doubt imply, at first, inspection by a Health Authority, and then, segregation of the source of infection, either at home or in hospital. If the patient is a wage-earner, this involves the question of not only the cost of his treatment but also the maintenance of his family. But the Indian Acts are strikingly reticent about such provisions. Unless these provisions are offered, the co-operation of the medical profession and the public in segregating an infective case can hardly be forthcoming; the State has no moral right to carry them out either. The result of the present arrangement is to drive the infection underground by avoiding detection and compliance with the provisions of the law. To quote an example; a teacher in a school is detected to be an 'open' case of pulmonary tuberculosis. We know, and probably the teacher knows, that sooner he ceases to continue at his post better is it for the health of a large number of susceptible children under his care. But unless financial relief is offered in lieu of his temporary absence in an institution and for the support of his family, he will try to hide the diagnosis, while still remaining a source of great danger to the community.

In a country with an annual loss of 1,000,000 lives from tuberculosis and a bed capacity of 2,600 only for the reception of the tuberculosis patients, the enforcement of the provisions of notification, disinfection and segregation can hardly be expected at the present moment. But a good deal can be done towards home segregation by tactful and sympathetic medical officers and health visitors. The establishment of some clinics and the results of tuberculosis surveys have brought to the surface the tragedy of the situation but relief can hardly be expected unless isolation beds are increased and financial provisions are secured by legislative enactment, in the matter of social assurance, taxation, and co-operation with local authorities.

Another matter which is very important for the successful working of a piece of legislation for the restraint of infection is the way in which the M. O. H. proceeds to carry out his job. Whenever a case is reported it should be the Health Officer's aim to break up the transmission of infection by personal enquiries, visits, tact, persuasion and education. We regret to state that the working machinery in most parts of India is very slack in these respects.

In our enthusiasm, we once wanted to draft an *ad hoc* Tuberculosis Act in Bengal, but we met with strong and very reasonable opposition from the members of the Sanitary Board. We realise that no tuberculosis programme can succeed with a legislative foundation and that every 'coercive' legislation must be backed by 'enabling' legislation. Without ensuring the latter, the former cannot be enforced with benefit to the community. I venture to express that the time has not yet come in India to frame any comprehensive and useful tuberculosis legislation, although it may seem to be very important and urgent. It will be putting the cart before the horse.

MUNICIPAL ACTS

I SUGGEST that, during the *ad interim* period, the provisions of the Municipal Acts and Rural Health Acts be acted upon with zeal and sympathy and that more power be delegated to the Health Officers, instead of to the Municipal Commissioners, to take prompt action, in co-operation with the anti-tuberculosis organisations which are now being extended with the help of the King Emperor's Anti-Tuberculosis Fund. Let the cases be followed in the homes of patients and where beds can be secured and where the patient can be induced to leave his home, let him be removed to an institution; otherwise isolation in the home is to be aimed at When the State and local bodies will realise their financial obligations in the matter of the care and after-care of the tuberculous, then will the time come for legislative measures which have been carried out with so much success in Western countries. In the meantime, I would draw the attention of all Public Health Workers and administrative heads at the centre and in the provinces to enforce, with mercy, certain provisions of the Municipal and Health Acts, of which the following may serve as example :—

Bengal Municipal Act, 1932—Sections 108, 269, 329, 376, 377, 378, 379, 381, 390, 391, 396, 421, 434 and p. 301 of the Rules, Model Rules and Bye-laws under the Bengal Municipal Act, 1932, 1936.

Calcutta Municipal Act, 1923 and 1932—Sections 435, 436, 438, 439, 441.

Punjab Municipal Act, 1911—Sections 141—144.

Madras Public Health Act, 1939—Chapter VII.

When one goes through these Acts, many of the directions given in relevant sections seem to be ambiguously worded. It is realised that a change of law cannot be made without the approval of the legislature, but suitable bye-laws can be framed by administrative machinery, without reference to legislature, and acted upon to control tuberculosis in urban, rural and industrial areas. Bye-laws to be successfully operated must give clear and complete directions

without any ambiguity, must be general in application, positive in their terms and directed to prohibit or enjoin an act by persons upon whom they are to operate and they must impose a penalty for contravention. It will be seen that the relevant sections in the provincial Acts are extremely defective in these respects. Before definite legislative action is taken some model bye-laws may be framed by a central or provincial committee for the guidance of Local Bodies in order to try for some years the application of a rational procedure all over India.

ALTERATIONS SUGGESTED

THE following are some of the alterations suggested in the Bengal Municipal Act, 1935 :—

Section 376 : delete the words "epidemic form".

,, *377* : Re : Notification—The first charge should be on the head of the family, next on the Medical Practitioner and lastly on others.

,, *378* : Add the words "Health Officer" after the words "Registered Medical Practitioner".

,, *389* : The Health Officer should have a right of entry without being referred to the Chairman.

,, *391* : Rules of the enforcement of disinfection of infectious diseases should be provided.

,, *394* : Even if school medical inspection is left with the Education Department, the School Medical Officer should ordinarily work under the Health Officer, to secure more efficient co-ordination and results.

,, *375 and 420* : Licensing of industrial enterprises should be done by the Health Officer.

Schedule 6 : Building regulations should be operated by the Health Officer.

Bengal Food Adulteration Act—The prosecuting authority should be the Health Officer.

Bye-laws under Section 392 (restraint of infection) are fairly comprehensive but the Director of Public Health should have power to compel the local bodies to apply the laws properly.

A consolidated Public Health Act of Bengal, on the lines of the Act of 1939 in Madras, incorporating the relevant portions of Bengal Municipal Act, Bengal Food Adulteration Act, Bengal Birth Registration and Vaccination Acts has become an urgent necessity.

ADMINISTRATIVE IMPROVEMENTS

IT is well-known that Health Officers are often obstructed in the discharge of their legitimate duties by the Chairman and Councillors of Municipalities and District Boards. The following administrative improvements are suggested :

1. The Health Officers should be given more executive powers and their duties and relations with the Chairman should be more specifically defined. These officers should have the right of direct correspondence regarding health matters of his area with the Director of Public Health.
2. The Director of Public Health should be given more control over health affairs in the municipalities and district boards. Instead of acting in a merely advisory capacity as now, the Director of Public Health should have more mandatory powers.
3. A copy of all recommendations of the Health Officer to the local bodies concerned should be sent direct to the Director of Public Health.
4. The Health Officer should be empowered to draw up the Public Health portion of the Budget and the requirements for staff and to submit the same to the local body concerned, which should give due consideration to his requirements. It would be better if the local bodies get the approval of such proposals from the Director of Public Health. The Health Officer should have a direct control over the sanitary staff under him and should have a say in appointing and dismissing them.
5. The Health Officer should be given protection, in more direct terms, with regard to his security of service in so far as the dual control of his appointment is concerned.
6. For the purposes of administrative efficiency in improving public health, it is desirable that the services of Health Officers should be provincialised under the Director of Public Health, who should be empowered to recommend transfer for officers from one area to another.

WANTED A MINISTRY OF HEALTH

WHEN a certain amount of experience has been gathered as a result of anti-tuberculosis work for some years and when the public demand for more relief from the ravages of tuberculosis become insistent, we shall know more about the trends of legislation. The subject may then be considered in the light of experience gained. I cannot visualise, however, how the administrative machinery necessary to control a widespread disease like tuberculosis, with its many causative factors and implications, can be set up and managed without a Ministry of Health at the centre in the provinces, with appropriate administrative staff under them. The unification of procedure, which is so necessary, cannot be achieved without this. I am, however, strongly in favour of legislative provisions and their enforcement in the matter of certain factors which indirectly help the anti-tuberculosis campaign, *e.g.*, rural and town planning, slum clearance and housing to prevent over-crowding and insanitary living, especially in urban and industrial areas, diminution and control of dust hazards and introduction of social assurance. I do not mind if spitting on the floor and walls of public buildings and public vehicles is declared a public nuisance and a criminal offence, and is punishable with a fine or simple imprisonment in lieu thereof, at the present moment.

A propos Tuberculosis

By

DR. NARENDRANATH SEN, M.B., T.D.D. (Wales)

Assistant Superintendent, Jadabpur Tuberculosis Hospital.

FOR the prevention and treatment of tuberculosis, the co-operation of the patient with the physician is absolutely indispensable. The patient must know the essential features of the disease, and it is a part of the routine duty of doctors attached to a sanatorium to spread this knowledge. I, therefore, propose to approach the subject of tuberculosis from the patient's point of view. A variety of interesting questions are asked by patients and their relations, some of which have been picked up and appropriate answers given.

Patient—What is tuberculosis? Is it the same as phthisis?

Doctor—Tuberculosis is the disease caused by T. B. germs. These germs may affect all the organs of the body—chiefly lungs, glands, bones and bowels. The word "phthisis" literally means "wasting" and is usually applied to chronic lung tuberculosis.

Patient—Can tuberculosis be caused without T. B. germs?

Doctor—No. It is always caused by germs derived from a man or animal suffering from the disease.

Patient—What are the sources of these germs?

Doctor—The sputum of phthisical patients is the most potent source, less important being the stool and other excreta. The milk and flesh of infected cattle may also carry the disease.

Patient—How do these germs get into our body?

Doctor—(*i*) Usually through indiscriminate spitting by ignorant and careless patients. The watery portion of the sputum dries up and the solid portion containing potential germs mix with the dust and float in air. Inhalation of this dust gives the germs easy access into our body.

(*ii*) When a patient with advanced disease coughs, laughs or talks aloud, he or she scatters droplets of sputum up to a distance of 3 ft. Those coming in close contact may directly inhale these droplets.

(*iii*) A careless patient also infects everything that the hands can touch. Thus the clothing, bed linen, towels, handkerchiefs, watch, pen, knife, books, writing materials and utensils may all carry the infection to others.

(*iv*) Infants and children who live largely on milk can get the disease by drinking infected milk. The custom of boiling milk in this country kills the germs and protects our children. But the incidence of cattle tuberculosis in India is also negligible.

Patient—Is it a congenital disease? How does it run in families?

Doctor—A tuberculous mother does not convey the disease to her offspring before birth. Children born of tuberculous parents do not show any sign of this disease at birth. It is true that many of them develop tuberculosis as they grow old. The reason is that a sick parent has plenty of opportunities to infect the children and these children being born with a poor constitution very easily catch the infection.

Patient—Does the disease always follow the entry of T. B. germs?

Doctor—No. Most people are infected with these germs but very few develop actual disease. Lack of food, lack of sunlight and air, overcrowding, over work, repeated attacks of malaria and other factors which weaken the constitution help in the growth of active disease.

Patient—Are old people immune to tuberculosis?

Doctor—No. It is a disease of the growing age; but people of all ages can get it.

Patient—What are the early symptoms of phthisis?

Doctor—These may be very vague like tired feeling, loss of appetite, loss of weight and burning of hands and feet. But most patients start with blood spitting or fever and cough.

Patient—Does blood spitting always mean phthisis?

Doctor—No. But being the most common symptom of phthisis any body who spits blood should be regarded as suffering from this disease until any other source of blood is discovered.

Patient—How can one be sure that he is suffering from tuberculosis?

Doctor—Finding of T. B. germs in the sputum is the surest sign; but these may not be present in the earlier stages of the disease. X'Ray examination of the chest gives more definite information and whenever in doubt, an X'Ray plate should always be taken. External examination of the chest is not so reliable and often misleading.

Patient—Is Jadabpur a sanatorium? Why are tuberculous patients treated here?

ABOUT TUBERCULOSIS

Doctor—The popular meaning of a sanatorium is a health resort where all sorts of convalescent patients flock to recoup their health. But in medical language a sanatorium means an institution where tuberculous patients are treated according to certain definite hygienic principles irrespective of where this institution is situated. It is in this last sense that the *Jadabpur Hospital* is a sanatorium.

Patient—Can a change of climate cure tuberculosis?

Doctor—There is no climate on the face of the earth where tuberculosis does not occur. The modern tendency is, therefore, to treat the patient in his home climate. A T. B. patient requires perfect rest, a hygienic mode of life and often some form of collapse treatment. If these are not available, even the best climate will not cure tuberculosis. When the disease is arrested, help may be taken of the bracing climate and change of environment to restore the patient quickly to his normal health.

Patient—What are the principles of sanatorium treatment?

Doctor—Fresh air, good food, rest and graded exercise, a routine mode of life and collapse treatment where indicated, are the basis of treatment. It is popularly called "open air treatment"; but "rest treatment" is a more appropriate term. Rest of the body, rest of the mind and rest of the diseased lung—these are what we aim to achieve.

Patient—Why is rest so important for our treatment?

Doctor—Because any movement or excitement makes the blood rush through your diseased tissues where T. B. germs produce their poisons. Less movement means less blood flow and less poisons and therefore less fever, more appetite and more strength. If bed-rest is not enough, additional rest to the lung is secured by collapsing it by artificial pneumothorax and other surgical measures.

Patient—I am tired of taking rest. When will you give me walking?

Doctor—So long as you are getting fever, you will not be allowed to get out of bed. When the fever subsides we shall allow you to sit up; and when this is tolerated you will be allowed to walk. Starting with one furlong the length of walks will be increased step by step up to several miles a day.

Patient—Why do you insist on a correct recording of temperature?

Doctor—Because the temperature is an index of poisons in your blood and the amount of rest and exercise you require will be regulated by it. Auxilliary temperatures are unreliable. It should be taken for 5 minutes under the tongue after ½ hour's rest in bed.

Patient—Will exposure to sunlight do me any good?

Doctor—Applied under medical supervision, it is good for gland, bone and abdominal tuberculosis. If you are suffering from lung tuberculosis it will be decidedly harmful and may even cause blood spitting. Sunlight kills T. B. germs outside and not inside the human body.

Patient—I could not secure admission into any sanatorium. Can I be successfully treated in my own home?

Doctor—If you take perfect rest and adopt the sanatorium mode of life and if proper medical help is available you can be treated as successfully in your own home as in a sanatorium.

Patient—How can I prevent the spread of disease to others?

Doctor—By keeping aloof from others, developing cleanly habits and disposing of your sputum in the right way.

You must have a room to yourself, sparsely furnished, where children should *never* be allowed. You must have your own set of articles for daily use. You must always spit into covered spittoon (mug or bottle) containing some lysol lotion made by adding a teaspoonful of lysol to a cupful of water. The contents of the spittoon should be buried underground, burnt with saw dust or run down the closet. The spittoon should then be cleaned and boiled in water.

Whenever you cough, always hold a handkerchief to your mouth. After spitting wipe your lips with this handkerchief and keep it in a paper cover. Soak this handkerchief in lysol lotion for ½ hour daily and burn the cover from time to time.

Wash your hands every time you touch the spittoon or the soiled handkerchief. Wash your mouth several times a day. Get your utensils boiled after principal meals. Get your clothing and bed linen boiled in water once a week.

Patient—I am unmarried and have been cured of tuerculosis. Do you think I can marry?

Doctor—I must be satisfied that your disease is actually cured. You should not marry unless you have been free from all symptoms for at least 5 years. After this period you will have a thorough check-up and if everything is found all right, you may be allowed to marry.

Patient—I am a married man. Can I live with my wife?

Doctor—So long as you are suffering from active disease, you should not. If you have been free from symptoms, specially the cough and the spit for at least two years, you may.

FOR TUBERCULOUS YOUTHS—

THE BURROW-HILL COLONY

By

AMIYA JIBAN MOOKERJEE

A CORNER OF THE COLONY

TO get to the "Burrow Hill Sanatorium Colony" in England, one books to Frimley which is easily reached by electric trains that run frequently, *via* Ascot or *via* Woking, in about an hour from Waterloo Station. One may also avail oneself of a car, in which case the Great West Road is taken to Staines, Bagshot and thence to Frimley Village. The Burrow Hill Sanatorium Colony is about one-and-a-half miles from Frimley Station.

OPEN-AIR HORTICULTURAL INSTRUCTION

The great interest underlying this Sanatorium Colony was well expressed, about ten years ago, by a medical officer in the North of England, who remarked to Dr. W. M. MacPhail, the Assistant Medical Superintendent of the Burrow Hill Sanatorium Colony, that if they could afford to send their patients to Burrow Hill he would think it "a happy fate for a boy from that county to be tuberculous"!

But this was plainly overdoing a praise; for, as we consider the dreadful and far-reaching evils of the disease, tuberculosis, we surely feel that to pay any homage whatever to tuberculosis, is, to use the words of Thomas Mann, "an aberration, the beginning of intellectual confusion".

The Burrow Hill Sanatorium Colony, however, have been lavishly praised by many others and the general report is that the opportunities there for a tuberculous boy must be greater than many healthy boys would or could have. What do all these really mean then? Certainly not that for young people to be tuberculous would really be a good thing! Obviously, we must not take the words too literally. And now let us proceed to find the basis of such high-flown praise.

The Burrow Hill Sanatorium Colony is indeed contributing much not only to the actual treatment of tuberculosis among young people of a particular age-group, but also to the solution of the problem which is particularly pressing in adolescence—the problem of the profitable use of the time spent in a sanatorium during the course of treatment. And it is in the latter aspect that this "Sanatorium Colony" has evoked unadulterated admiration of the entire world.

FOR YOUTHS ONLY

BURROW HILL is meant for the treatment of tuberculous youths from 13 to 19 years. In the early days of this institution, its authorities encountered some difficulty in filling its beds; but as the tremendous utility of such an institution was realised, the wind blew in a different direction. To-day, a patient has to wait indefinitely before he can secure a bed in this institution.

Usually, patients in whom the outlook is favourable are admitted to this sanatorium colony and they enjoy the

INSTRUCTION IN BEE-KEEPING

advantages of ordinary sanatorium treatment under ideal environmental condition. Along with active treatment of the disease and the restoration of health of the tuberculous boys, which, of course, are ever the first consideration, the patients receive general education and technical training. Tuberculosis is a disease which takes usually a long time to cure, and in a sanatorium, it is demanded of a patient that he should allow the necessary length of time to himself and to his physicians to complete his recovery. But the authorities of the Burrow Hill Sanatorium Colony believe that "without accompanying education and training, this prolonged treatment would be worse than useless, because in these formative years the resulting idleness and lack of aim would lead to a permanent loss of initiative. The combined treatment and education scheme of the Colony allows a restoration of health without loss of morale. That these are no mere transitory results will be shown by a glance at our figures for employment. The number of trained patients who are in employment is gratifyingly high. It is also a matter for congratulation that this figure is much higher now than it was in our earlier years".

PLAYING CRICKET

The authorities, further, are quite naturally justified in remarking: 'In thus restoring to wage-earning capacity youths who have been disabled by disease and handicapped by onset of disease during the years of apprenticeship, the Colony is doing a real service to the community."

TECHNICAL TRAINING

A HIGH standard of efficiency is maintained in the technical training provided at the Burrow Hill for the tuberculous youths on the way to recovery. Boys with different capacity and inclination are taken for different education and training. Some boys take to horticulture; and pupils, who are more advanced in gardening courses, are encouraged to enter for the examination of the Royal Horticultural Society. As the courses are both theoretical and practical, the youths have at first to attain a reasonable standard of general education—which is very satisfactorily given to them in the Colony School. Those who go in for other kinds of training, *e.g.*, Shorthand, Typewriting, Book-keeping, Commerce, etc., have their progress checked by the examinations of the Royal Society of Arts, London Chamber of Commerce, the Pitman Institute, etc., and for them a standard of general education is also higher. The Colony School has the official approval of the Board of Education; and the educational and agricultural committees of the county of Surrey regularly supervise the technical courses. Due to the acknowledged sound standard of education and working efficiency, satisfactory employments for boys trained at the Burrow Hill Sanatorium Colony are always ensured through special arrangements with the different authorities of outside concerns.

REHABILITATION

THE usefulness of the work of the Colony in preparing its boy-patients for the future can hardly be overestimated. After the training at the Colony some boys secured such posts outside as they could never expect to have otherwise. In fact many would certainly have perished in their bad home conditions.

The authorities of this institution believe that "Rehabilitation", *i.e.*, bringing tuberculous youths to normal conditions of life without leaving them half-way, is of supreme importance and it should be done quickly, although very cautiously. The mischievous tendency of the disease to re-assert itself has caused occasional failures, but their percentage has been negligibly small

Giving his whole-hearted tribute to the educational and the social sides of the Colony Scheme, Dr. Kendall Emerson, Director of the National Tuberculosis Association of the U. S. A, remarks: "On talking to the lads themselves, there could be no doubt that they appreciated the opportunities offered by residence at Burrow Hill They undertake their work and study most seriously and all look forward with new hope to the day when they could put their training to practical and constructive use. The Colony's record of achievement in restoring its patients to lives of economic efficiency is one of notable success."

The vision and planning of the authorities of this wonderful institution have, indeed, saved many young lives from worry and despondency and made them truly useful members of society inspite of being apparently handicapped by tuberculosis. During its existence of little over a decade, the Colony has found suitable employments for 86% of its trained patients. Is it not a marvellous achievement in the face of the general and widespread misgivings with regard to the future of tuberculous patients?

In this "Sanatorium-College" (if we may be permitted to call so) recreation is also not forgotten. There are recreation halls, arrangements of suitable indoor and outdoor games, concerts, lectures, etc., which the boys enjoy heartily.

UNIQUE INSTITUTION

WHAT tremendous good this unique institution has done can be realised from a few extracts from letters of appreciation written by some of the young patients:

1. "I wish to state how glad I am to have been a patient at Burrow Hill. I am positive that my two years there have been the foundation of my continued fitness" (D W)

2. "Yesterday I was given a rise and am now looking forward to the next one. For all this I have the Colony to thank, for my training and for giving me back health. . . . Wishing you the best in your campaign against illness and ignorance." (R. B)

3. "I feel that I should write to you expressing my thanks to you and everyone at Burrow Hill, because my presence here (in the Army) is entirely due to you You will remember a poorly-looking boy, whose name was J—who entered the Colony and who was made fit enough to join the Army" (A. J.).

—*Continued on page 142*

SOCIAL SERVICE *and* TUBERCULOSIS

IT has been estimated that not less than two million people are suffering from active tuberculosis in the whole of India. This number is so huge that for many years to come modern institutional treatment can be available for but a small proportion of the sufferers, and for the great majority of them treatment must be provided in their homes.

This is one of the reasons why those responsible for the technical planning of the tuberculosis effort in India have put the establishment of tuberculosis clinics, in suitable centres, throughout the country, in the forefront of the campaign against the disease. These clinics will be centres where those suffering from the disease, and private practitioners treating tuberculosis patients can obtain expert advice in order to make home treatment as efficient as possible, under the circumstances.

The character of the tuberculosis clinic will largely depend on the needs of the local community and on the funds available. The minimum requirement will be a place for the reception and examination of patients, and for treatment which in some cases may have to be given in the clinic ; there must be a tuberculosis doctor and one or more specially trained tuberculosis health visitors to the clinic. But, if the work of this technical staff is to be of the greatest possible value, it must be supplemented and supported by an organization for social service, namely, a Care and After-Care Committee of voluntary workers.

An "Unblazed Trail"

TO a great extent Tuberculosis Social Service in India is an "unblazed Trail", and the committee of each clinic will have to embark upon its own explorations of discovery, guided by the work that has been and is till being done by pioneers. There must be few parts of India, however, where there is not a great sympathy for sufferers from the disease, at least in the many families who have had personal experience of tuberculosis among their own relatives, and from among these sympathisers there will naturally be those who will be ready to help in voluntary service. To enlist these people in a Help or Care Committee should be one of the earliest thoughts of those responsible for the work of a clinic. This Committee should, of course, include the tuberculosis doctor, and, possibly, one or more of the tuberculosis health workers connected with the clinic, but the Secretary should not be one of the technical staff. It is essential that in forming the Committee there should be chosen as members not only those who can give their time and energy in personal service to tuberculosis patients and their families, but also those who can influence the public, create confidence and obtain support, on account of their own keenness, interest and sympathy. The whole of the work of this Committee is a contribution of social service in connection with tuberculosis.

Social Service as applied to the tuberculosis patient is not easy to define, specially as it is so varied in its expression ; but in general it can be summed up as "a study of the social condition of the patient with a view to bringing the knowledge gained therefrom to the help of the patient both to hasten and safeguard his recovery and to prevent the spread of the disease to others".

Care Committee

THE work of the Care Committee will be concerned with two groups of patients, although the line between these two groups is not very sharp. There will be many patients too poor to pay for their own private doctor or for their treatment and who therefore, will have to be helped from the clinic. The clinic doctor and nurse will have to visit these patients in their own home, specially when they are not able to come to the clinic. Assistance from members of the Care Committee will be invaluable to the doctor and nurse, in caring for the social needs of these patients, without which care much of the medical help would be wasted or useless.

The other group will be those patients who can pay for their medical aid or even for their own doctor, and it is important to enlist the aid of the private medical practitioners in such cases. The clinic is not meant to compete with the private practitioners, but it is there to help them in every way possible, by giving free, expert advice which can best be provided if the private practitioner keeps the clinic informed of the progress of the patients treated by him in their own homes. With these patients the work of the Care Committee is different ; it should promote the co-operation of the local medical practitioners with the clinic, with a view to the control and prevention of tuberculosis in the whole area. This co-operation is a matter of supreme importance, if the tuberculosis scheme is to be successful. The Care Committee can also provide for many of these patients various forms of service or help which they would be glad to avail themselves of, and which might be difficult to obtain otherwise, in spite of their ability to pay for their doctor and their treatment. All the work of the Care Committee for this class of patients must be done with great tact and with the full knowledge and co-operation of the private practitioner.

For some patients, who are too poor to pay for their own doctor, the Care Committee may, under certain circumstances, such as distance from the clinic, arrange for treatment in their homes by private medical practitioners, paying such doctors a small fee for their services.

The Care Committee can also strive to bring into contact with the clinic or private medical practitioners, any patients who

have not yet come under medical advice, because such contact is necessary if tuberculosis is to be stamped out.

Financial Support

FOR the carrying out of the work of the Care Committee, it must have sufficient financial support. But money for social service should never be provided from the general funds of the clinic intended for the staff and medical work, and an important function of the Care Committee will be to raise subscriptions from the public for its particular work. Such support will readily be given if there is evidence of useful work by the Committee, as part of the Clinic's activities, in fighting the disease and in making it safer to live in that locality. The Care Committee will maintain its own funds with its own Honorary Treasurer, who, like the Secretary, should not be one of the technical staff of the clinic. While it is not possible to define all the uses to which the funds of the Committee should legitimately be put, the following may be suggested:—

(*i*) Giving relief to poor patients, after the Committee has, by personal investigation, found such relief is necessary.

(*ii*) Payment for transport of patients to clinic, hospital or sanatorium.

(*iii*) Provision, in special cases, of medicines, and medical necessities, which though considered necessary by the doctor, cannot, because of their cost, be provided by the clinic or the patient.

(*iv*) Payment of X-ray charges for poor patients, when the clinic has not its own X-ray, but can get such work done by a local hospital on payment.

(*v*) Provision of extra nourishment on the recommendation of the clinic doctor.

(*vi*) Provision of other place for treatment of a patient for whom treatment is impracticable in his own home, due to unhygienic or overcrowded conditions, and for whom institutional treatment is impossible to obtain.

(*vii*) Provision of other place of treatment, as a preventive measure, for a patient who is a dangerous source of infection, if he is left in his own surroundings.

(*viii*) Provision of aid for families whose natural supporter is sick, whether in the home or in hospital or sanatorium.

(*ix*) Arranging for the care and, if necessary, boarding out of children, if the mother is sick.

In addition to forms of service requiring money, there are many forms of service which the members of the committee may undertake, without expense, such as personal visiting of the sick, providing literature for those who can read, and small personal services, too many to describe in detail.

After-care of Patients

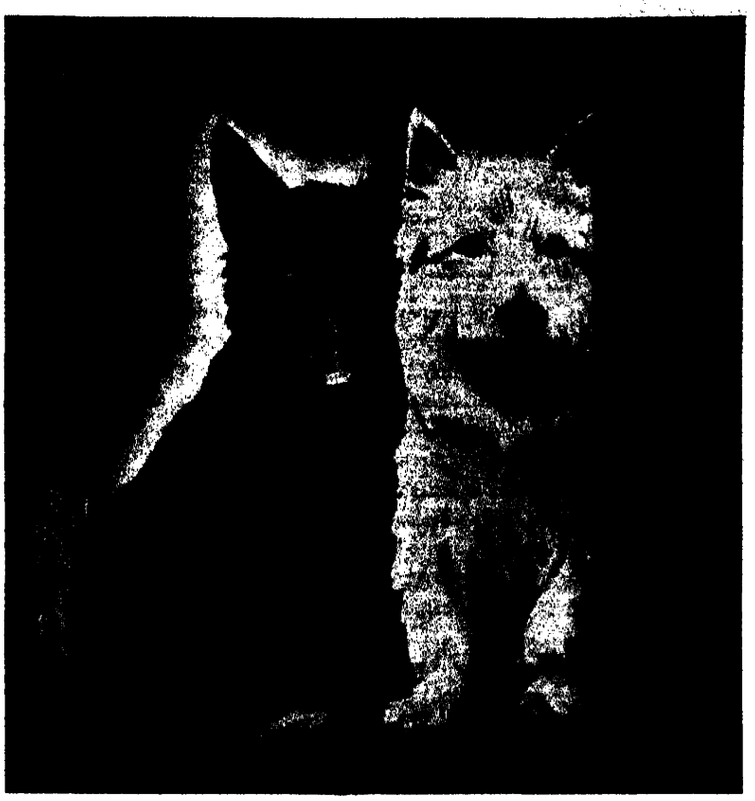
THE social service of Care Committees so far mentioned has been to patients while they are actually suffering from the disease. There is, however, one other not less important function of the Care Committee, and that is, the care for those who have been under treatment and have been considered fit to return to a more or less normal life. This function is usually styled the "after-care" of the patients.

The Committee should make it their concern to help such ex-patients specially during the first dangerous years after their illness, when there is, in many cases, the risk of a set-back, which would undo all the benefit of their treatment. The after-care of such patients would include the finding of suitable employment, according to medical advice. The employment may be their old occupation, either whole or part-time, or it may be a new one more suitable to the health and strength of the ex-patient. In many cases it will mean enlisting the sympathy of the employer, and if the ex-patient cannot work whole-time, to get the employer to give part-time or light work, and so to make this his contribution of social service to the tuberculosis scheme.

For some ex-patients, the Committee may be able to start them in a new way of making their living independently, and, if necessary, provide the training for the new occupation, such as small cottage industries, bee-keeping, or petty trades.

FOR TUBERCULOUS YOUTHS—*Continued from page 140*

4. "I am still working in the trade you taught me, and I may add that the training I received while at the Colony helped me considerably in obtaining the position I now hold." (L. R.).



5. "I am writing to thank you and the rest of the staff for all you did for me while I was at the Colony. I am now on the permanent staff and am very grateful for all that Burrow Hill and its staff did for me to help me get so far." (J. F. H.).

6. "I should like you to know that I am getting on very well with my work and for this I am very grateful for the time I spent at the Colony. It is now over five years that I have been home and I am now married, but I still look back to the Colony days and wish that I had been a little more contented than I was. . . . . I was helped by your understanding of me and I cannot help repeating once more how very grateful I am. In these times a regular job such as the training at the Colony afforded me is something to be very grateful for." (T. T.).

And there are hundreds of such epistles received by the authorities at Burrows Hill.

While an institution like the one at Burrow Hill is moving heaven and earth to achieve what is just, what is beautiful, what is truly useful to the promising tuberculous youths of the country in a most scientific manner, we in India are complacently allowing hundreds and thousands of young lives being blighted and ruined. We have not yet taught ourselves to look upon the menace of tuberculosis as one which should be faced and fought with every resource of science and social organisation in the interest of the fundamental vitality of the nation! Who will build a Burrow Hill for India?

DOGS *AND* RABIES

RABIES is an acute infectious disease, nearly always transmitted by the bite of an infected animal. It is not necessary to be bitten as the virus of rabies may enter the body through cuts, wounds, or scratches. All warm-blooded animals, domestic or wild, including fowl are susceptible.

Squirrels, rats, rabbits, cats, polecats (skunks), guinea-pigs, and deer that are ordinarily timid, when rabid are apt to attack man or beast. A bite from any animal should always be regarded as dangerous, and if possible the animal involved should be held for observation for at least ten days.

Suspected animals should be held for observation under supervision of health authorities or veterinary hospital, where the seriousness of the disease is well understood, and the dog can be isolated from other animals, children, and strangers.

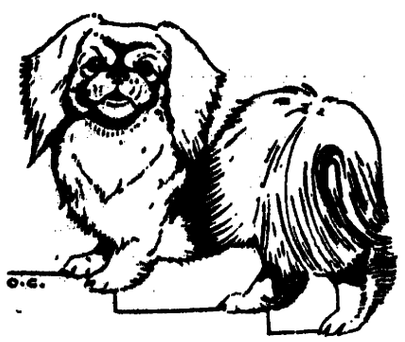
If a person is bitten, a physician should be consulted as soon as possible. If an animal is bitten, a veterinary consultation is advised.

Pasteur treatment for rabies is said to be over 99 per cent successful in man, and somewhat less than that for dogs. Since animals rarely receive Pasteur treatment because of the expense, cauterization of wounds should be thoroughly performed.

IRISH TERRIER

BULL TERRIER

II



A PERSON bitten by a dog may labour under a false impression that because there is no evidence that the dog in question was bitten by a rabid animal, there is no danger of rabies. A dog may be infected with rabies by a bite or injury to the skin without the knowledge of the owner, because the virus can enter a very insignificant wound. For example, a rat-bite on the tongue or inside of a dog's mouth would not show externally.

If the owner knows that the dog has been bitten, naturally this should increase the suspicion of rabies. Rabies may occur at any season of the year, contrary to the popular opinion that it is associated with warm weather.

The closer the injury is to the brain, the earlier the symptoms appear. Bites on the face call for the speediest action, and preventive treatment should start immediately without waiting for a positive diagnosis. In the meantime, if both laboratory tests and clinical diagnosis prove negative, treatment may be stopped.

III

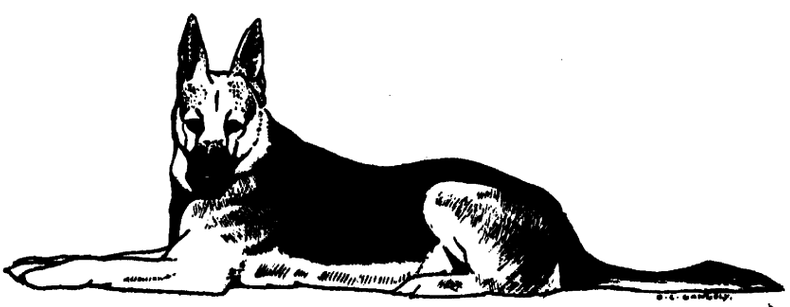
IN a typical case of rabies, the dog may be melancholy, show fear or anger, or wish to be alone. In an obedient dog, he may refuse to obey and the stubbornness may be the first thing noticed. The maniacal or irritative stage soon

POODLE
(LEFT)

It appears to be of German origin and to have been used as a water-dog for retrieving game.

BULL DOG
(RIGHT)

An excellent watch dog, possessing tenacity and endurance. It was originally used for bull-baiting and dog-fighting



follows the sullen. The dog becomes very restless, may pace back and forth ceaselessly, and if not confined may run several miles until exhausted, biting at anything that comes to his notice, and in this stage he may spread the disease far and wide. The dog may make sudden, unusual movements, snap at imaginary objects, bark suddenly without cause, be very sensitive to noise and easily startled. He may destroy carpets, furniture, try to eat indigestible objects, and perhaps scratch and bite himself viciously. Salivation may be stimulated, the saliva drooling from mouth, but not "frothing". A change of voice is always noticed.

vegetables). Because the starch-splitting enzyme is absent in the saliva of the dog mastication is not so important, and this explains why a dog will bolt food without chewing it. Also, the meat-digesting secretion of the stomach—gastric juice—in the dog is three times as strong in hydrochloric acid as in the strictly herbivourous animal which lives on plants. Hydrochloric acid plays an important part in the digestion of meat.

The digestion of food takes place largely in the dog's stomach and not chiefly in the intestines as in herbivorous animals. On a meat diet the food should stay in the stomach for a much longer period than on a plant diet, and this

of teeth, bones, and glands than the herbivorous or omnivorous animals. The dog completes the eruption of two sets of teeth by seven months of age, and is sexually mature as early as eight to ten months. Nature supplies mineral in all foods but milk and bones are especially abundant in minerals.

There is danger in feeding domesticated dogs small bones that might lodge in the intestinal tract. It is safer to feed bonemeal with an occasional large bone to gnaw on. Mineral supplement to the food is important in growing dogs and pregnant females. It is a popular error that milk is harmful to dogs. There is no better food for a growing dog.

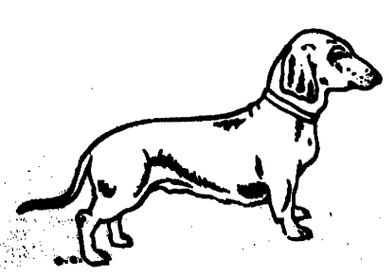
ALSATIAN

THE DOG'S DIET

I

THERE is a wide variation in opinion on the subject of proper diet for dogs. Some of these opinions are not founded on physiological facts of the science of digestion and nutrition. There is no doubt that the dog can thrive on a meat diet, nevertheless, many centuries of domestication have necessitated an omnivorous diet, (meat, cereals, and

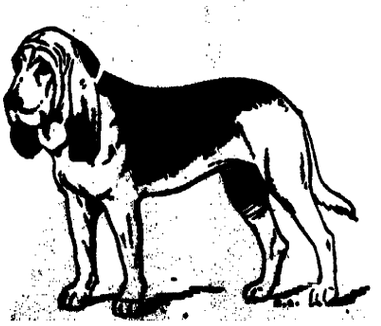
explains why a dog, when fully mature, can thrive on one full meal a day.



II

AS a rule, a dog will thrive on a diet suitable for human consumption, provided starches and fats are not used to excess and the diet is variet to include the vitamins found in lettuce, celery, tomatoes, onions, carrots, spinach, string-beans, fruit, and cod-liver oil. However, the dog is a rapidly maturing animal and requires more mineral and protein in the diet for early development

However, there are idiosyncrasies in dogs as in humans. Experience has shown that some dogs, notably the bulldog type (English, French, Boston) sometimes vomit milk. This can be corrected by adding one teaspoonful of lime water to each cup of milk; the lime water correcting the excess acidity common in certain dogs.



III

THE sensible thing to do in feeding any dog is to avoid foods which experience has shown are not well tolerat-

DACHSHUND

It is used both as a household pet and and as a hunting dog

BLOOD HOUND

It has the keenest scent of all dogs, but is heavily built and lacking in speed

ed A practical rule is to feed one ounce of food *per day* for each pound of body weight for growing or thin dogs. For mature dogs if in good condition one-half ounce per pound *per day* is sufficient For dogs that fatten too easily, one-quarter ounce per pound *per day* is sufficient This should consist of 50 per cent protein, 25 per cent cereal, and 25 per cent vegetables Protein includes meat, fish, eggs, cheese, and milk Cereals include dog-biscuits, bread rice, oatmeal, farina shredded wheat etc The feeding calculation is not a hard and fast rule and can be varied to suit the individual case

Good judgment indicates a wide variation of wholesome food as different foods possess different minerals and vitamins

Dogs should have as much sunshine fresh air and exercise as possible but if exercise is limited, the diet should include bulky foods such as bran shredded wheat, whole wheat, and vegetables

The following are considered laxative foods bran, unboiled milk, buttermilk cream oatmeal gruel, vegetables, fruit soup stew, liver and heart

If the diet is found to be too laxative reduce the amount of above items and substitute toasted bread, soda crackers, boiled skim milk cottage cheese, meat in concentrated form (not stewed)

MASTIFF

It is powerfully built smooth coated watch dog with high massive head and wrinkled skin

IV

IN addition to proper diet, a dog should be protected from internal and external parasites and contagious diseases such as rabies and distemper which can be prevented by vaccination The old saying "whatever is worth doing is worth doing well" applies to the care of the dog, and experienced dog-fanciers have found that it pays to engage the services of a veterinarian Naturally, a person devoting his entire attention to the care of dogs, after completing a prescribed course of studies and training, is best qualified to advise the dog-owner as to prevention and cure of dog ailments The dog in sickness requires a special diet and your veterinarian can best advise you on that Indiscriminate dosing with patent medicines may cause your dog needless suffering and the loss of valuable time in arresting trouble If your dog is not well, a correct diagnosis of the cause is most important and a trained specialist in the diseases of the dog is the right person to consult

EATING HOUSES IN CALCUTTA—*Continued from page 162*

of milk 2 440 of ghee 1 578 of mustard oil 761 of butter 337 of flour 1 304 of sweetmeats and the rest other food stuffs As a result of analysis done at the laboratory 2 624 of these samples were found to be adulterated Of the adulterated samples 897 were of milk 691 of ghee, 474 of mustard oil 67 of butter and 196 of sweetmeats and 6 of flour Including 2,050 cases pending from the last year 5 062 prosecutions were instituted during the year

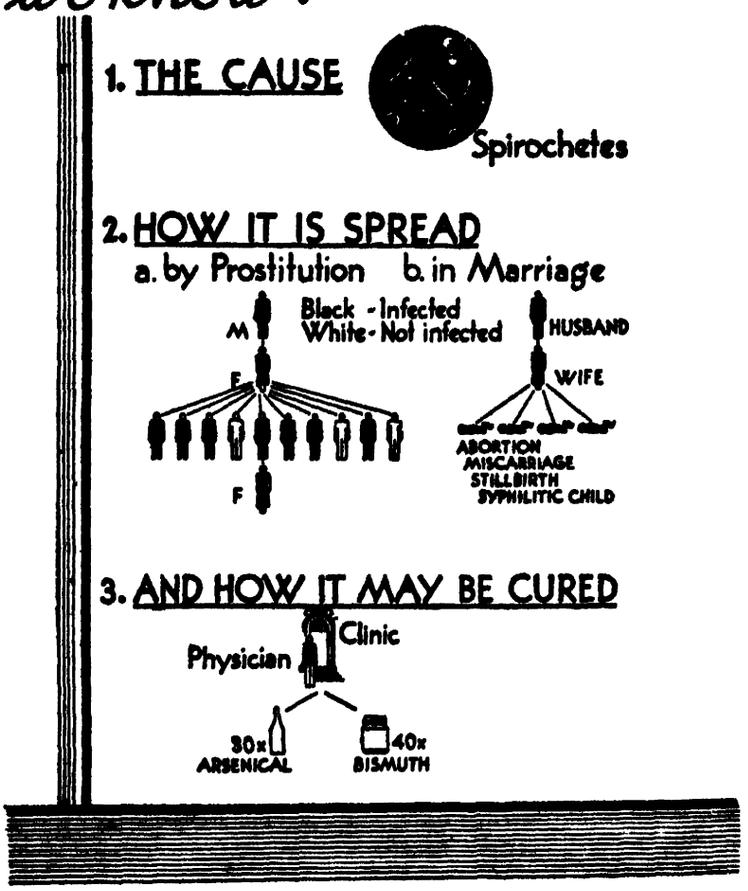
The provisions of Section 390 of the Calcutta Municipal Act controlling the eating houses hotels tea shops and other places where food is prepared or sold were fully enforced during the year under report The Food Inspectors regularly inspected all these places and took statutory action against the vendors whenever the samples taken from these places were found adulterated and defects in sanitary arrangement were noticed

In the same report (in Section VIII) we gather further from a statement of samples of foodstuffs and other articles analysed during 1938 in the Corporation Laboratory, the following data

Particulars of samples	Total No. received	Total No found adulterated	Percentage
Milk	1915	897	45 5
Ghee	3382	697	20 8
Mustard Oil	1982	474	21 07
Dahi	755	109	14 4
Tea	465	28	6 79

Naturally we are now brought to think of (1) Warranty or Invoice as under the sale of Food and Drugs Act in England and (2) provision of Municipal Stores for pure food stuffs and municipal dairy

Before I conclude I must say that we should take care of the food at home The foods which require the greatest care are those which are the most perishable Much can be done by the exercise of a little care and forethought to protect food from contamination and keep it in a good condition until it is consumed In the first place, perishable food should be bought daily or as often as may be required Food should be kept in a clean cool place, and handled as little as possible until wanted It should be protected from contamination by being kept securely covered Milk should be used warm



IV

SUSPICION has fallen upon rats and mice as being possible carriers of the organisms responsible for food poisoning infections Cold meats and meat food preparations, to which some cases of food poisoning have been traced in the past, were suspected of having received the infection from contamination by rats or mice running over them or feeding upon them It is a wise precaution, therefore, to protect such articles during storage from the risks of such contamination Closely-woven wire covers are useful for this purpose and will serve as protection from equally objectionable contamination from flies

There are certain foods which are consumed raw and are specially liable to accidental contamination in course of preparation for the market and then, in transit to the consumer Such, for instance, are lettuces, tomatoes, celery, etc and, as the protection afforded by cooking is absent in their case, care should be taken to wash them thoroughly under running water before they are consumed

The importance of the use of raw vegetables as part of the daily diet is properly insisted upon in view of the supply of essential vitamins and other nutritive constituents which they provide, but it is equally important that they should be eaten in as clean a condition and as free from all contamination as possible

ABOUT SYPHILIS *we know:*

HUNDREDS of thousands persons die each year from syphilis.

Many more die each year because of syphilitic heart disease.

Countless babies die each year from syphilis.

It causes each year thousands of abortions, miscarriages, stillbirths, and syphilitic children.

1 in 10 cases of insanity is due to syphilis.

1 in 7 cases of blindness is due to syphilis.

These Serious Results can be Prevented by

1. Early competent treatment.
2. Continuous competent treatment.
3. Sufficient competent treatment.

See your doctor for advice, examination, and treatment.

This is Syphilis

SYPHILIS is a highly contagious, dangerous disease caused by the germ called the "spirochete"; syphilis is also known as "the pox", "syph", "lues", and many other names. Gonorrhea and syphilis are not the same thing. They are two separate and distinct diseases. Each is caused by a different germ. One person, however, may have both diseases at the same time.

Syphilis is spread from one person to another, usually during sexual intercourse, but may be caught in rare cases by kissing, using infected drinking cups, towels, and similar personal articles.

The disease occurs in three stages unless properly treated.

The First Stage

IN the first stage a sore appears. The sore is called a hard chancre, pronounced "shanker". This sore appears at the point where the germ enters the skin, 10 days to 3 weeks later.

The sore may be a small pimple, a blister, or a large open ulcer.

Sometimes there are several sores.

On men, the sores are found almost always on the penis.

In women, the sores are found about the opening of the vagina or on the mouth of the womb.

Sores may occur on any part of the body—the lips, fingers, tongue, legs, or wherever the germ has touched.

Of course, all sores are not due to syphilis.

One cannot tell by looking at a sore that it is caused by syphilis.

Scrapings must be taken from the sore and examined under a microscope by a dark-field examination.

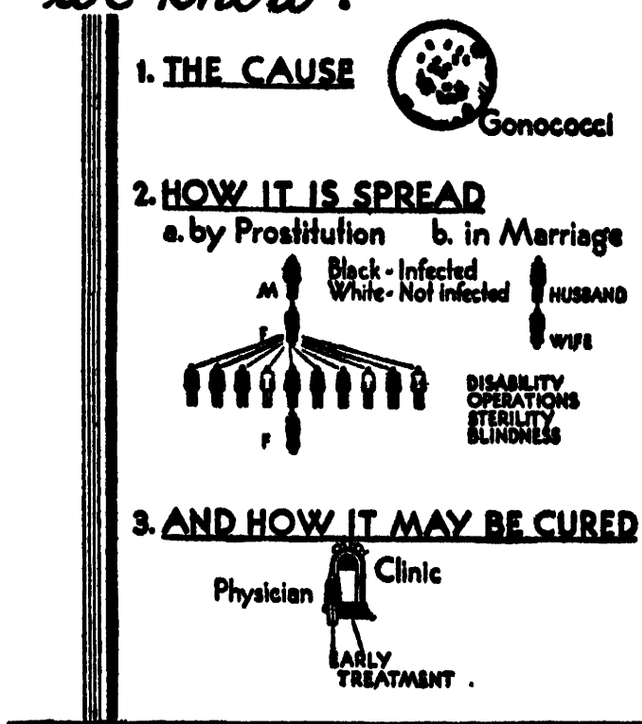
This is the only sure way of learning whether a sore is due to syphilis.

The blood test (Wassermann) is usually negative during this first stage.

Treatment begun in this first stage produces more cures than if begun later. Seven out of eight cases can be cured.

Medicine put on the sore *will not cure the disease.*

The Second Stage



TWO cases out of three have a second stage. This stage begins 3 to 6 weeks after the sore appears. One or all of these signs may appear:

1. A rash appears over the body. As a rule this does not itch and does not contain pus.
2. Small white sores appear in the mouth, on the inside of the cheeks, on the tongue, gums, and tonsils. These are like fever blisters or cold sores.
3. Small flat warts appear on the sex organs. Sometimes they appear on other parts of the body.
4. There is loss of hair.
5. There may be sore throat and fever.

The white sores and the flat warts are very catching. Those who come in touch with them are

—Continued on page 148

ABOUT GONORRHEA we know:

GONORRHEA infects over hundreds of thousands each year.

Gonorrhea makes child-bearing impossible in many women.

Gonorrhea makes many men sterile.

Gonorrhea causes severe rheumatism and heart disease.

THIS IS GONORRHEA

Gonorrhea is a highly contagious, dangerous disease.

Gonorrhea is also called "clap", "gleet", "strain", "dose", and numerous other names.

Gonorrhea is caused by a germ.

Gonorrhea is spread by sexual intercourse; the exception to this is in little girls. They usually catch it through being handled by a member of the family who has the disease.

Gonorrhea is not a simple disease, like the "common cold." It is a very serious condition.

Strain or heavy lifting does not cause gonorrhea.

One attack of gonorrhea does not protect against others. A person may have gonorrhea several different times.

Gonorrhea and syphilis are two different diseases. They may, however, occur in the same person at the same time.

Gonorrhea does not go into syphilis nor does syphilis lead into gonorrhea.

THIS IS GONORRHEA IN THE MALE

The germs enter the urethra (tube through which the water passes from bladder to outside) during sexual intercourse.

The first sign of infection is a burning pain on urination (passing water). There may be some redness and irritation at the opening of the urethra. These signs appear usually 1 to 3 days following intercourse.

Discharge (pus) from the urethra appears usually 3 to 5 days following intercourse. However, this may vary from 1 to 21 days The pus is white at first; later, it becomes yellow and thick.

Glands in the groin may become swollen and painful.

The person may have fever and feel "bad" all over.

Examination of the pus by a doctor will show the germ of gonorrhea in most cases.

If the person is not treated at once by a physician, the germs enter the spongy part (testicles and prostate gland). Just as a sponge sops up water, so does this portion (between the legs) sop up and spread the germs of gonorrhea.

After this occurs, the disease is more difficult to treat and cure. The testicles (balls) may swell and make the man sterile. The prostate gland becomes swollen and full of pus. It requires skilled medical treatment which only a doctor can give. Massage of this gland (like squeezing water out of a sponge) is necessary after the first signs of the disease disappear

The germs in the urethra may produce scars, like rust in an iron pipe. These scars make it hard to pass the urine. Prevent these by getting prompt medical care.

Rheumatism (stiff joints) and heart disease result when the germs get into the blood. These are serious conditions. Death or permanent crippling may result. These conditions can be prevented by early and proper medical treatment.

When the gonorrheal germs get into the eyes, a severe infection occurs. Blindness may result.

GONORRHEA IN THE FEMALE

The opening of the urethra becomes red and swollen. Painful urination occurs.

Following this, there appears a white or yellow discharge (pus) from the genitalia (privates, vagina).

Be suspicious of any discharge from the vagina. The "whites" may be gonorrhea. See your doctor at once.

The germ can pass through the womb into the tubes and ovaries, producing a serious condition from which death may occur.

—Continued on page 149

ABOUT SYPHILIS

—Continued from page 146

likely to catch syphilis. The patient MUST take extreme care not to infect other people. For example:

Don't have sexual intercourse. Your partner is almost sure to catch syphilis.

Don't kiss. The mouth sores are dangerous to others.

Don't use towels that other people will use. The towel may carry the germ.

Don't use the same drinking glass, tooth-brush, pipe, or similar personal things that other people will use.

Wash with soap and water after touching the sex organs.

The blood test is always positive in this stage Doctors call the blood test a Wassermann test.

Treatment causes both chancre and rash to disappear within a few days, *but* the person is not cured.

This is the Hidden Stage

Many persons have syphilis but do not know it. There may be no signs on the outside.

This stage appears in those who have not been treated or in those who have not had enough treatment. There may be no marks on the skin, no pains inside by which the person may know he has syphilis. Only the blood test will tell him.

But the germ is at work. The germ infects the brain, the spinal cord, the liver, the spleen, the heart, the blood vessels, and other parts of the body.

The Third Stage

FIVE years, ten years, or even twenty or thirty years later, syphilis reappears. Syphilis reappears as heart disease, insanity, loss of power to control the legs, blindness, and other conditions.

Prompt treatment will stop these conditions—even though it may not cure them. Prompt treatment may prevent death or crippling. Many persons in this stage do not know they have syphilis. That is one reason why everyone should have a blood test every year.

Syphilis in Pregnancy

SYPHILIS can be passed from the mother to the child in the womb.

Four times out of five, untreated mothers will have abortions, miscarriages, dead babies, or living syphilitic children.

Women very often do not know that they have had a chancre because of the arrangement of their sex organs.

Every woman must—

1. Visit a doctor as soon as pregnancy is suspected.
2. Insist upon a blood test in each pregnancy If the blood test shows syphilis, prompt and continuous treatment will insure the birth of a baby free of syphilis. Treatment to do this *must begin before the fifth month* of pregnancy. Treatment begun *after* the fifth month will save only three children out of five.

Syphilis can be Cured

Seven out of eight cases of syphilis can be cured, if:

1. Treatment is begun during the first 6 months of the disease.
2. Treatment is given right straight through for *70 weeks* with NO INTERRUPTIONS.

Old syphilis is more difficult to cure. But treatment will prevent the disease from getting any worse. Even brain and other nervous system syphilis can be helped by good treatment.

Treatment for Syphilis

SYLHILIS, less than 4 years old, requires 70 shots; 30 in the arm and 40 in the hip This MUST BE GIVEN EVERY WEEK RIGHT STRAIGHT THROUGH WITH NO REST PERIODS.

This number of shots is needed even though the blood test becomes negative. Most blood tests do become negative after a few shots, but if treatment is stopped, the signs of syphilis will come back.

Syphilis more than 4 years old requires different treatment for

The [illegible] will prescribe this treatment. Don't go to the quack. He wants your money. He does not care to cure you. He does not even know how to cure you.

These Points Must Be Remembered

1. HAVE a blood test every year.
2. Visit a doctor as soon as syphilis is suspected. Do not go to the quack or the drug store
3. Treatment consists of 70 shots, given right straight through, one a week. There must be no rest periods between treatments
4. The spinal fluid must be examined at the end of treatment This tells the doctor whether the brain and spinal cord are infected
5. Every pregnant woman must have a blood test. If syphilis is found, treatment must be given promptly to insure the birth of a baby free of syphilis

Syphilis Can Be Prevented

MANY cases of syphilis can be prevented by the following methods:

The use of the rubber (condom) during sexual intercourse. This protects both the man and the woman. Even though the rubber is used, the following method must also be carried out:

(*a*) Wash the sex organs with soap and water for ten (10) minutes Also wash the skin all around the sex organs and on the legs and stomach Dry the skin

(*b*) Rub "blue" ointment (also called calomel or mercury ointment) into the skin that has been washed. Cover with toilet paper to prevent soiling clothes.

The above applies only to men. The woman must go to a doctor for such treatment after she has had

"Damaged Goods"

After a painting
by
JOHN COLLIER

She can wash with soap and water both inside and outside the vagina. *She must not use mercury ointment or bichloride solution* inside the vagina. She may poison herself.

To prevent infection with gonorrhea, inject a teaspoonful of 10 per cent. argyrol or 1 per cent protargol into the urethra by means of a syringe. Hold this for 5 minutes.

The above methods for prevention of syphilis and gonorrhea must be used within 2 hours following sexual intercourse.

If used later than that, they are not so likely to prevent the diseases.

ABOUT GONORRHEA

—Continued from page 147

Or it can produce "female trouble". This often makes an operation necessary, removing the tubes and ovaries.

Many times, gonorrhea makes it impossible for a woman to have children.

The Treatment of Gonorrhea

1. Go to your doctor at once when you see any of the signs of gonorrhea. DO NOT GO TO A QUACK.

2. Follow his advice and treatment carefully and faithfully in every way. There are no short cuts to a cure.

3 Drink plenty of water.

4 Exercise as little as possible.

5. When the testicle is swollen, all treatment should be stopped; go to bed with a support for the testicle and use either ice bags or hot-water bottles on the swelling. Tell your doctor at once.

6 Beware of the morning drop, "gleet". This means your gonorrhea is not cured and you need more treatment, especially prostatic massages and sounds.

7. Douches of some antiseptic solution are of value in women but should always be taken under the direction of a doctor. Treat early and thoroughly so that you may be cured.

The Evidences of Cure

The doctor will want to make sure that you are completely well and this is done by the following steps:

1. Absence of all discharge from the urethra, including the morning drop.

2. Urine clear when passed into two glasses.

3. Massage of the prostate gland to be sure there is no pus present.

4. Passing sounds (metal instruments) to dilate the urethra.

5. Examination of the vagina in women.

After the above procedures have been carried out and no evidence of gonorrhea found, one can be fairly well assured that he is cured. As an added precaution, one should protect one's partner during intercourse, for the first few months after cure.

Warnings

1. *Avoid sexual excitement.* Do not have sexual intercourse. It makes the disease last longer and makes it worse.

2. Avoid alcohol in any form, including beer. It makes your discharge worse and the infection harder to cure.

3. Avoid hard physical exercise.

4. *Do not treat yourself.*

5. Avoid quacks and drug clerks. They have had no medical training. They are not interested in your health. They want your money.

6. Do not use dressings over the opening of the urethra or in the vagina. This dams back the pus and makes the infection worse.

7. Keep your bowels open; avoid constipation.

8. Obey your doctor's orders in every way.

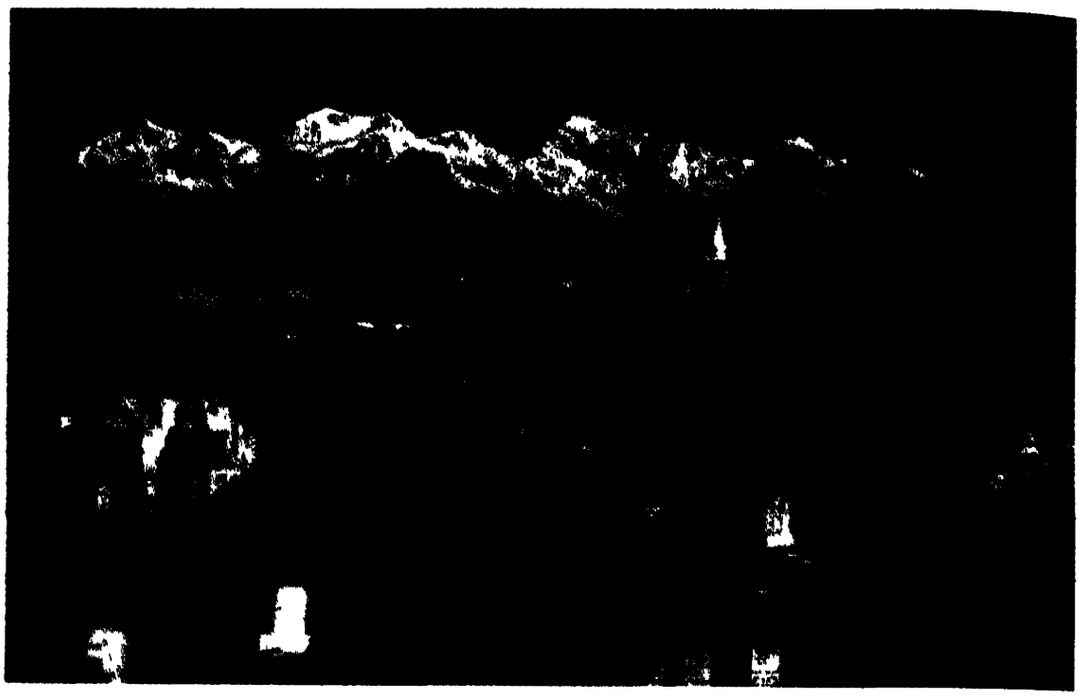
9. In order to protect others, do not have sexual intercourse until the doctor says you are well. Gonorrhea is not cured just becaus the discharge stops.

10. Do not allow others to use your irrigation syringe or douche nozzle. You should not use that belonging to another person.

11. After handling the genitalia (privates) wash hands thoroughly with soap and water so that you will not spread the germs directly to children, or through soiled towels, cooking utensils, drinking cups, and other personal articles.

Gonorrhea can be Prevented

Carry out the folowing instructions and gonorrhea can usually be prevented.



1. Use a rubber (condom) during sexual intercourse. This protects both the man and the woman.

In the man, inject a teaspoonful of 10-percent argyrol or 1-percent protargol into the urethra by means of a syringe. Hold this for 5 minutes.

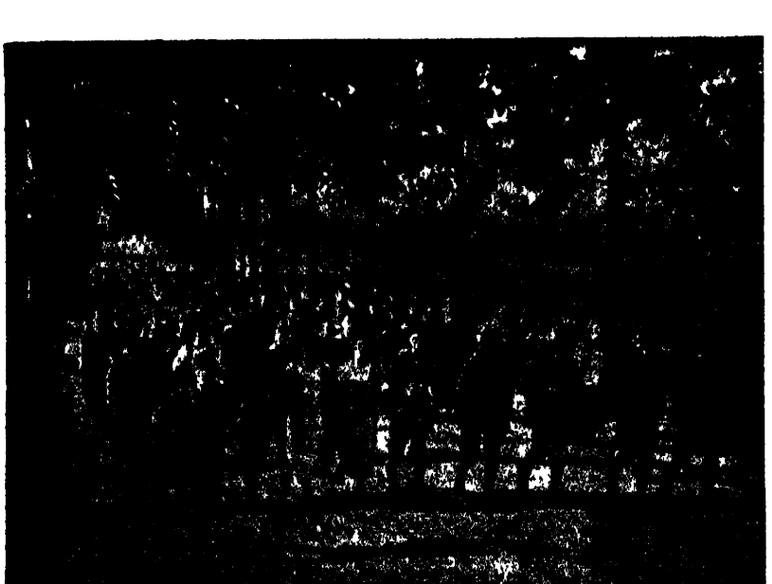
To protect against syphilis wash the sex organs, legs, and stomach with soap and water for 10 minutes. Dry the skin. Then rub mercury ointment (also called calomel or blue ointment) well into the skin. Cover with toilet paper to prevent soiling the clothes.

These things must be done not later than 2 hours after sexual intercourse. If done later they are not of as great value.

The woman must go to her doctor for such treatment. She cannot give it to herself. However, washing the sex organs with soap and water and a douche with soap suds will help.

A CALL from THE HILLS

By



ERIKA SORGAY

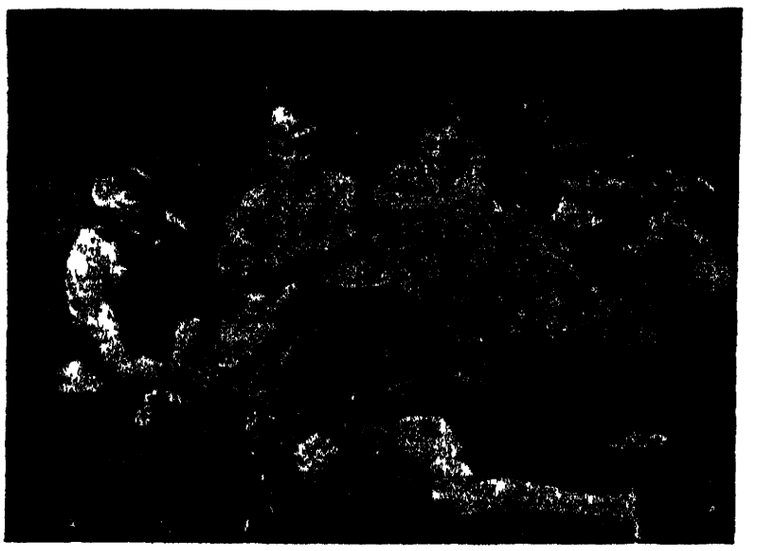
Darjeeling

I

EVERY European on a recreational trip to the hills, thus escaping the heat of the plains where the thermometer is daily soaring up to 100 degrees and more at this time of the year, may find himself reflecting on the fortunate position of Bengal, which—though of an enervating hot house-climate—has yet the health-giving and health-restoring hill-resorts within its folds. Only a night's journey brings the European traveller from Calcutta into surroundings, which—in landscape, climate, vegetation and comforts—remind him of many a place he may have visited in his own country. He finds big hotels and small boarding-houses, shops of every description, cinemas, riding and tennis,—in short, everything he may be looking for, quite apart from the beautiful views and the bracing air, and every pleasure is being shared by a merry holiday crowd.

Yet one aspect is missing there are nowhere groups of boys or girls to be seen as one can find them everywhere in Europe: with their ruck sacks on their back hiking from place to place, singing while they wander, here resting and cooking their simple meals, there enjoying a beautiful sight,

A joyous band of 'Hikers'—bubbling with health and spirits



Four 'Wandering Birds'—'Wander Vogel'

spending their evenings in merriment or serious discussions in some Youth Hostel till the deep, sound sleep overcomes them as only youth can enjoy it in those care free years.

II

THIS movement had its origin some decades ago in pre-Nazi Germany where the enthusiasm of the young people soon turned it into a country-wide movement and caused youth hostels to spring up everywhere It is a great pity that a dictatorial government has lately been abusing this spontaneity, that free 'wanderings' have been turned into regulation marches' and songs that rose from joyous hearts keyed into something like 'a song per kilometre', and that the inner impulse has—

A Simple Meal

'Not had there been any in Europe before youth began to hike' No provincial or local government can afford to build houses for such purposes when they are not sure that there will be a demand for them Youth will have to convince the public and the Government that they are in earnest, that such hostels are a vital need for them, and then a way *will* be found to build them

There is one much more important question who should constitute such groups, and who should lead them? To me it seems that taking the initiative should not be left to incompetent individuals as—specially at the beginning of such a movement when a 'taste' has to be created among the young this is a task of great responsibility Therefore, it appears to me that the right agencies for taking the initiative are the schools and colleges A class of students is already a more

Joy and health effervescing in a country dance

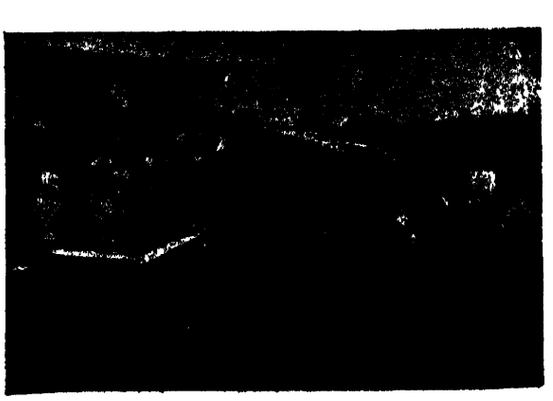
by killing the very soul of it—been turned into an outward compulsion The superimposed State interference has compressed and moulded what was once a free and joyous movement into a forced labour service with an ultimate aim apparent to all

Where then is Bengal's youth that has such unique opportunity in these wonderful mountainlands of gaining not only pleasure, friendship, a widening of their mental horizon and strengthening of their physical stamina, but also health and recreation by a total climatic change? Where are they all? You, my reader, may say 'But there are no such hostels in our country', and my answer is

In communion with Nature—to the soft accompaniment of a guitar in the still evening

congenial group than most groups that could be formed outside such institution And should not a teacher or professor be the best guide, who, by his character demands the respect and wins the love of his pupils, who, by his knowledge, should be best able to stimulate and satisfy the curiosity of his group, and who, being young at heart, can feel and appreciate the joy the youth experience at such freedom?

And now I see already the surprised faces of some of the professors before me 'Do you mean us to give up part of our holidays? Do you mean us to put in some more holidays for such excursions'? Yes, do one or the other, whichever is more convenient Personally, I would suggest the latter, but wait—I see you, dear Professors, already wringing your hands in despair at the thought of what will happen to your curriculum therefore wait—I have not yet finished You fear you may be losing time? But aren't you pouring *life* into your text books? That is just why I would wish to chose you as the friend philosopher and guide of Bengal's youth so that you may not lose but *gain* time What a store of knowledge can be observed Is that nothing? After all every law that has been discovered has been wrung from Nature herself, it is her Book also that we should read with special attention I do hold that no really intelligent personality can be bred on book-knowledge only, it has got to be supplemented by Nature-observation in as many of its aspects as possible And does not, therefore, a great opportunity for some real education lie in such outings?



III

MANY may fear that such a scheme must inevitably break down on the money question I do not think so I am sure more students of schools and colleges might be found who could put aside 1 anna per day or per week than we might be inclined to think at first And that would be quite enough to earn a yearly holiday trip of about 10 days to the hills, provided everything is well-planned on a simple and cheap scale By pooling the resources of a class of about 20 students it would be even possible to take along two or three comrades who were not so fortunate as to be able to spare that daily anna And does not already in this lie a great practical lesson, making it clear to everyone that he is part of a group or team, that this does not break up, and that he is responsible for its continuance in harmony and comradeship? Can there be any greater lesson in practical citizenship?

What I have said so far applies to boys as well as to girls May be, the latter will have to overcome a few more difficulties and a few more prejudices but that will make all this only the more valuable And, for practical reasons they may have to exchange their *sarees* for short skirts or trousers I am surely the last to wish to persuade the Indian girl to give up her *saree* as I do not know any other type of woman's dress more artistic and more beautiful yet where the beautiful clashes with the practical it is the first that has to give way And as, with all their educational advantages these excursions are first and foremost meant to strengthen health and to infuse energy, road sweeping dust gathering *sarees* are surely not the right garments Free and easy body-movements are half the joy in hiking, and should our Bengalee sisters be deprived of this valuable half just to please prejudices?

These are only a few aspects of a suggestion Let me hope at least that some of my readers might think it over, find it acceptable and tried to create the 'Wanderlust' among Bengal's youth, the hope and future of the nation

Dancing and Singing—for recreation

you can open up before your pupils what an amount of geographical, physical, historical and other observations can be made! Differences in speech, customs, race, in industries in field-work

HEALTH and PRIMITIVE LIFE

By

TARAK CHANDRA DAS M A

Illustrated with photographs specially taken by S Shaha

Lecturer in Anthropology, Calcutta University

HISTORIANS of human migrations tell us that at one time the jungle tribes of to day occupied the flat plains of Northern and Southern India Civilised man in search of more and more food drove them out of these fertile river valleys,—wide in area and rich in crops Big empires and powerful kingdoms arose where once the primitive tribes used to roam about in search of games Philosophy and religion, art and literature, music and drama, sculpture and architecture, in a word, the Indian civilisation, with all its branches, flourished over the ashes of these primitive folk Centuries fleeted away with their glamour and glories The people in their surfeit did never think of the wretched folk whom they had driven to the surrounding jungles and hills In supreme contempt, they were dubbed *dasyus, rāksasas, or piśacas,* association with whom was in itself polluting to the 'twice-born' But the Goddess of Fate was all the while smiling as she could foresee that these hills and forests will soon be sought after by the children of the conquerors of the plains Too much food or too little of it is now driving to the hills the two sections of the dwellers of the plains Surfeit deteriorates physical health and civilization produces ailments of the mind which no medicine can cure Distracted in body and mind we seek relief in flying to the land of the savage where we still expect to catch a glimpse of the Arcadia

According to the census of 1931 the tribal population of India rises above twenty-two millions, or, in other words, out of every sixteen persons, one is an aboriginal India possesses at least five well-marked tribal areas To the extreme north-west frontier of our country we have a medley of tribes about whose depredations we often read in the newspapers Chota Nagpur and the hinterland of Orissa with parts of the Central Provinces and Central India form the biggest aboriginal region in India In the extreme south, round about the Nilgiri Hills we have another area of tribal concentration Assam presents the highest proportion of tribal population among all the British provinces Besides these, the lower ranges of the Himalayas shelter a large number of scattered tribes The readers of the Health Number of he *Calcutta Municipal Gazette* may be interested to hear something about the health and hygiene of this large section of our countrymen The Corporation of Calcutta is very intimately associated with these tribal people, especially those who reside in Chota Nagpur and the hinterland of Orissa, as the cleanliness of the city solely depends on them As our health depends upon their service, it is natural that we should try to find out what gives them the immunity which they enjoy inspite of the dangerous nature of their work

The Tribes

THE primitive tribes occupy the hills and forests where the soil is naturally poor and cultivable land limited in extent. Many of them again are not acquainted with the ordinary modes of agriculture. Even the plough is not used by a large section of them; sometimes its advantages are not known but more often it is unsuitable to the fields to be cultivated. Throughout the hills the tribal people practise shifting hill-cultivation. The hill-slope is cleared of its trees and shrubs which are burnt on the spot, and seeds of different kinds are either sown broadcast or simply put into holes made with a *dao* or small hoe. The same field produces different kinds of crops at the same time and the hill-men gather them in due season. But many are the natural foes of these crops over whom the owners of the plots keep a strict watch. Besides rain and drought there are the rats and birds, bears and boars, and elephants and deer. With their primitive weapons they fight with these animals but the evil spirits responsible for rain and drought are not so easily conquered. The priest offers food and sacrifices animals and the magician plies his art to combat these supernatural agencies. The crop gathered after so much trouble is often insufficient to provide two meals a day throughout the year. But as long as it lasts, our tribal friends do not think of the morrow but enjoy the living present in dancing and singing, and feasting and drinking. When the granaries begin to shrink they curtail the amusements and gradually the meals even; and at last they go to the forest in search of edible roots, fruits and leaves. Thus starts a period of half-meals and starvation which only ends with the gathering of the next crop.

Inspite of this precarious food-supply the primitive tribes enjoy sturdy health, which cannot only be attributed to the nutritional value of their food. The secret of their robust constitution should be sought elsewhere. It is most probably due to the nature of their habitat, outdoor life, games and amusements, adult marriage and normal sexual life, isolation, and simple habits.

She prefers to enjoy her rest under the shade of a tree within the compound or in the shade of her hut

Their Habitat

WE have already stated that the primitive tribes were driven from the plains to the hills and forests. This was a boon in disguise. In Assam the comparatively more primitive tribes prefer to live in the bracing climate of the higher ridges. The Ao Nagas almost invariably build their villages on the highest parts of the long unbroken ranges which cover their country in parallel lines. None of these villages can be found in the valleys. Mr. Mills attributes their virility and health to this feature of their residence. Similar also is the condition of the Angamis and many other Naga tribes. Among the Kukis too I personally found this preference for the higher ridges. Gurdon speaks of the Khasis who live on the high central plateau of the Khasi Hills as exceptionally healthy and strong. Their rosy cheeks and gipsy complexion attract the attention of even the casual visitors to the Burrabazar at Shillong. Far away to the south, the Todas refuse to come down to the foot of the hills or even to the lower ranges leaving

When the moon shines over the peaceful hamlet no Santal woman can resist the beat of drums

their present habitat at the top where the Madras Government has built up its summer residence, and a health resort has grown up around it. The hill tribes are so much attached to their country that as log as it supplies the barest necessities of life they can hardly be induced to leave it for better and more fertile lands. Cleveland's stone pillars around Damin-i-koh could not attract the Paharias of Rajmahal Hills to the plains below, with its virgin soil and prospects of permanent cultivation. Darjeeling, Simla, Mussorie, Naini Tal—every one of them speaks the same tale. All around these places the hill tribes have their residence and the plains-men are intruders.

Dimly conscious of youthful yearnings the primitive maidens move through the village in pairs singing amorous songs

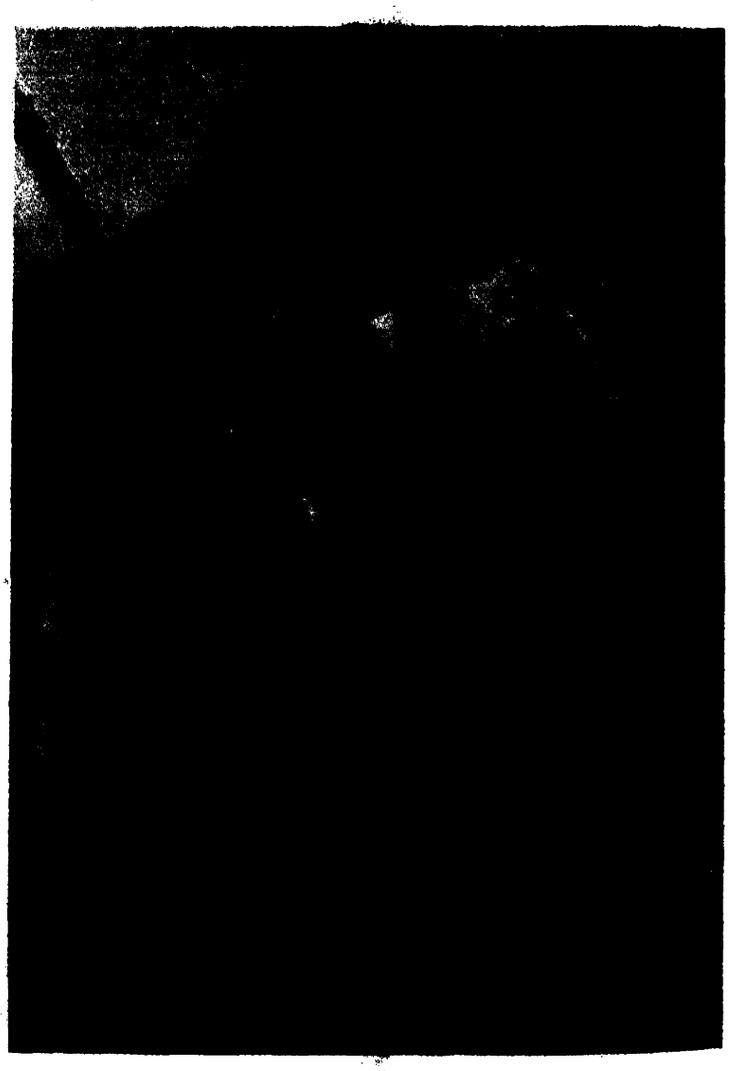
Not only the hills but even the dry uplands of Chota Nagpur, the Central Provinces and Central India are occupied by the primitive tribes. Not far from our City lies the Santal Parganas whereto the Santals migrated only the other day. The jungle disappeared under their axe, and the healthy uplands became clothed in the verdure of the standing crops. The successive Census Reports show how rapidly the Santals have multiplied in this wide open land with its dry climate and fertile soil. The Oraons and the Mundas living on the Ranchi plateau also bear testimony to this.

The tribal villages are, as a rule, built far away from one another. In the midst of extensive open country or forest land the tiny villages stand isolated. It is a necessity where shifting cultivation is practised. The same field cannot be cultivated for more than three or four years after which it is left fallow for ten to twenty years in order to gather mould. In the uplands where permanent cultivation prevails there are wide stretches of gravelly soil which limit the growth of population. The wide open country with its free air, ample unobstructed sunshine and natural surroundings produce a condition which is extremely healthy both for the body and the mind. Often with wonder I have looked at the Santal maiden, or the Munda youth or the Ho lad. They appeared as statues carved out of black marble—perfect models for sculptors. Like the *sal* sapling forcing its head out of the rocky bed these Mundari young men convey the impression of strength and hardiness rare among advanced peoples. They are in perfect harmony with their native land where the soft verdure of the blossoming *sal* forest contrasts with the bare rocks flouting the ravages of time and atmosphere.

But this is not the tale of every tribe. There are primitive groups which have been forced by nature and man to seek shelter even in the unhealthy areas where malaria rages throughout the year. They, of course, show in their physique the ravages of this and other diseases but even among them we

Even in the rainy reason when the clouds gather in the sky, the Santal housewife does not think it necessary to stock rice but prepares it afresh every day

meet with a state of immunisation, rare among the advanced peoples.



Outdoor Life

PRIMITIVE peoples are true lovers of outdoor life. From morning till nightfall they remain out of doors either engaged in the fields or in the discharge of household duties. Even the leisure hours they spend in chatting under the big trees which grow in different quarters of the village. These are the clubs of the Chota Nagpur tribes. In Ho villages of Singbhum the idlers always gather under these trees where they find convenient seats in the dolmens constructed over the ashes of departed ancestors. The Nagas have their sitting-out platforms with stone-seats arranged in rough circles, where any one, wishing to pass an hour or two or even more in tasty gossip under the cheerful sunshine, will not lack suitable companions. When primitive man has no work to do he cannot and does not remain indoors. Even women perform most of their duties out of doors. I have seen Kuki women weaving on their looms in the courtyard, moving to the open verandah in foul weather. Though primitive woman has no sitting-out platforms or clubs under the spreading trees she also prefers to enjoy her rest under the shade of a tree within the compound or in the shade of her hut, when her children may be found either sitting or lying on a bedstead. They take shelter within the hut only when driven by the scorching rays of the sun or by heavy downpour of rain. In fair weather and when the cold is not intense both the sexes pass the night under the sky. This love for outdoor life is almost a habit with them. The mother carries her infant to the field where she works for hours together. There it remains either on her back or under the shade of a tree —sleeping or playing by itself till the mother is free to return home. This is continued during boyhood when outdoor games in and outside the village keep these primitive children engaged for hours together. When these care-free days of boyhood come to an end the boys and girls begin their apprenticeship in their respective duties. I have seen boys in their teens as well as young men passing days and nights at a stretch in the temporary field-shelters guarding their crops against the depredatious of wild animals. On one occasion I found a number of Oraon boys happily passing their nights over straw-stacks in the threshing floor at the foot of the Netarhat Hill—flouting both tigers and the more dangerous anopheles, when we felt rather uncomfortable even under a rug within the four walls of a bungalow.

Games and Amusements

HEALTHY games and amusements have contributed largely to the body-building of the primitive people. We have already referred to the outdoor games of the boys and girls. Weight-lifting, stone-throwing, jumping, running and wrestling are some of the physical exercises in which the boys indulge from an early age. Hunting with their primitive weapons and implements also provides ample opportunity for improving their health.

Dancing is the primitive's passion. Children at the age of six or seven begin their apprenticeship. They stand at the end of line or behind their seniors and move their hands and feet in imitation of their elders. As they grow in age and body the movements become more and more lively, and at the fourteenth or fifteenth year they become adept in the art. At the end of the day's toil, after the evening meal, one by one, the young men and maidens assemble in the *ākhrā*. The elders also drop in casually for an hour or two of recreation. The beat of the drums hasten the laggards and the dance begins in a romantic setting. When the moon shines over the peaceful hamlet no Santal

They flout misfortune with a laugh which is born in the health of body and mind

Health gives them the grace which ornaments vainly try to emulate

woman can resist the beat of these drums The light of the torch or or the mbon casts a mysterious halo over the moving figures As the night deepens and the elders disappear men and women move in unison tightly held in each others arms Often it is found that a night's partner in the dancing arena becomes a partner in life

It is very difficult to realise what an extra amount of energy is necessary to continue this dance for hours together after the exacting labour of the field unless one has seen it with his own eyes Dancing in Chota Nagpur is not a tame affair Vigorous body-movements are necessary in every one of them In Assam the war dances of the different tribes *e g*, Naga, Kuki Garo Khasi, etc, are amazing feats of physical endurance The founder of the Bratachari movement has no doubt been deeply influenced by the example of these primitive tribes in his attempt to introduce folk dances as a form of physical exercise among the advanced people of our country

Art of Marriage and Normal Sexual Life

MARRIAGE in primitive society almost invariably takes place in adult age Only in areas where they have come in close contact with Hindu infant marriage it has been introduced among the more well to do section The bride in the primitive community is an asset, and her parents part with her only on payment of a price either in cash or kind Most often the young man has to earn this money himself This is not possible unless he is fully grown up The bride is also required to be fully developed as she has taken up the duties of a house wife, soon after marriage, when her husband sets up a new house and starts an independent family This is almost invariably the case in communities with shifting cultivation It is quite natural that the progeny of such fully developed parents should enjoy good health

Most of the primitive peoples enjoy a normal sexual life There is little restriction on the free intercourse of the sexes In the field they work together, in fairs and festivals they enjoy each other's company in the dancing arena young unmarried people of both the sexes pass night after night unhampered by prudery Often in the field they meet their sweet hearts when downcast looks and bashful smiles convey more the tidings of the heart Dimly conscious of the youthful yearnings the primitive maidens move through the village path in pairs singing amorous songs Spontaneous attachment springs up under the circumstances and ends in marriage On rare occasions seniors stand in the way of such mutual love Moreover, primitive society condones to a very great extent sexual lapses in pre nuptial days though married life is scrupulously protected from unchaste behaviour Thus a healthy sexual life prevails throughout these communities and abnormalities are uncommon

Isolation

ISOLATION is a very important factor in the maintenance of health among primitive tribes Primitive people live in intimate contact with nature and the natural life confers immunity from many ailments, which artificiality has produced in civilized life As long as the Nagas were active head hunters they enjoyed immunity from many of the fell diseases which now decimate their villages Contact with the life of the plains has introduced tuberculosis, cholera, small pox, venereal diseases, etc among them, and the absence of blood feuds between the villages has helped to disseminate them from village to village All the earlier writers on Manipur such as Pemberton, McCulloch, and Brown unanimously say

BOOK REVIEW

*A HOME DOCTOR**

By

PROF. B. N. GHOSH, M.B.E., F.R.F.P.S. (Glas.), L.M. (Dub.), F.S.M.P. (Bengal), F.R.S. (Edin.)

Carmichael Medical College, Calcutta

MR SATISH CHANDRA DAS GUPTA is well-known to every one in Bengal. He is one of the band of workers who have dedicated their lives for the welfare of the country. His heart is with the people, and for the people he has worked with robust optimism It is, therefore, natural that he should attempt to leave for posterity a legacy which will be more practical and tangible, and whose beneficent effect will be of greater value to the people, specially the masses living in the villages. His first contribution in this direction was a book entitled "Cheap Remedies". In the present book he has gone a step further and dealt with the diverse problems which affect the health of the people; and in undertaking this task he had the blessings of Mahatma Gandhi, under whose inspiration he has written it. In a country like India where ignorance, prejudice, indifference and conservatism loom so large in daily life, a work of this nature is indeed welcome. Moreover, the application of the principles of sanitation, which is everywhere somewhat unpopular with the world at large, is a matter of special difficulty in India. Hence every facility and encouragement should be placed in the way of such men who endeavour to spread a knowledge amongst the people and thus enable them to appreciate the importance of sanitary methods and the value of prevention of disease.

The work embraces all the possible subjects which one must know to lead a healthy life and to avoid disease. These include a knowledge of the human structure, which covers about 200 pages and discussed in the first two chapters. The third chapter deals on nutrition, and this includes a discussion on the value of different food materials including the vitamins Chapter four is devoted to a description of hygiene and sanitation. This is followed successively by chapters on nursing; home treatment of symptoms; pregnancy and care of mother and child; cheap remedies, examination of the patient, diseases of the digestive organs diseases of the liver and kidneys, diseases of the respiratory system; diseases of the circulatory system; diseases of the nervous system constitutional diseases, infectious diseases; and finally diseases of the sense organs and women.

II

It will thus be seen that very little is left which has not been treated in this book; in fact, it is encyclopaedic in its scope and outlook The volume of information under each heading is amazing and we cannot but admire the energy, perseverence and the power of clear exposition of the author. We have no doubt that the book will be read with interest and profit not only by the lay people, but much valuable information may be gathered even by medical men.

We have, however, a few criticisms to offer. The book is bulky to handle, and there is much reduplication of material, which, by careful editing and judicious pruning, will reduce its size without affecting its usefulness There are many matters which are better avoided in a work meant for non-medical men. For instance, it is not safe to deal on the treatment of syphilis with drugs like arsenic or bismuth or mercury. The same may be said of many diseases dealt with in the book A book primarily intended for lay people should, as far as possible deal with the preventive aspect of the diseases and advice regarding treatment should only cover so far as can be undertaken at home by non-medical men without any risk to the patient Thus treatment with injections (sometimes intravenous) with highly potent drugs, or even the intravenous use of saline in cholera are best left for qualified practitioners Many treatments have been recommended whose value is debatable, and one would naturally like that these were not discussed in a book of this nature There are some inaccurate statements which require correction For instance it is mentioned that normal saline contains 90 grs. to the pint (page 1052) *it is not so.* It is 0·9 p c or 80 grs to the pint. Again, on page 1036, under treatment of round worm, thymol has been recommended in doses of 15 to 30 grs. It is never used for this parasite but used in cases of hook worm (page 1039).

We have nothing but praise for the book and we trust that the author will take the criticisms in the same spirit in which they have been made

*MALARIA CONTROL**

By

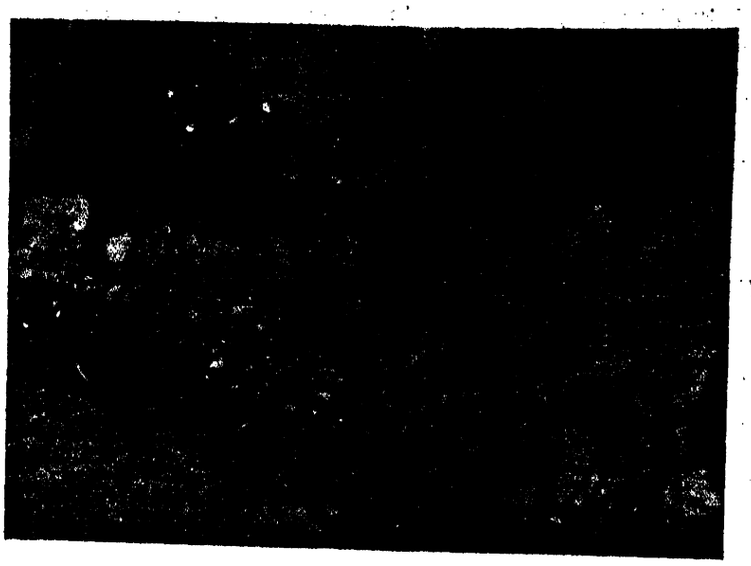
DR. K. L. CHOWDHURY, M.B.

Mosquito Control Officer, Corporation of Calcutta

LT.-COL. COVELL needs no introduction to the malariologists of India. The second edition of this useful book has been recently published and will be of the greatest value to those already engaged in malaria control work not only in India but in all countries. The book removed a long-felt want of the malariologists when it first made its appearance in 1931, and the more important advances made in malaria control during the last ten years have now been added to this edition of the book in the form of a new chapter. The special feature of this book is the exhaustive bibliography, including 1,148 references as against 570 in the first edition. The references, covering 95 pages, have been well arranged for the convenience of research workers under the headings of the various measures dealt with in the book. A list of sources of various apparatus used in the application of anti-mosquito measures has also been given as an appendix.

* *Malaria Control By Anti-Mosquito Measures*: By Gordon Covell, C I E, M.D. (London), D.P.H., D T M & H (Eng), Lieut-Colonel, Indian Medical Service, Director, Malaria Institute of India (2nd Edition)—Revised, enlarged and brought up-to-date by the author—Published by Thacker, Spink & Co (1933) Ltd., 3, Esplanade East, Calcutta in January 1941.—Demy, pages 224 with index.—Thirteen illustrations in text two plates

Since the epoch-making discovery of Sir Ronald Ross in 1897 that mosquitoes are responsible for the spread of malaria, the whole world seems to be in a state of war against this deadly enemy of human beings, and the scientists all over the world are engaged in discovering the best and the most economical means of destruction of the mosquitoes in all its stages. The medical men, the chemists and the engineers are all playing their parts to solve this problem. As a result of this, the literature on the subject of mosquito-control have been scattered in different scientific journals published in different languages. Covell's book gives an up-to-date compilation of the experiences of the workers in different countries of the world.



In reviewing this book one cannot but recall the endeavour of Col. J. A. Sinton, I.M.S., to draw the attention of the Government of India in his publication "What Malaria Costs India." He wrote in its foreword :—

> "The necessity for drawing attention to the grave danger which malaria places in the way of the progress of India, was one of the reasons for the compilation of this article. It is hoped that in future a much greater interest will be taken, by both the lay and the official populations, in a disease which is sapping the physical vitality of the people, the social and intellectual development of the nation, and the economic resources of this subcontinent. It is hoped that a realisation of the importance of malaria to India will lead to a better and more wide-spread knowledge of the disease and the initiation of more forceful and active measures for its amelioration. The plea of the sanitarian and of the malariologist is too often as the voice of one crying in the wilderness. India is like Prometheus bound by chains of apathy to the rock of expediency and financial stringency, while the vulture of malaria devours the vitals of her people."

In tabling a motion urging control of malaria in the old Imperial Legislative Council in 1916, the Hon'ble Mr. Surendranath Banerjea said :—

> "We have the plain fact admitted by the Government of India that malaria is the greatest scourge that decimates the people of India. The loss of human life does not alone represent the sum total of the suffering and misery inflicted on the people by malaria. For one man who dies of malaria at least ten suffer from it—though they do not die of it. They carry on a lingering existence hovering between life and death, to whom death in many cases would be a relief. Having regard to the terrible mortality caused from malaria and the wide area it covers, I think I am entitled to hold that it has become a great national problem."

Col. Covell is also responsible for the excellent anti-mosquito organisations of the three important cities of India, viz., Bombay, Calcutta and Delhi. His recommendations for mosquito control work in these cities have been carried out by the authorities concerned with the most encouraging results. In Calcutta, not only the sickness due to malaria has diminished, but other mosquito-borne diseases are also on the wane.

Cyclist Volunteers of 1941

Cycling for
HEALTH & SPORT

By

DR. SACHIMOHAN MUKERJEE, M.B.

Organising Secretary,
All-Bengal 50-miles Cycle Race

CYCLING is a first class sport. It is also a refreshing form of physical culture which, when properly utilised, builds up bodies. I wonder how many of the medical men remember the utility of cycling, when they recommend graduated exercise to suitable patients. Cycling is probably one of the best form of exercises for persons with toneless abdominal muscles and underdeveloped muscles of the lower limbs. If recommended in suitable cases, regulated cycling may cure constipation and atonic dyspepsia. Of course, like all other forms of exercise, it should be practised under instructions of efficient physical culturist.

But the chief reasons for the very wide adaptation of cycling as a popular means of conveyance in this country, particularly in smaller towns and in suburbs of big cities, is that it is probably the cheapest and easiest of all means of conveyance. Owing also to the comparative speed and freedom of movement, even in narrow paths, it has earned a very great popularity. It is, therefore, no wonder that cycle-racing has attained to a high place in the sporting world. In almost every athletic sports meeting, cycle-racing forms probably the greatest object of thrill for the competitors as well as spectators. The interest of this sport is attracting cyclists of either sex. Girls, both European as well as Indian, are taking to it in gradually increasing numbers.

Cycle-racing for short and long distances differ from each other in certain respects. Short distance cycle-racing, ranging up to ten thousand meters (equivalent to 6·2 miles), is held on grass tract. To win a short distance cycle race one must make a good start and the strength and agility of the leg muscles must be good. The cyclist must also be an expert in certain tactics of the track. The record time in India for one thousand metre cycle race is 1 min. 30·3 sec.

LONG-DISTANCE RACE

THE foremost factors for winning a long-distance cycle-race are the stamina of the muscles and the power of endurance of the cyclist. The racing-cyclist, using a fixed-wheel cycle, has got to paddle the cycle continuously at an average speed of 20 to 25 miles in an hour. The speed often reaches well above 25 miles per hour. Cramps of the leg-muscles are the commonest bug-bear for a long-distance racing-cyclist. The tear of the chain and puncture of tyres are commonest disorders of the cycles in such races.

The time record for a cross-country road race on cycle depends on many factors, of which the following are important. Apart from the calibre of the cyclist and his form at the time of race, the weather condition, the direction of the wind, the effectiveness of traffic control, the condition of the road, and the thoroughness of road management play very important roles in the success of a cross-country cycle-race. Therefore, to conduct such races successfully one has got to depend on many things including sufficient volunteers and police arrangement to ensure effective traffic control and co-operation of bus, motor and cart drivers. And as most of the long roads are intercepted by railway lines, proper timing for the race and co-operation of the railway authorities are also essential. Apart from this, some elements of luck regarding weather condition, direction and strength of the current of wind, also come into prominence as leading factors.

In the long distance races, motor cycles, having greater range of speed than the cyclist competitors, are very useful in guiding the track, regulating traffic and carrying sports officials and road inspectors. Motor cars cover greater space of road and naturally obstruct the cyclists. The use of motor cars by sports officials should, therefore, be minimised. Motor cars and vans carrying first aid units, medical officers and cycle repairing units should follow the cyclists at a distance. Volunteers on foot should be placed in charge of important road-crossings and crowded localities on the road.

LONG DISTANCE CROSS-COUNTRY RACES

OF the long distance cross-country cycle races in India, the longest one (officially recognised) is run between Bombay and Poona. The record time for this is 6 hours 19 minutes 8 seconds. The 100 kilometre (62·2 miles) race of the Indian Olympic Sports has the time record of 3 hours 8 minutes 54 seconds.

The important long-distance cycle-racing in Bengal is the All-Bengal 50 Miles Cycle Race run on the Diamond Harbour Road. The part of the road between Behala and Hazipur bridge near Diamond Harbour is 25 miles. Competitors have got to go to Diamond Harbour and come back to Behala to cover 50 miles. This race is organised by Sarsoona Sporting Union and is registered under the Bengal Olympic Association. It has earned great popularity with the senior cyclists of Bengal. The

HEALTH & PRIMITIVE LIFE

—Continued from page 157

that the valley and the surrounding hills were free from epidemic and contagious diseases and venereal infections till the arrival of the men from the western plains. This is the condition throughout all the culture-contact areas where the savage and the civilized have come to live together. Most of the diseases in primitive communities are attributed to the machinations of evil sprits or magicians and treatment follows aetiology. Offerings and sacrifices are made to the supernatural agencies and counter-magic resorted to. But unfortunately the diseases of the civilized are not amenable to the antidotes of the savage and they fall easy victims. But where the home of the primitive is free from the approach of the advanced, he has been able to maintain his health.

Simple Habits

ANOTHER name for the primitive peoples is *nature-folk*. They are nearer to nature in their simple habits. The food they take may be scanty but they do not destroy its nutritional value in the elaborate process of cooking to which civilized palate has become adjusted. Most of the articles of their food are taken either raw or half-cooked and are freshly prepared. Even in the rainy season when the clouds gather in the sky the Santal housewife does not think it necessary to stock rice but prepares it afresh every day.

The primitive peoples move about with the scantiest clothing. A loin-cloth is sufficient where nature does not force to wear something warmer. Even this loin-cloth is sometimes regarded to be unnecessary. Not long ago the Juang ladies of the hinterland of Orissa used to hang a few leaves from the waist in front and thought themselves decently dressed. In the middle of the nineteenth century the Luhupa men of Manipur hills used to visit the markets of the valley with nothing except an ivory ring on the foreskin. But the 'eternal woman' keeps a careful watch even in primitive hearts. She attempts to beautify her body with simple ornaments made of seeds, beads, orchid stems, grass or brass. This is however, unnecessary for health gives them the grace which ornaments vainly try to emulate. In their ignorant simplicity they are not afraid of bacilli or bacteria. With them life is full of mirth and gaiety. Even in the midst of the direct calamity they do not lose heart but enjoy life to the dregs and flout misfortune with a laugh which is born in the health of body and mind.

Nature-Folk

THESE are some of the causes which account for the sturdy health which our tribal folk enjoy. Nature herself also helps them in weeding out the weaklings who, according to the modern eugenists, vitiate the whole stock by unrestricted breeding. They do not receive the artificial help which civilization has elaborated through centuries in order to protect the unfit. They quietly succumb to nature which assumes her grim form in primitive surroundings. What the State has attempted to bring about by drastic legislation in Germany and America, has been undertaken by Nature herself among the Nature-folk.

fourth meeting of the race, which came off on the 23rd March, this year, was competed by 24 cyclists. The record of time this year was 2 hours 35 minutes and 39 seconds.

Cycling, it may be stated in conclusion, is an easy, pleasant and thrilling form of exercise which ranks high as a first-class sport, is extremely economical and has already millions of devotees in India. It keeps one tense, alert and tip-top and the habit of self-reliance is greatly stimulated by it. Even as a hobby, cycling does you good—physically and mentally. Although the habit of cycling has come to us from foreigners, it has now been so intensely internationalised that we are now as much at home on a cycle as walking in God's free air.

Eating Houses *in* Calcutta

By

DR. J. P. CHAUDHURI, M.B. (Cal.), D.P.H., R.C.P. & S. (Edin) R.F.P.S. (Glas.), D.T.M. (Liv.), D.P.H., R.C.P. (Lond.), Etc.

District Health Officer, District I, Calcutta Corporation

THESE lines are written to convey some useful hints to those responsible for conducting teashops, eating houses, sweetmeat shops and similar concerns in Calcutta. No adequate protection, as a matter of general rule and routine, unfortunately, is normally available for an ordinary citizen partaking tea and refreshments at our wayside stalls. But apathy in such an important matter is nothing short of a crime. No earthly good, again, is done by the public, the Corporation and the owners of these food-staffs slinging mud at one another. It is time that all realise that it is imperatively necessary for all to co-operate with one another, so that the dreadful evil of food contamination may be fought and vanquished. The test of civic progress is afforded by the protection the people enjoy from the chances of diseases through such sources as the tea shops, eating houses or sweetmeat shops. Of course, these three do not exhaust the list: but they are the main repositories of the city's death-germs and must be thoroughly and effectively cleansed and maintained in health-preserving conditions.

II

CLEANLINESS is the *key-note* of the civic service enjoined on those who cater to the public needs and demands for Tea, Eating Houses and sweetmeat shops. With Hindus, particularly, outer as well as inner cleanliness is a strictly enjoined tenet of religion. It is our prime duty to observe cleanliness of the place where food is manufactured, where food is stored, where food is served, where refuse is kept; cleanliness of the cups, saucers, plates, tumblers, and all other utensils; cleanliness of the persons, who prepare, handle and serve the food and drink; cleanliness of the drinking water and utensils used for storing and serving. The inner cleanliness of the persons engaged in the food trade must also on no account be neglected. Some of these men become potential dangers to public health as carriers of Enteric and Dysentery. Stools and urine of such employees suffering from these diseases should be forthwith examined and great care should be given to their being discharged from hospitals to resume normal work. Private practitioners should also make it an invariable practice to communicate with the District Health Officers concerned to report such cases as come to be treated by them for free bacteriological examination of the stool and urine of those patients. It will be ideal if the tea, eating house and sweetmeat shop owners would only employ those who can produce medical certificates to show that they are not carriers of these diseases.

Places where tea, eatables and sweetmeat are served to the public should be always attractive for customers. Suitable lavatory arrangements for customers should also be provided. As the hands and mouth of the person partaking food should be washed clean, facilities must be provided for that also.

Owners of such shops are required by law to take out a "health license" under Sec. 390 of the Calcutta Municipal Act of 1923, which provides:

> (1) No person shall, without or otherwise than in conformity with the terms of a license granted by the Corporation in the behalf, keep any eating house, tea shop, hotel, boarding house, bakery, aerated water factory, ice factory, or other place, where food is sold or prepared for sale;
>
> Provided that the fee payable for any such license, shall in no case exceed one rupee.
>
> (2) The Corporation may at any time, cancel or suspend any such license if they are of opinion that the premises covered thereby are not kept in conformity with the conditions of such license or the provisions of any by-law made under Sec. 478 relating to such premises, whether the licensee is prosecuted under this Act or not.

Food must never be kept exposed at the risk of contamination by dirt, dust and flies. Every shop-keeper should co-operate to safeguard public health by conforming to the conditions of the license and the provision of the Act.

We will now deal briefly with the matter of ensuring greater purity of all foods and delicacies.

III

THERE is a definite prohibition against sale of diseased animals or unwholesome articles intended for human food. Section 412 of the Act provides:

> (1) No person shall sell, store for sale, expose or hawk about for sale, or keep for sale, any animal intended for human consumption or manufacture any such food or drug which is unsound, unwholesome or unfit for human food.
>
> (2) In any prosecution under this Section the Court shall, unless and until the contrary is proved, presume that animal, food or drug found in the possession of a person who is in the habit of keeping animals of this class intended to be used for human consumption or of keeping or manufacturing such food or drug for the purpose of human consumption, has been so kept or manufactured, as the case may be, for sale by such person.

The above Act regarding Warranty or Invoice provides as follows:

> To be a legal defence, a copy of it must be sent to the purchaser within seven days from the service of the summons, along with a written notice that the defendant is to rely on it in his defence. The name and address of the warrantor must be given and he must also be informed and may appear to give evidence. A warranty from outside the United Kingdom is no defence, unless the purchaser can prove he has taken steps to verify the statements in it. A warranty to a master covers the servant.
>
> On discharge of defendant on warranty, proceedings may be taken against the warrantor, either in the district where the article was purchased or where the warranty was given.

Is it not time to get similar amendments in the Calcutta Municipal Act? Indeed, it may be further added, that the Corporation of Calcutta should set up such municipal stores for pure foodstuffs and also start a dairy of its own as in Madras, in the health-interest of the citizens.

The Act further prohibits, under Section 406, sale, etc., of adulterated and misbranded food or drugs; and also, under Section 407, prohibiting sale, etc. of certain articles which are not of prescribed standard of purity. To be brief, I will no more quote, chapter and verse of the other relevant legal sections, such as Sections 410, 418, 419, 420, 424, etc. But I shall have to quote following from the report of the Health Officer of Calcutta for the year 1938-39 (Section IV, page 22) regarding the work of Food Inspectors for the year 1937:

> The total number of samples collected by the F.I.S. during the year under report was 9,730 as compared with 10,328 in the preceding year. Of these samples, 2,169 were

THE WAR IN HUMAN BODY

By
Dr. SIVAPADA BHATTACHARYA, M.D

THE ENEMIES READY TO ATTACK US

Diseases are caused by the invasion of the human body by myriads of organisms. These aggressors are our constant enemies :

I. THE ARMY OF MORSUSMURIS
(RAT-BITE FEVER)

II. AMOEBIC DYSENTERY

The primitive uncivilised cannibal army of Entamoeba histolytica that burrow and make tunnels in our intestines and draw their rations from the body.

III. MALARIA

The huge army of malarial parasites can mobilise within 12 days from a standing unit of 1,000 spores to 1,000,000,000, each ready to attack a blood cell, or 2 or 3 will wrestle with a refractory corpuscle.

IV. BACILLARY DYSENTERY

The Bacterial Batallions of bacillary dysentery.

Army Units : Shiga.
Flexner.
Strong.
Morgan.

V. CHOLERA

The Division of Machine Gun of Asiatic Cholera can discharge 78,700,000,000,000,000, 000,000,000,000 bullets from one machine in 24 hours.

VI. SLEEPING SICKNESS

The sleeping gas-units of trupanosomes.

VII. ELEPHANTIASIS

Night bombers of Filaria.

VIII. KALA-AZAR

L.D. bodies are a very determined lot of invading army and require very strong measures to check their progress.

But how is this huge enemy army transported from one place to another ?

THE WAR IN HUMAN BODY

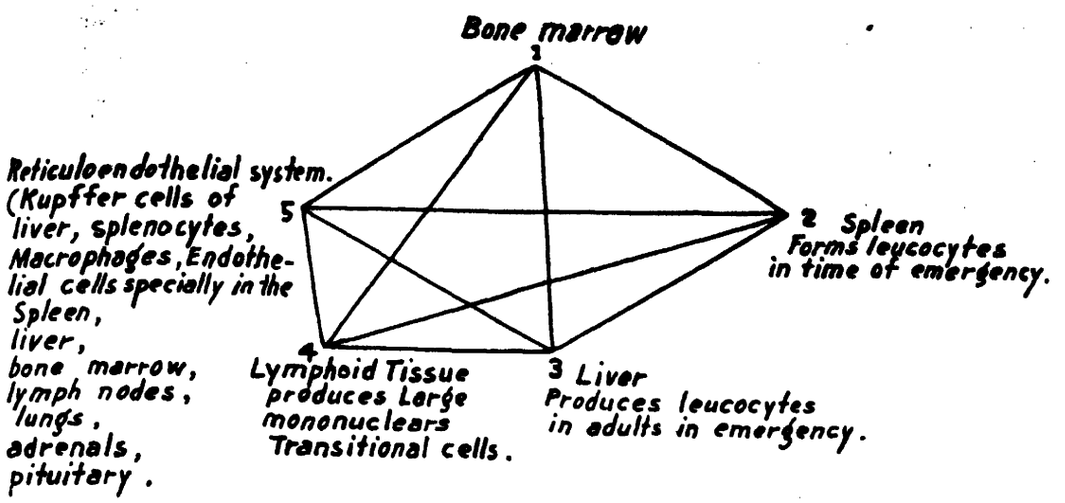
TRANSPORT DEPARTMENT

MOSQUITOES *carry* a number of disease armies.

ANOPHELES TYPE	MALARIA
STEGOMYIA	DENGUE & YELLOW FEVER
CULEX	FILARIASIS

SANDFLIES *carry*	SANDFLY FEVER ORIENTAL SORE KALA-AZAR
HOUSE FLIES *carry*	CHOLERA DYSENTERIES TYPHOID FEVER E. HISTOLYTICA—transform themselves into covered armoured cars (cysts) and then enter the body
LICE *carry*	RELAPSING FEVER TYPHUS FEVER
FLEAS *carry*	PLAGUE

A Number of other Disease Armies is transported by Flies, Fleas and other insects



NATURE CONQUERS : NATURE SUCCUMBS

"No one can be saved unless Nature conquers the disease and no one dies unless Nature succumbs", said Galen 1800 years ago; and it is true to every word even to-day.

1. *But how does our body conquer ?*
2. *Who are the sentinels that keep watch on the outposts against millions of invading forces ?*
3. *What constitute the "Barbed-wire-entanglements" for the invading organisms ?*
4. *Who are the body's standing armies ?*
5. *How are the armies mobilized and who help in mobilization ?*
6. *How do the different war departments of the body work ?*
7. *What is war in the body ?*
8. *Progress of war.*
9. *After-effects of war.*

MOBILIZATION

How are the armies mobilized and who help in the Mobilization?

These are the five Ministers who help in mobilization and during de-mobilization 1, 2, 3, 4 and 5 help in its work. The whole work receives help from the Brain, Autonomic nervous system and it gets a spur from the Adrenals,—the War Secretary for emergency function.

HOW DOES OUR BODY CONQUER?

THE human system has a complex organisation for its defence and protection.

THE best prevention of war is always "to remain prepared for war", which is an established dictum in international politics. Our body follows it to the letter. In all emergencies it puts forth its supreme effort and marshals out its entire force at a moment's notice by various wonderful mechanisms. The attainment of perfection is the result of the process of evolution of millions of years.

IF the enemy cross the first line of defence, an immediate fight would ensue. The process of the fight seems to be very carefully planned and very cunningly executed.

THE brunt of the first attack would naturally fall on the outer fortifications of body—the SKIN ; and unless a portion of it is blown off by the bombardments of the enemy, it resists the invading force. The gates of the "body fort" are guarded at the outposts by the most efficient sentinels—the LYMPH GLANDS. These sentinels never sleep and are always on the look out for foreign invaders. These LYMPHATICS and LYMPH NODES form the "Barbed-wire-entanglements", and the invading armies can never get beyond this barrier without a tough fight. If the attack is laid out on a large area, our body goes on a "War Footing". "The MINISTER-FOR-WAR" speed up the ammunitions and there goes on the great carnage.

THE WAR IN HUMAN BODY

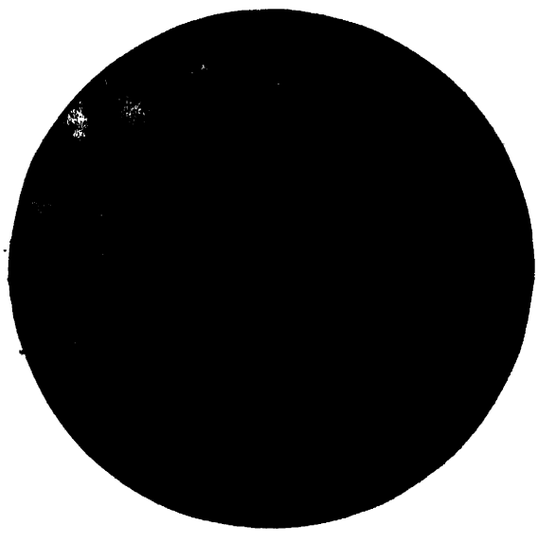
THE STANDING ARMY

ALL of us have heard of the "White Corpuscles" or Leucocytes. They are the standing army and like the War Office or the Army Head-Quarters, the body wants to keep all secrets of their movements and activity to itself, and hence not much is known about them. We know that each average body has a modest standing army of 27,500,000,000 (twenty-seven thousand five hundred millions), or an average of 5,000 leucocytes per c.m.m. The body has about 5,500 c.c. of blood. There are four main divisions of this militia :

1. NEUTROPHILES.
2. LYMPHOCYTES.
3. LARGE MONONUCLEARS.
4. EOSINOPHILES.

THIS little army can be transhipped through blood vessels from one extremity of the body to another within 20 seconds. It can be increased in time of war to 5 to 8 times the original number. The next division which works in the base is the ANTIBODY DIVISION. It tries to prevent future war, but if a war is forced on the body it tries to soften its horror to a minimum. It confers immunity on us. The time taken for the actual preparation of both sides is the INCUBATION PERIOD.

WHEN WAR BREAKS OUT



THE first fight takes place between these LEUCOCYTES and the INVADING ORGANISMS. The Leucocytes are hurriedly mobilised and transhipped to the front. The fighting divisions are called PHAGOCYTES. These warriors do not believe in the use of deadly arms; they fully subscribe to the old doctrine of hand-to-hand fight. They come like greedy demons with their mouths open and set to devouring the invading organisms in *toto*. Probably the bacteria 'au-natural' are not palatable and somewhat indigestible. So the 'Antibody' division from the base sends the 'Opsonin' to prepare invading microbes for the banquet. With the presence of Opsonin in the blood, Phagocytes engulf invading armies in bunches.

A 'BLITZKRIEG', with destructive weapons of incendiary bombs, tanks and mass attacks, results in the destruction of parts of the body. These are manifested by craters in the form of ulcers, abscesses and gangrene with death—local and general. The all-careful scavengers and Wardens work dauntless day and night without any rest and remove the effete materials. Repair also takes place and the body becomes fit.

SEVERE bombing in all parts destroy all defensive weapons. This results in acute attack and death of the body.

A Great Fight in the Lymphatics of the Groin in a case of acute Sepsis.

Bacteria anchored in the Reticulo-endothelial cells of liver.

A strong fight in the Lymphatics of the intestine in Typhoid fever.

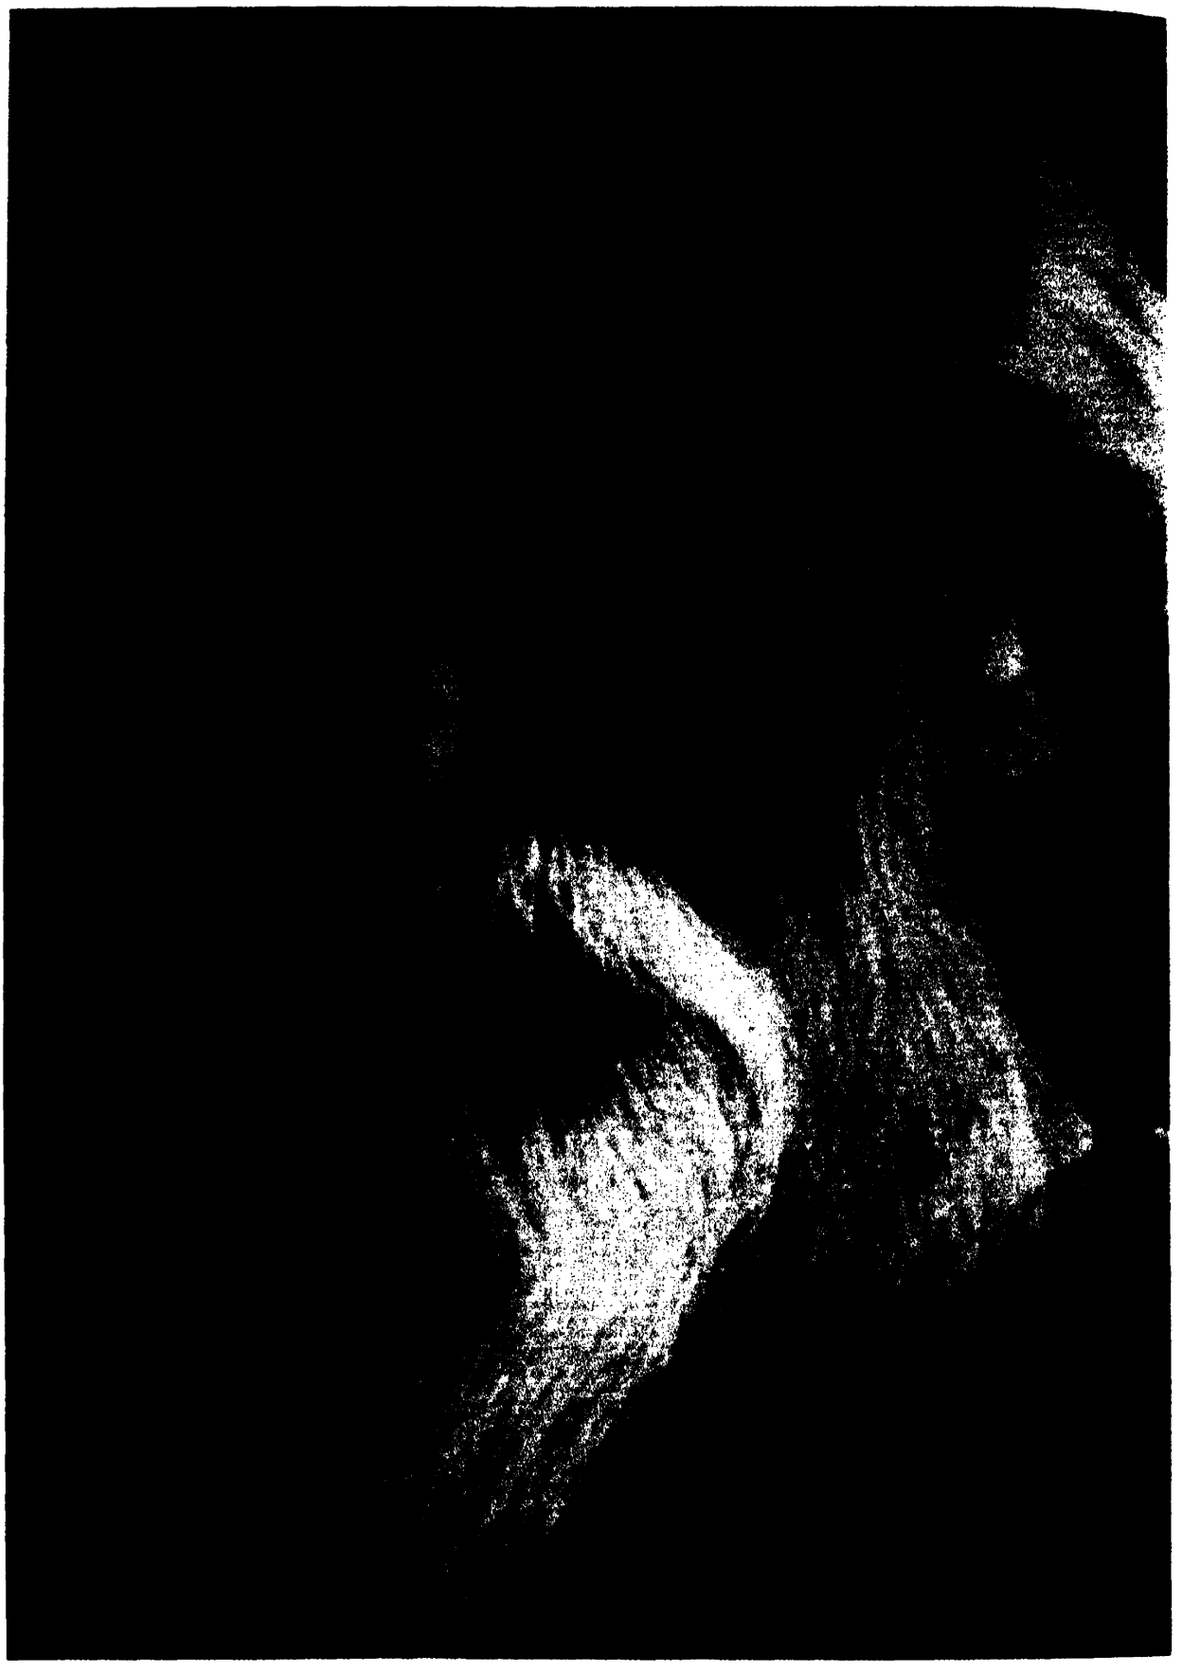
Destruction and havoc in a fight in the Liver with Entamœba hystolytica infection.

PROGRESS OF WAR

IF our armies are able to inflict a smashing defeat at the beginning, we describe it as an "Abortive attack". If deadly war lasts for some time (which is popularly called an acute attack) before our troops come out victorious, as it often happens, we have to pay dearly for the fight but the life is after all spared, and we go into a state which we call "convalescent stage".

BUT all wars with all their Horrors, Privations and Devastations have an instructive side. We gain in knowledge and experience. It would thus teach us how we can make ourselves more and more fit to withstand the fight.

SHOULD the body win in the fight, death of the invading organisms is the inevitable consequence and what the body gains is in the production of an immunity against that particular organism. The duration for which this immunity would last depends on the nature and the intensity of the fight. In some cases this fight is prolonged for a very long time and ends in chronic suffering.



AFTER-EFFECTS OF WAR

THE LEAGUE OF NATIONS had its cradle-bed on the ruins and devastations of war, and ever since it has been trying to make "wars" impossible in future.

ALL NATIONS while armed to the teeth are sincerely trying to find out a common formula for an ever-lasting peace, and we are also striving after the same ideal.

WHILE keeping the body in the fittest condition to combat, we are trying to make it possible by Education, Research, Health Propaganda and Prophylactic inoculations to prevent diseases and to make human life safe for generations to come.

PEOPLE sometimes defy the first Laws of Health, forget the lessons received by repeated experiences of hundreds of centuries of body fight. The result is epidemics—pandemics of destruction and death.

HOMAGE

RABINDRANATH TAGORE completed his eightieth year on May 8 last The attainment by the POET of the eightyfirst year of his life is an event of outstanding importance for Calcutta This great city claims the POET in a very special way, not only because he was born and brought up here, but because he comes of a family that in learning and religion, literature and art, music and painting, has contributed greatly to the city's heritage Since the early years of British connection with India, the Tagores have produced some of the foremost figures in Bengal—many distinguished men and women,—and Calcutta is a finer place because they have lived and worked here and bequeathed something of their spirit to succeeding generations Here the POET'S grandfather, "PRINCE" DWARKANATH, friend and collaborator of RAJA RAMMOHAN ROY, became the pioneer and leader of many movements for the advancement of his fellow citizens Here his father, DEBENDRANATH TAGORE, preached anew the message of the *Upanishads* And here it was, in a house in Sudder Street, sixty years ago, came to the young poet the Great Awakening, and over this city rolled in fine frenzy his poetic eyes, investing everything with the new light of the "Illumination" Calcutta has indeed special reasons to rejoice in celebrating the POET'S eightyfirst birthday

THE extraordinary versatility of RABINDRANATH'S genius branches out into practically every department of human culture In every field of activity his contributions, rich and varied stand supreme As a poet and man of letters, he has enriched the literature of his mother tongue He has touched to adorn every department of it It is indeed a marvel that one of the greatest forces in the renaissance of his own native Bengali literature, he should also have become 'one of the greatest masters of contemporary English prose" His literary works in English have, in the words of a noted English writer "made a definite and peculiar contribution to the totality of modern English literature, to which he has given something that has no exact counterpart" He has interpreted Indian philosophic and religious thought to bring out its underlying message of freedom for the human mind His social philosophy reflects a Religion of Humanity A great composer of songs, a creator of new melodies and dance forms, a producer of plays and festivals, his histrionic gifts have often delighted thousands He is a painter also—a painter who confuses critics and baffles classification And he has been the chief inspirer of the Bengali School of Painting led by his nephew ABANINDRANATH By his insistence, in his writings, on the use of artistic things in every-day life as well as by his personal example and encouragement, RABINDRANATH has definitely contributed to the revival of Indian, particularly Bengali, traditions in our arts and crafts His school at Santiniketan, where children learn and grow in an atmosphere of freedom and culture in living contact and kinship with Nature, stands as a monument to his genius as an educationist His gospel of self-help, service and sacrifice brought about a deep national consciousness in the early decades of the present century, and he became at once the Poet and Prophet of the new Nationalism which Bengal gave to India His were the greatest songs of her aspiring liberty, his was the creation of the first all-human prestige of the modern Indian Man

—Continued on next page

IT is a matter of great rejoicing with us that Rabindranath Tagore has reached the eighty-first year of his life. He has earned immortality by inspiring us mortals through his prose and verse, by his own life and character and by his deep and abiding faith in the Great Being. Nor have his activities been confined to literature alone. He has given a great impetus to learning in every form. The educational centre founded by him may well be expected to guide future generations along the path of progress in culture and better life.

LATELY great anxiety prevailed throughout the country on account of his serious illness. Fortunately for us, he has recovered. May God grant him health and happiness is the prayer that goes out from the heart of every countryman of his, in which it is also my privilege to join on behalf of this great city—the city of his birth.

जिजीविषेत् शतं समाः

Phanindra Nath Brahma

TAGORE is not a politician as the term is understood, but his contribution to constructive politics is as great as his work in other fields. As early as 1904 he drew up a complete scheme for the re-organization of our villages with the revival of cottage industries to help remove the poverty of the masses with the co-operation of the peasant himself. RABINDRANATH'S idea of national regeneration through such a comprehensive scheme of rural reconstruction is now being worked out at Sriniketan.

AN APOSTLE of the unity of the East and the West, RABINDRANATH TAGORE founded the VISVA-BHARATI as a centre of culture, where the two can meet on equal terms, in amity and friendship—promoting understanding, goodwill and peace among the nations of the earth. For the last twenty years he has given his all to the building up of this institution, —denying himself all that make life comfortable in old age. He has sacrificed his leisure, his health,—even his creative work,—to place this international university on an enduring basis. He has given all that he has earned from his books and more, and he has,—let us confess to our shame,—gone about with the beggar's bowl. He has preached its message far and wide. He has given to the world something which is of unique, universal and permanent value,—a new Culture. The spirit of this new Culture is Freedom—freedom from all stereotyped forms as well as from over-emphasis on no-forms, from asceticism to stoicism as well as from epicureanism, from all that—sweet or bitter—which stands in the way of the progress of the human soul.

TAGORE, in fact, cannot be "summed up". And we shall not attempt the impossible. We offer him our reverent homage and pray that he may be spared to us many more days—to guide us and inspire us and serve as a beaconlight in the midst of encircling gloom.

ALL-EMBRACING COSMOPOLITANISM

TWO sons of Mother India, more than any others, have raised her dignity and status in the eyes of the world, Rabindranath Tagore and Mahatma Gandhi. The British connexion may have brought railways and telegraphs to this ancient land but the impression left abroad was that India was a land of cobras and semi-savages and hot as Turkish Bath. Those who affected a higher pose inquired about *fakirs* and talked of the mango tree or rope tricks. Jagadish Bose, Prafulla Ray and Raman attained fame in the limited sphere of science but Tagore the Poet and Gandhi the Mystic, carried India forward at one bound and placed her along with others in the vanguard of world culture and civilization.

MANY better qualified than myself will speak of the contributions Tagore has made to art and literature. There is, however, an aspect of his philosophy of life which has not received that attention from his countrymen which it deserves in the present days of our misery and political degradation. A child of the East and the West, Tagore is, in my view, pre-eminently indebted to Kabir for his special and peculiar ideology. Generations yet unborn will go on discussing whether Kabir was a Hindu or a Muslim or an offspring and an outcome of the contact of Islam with Hinduism. Howsoever his poetic love may have been influenced by the Hindu Bard of Maghar, Kabir made of Tagore the man who set the whole of Asia thinking. Was it worth-while worshipping the demon of Nationalism as created by the warring peoples of the West, whose loyalty to the teachings of the Asian Prince of Peace had become an exploded myth? Brotherhood of man and an altogether humanitarian international outlook, the pillars on which the structure of Muslim Society has been reared, must have been inspired into Tagore vicariously by Kabir, or directly by his own study of the Bulbul of Shiraz and other masters of Iranian poetry.

I HAD the privilege of visiting the Poet, with Mrs. Sarojini Naidu, in 1917, when I visited Calcutta as a Congress delegate. During the course of the conversation the Poet told us that no man, and especially an Oriental, could write real poetry unless and until he had read Hafiz, and that he had *himself* begun to learn Persian. It is this wider vision and all-embracing cosmopolitanism that has made Tagore transcend the boundaries which circumscribe the mental outlook of the ordinary man. Tagore is an Indian to the core of his heart and yet he is no less International. He will live through his works for generations to come. China has benefited out of his teachings. Let us emulate him while he lives and let us immortalise him by our efforts to realise his ideals.

—Abdur Rahman Siddiqi

RABINDRANATH AND INDIAN NATIONALISM

WHAT Goethe was to Germany, what Wordsworth was to England, what Walt Whitman was to America, that Tagore is to India.

The whole of India has united in the grateful appreciation of the supreme contribution which Rabindranath Tagore has made in every sphere of India's cultural existence for more than half-a-century. In particular, Bengal has expressed her eternal gratitude for the manifold services which Tagore has rendered to the Indian national cause. Tagore is admired not only in his literary accomplishments but also in the hearts of his people. He has captured the imagination of young Bengal and of young India, not simply because he is the Enlightened One, but because he has been the finest Interpreter of the spirit of India and the spirit of Asia to the Western World.

He is one of the greatest makers of New Asia and has been instrumental in transforming the Indian cultural movement from an Idyl into a Force. His poems and songs were chanted by the champions and supporters of the new Renaissance movement which synchronised with the Swadeshi movement in the beginning of twentieth century. They still furnish the joy and the inspiration to every worker in the national cause. Generations yet unborn will point their fingers to this Venerable Seer as the *Rishi* of modern India, who had shown the way to the Final Beatitude to every Indian who suffered and toiled for the emancipation of our Motherland.

Tagore preached a new Ideal—possibly the grandest conception of Truth and Beauty—when the greatest minds of the East and the West met a decade back at the residence of Professor Einstein. Tagore told the great Scientist that Truth is realised through Man. Einstein attempted to argue that if there would be no human being, the Apollo Belvedere would still be beautiful. Tagore in his inimitable poetical prose impressed upon the great Scientist his twin doctrines of Truth and Beauty in the following words:—

> "Beauty is in the ideal of perfect harmony which is in the Universal Being, truth the perfect comprehension of the Universal Mind."

IN the present distracted world, when the intoxicated Imperialist nations are indulging in a blood-bath, Tagore has preached a new Religion—

the Religion of Man—which was his thesis for a series of fine discourses he addressed to the Western World. What is Tagore's Religion? It transcends the limitations of Country and Community, the frontiers of States and Nations, the artificial boundaries created and imposed by the modern machine Civilization. Tagore has preached and is preaching his Religion not merely as an Idealist, as a recluse, but as a practical Philosopher who has practised in his own life and in his own actions the principles he has preached. Tagore has expounded his own Religion in the following words:—

"My religion is in the reconciliation of the Super-personal Man, the Universal human spirit, in my own individual being".

It is the great glory of Tagore that like a true Prophet he warned his countrymen not to mistake the convulsions of hysteria as the symptoms of power. He has preached the grand old Indian doctrine that one man should not covet another man's property or wealth. He had exposed the true nature of the exploitation which is carried on in the name of India's salvation. He has pointed out to the British people that their policy would bring ruin not merely to India but also to Britain. In one of his stirring addresses Tagore has exclaimed—"By robbing India of her strength, her masters have invited disaster on themselves".

IT has been the pride of Bengal that our greatest Poet had been the foremost Musician and Singer as also a constructive National Worker. The musical words of Tagore not merely gave us verses of enchanting beauty but also sounded a clarion call to the weak in spirit who suffered from a sense of defeatism. In his great song Tagore invoked the Dispenser of India's Destiny in the following words:—

"Thou Dispenser of India's destiny,
Victory, Victory, Victory to thee.
Eternal Charioteer, thou drivest man's history
Along the road rugged with rises and falls of Nations.
Amidst all tribulations and terror
Thy trumpet sounds to hearten those that despair and droop
And guide all people in their paths of peril and pilgrimage.
Thou Dispenser of India's destiny,
Victory, Victory, Victory to thee."

Tagore's trumpet was sounded, and that will for ever hearten those in India who despair and droop. The Victory of Tagore will be the Victory of India and would mean the triumph of Spirit in the truest sense of the term.

—*N. C. Chatterjee*

THE QUINTESSENCE OF OUR CULTURE

THE earliest day of my life that I can remember, there came floating a song into my ears which penetrated deep into my soul and has held me in thrall ever since. It was a strange, simple song,—a song that the young Bengali cowherd breathed through his frail, bamboo flageolet,—a song that had the fragrance of Bengal's paddy fields and rain-swept mangoe groves,—the coolness of her moon-blanched nights and the soft melody of her noble Ganges! Yes, that phantom-song was Rabindranath Tagore's! To millions of Bengali hearts, that song came floating likewise. Its joys and lamentations, its philosophy and wisdom, its passion and pathos, its message and call had the same abiding influence on the lives of every one of us in every walk of life. We cannot weep without humming a note of it; we cannot love without chanting a line from it; we cannot pride without giving a thought to it; we feel no inspiration without its vibrations in our bosom!

RABINDRANATH is a seer and a sage, born to rule the hearts of men and lead them from darkness to light, from ignorance to knowledge. In a world of ever-changing tastes, ever-tumbling values and ever-fleeting forms, the intellectual truth and moral beauty of Tagore's poetry remain bright and untarnished: the very quintessence of our culture and civilisation! His message has universal appeal; his fame is international. And yet, there is an undercurrent of all that is typically Bengali in his themes. What my youth and the youth of the rest of my countrymen owe to Tagore's poetry is impossible to describe. Think what the skies would look without the stars or the garden without the flowers! It would all have been bleak and arid without this comforting oasis. It is in the Poet's wonderful writings that we come into touch with the more permanent values of life, such as Death, Love and all that which, whether of Nature or of Art, breathes the sublime essence of Truth and Humanity. The supreme and infallible test of our love and devotion for Tagore lies in the fact that we delight to imitate his handwriting; we freely steal from his works; we try eagerly to borrow his manner and speech,—in fact, we have an uncontrollable urge to feel, suffer, laugh, weep, love and hate with this unique and super-sensitive soul, for most assuredly do these form the synthesis of Bengali life and culture.

IT is the eighty-first birthday of such a beloved personality that we are celebrating today. Millions of prayers will mingle with millions of joyous tear-drops at the thought that he is still among us, that we live in the age of Rabindranath Tagore and that we belong to his race!

Rabindranath shall not die, for the monument of his glory is

'more lasting far
Than bronze, and loftier than the royal site
Of pyramids'.

—*B. N. Ray Chowdhury*

Rabindranath Tagore

A Chronicle of Eighty Years

1861—1941

A head by Epstein at Birmingham Museum

INTRODUCTION

TAGORE cannot be "summed up". The extraordinary versatility of his genius branches out into practically every department of human culture, and this has naturally made the task of his biographers exceedingly difficult. We have, of course, a number of 'lives'—several in English and only one in Bengali; but we have yet to wait, it seems, for a really adequate biography of one of the greatest personalities of modern times. One principal difficulty in the way of comprehensive treatment of the subject has been the scattered nature of the materials on which a really complete biography must be based. For the first time, Mr. Prabhat Kumar Mukhopadhyaya, the Librarian of the Visva-Bharati, has made the most painstaking attempt at collecting these materials in his two-volume biography of the Poet ('Rabindra-Jibani'); and however much his book may leave to be desired in other respects, his work must be recognised as one of the most authentic sources of information regarding Tagore's life and work. All the English biographies of the Poet suffer more or less from a lack of factual background to his great career and, consequently, are wanting in just that perspective which alone can help us to form a correct estimate of Tagore's personality and achievements. The FACTS of the Poet's life have to be known, and correctly, to understand him.

SINCE the publication of Mr. Mukhopadhyaya's book any Bengalee can dip into his two substantial volumes and pick out for himself quite a good deal of what he wants to know about Tagore's activities extending over seventy years. For those, however, who are not familiar with Bengali, we have attempted here to set up, in chronological array, a record of the principal events which consubstantiate his remarkable career, and to make out a chronicle by linking up the basic activities of Rabindranath—as a poet and educationist, as a political thinker and nation-builder, as a reformer and regenerator—with contemporaneous social, political and cultural developments, so that the unique contribution of Rabindranath Tagore to the making of the India of to-day may be viewed against its true background.

WE acknowledge with the greatest pleasure the immense assistance we have received from Mr. Prabhat Mukhopadhyaya's book, which brings down the account of the Poet's life to 1936. For the subsequent years we are also indebted to Mr. Mukhopadhyaya, who has helped us with the chronology of the last five years,—a portion only of the comprehensive chronology he has prepared for the 'Rabindra Birthday Number' of the VISVA-BHARATI QUARTERLY. We should also thank Mr. Krishna Kripalani, Editor of the 'Quarterly' for allowing us to use it.

WE must also place on record the help rendered by Mr. S. N. Ghose by collaborating with us in the preparation of this Chronicle. But for his painstaking co-operation we could not have completed it in time for this issue.

THE EDITOR

TAGORE GENEALOGY

The Tagores belong to the *Sandilya Gotra* and come of the *Rahri* clan of Bengal Brahmins, being Bandyopadhyaya. According to the *Kulasastra*, the Tagore family originally belonged to the *Kusari* line of Pithavoga. Bhattanarayan is the earliest *Kusari* known to us, but his son Dina Kusari may be regarded as the real founder of the *Kusari* line. Then came Jagannath Kusari, who was linked up with the *Pirali* family by his marriage with the daughter of Guri Sukadeva of Jessore, one of the original *Piralis*. After Jagannath came Purushottam who may be regarded as the original head of the Tagore family. Sixth in descent from him came

PANCHANAN "THAKUR"

Who left his original home in Jessore in 1690 and settled at Gobindapore, a village on the site of the present Fort William in Calcutta. The merchants of the locality used to call him "*Thakur Masāi*" (Reverend Sir) from which he gradually came to be known as Panchanan "Thakur". This is said to be origin of the surname of "Thakur", or Tagore in its anglicised form.

JAYARAM

(died 1756)

[Appointed *Amin* of the first Survey operations by the English in Calcutta in 1707, acquired considerable properties.]

ANANDIRAM (died before 1756)

NILMANI (died 1791)

DARPANARAIN (1731—1793)

GOBINDARAM (died 1777)

[After the battle of Plassey and the flow of wealth from Murshidabad to Calcutta Nilmani considerably added to his fortune and he purchased, in 1765, land at Pathuriaghatta, Calcutta and built a house thereon in which he lived with all his brothers till 1748 when he separated from them and settled with his sons at Jorasanko.]

GOPIMOHAN (1761—1818)

KRISHNAMOHAN (died 1765)

HARIMOHAN (1777—1833)

PEARYMOHAN (died 1825)

LADLIMOHAN (1780—1833)

MOHINIMOHAN (1793—1820)

SURYAKUMAR (1784—1820)

CHANDRAKUMAR (1786—1832)

NANDITA married to Krishna Kripalini

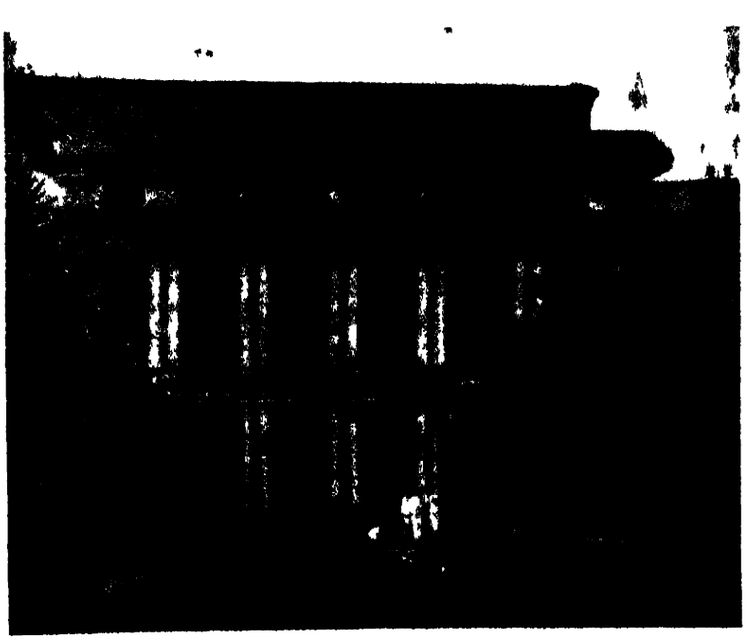
THE POET'S FATHER *Maharshi Debendranath*

THE POET'S MOTHER *Sarada Devi*

1861—1866
FIRST 5 YEARS

BORN in Calcutta, at 6, Dwarka Nath Tagore Lane, named after his grandfather, the Prince Dwarka Nath (1794 1846) on Tuesday May 7, 1861 between 2 30 and 3 A M (corresponding to Monday, the 25th *Baisakh* Bengali Era 1268 and Saka Era, 1783), fourteenth issue (ninth son) of the Maharshi" Debendra Nath Tagore (1817 1905) and Sarada Devi (died March 1875)

Debendra Nath purchases in 1863 about 20 *bighas* of land at Bolpur the present site of Santiniketan and Visva Bharati



Right of reproduction in whole or in parts strictly reserved

1867 1876
AGE 6 15

ADMITTED to Oriental Seminary leaves it after a short while to join Normal School is later placed along with his elder brother Somendranath and nephew Satya Prasad Ganguly,

THE POET'S GRANDFATHER
Dwarkanath Tagore

THE HOUSE WHERE HE WAS BORN
6 Dwarkanath Tagore Lane Calcutta known as the Jorasanko House is a great rambling mansion in the heart of Calcutta's teeming life Only a portion of the house is seen here

RABINDRANATH TAGORE

under private tutors,—the subjects taught including rudiments of physics, elementary geometry, arithmetic, history and geography, physiology and anatomy besides Sanskrit grammar, Bengali and English; also music; practises wrestling and gymnastics; makes first attempts at versification in 1868; joins Bengal Academy but plays truant shortly after; visits Santiniketan with his father, coming back for his *Upanayan* (Brahminical initiation into *Gayatri* prayers) in Calcutta on 6th February, 1873 (25th *Magh*, 1279 B.E., age: 11 yrs. 10 mths.); accompanies his father—after a short stay at Santiniketan—on an extensive tour through northern India, staying at Amritsar for a month and four months in the Himalayas (Dalhousie); receives from his father regular lessons in Sanskrit grammar, English and rudiments of Astronomy; returns to Calcutta and gets admitted into St. Xavier's School (1874); one of his earliest poems under the title *Abhilas* ('Desire') published anonymously in the *Tatvabodhini Patrika* (Nov.-Dec., 1874), —it being only mentioned that it is composed by a 12-year-old boy; death occurs of his mother (March 8, 1875: Poet's age: 13 yrs. 10 mths.).

Early Days and Early Poems

THE first poem published over his name appears in the *Amrita Bazar Patrika* (then an Anglo-Bengali weekly) of February 25, 1875, written for and recited (on February 11, 1875) at the 'Hindu Mela', a patriotic gathering held annually in Calcutta (sponsored in 1867 by Rajnarain Bose and organised by Nabagopal Mitra and the Poet's cousin, Ganendra Nath Tagore)*; study under tutors continued at home in Sanskrit poetry and drama (*Kumarsambhabam* and *Sakuntala*) and in English literature (mainly Shakespeare); translates *Macbeth* into Bengali verse (a portion of it was later published in the Bengali magazine, *Bharati* of 1880-81); composes a song for a patriotic play, *Sarojini*, written by his fifth brother Jyotirindranath Tagore (1848-1925); writes at about this time *Bana Phul* ('The Wild Flower'), a long poem running into eight cantos and fully published in 1876 in *Jnanankur* (a Bengali monthly edited by Sri Krishna Das); also composes some lyrics in the style of Vaishnava *padabalis* under the pseudonym of "Bhanusinha Thakur"; goes with his father on a second sojourn to the Himalayan regions.

1877—1884

AGE 16—22

RETURNING to Calcutta, appears in the role of 'Alik Babu', a character in a play written by Jyotirindra Nath, privately staged at the Jorasanko residence;* contributes poems (including the 'Bhanusinha' series), essays, literary criticisms (notably one on Michael Madhusudan Dutt's *Meghanadbadha Kabya*)—all to the new Bengali monthly magazine, *Bharati*, started and edited by his eldest brother Dwijendra Nath Tagore (1840-1926); other contributions include (*Bhikarini*, a long story), *Karuna* (a novel, unfinished), *Kabi Kahini* (a long poem) and articles on such varied topics as 'English Manners', 'The Anglo-Saxons and Anglo-Saxon Literature', 'Beatrice and Dante' and a review of Bankim Chandra Chatterjee's poems (*Kabita-Pustak*); composes and reads at the 'Hindu Mela', a poem on Lord Lytton's Delhi Durbar (1877), immediately following the great Indian Famine—an impassioned indictment of the cringing tribute paid by the Princes and peoples of India to "the golden chain" imposed on India by England;† is sent to stay and study English literature with his second brother Satyendra Nath Tagore, the first *Indian* member of the Indian Civil Service (1842-1923), then District Judge, Ahmedabad.

In England

SAILS with Satyendra Nath for England by s.s. *Poona*, on September 20, 1878; about this time his *first* book of poems, *Kabi-Kahini* is published; arrives in London and goes to school at Brighton staying with Mrs. Satyendra Nath Tagore and her children—Surendra Nath and Indira (later Mrs. Pramatha Chaudhuri); shortly after brought to London by Taraknath Palit (later Sir T. Palit) and admitted into the University College; studies English literature under Prof. Henry Morley (brother of John, lated Lord, Morley),—staying at first with his Latin tutor (opposite Regent's Park) and then with Prof. Barker and Dr. Scott; also studies Music and is a frequent visitor to the British Museum; attends a session of the House of Commons to hear Gladstone and Bright; contributes (from London) poems (notably *Bhagna-tari*: 'The Wrecked Boat'; a verse-ballad written at Torquay) and a series of letters (*Europe-Prabasir Patra*) recording his impressions of England and the English people—published in *Bharati* with critical footnotes by the editor (Dwijendranath); also a number of poems and essays on a variety of topics; begins the verse-story *Bhagna Hridaya* ('Broken Heart'), published later in book form (1881).

First Public Speech

RETURNS to India (1880); writes two musical plays *Valmiki Pratiba* (The Genius of Valmiki) and *Kal-Mrigaya* ('The Fatal Hunt'); appears in the role of Valmiki in the former and the Blind Hermit in the latter in the performances of the two plays (the first in February, 1881 and the second on the 23rd December 1882) staged at the Jorasanko house before a distinguished gathering including Bankim Chandra Chatterjee (1838-1892), Gurudas Banerjee (1844-1918) and others; discourses on "Music and Feeling" (with vocal demonstrations) at the Lecture Theatre of the Calcutta Medical College (his first appearance as a public speaker) at a meeting held (May, 1881) under the auspices of the Bethune Society (founded 1851) with the Reverend Krishna Mohan Banerjee (1813-1885) in the chair.

* * *

LEAVES for England in May, 1881 with Satya Prasad Ganguly (his nephew) and his friend Asutosh Chaudhuri) later a Judge of the Calcutta High Court) to study law; changes his mind and returns from Madras and proceeds to Mussoree to meet his father; publishes *Sandhya-Sangeet* ('Evening Songs'), 1882; later, comes to stay with Jyotirindranath at Chandernagore,—composing poems and setting some to music; returns to Calcutta and stays at 10, Sudder Street (off Chowringee, near the Indian Museum); here comes "the great illumination" and is written the exquisite poem, *Nirjharer Swapnabhanga* ('The Fountain Awakened from its Dream'), which is the key-poem of *Provat Sangeet* ('Morning Songs').

---

* An interesting report of this—the first public appearance of the Poet has been unearthed by Brajendra Nath Banerjee from *The Indian Daily News* of Calcutta, dated the 18th February, 1875. It runs as follows:

"*The Hindoo Mela*".—The Ninth Anniversary of the Hindoo *mela* was opened at 4 P.M. on Thursday, the 11th instant, at the well-known Parseebagan . . . on the Circular Road, by Rajah Komul Krishna, Bahadoor, the President of the National Society. . . . .

Baboo Rohindra Nath Tagore, the youngest son of Baboo Debendro Nauth Tagore, a handsome lad of some 15, had composed a Bengali poem on Bharut (India) which he delivered from memory; the suavity of his tone much pleased his audience."

It only remains to be added that the Poet was then aged 13 years and 9 months and not 15 years as stated—ED.

* This, however, appears to be not his *first* appearance on the stage. Before this he had appeared, with his brother Jyotirindranath in the performance of a musical play written by Jyotirindranath, to which Rabindranath had contributed a few songs. This play was published under the title *Manamayi* in 1880.

† This patriotic poem later found place in his brother Jyotirindranath's drama *Swapnamayee* published in 1883.—ED.

RABINDRANATH TAGORE

1890—1899

AGE 28—37

25, 1886; is engaged in several controversies on social and socio-religious subjects in the pages of *Sanjivanee* (a Bengali weekly founded by Dwarka Nath Ganguly, Heramba Chandra Maitra, Kali Sankar Sukul, Paresh Nath Sen, Krishna Kumar Mitra—Editor, Gagan Chandra Home—Asst. Editor) against writings appearing in the *Bangabasee* (another Bengali weekly edited by Jogendra Chandra Bose) attacking the ideas and ideals of Brahmo Samaj; composes and sings the opening song (*Amra Mlechchi aj Mayer dakē*: 'Assembled we are to-day at the call of the Mother') at the second session of the Indian National Congress in Calcutta, in December, 1886; publishes some letters on social questions in *Chithi Patra* (1887); Asutosh Chaudhuri publishes *Kari-o-Kamal* ('Sharps and Flas') 18886, a collection of literary studies, *Samalochana* (1888); visits Satyendra Nath, then posted at Nasik; spends some time at Ghazipore, where he writes most of the *Manasi* group of poems; returns to Calcutta and stays with his father at Park Street, reads, at the instance of Bipin Chandra Pal (1858-1933), a paper on the ideals of Hindu marriage in the hall of the Indian Association for the Cultivation of Science with the late Dr Mahendra Lal Sircar (1833-1904) in the chair; a bitter and prolonged controversy follows, in which the Poet receives the support of M.-M Mahesh Ch Nayaratna (1836-1906), the then Principal of Sanskrit College; first visit to Darjeeling (1887); goes to stay in Shelidah, the headquarters of his ancestral estate, with his wife and daughter and Balendra Nath Tagore (1871-1900), his favourite nephew; goes again to Ghazipore, incessantly writing poems and composing songs; writes, at the request of Mrs. P. K. Ray, *Mayar Khela*, a musical play, for performance by the members of the Sakhi Samiti (a ladies' club, started by the Poet's elder sister Swarnakumari Devi); his eldest son, Rathindra Nath born on 27th November, 1888; appears in the role of 'King Vikrama' in a private performance of his *Raja-o-Rani* ('King and Queen'), dedicated to his eldest brother, Dwijendra Nath, and published in 1889, leaves for Shahjadpur to write another play, the well-known *Visarjan* (Sacrifice'), dedicated to his nephew, Surendra Nath Tagore, and published in 1890.

STAYING in Santiniketan, composes his magnificent poem on *Megha Duta* (inspired by Kalidasa's famous theme, 'The Cloud-Messenger'); his second daughter Renuka born: 31st January, 1890; sails for England (Aug. 22, 1890) with his friend Loken Palit and his second brother Satyendra Nath Tagore; arrives in London *via* Italy and France and returns to India, landing in Bombay, 4th November, 1890 after a sojourn of about ten weeks abroad; is now called upon to shoulder responsible work in connection with the management of the Tagore estates; makes Shelidah his headquarters and constantly tours by houseboat to different parts of the *zemindari*—Patisar, Shelidah, Kusthia, Pabna, Kumarkhali and Cuttack (Balia)—and introduces a remarkably efficient system of administration.

Shelidah and "Sadhana"

JOINS his nephew, Sudhindra Nath Tagore, in bringing out a new Bengali monthly magazine—*Sadhana*, turning out poems, short stories, essays, reviews, political and even scientific articles and topical notes —himself filling more than half the new periodical every month; also commences his famous *Europe Jatrir Diary* ('Diary of a Traveller to Europe'), collaborates with Krishna Kamal Bhattacharyya (1840-1932) to start the Bengali weekly—*Hitabadi*, contributes to it a number of short stories (notably, 'Post Master'), takes part in the ceremonial festivities of the 7th Paus (1298 B.E.) in connection with the consecration of the prayer hall at Santiniketan; his youngest daughter, Mira born: 12th January, 1892; writes his verse-drama *Chitrangada*, dedicating it to his nephew Abanindra Nath Tagore, who illustrates it (1892).

* * *

TOURS frequently in North Bengal looking after the affairs of the estate; establishes intimate contact with the life of the people around him,—"the patient, submissive, family-loving, home-clinging, eternally-exploited" Bengali ryots;* goes to Cuttack (Orissa) by steamer from Calcutta to inspect the zemindari there; engages, in the pages of *Sadhana*, in a sharp controversy with Chandra Nath Bose (1843-1909) over the latter's essay (published in *Sahitya* another Bengali monthly, edited by the late Suresh Chandra Samajpati) on the metaphysics of dietetics, also writes two remarkable articles, *Stri Majoor* ('The Female Labourer') and *Karmer Umedar* ('The Job-hunter') showing the interest he was taking in the awakening of labour as reported and reviewed in journals from abroad, writes his humorous play *Goraya Galad* ('Wrong at the Start'); a collection of 352 songs is published in 1893, writes the poems of *Sonar-Taree* ('The Golden Barge', published in 1893), a collection of sixteen short stories (from *Hitabadi*, *Nabajiban* and *Sadhana*) is published in 1893 and dedicated to the late B. L. Gupta.

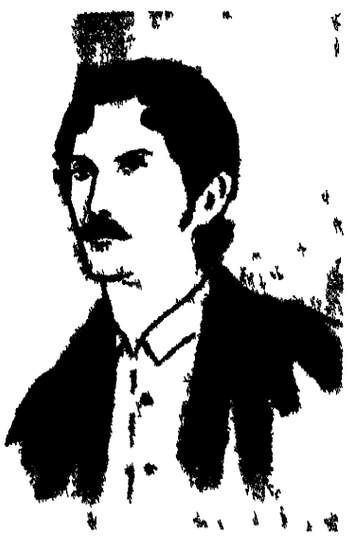
* * *

CONDUCTS a remarkable correspondence with his great friend Loken Palit, mainly on literary ideals and expression in *Sadhana*, enters again in the pages of *Sadhana* into a vigorous controversy with Chandra Nath Bose over the latter's essay on the Hindu doctrine of nihility (*Laya-tattwa*), which appeared in *Bangabashi*, composes his famous satire poem, *Hing-ting-Chhat* (believed to be directed against the neo-Hindu reactionary group); writes on the comparative word-values in Sanskrit, Bengali and Hindi from the standpoint of cadence, sequence and symphony (his first essay on phonetics); is invited to speak on Education at a conference at Natore and writes *Shikshar Her-Fer* ('The Tortuosities of Education' published in *Sadhana*: 1892), in which he pleads for the acceptance of Bengali as the medium of instruction in our educational institutions,—his views being endorsed by Bankim Chandra Chatterjee, Ananda Mohan Bose, Gurudas Banerjee (later a Vice-Chancellor of Calcutta University); writes his short story master piece *Kabuliwala* in *Sadhana*, commences his profoundly thought-provoking *Panchabhuter Diary* ('The Diary of the Five Elements') discoursing on life literature and art; proceeds to Cuttack

THE ILLUSTRATIONS

In laying out the pictures illustrating this Chronicle it has not been found in some cases possible to place these alongside or near the events or occurrences recorded. The sequence of time has, however, been maintained as far as possible in arranging the pictures.

—EDITOR.



* In a letter written about this time the Poet says:—

"I feel a great tenderness for these peasant folk—our *ryots*—big, helpless, infantine children of Providence, who must have food brought to their very lips, or they are undone. When the breasts of Mother Earth dry up, they are at a loss what to do, and can only cry. But no sooner is their hunger satisfied than they forget all their past sufferings . . . . .

"I know not whether the socialistic ideal of a more equal distribution of wealth is attainable, but if not, then such dispensation of Providence is indeed cruel, and man a truly unfortunate creature. For if in this world misery must exist, so be it; but let some little loophole, some glimpses of possibility at least, be left, which may serve to urge the nobler portion of humanity to hope and struggle unceasingly for its alleviation."

About the time when Bhanu Sinher Padavali was published 1883 1884

WHERE THE GREAT AWAKENING CAME

—The House at 10 Sudder Street Calcutta where Rabindranath wrote his Nirjharer Swapna bhanga (The Fountain awakened from its Dream) the key poem to Bhanu Sinher Padavali from which he dates his real birth as a poet Writes he in his Reminiscences — Where the Sudder Street ends trees in the garden of Free School Street are visible One morning I was standing in the verandah looking at them The sun was slowly rising above the screen of the trees and as I was watching it suddenly in a moment a veil seemed to be lifted from the eyes I found the world wrapt in an inexpressible glory with its waves of joy and beauty bursting and breaking on all sides A veil was suddenly withdrawn and everything became luminous The whole scene was one perfect music—one marvellous rhythm That very day the poem known as The Fountain Awakened from its Dream flowed on like a fountain itself There was nothing and no one whom I did not love at that moment I seemed to witness in the wholeness of my vision the movements of the body of all humanity and to feel the beat of the music and the rhythm of a mystic dance

most remarkable tribute to the great man, in a series of penetrating articles on some contemporary events expresses his indignation (in *Sadhana*) against the many manifestations of 'inferiority complex' in contemporary Indian society, is elected Foundation Vice-President of the Academy of Bengali Letters—*Bangiya Sahitya Parishad* (1894), takes over the editorial duties of *Sadhana* from Sudhindra Nath Tagore, his burning patriotism and strong indignation at some glaring instances of British official insolence find expression in his great story *Megh-o-Roudra* ('Sunshine and Shadow') and his article *Apamaner Pratikar* ('Redressing Insults'), introduces Dwijendra Lal Roy (then an Excise Inspector at Dacca) to fame in literary Bengal through appreciative reviews (in *Sadhana*) of his humorous poems and his *Arya-Gatha* seeks to set up a standard in Bengali literary criticism by writing critical reviews of contemporary publications in his own periodical

* * *

BIRTH of his youngest son Samindranath November, 1894, relieves himself of the burden of the *Sadhana* (which ceases publication in November 1895), enthusiastically plunges into "business" in partnership with his two young nephews Balendra Nath and Surendra Nath Tagore, who had started a shop for Swadeshi cloth and a firm for trading in jute, writes a series of remarkable short stories beginning with *Kshudhita Pashan* ('Hungry Stones' 1895) publishes *Chhelebhulana Chhara* (a collection of nursery rhymes from all over Bengal, in the *Sahitya Parishad Patrika* 1895, publishes a series of vigorous political writings notably, his essay, *Abdarer Ayeen* ('The Insinuating Law'), writes his poem on *Jivan-Devata* ('The God of Life'), and another on *Nadi* ('The River), which he dedicates to Balendra Nath on the day of the latter's wedding, returns to Patisar (after Balendra Nath's wedding) and composes the *Chaitali* ('The Last Harvest') group of poems, proceeds next to Orissa in connection with the partitioning of the Tagore estates (1896), writes *Malini*, the first collected edition (folio pp. 476) of his poems published by his nephew Satya Prasad Ganguly on the 15th Aswin, 1303 B E —Sept Oct, 1896, returns from Orissa to the banks of his favourite Padma *via* Calcutta and Shahjadpur, composes the *Kalpana* group of poems, writes *Baikunther Khata* ('Baikuntha's Manuscript' : a comic play), reads a paper in tribute to Iswar Chandra Vidyasagar (1820-1891) at a public gathering in Calcutta at his death-anniversary, attends the Bengal Provincial Conference at Natore (April, 1897), held under the presidentship of his brother Satyendra Nath, receives from Maharajah Jagadindra Nath Roy of Natore (Chairman of the Reception Committee) support to his futile attempt to have the proceedings of the Conference conducted in Bengali, the Conference broken up by the Great Earthquake of 1897, returning from Natore, engages himself in writing a series of verse-dialogues—*Gandharir Avedan* ('The Appeal of Gandhari'), *Sati* ('The Suttee'), *Narak-Vas* ('Condemned to Hell'), *Lakshmir Pariksha* ('The Trial of Lakshmi'), is taken ill with neuritis, goes to Karmatar (Santhal Parganas) for a change, proceeds to Simla and benefits considerably in health returns to Calcutta and takes editorial charge of the *Bharati* (1898-99)

Poetry and Polemics

WRITES strongly and indignantly against the reactionary policy of the Indian Government, particularly regarding the treatment meted out to Bal Gangadhar Tilak who was arrested on a charge of publishing seditious articles in *Kesari* (alleged to have led to the murder of Mr Rand the Bombay Plague Officer and his friend Lt Averst in June, 1898) actively helps in raising funds for the defence of Tilak reads *Kantha-Rodh* ('Throttled') at a public meeting at the Calcutta Town Hall in protest against the new Sedition Bill (1898), writes on the outbreak of Plague in Calcutta, warning the authorities against repetition of Bombay measures which ended in the murder of Mr Rand helps Sister Nivedita in organizing relief for plague victims of this city, attends the Dacca session of the Bengal Provincial Conference, reading a Bengali translation (by him) of the presidential address of the Rev Kali Charan Banerjee strongly criticises the Imperial policy of dividing Bengal politically and culturally, touching specially upon the cultural danger in the systematised displacement of the Bengali language from non-Bengali provinces like Assam and Orissa, expresses himself freely on the topics of the day in such writings (in Bengali) as *Coat* vs *Chapkan, Mukherjee* vs *Banerjee*—referring to Raja Pyari Mohan Mukherjee, who held in contempt the Congress attitude towards the so-called 'natural leaders of society' and to Surendra Nath Banerjea, who stood for the democratic ideals of the day, shows up in *Rajtika* ('The Kingly Mark') the mentality of a section of our landed aristocracy vying with one another to top the subscription list for a memorial to an Anglo-Indian official welcomes Dinesh Chandra Sen's *Bangabhasa-O-Sahitya* (History of Bengali Literature) in an appreciative review in *Bharati* takes a prominent part in raising funds for the Bengali poet Hem Chandra Banerjee who had tarnished [illegible], publishes the verse-epigram *Sishu* (which [illegible]

'Bangadarshan' and Santiniketan

REVIVES with the help of his friend Sris Chandra Mazumdar Bankim s famous monthly journal *l angadarshan* and takes editorial charge (1900) with him are associated as regular contributors Akshav Kumar Maitra Bipin Chandra Pal Chandra-sekhar Mukhopadhyaya at the head of a group of brilliant writers writes a vigorous protest against the insolence of British Imperialism in South Africa as evidenced in the Boer War, composes the poems of *Naivedya* (a remarkable exposition in verse, of the ancient

—*At Shelidah, 1890.*

—*Singing to the accompaniment of 'sitar' played by*

RABINDRANATH TAGORE

Hindu ideals and philosophy of life); reads the poems at one sitting to his father Maharshi Debendranath, who gives him his blessings and a purse towards the expenses of its publication; comes in contact with Upadhyaya Brahmabandhab through common association with *Bangadarshan* in which the Poet deplores the evil influences which tend to "make all cultures, Western or Indian, seem unnatural"; dilates upon the historic foundations of Hindu culture; opposes in a series of remarkable articles the blind imitation of Western culture whose strength, however, he recognizes; begins (in *Bangadarshan*) "the first psychological novel" in Bengali, *Chokher Bali* ('The Eyesore'); marries his second daughter (Renuka) to Dr. Satyendra Nath Bhattacharya (since deceased).

* * *

RELINQUISHES the management of the Tagore estates and comes with his family to stay at Santiniketan (1901); establishes, with his father's consent, *Bolpur Brahmacharyasram* at Santiniketan (December 22, 1901), a school on the pattern of the old Indian *Asrama*,—himself teaching the boys, joining in their games, entertaining them with stories, living with them, and thus exercising a profound influence on their mind, with him are associated, as the first batch of teachers, Jagadananda Roy, Lawrence (an Englishman), Rewachand (a Sindhi Christian, who afterwards became Swami Animananda) and Pandit Sibdhan Vidyarnab; passes through extreme financial difficulties, having to allocate the major portion of his allowance from the family estate to liquidate the debts of the jute business and the heavy expenses of running the school; has to sell his house on the sea at Puri, his valuable library, while his wife cheerfully parts with all her ornaments and jewellery to help her husband in tiding over the crisis; Upadhyaya Brahmabandhab joins Santiniketan School; the Poet attends to his editorial duties of *Bangadarshan* apart from the heavy work in connection with the school; propounds Pan-Asiatic ideas in the course of an appreciative review of Lowes Dickinson's *Letters of John Chinaman*; reads two papers on 'Bengali Language and Literature' and 'History of India' at the weekly discussion meetings (*Alochona Samiti*) conducted by Messrs. Mazumdar Brothers, publishers of *Bangadarshan*; joins in the country-wide agitation against Lord Curzon's unwarranted attack on the veracity of Eastern people in his Convocation address at Calcutta University (18th February, 1902);* writes trenchantly on the Viceregal performance, quoting devastatingly from Herbert Spencer's "Facts and Comments" instances of England's lying propaganda against the Boers in South Africa.

Sorrows and Sufferings

SERIOUS illness of his wife necessitates her removal to Calcutta; she dies on the 7th *Agrahayana*, 1309 B.E. (November 23, 1902); returns to Santiniketan with Rathindranath (aged 14), Mira (aged 10) and Samindranath (aged 8); composes *Smaran* ('In Memoriam'), a series of memorable poems dedicated to the memory of his departed consort.

SATISH CHANDRA ROY, a young Bengali poet of great promise, joins Santiniketan as a teacher; sudden illness of his second daughter Renuka; takes her for change first

—As Editor of the "Sadhana": 1894-95.

to Hazaribagh and then to Almora, here he composes the poems of *Sisu* ('The Child') with which he used to entertain his motherless young boy Samindra; is compelled to come back to Santiniketan on important work; hurries back to Almora on receipt of a wire announcing Renuka's condition to be precarious—walking all the way from Kathgodam as no *dandi* or horse was available, brings her down to Calcutta; summons his son-in-law (Renuka's husband) from England by cable, Renuka dies (May 1903, within six months from her mother's death); maintains uninterrupted his editorial duties, regularly contributing the instalments of his novel *Nowkadubi* ('The Wreck') to *Bangadarsan*; writes *Rajkutumba* ('The King's Kinsmen'), *Ghuso-Ghusi* ('Blow for Blow') *Dharmabodher Dristanta* ('Righteousness Exemplified'),—all contributions of political import, dealing with the divine right of man to oppose injustice even to the extent of meeting force by force.

* * *

SATISH Chandra Roy dies of small pox at Santiniketan (February 1904); the school removed temporarily to Shelidah; Prof. Mohit Chandra Sen joins the school as a teacher and brings out *Kabyagrantha*, the second collected edition of Tagore's poetical works in 9 parts; the Poet protests in *Bangadarshan* against 'patriotism fashioned in Western mould', reads his famous essay on *Swadeshi Samaj*, stressing the need for constructive nationalism, at a special meeting of the Chaitanya Library Association at Minerva Theatre (July 22, 1904) with Romesh C. Dutt (1848-1909) in the chair, reads it again at Curzon Theatre, following this essay prepares a complete scheme (September, 1904) for the re-organization of Indian society on the basis of self-help with the village as the centre, the revival of cottage industries to help to remove the poverty of the masses with the co-operation of the peasant himself, the reduction of the senseless extravagance at socio-religious ceremonies, the establishment of groups of voluntary workers, striving for an understanding between Hindus and Muslims,—all under the leadership of a chosen 'leader of society' (*Samaj-pati*), enthusiastically supports the movement set afoot in Calcutta for honouring the memory of the great founder of the Maharastra empire, Sivaji, by holding a festival (1904); writes his famous poem *Sivaji Utsab* and reads it at the Calcutta Town Hall; protests, however, against the public worship of Bhawani as a part of the festival as likely to alienate non-Hindu feelings, writes several school books, the late Principal Brajendra Nath Seal (later Knighted) writing the preface to one of them, (*Ingraji Sopan*), which introduced, for the first time, the "direct method" of teaching English in Bengal.

* * *

DEATH of the Poet's father, the "Maharshi" Debendra Nath Tagore, at the age of 87 (6th Magh, 1311 B.E., 19th January, 1905) at the Jorasanko residence in Calcutta; shortly before this the Poet sells, for Rs. 2,000 only, the publication right of his short stories, three of his novels, six of his plays, all his songs, some literary criticisms and miscellaneous essays, etc., to the proprietors of the Bengali weekly newspaper *Hitabadi*, who collected these in one volume with the title *Rabindra-granthabali* (Pp 1290); addresses a great meeting of students

---

* Lord Curzon had said:—

"If I were asked to sum in a single word the most notable characteristic of the East—physical, intellectual and moral—as compared with the West, the word exaggeration or extravagance is the one that I should employ. It is particularly patent on the surface of the Native Press.".

field under the auspices of *Bangiya Sahitya Parishad*) at the Classic Theatre in Calcutta urging them to organize the villages • criticises the findings of an Education Commission (consisting of four Europeans and one Indian, K G Gupta recommending the division of Bengali text books into four dialectical groups early in 1905 sponsors the opening of stores for selling Swadeshi goods and takes up the editorial charge of a new Bengali monthly *Bhandar* published by Kedar Nath Das Gupta creates in the pages of the new journal a sort of forum for discussion of the burning question of the day † visits Agartala at the invitation of the *Tripura Sahitya Sammilani* and reads a paper on *Deshiya Rajya* ('Indian States') appealing to Indian princes to encourage and patronise indigenous arts and crafts and stop the inroads of foreign luxury-products actively helps in association with Okakura and Sister Nivedita in the foundation of the new Bengal School of Indian Art sponsored by E B Havell and Abanindranath Tagore establishes weaving schools and handlooms in Calcutta and elsewhere (mainly in his estates) contributes to *Bhandar* a remarkable analysis of the Imperialist policy of economic exploitation of India in *Raja Praja* ('The King and his People'), Ajit Chakraverti joins the Santiniketan School as a teacher

MRINALINI DEBI
The Poet's wife died in 1902 and to her memory he dedicated a series of remarkable poems—'Smaran"

so powerful that you can cut asunder the God-made bond that binds us?") to the house of Pashupati Bose at Baghbazar where, in the large compound, he addresses a mammoth gathering appealing for contribution to a 'National Fund'—Rs 50,000 being raised at the meeting

* * *

For "National Education"

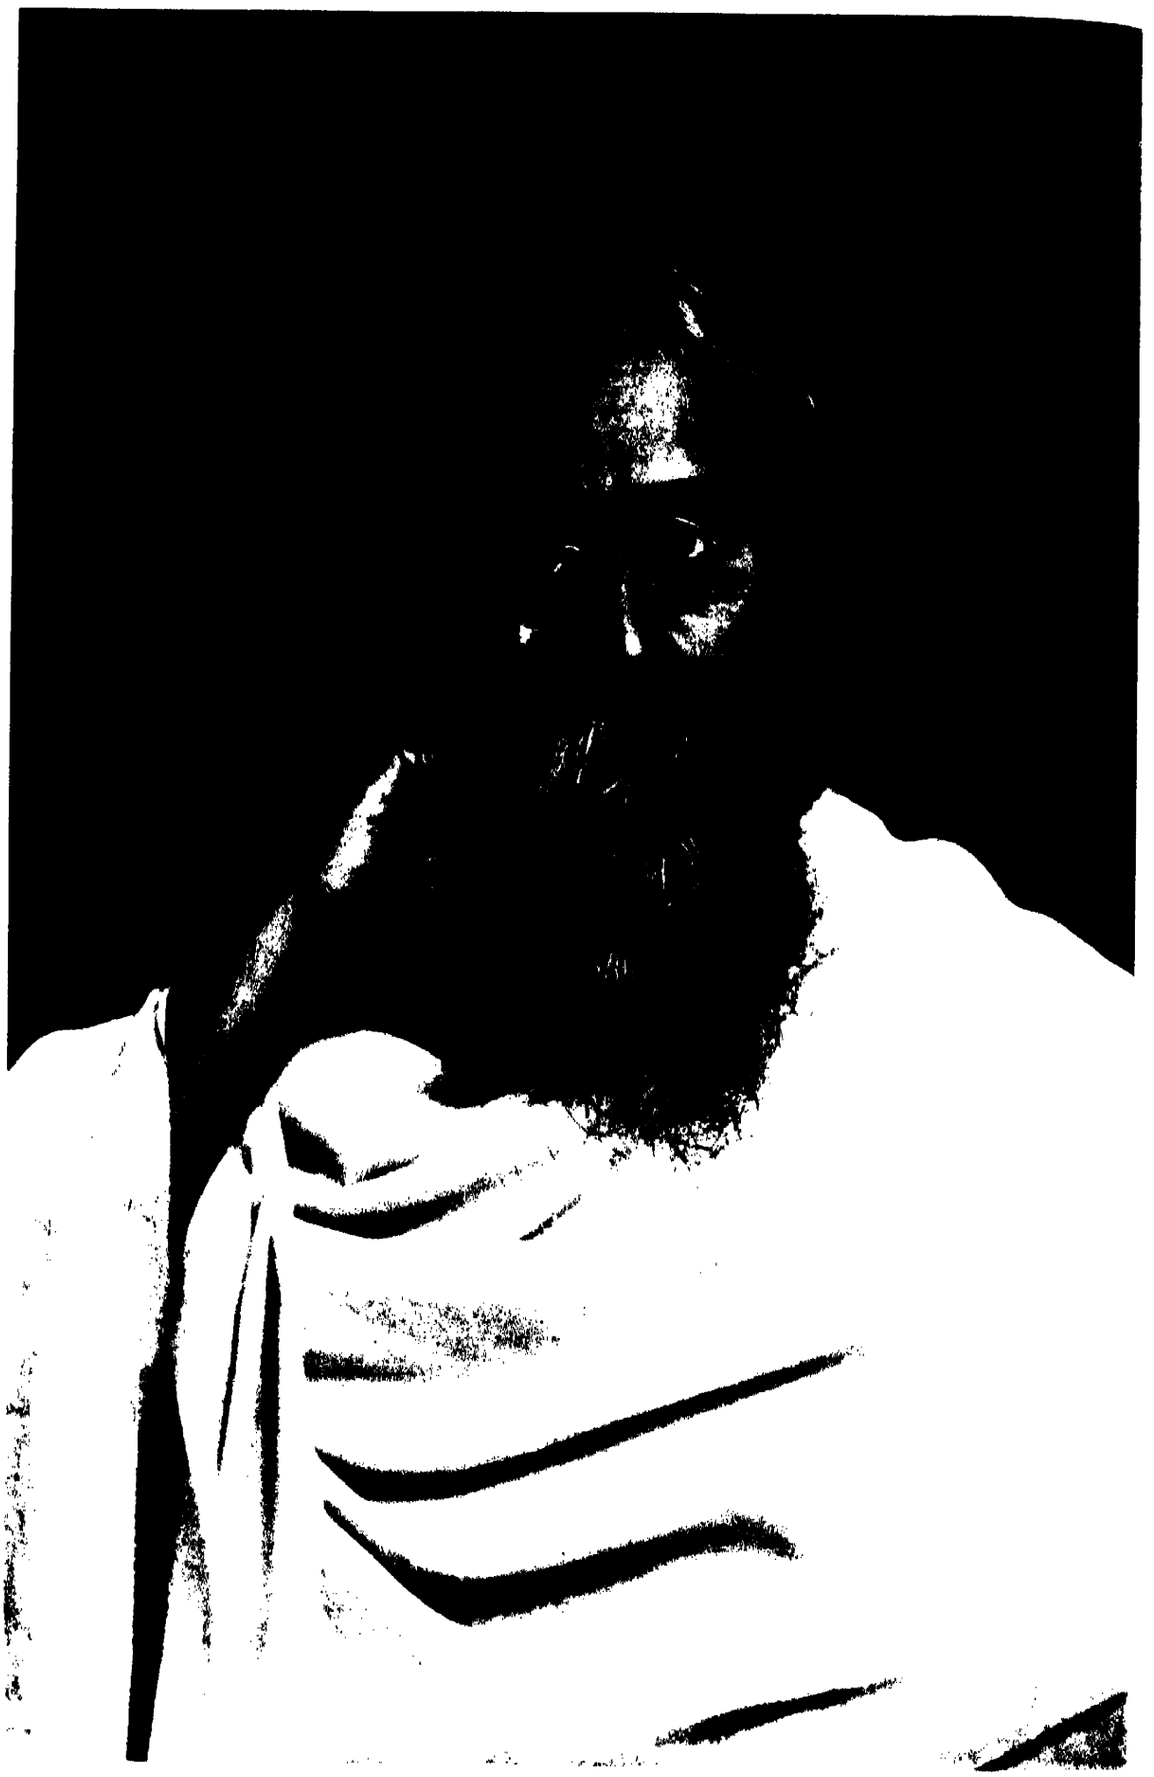
FREQUENTLY attends and addresses the large number of protest meetings following the Bengal Government (Carlyle) Circular forbidding students from attending political meetings or singing the *Bande Mataram* under penalty of rustication, addresses large gatherings, mainly of students, at Beadon Square and the Field and Academy grounds, of members (students) of the "Dawn Society" (November, 1905), delivers a striking address at the *Bijoya* gathering at Pashupati Bose's house, takes a leading part in the establishment of the National Council of Education, Bengal, which sought to provide education on "national lines" to students expelled from Government or Government-aided institutions for political misdemeanour and others as well, contributes to *Bhandar* a critical survey (*Raj-Bhakti* 'Loyalty') of the situation arising out of the visit of the late King George V in December 1905 as Prince of Wales and the Resolution of Welcome adopted by the Indian National Congress meeting in Benares under Gokhale, pays a remarkable tribute to the brave victims of police oppression in different parts of the new province (East Bengal) in pursuance of the policy initiated by its new Lt.-Governor, Sir Bampfylde Fuller (*Bhandar*, March 1906), sends his eldest son Rathindranath with Santosh Chandra (the son of his old friend Sris Chandra Mazumdar) to America *via* Japan to study agriculture; is invited to preside over the first session of *Bangiya Sahitya Sammilani* (Bengali Literary Conference) at Barisal called along with the Provincial Political Conference, returns to Calcutta when both the functions had to be abandoned because of the political situation, relinquishes the editorship of *Bangadarshan*; pleads for the unanimous acceptance of Surendra Nath Banerjea as the one accredited leader for conducting the national struggle, in the course of a paper entitled *Deshanayak* ("The Country's Leader") in which the Poet deplored the split in Bengal politics ('Moderates' *vs* 'Extremists') and laid down that a trained general was needed at the head of an army engaged in war—thus seeking to consolidate the discipline of the people in a personal allegiance to an individual man

1906—1911

AGE 44—50

ACCEPTS the task of drawing up a comprehensive programme of work for the National Council of Education and reads his paper *Shiksha Samasya* ("The Problem of Education") in Overtoun Hall, Calcutta (June 1906) writes a series of articles beginning with *Shiksha-Samasya* and ending with *Tatah-Kim* ('What Next?') publishes the poems of *Kheya* (July 1906) dedicating these to Jagadish Chandra Bose, takes a leading part at the inaugural meeting (August 14 1906) of the *Jatiya Shiksha Parishad* (National Council of Education) and delivers under its auspices a series of lectures explaining the scope and function of literature speaks at the Literary Conference held at Bhowanipore simultaneously with the Congress Exhibition in Calcutta (December, 1906) presides next year, at the adjourned session of Bengali Literary Conference *Bangiya Sahitya Sammilani* convened at Cossimbazar (Berhampore) by the late Maharaja Manindra Chandra Nundy

* * *



From Turmoil to Peace

DISAPPROVES of the line the national movement was taking tires of increasing party squabbles, is perturbed at the growing alienation between Hindus and Muslims, disillusionment as much as temperamental conflicts lead the Poet to seek escape and retreat at Santiniketan, writes in *Prabasi* (edited by Ramananda Chatterjee from Allahabad) *Byadhi-O-tahar Pratikar* ("The Disease and its Cure") striking a note of dissent in the political thought of the times, advocates a 'change of heart" and 'inner purification' and the acceptance of a radical social programme as absolutely essential for the attainment of *real* independence; is severely criticised for his sudden withdrawal from political activities; Ramendra Sundar Trivedi, one of his [illegible] friends and admirers,

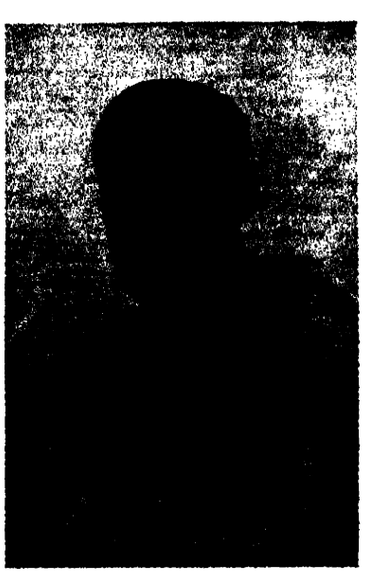
—With Mohit Chandra Sen and pupils of the Santiniketan School: 1904

replies to the *Prabasi* article (referred to above); follows one of the most fertile periods of his creative life, giving the world undying literary gifts; publishes (August 24, 1907) his famous poem, *Aurobindo, Rabindrer laho Namaskar* ('I salute thee, Aurobindo') hailing Aurobindo Ghose prosecuted on a charge of writing seditious articles in the new Nationalist daily *Bande Mataram* edited by him; marries his youngest daughter Mira to Nagendra Nath Ganguly and sends his son-in-law also to America to study Agriculture.



• • •

DEATH occurs suddenly of his youngest son, Samindranath, from cholera, at Monghyr (November, 1907); writes out regularly, in instalments, his great novel, *Gora*, for *Prabasi*; is persuaded to preside over the Bengal Provincial (Political) Conference meeting at Pabna (January, 1908); delivers his address in Bengali,—the Conference taking place amidst the agitated atmosphere created by the unhappy incidents at the Surat Congress in December 1907; again, in this address, he calls upon his countrymen for constructive work—and suggests that our young men should form themselves into bands of workers who should go round the villages, bring together Hindus and Muslims in fruitful work, confer with and help the villagers in starting schools, making roads and supplying drinking water and the like.

• • •

The East and The West

READS a paper (25th May, 1908) at the Chaitanya Library entitled *Path-O-Patheya* ('The Way and the Wherewithal') touching upon the tragic incident at Muzaffarpore (the first bomb-outrage in Bengal: March 31, 1908) and the discovery of the bomb factory at Manicktalla, Calcutta (May 2, 1908) leading to the arrest of Barindra Kumar Ghose and his associates; recognises in these outbursts the result of the policy of repression pursued by Government but warns his countrymen against such fatal expressions of natural exasperation, not withholding, at the same time, his tribute to the heroic spirit of self-sacrifice displayed by these young men, who had, the Poet felt, wiped out the reproach of cowardice levelled at Bengalis; writes another article entitled *Sadupaya* ('The Honest Way') in *Prabasi* (Sraban: 1315 B.E., July 1908) examining the genesis of the Hindu-Muslim dispute, which was being steadily fostered by an interested third party; addresses the students assembled at the Sadharan Brahmo Samaj on the historic significance of the meeting of the East and the West in India (*Purba-O-Paschim*: *Prabasi*, Bhadra, 1315 B.E.).

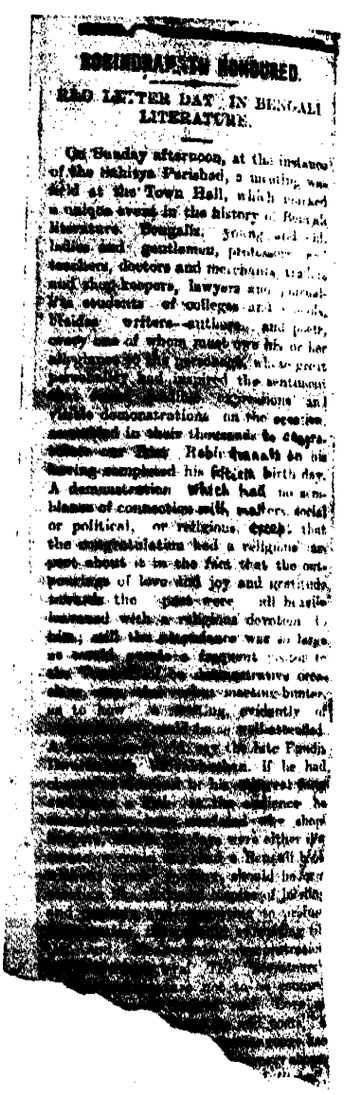
RABINDRANATH TAGORE

CREATES an exquisite drama *Saradotsab* (1908) and has it staged by the staff and students of Santiniketan; death occurs of his old friend, Sris Chandra Majumdar; delivers a series of sermons at Santiniketan; writes his first autobiographical sketch for *Bangabhasar Lekhak* ('Writers in the Bengali Language') published by the *Bangabasi* Office; D. L. Roy creates a furore in Bengali literary circles by attacking in the Press and periodicals Tagore's alleged "obscurity" and "immorality"; he (Tagore) ignores the attack; later, at the request of Sailes Majumdar (then Editor, *Bangadarshan*), he gives his opinion on D. L. Roy's criticisms; publishes a play, entitled *Prayaschitta* ('Atonement') in which he inculcates the philosophy of *Satyagraha* in the characterisation of 'Dhananjoy Bairagi'; stages the play at Santiniketan with himself in the leading role; occupies himself at Shelidah mainly with the songs of *Gitanjali;* comes to Calcutta (November 1909) to receive his son, Rathindranath, returned from America after three years; takes Rathindranath with him on a boat-tour through his North-Bengal *Zemindari;* returns to Calcutta and reads a paper, *Tapoban* ('The Hermitage') at the Overtoun Hall; delivers his famous sermon, *Viswabodh* on the anniversary of the Brahmo Samaj (11th Magh, 1316 B.E.); marries his son, Rathindranath, three days later, to Pratima Devi, a widowed girl connected with the Tagores and dedicates the novel *Gora* to him (January, 1910); publishes the allegorical play *Raja* (December, 1910); attends and speaks at a Literary Conference at Bhagalpore; the first English translation of his short stories by Loken Palit published in the *Modern Review*, May, 1911.

The Country's Homage

FIFTIETH Birth-Anniversary celebrated at Santiniketan with great solemnity (May 7, 1911); on this occasion is staged the Poet's *Raja* ('The King of the Dark Chamber') with himself in the role of "Thakurda"; reads to friends and admirers assembled at the time the memoirs of his youth; Ajit Chakraverti reads his essay on Rabindranath, one of the first attempts at an interpretative estimate of the Poet; goes to Shelidah and revises his reminiscences, which appear in the *Prabasi* serially as *Jibansmriti* (translated into English in 1917); also writes *Achalayatan,* a prose-play depicting the tyranny of fossilised orthodoxy eternally hampering human progress; the play, when published in the *Prabasi,* provokes violent opposition from traditionalists; returning to Calcutta after the rains, reads a paper on *Dharmer artha* (Meaning of Religion) at the Sadharan Brahmo Samaj Hall, in reply to the critics of his *Achalayatan;* reads another paper warmly supporting the proposed Hindu University at a meeting organised by Chaitanya Library at the Ripon College Hall with Sir Ashutosh Chaudhuri in the chair; Ananda Coomaraswamy comes on a visit to Santiniketan and in collaboration with Ajit Chakraverti translates into English some poems of Tagore which are published in the *Modern Review;* writes *Dak-Ghar* ('Post-Office'), "a three-act play of poignance and pathos"; diverse prose writings are published in *Tatvabodhini Patrika* (of which he was then Editor), the *Prabasi,* and the *Bharati;* in December composes, at the request of Asutosh Chaudhuri, for the twenty-sixth session of the Indian National Congress in Calcutta his famous national song, *Jana-gana-mana-adhinayaka.*



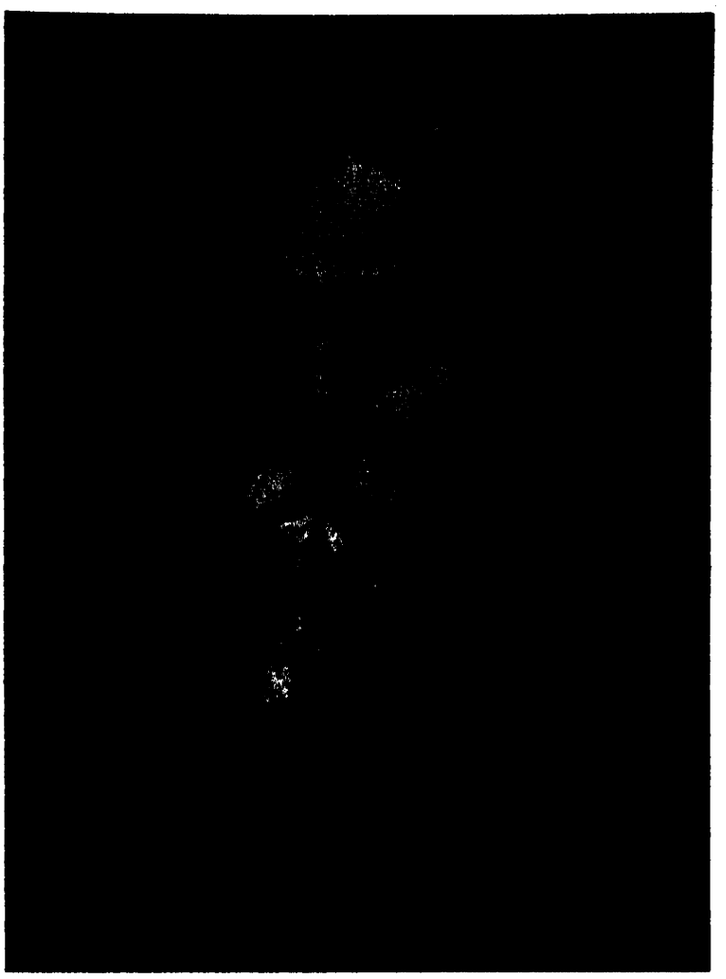
—As President of the first session of the 'Bangiya Sahitya Sammilan'—Bengali Literary Conference held in 1907.

1912—1918

AGE 51—57

AT the Town Hall, in Calcutta, on January 28, 1912, a great public meeting is held under the auspices of the *Bangiya Sahitya Parishad* (Academy of Bengali Letters) at which the Poet is presented, on his completing the fiftieth year of his life, with a remarkable address written and read by Ramendra Sundar Trivedi acknowledging in glowing words his great and unique contribution to every department of Bengali literature;* the *Parishad* also starts a special fund in his name for the promotion of original research work in Bengali; reads at the Sadharan Brahmo Samaj Prayer Hall a paper on *Atma-parichaya* (Self-introduction) in which he maintains that Brahmos are but Hindus and deprecates the separatist conceit which keeps the two communities apart; is vigorously criticised by the *Tatvakaumudi* (the organ of the Sadharan Brahmo Samaj); delivers another lecture at the Sadharan Brahmo

RABINDRANATH HONOURED.



RED LETTER DAY IN BENGALI LITERATURE.

On Sunday afternoon, at the instance of the Sahitya Parishad, a meeting was held at the Town Hall, which marked a unique event in the history of [illegible] Literature, Bengalis, young and old, ladies and gentlemen, professors, teachers, doctors and merchants, traders and shop-keepers, lawyers and journalists, students of colleges and [illegible], Vaidya writers, authors, and poets, every one of whom must owe his or her allegiance to the personality who is great personally, and among the sentiments [illegible] expressions and public demonstrations on the occasion, assembled in their thousands to congratulate our Poet Rabindranath on his having completed his fiftieth birth day. A demonstration which had no semblance of connection with matters social or political, or religious even, that the congratulations had a religious [illegible] spirit about it in the fact that the outpourings of love and joy and gratitude towards the [illegible] were all [illegible] imbued with a religious devotion to him, and the attendance was as large as usually attends a function [illegible] the Congress, [illegible] marking historic [illegible] to have a meeting, evidently of [illegible] the late Pandit [illegible]. If he had [illegible] the shop [illegible] either [illegible] should be [illegible]

—Facsimile of the opening paragraph of the report in a Calcutta newspaper of the fiftieth birth-anniversary of the Poet celebrated at the Calcutta Town Hall on January 28, 1912 (From "The Bengalee", Jan. 29, 1912).

* It was an unparalleled ovation,—the first time that such an honour has been done to a literary man in India. The meeting at the Town Hall was, to quote from a contemporary account, "the most representative, crowded and enthusiastic of gatherings that have ever filled that historic hall. From childhood to old age all ages and both sexes were represented there. Representatives of culture and high birth and wealth met there . . . . . high spirituality was there, science and industry were there, philosophy and forensic ability, poetry and the ancient learning of the land were there; literature had her many votaries there, the goddesses of music and painting had sent there some of her foremost worshippers. Nor was statesmanship left unrepresented . . . . . and there mustered strong in their thousands, the youth of Bengal, her rising hope, with enthusiasm writ large on their shining foreheads." ('The Modern Reviews', March, 1912).

Samaj Hall on *Bharatbarsher Itihaser Dhara* (The Main Currents of Indian History) maintaining that the great mission of *Bharatbarsha* was to unite all the conflicting elements gathered in this ancient land and create a rare synthesis to her glory and the benefit of mankind; the Governments of East Bengal and Assam issue confidential circulars that the institution of Santiniketan was "altogether unsuitable for the education of the sons of Government servants"; is mortified at many guardians and parents compelling their wards to leave Santiniketan, where at that time arrives Myron H. Phelps, an American lawyer, who publishes a glowing account of the human values of the teaching afforded at this institution; decides to go to Europe to acquaint the world at large with his educational institution and also to study the co-operative system in Denmark; suddenly falls ill on the night before his departure (March, 1912) and has to postpone the visit, his luggage going as far as Madras; goes to Shelidah and convalesces there translating into English some of his songs and poems; is advised to undertake a journey to Europe to recoup his health; sails with his son, Rathindranath, and daughter-in-law, Pratima Devi, from Bombay on the 27th May, 1912, on his third visit to Europe.

—In London in 1912 when "Gitanjali" (Song-offerings) was published.

Europe and "Gitanjali"

ARRIVES in London on June 16, 1912; puts up in a hotel from where he gets into touch with William Rothenstein, the celebrated English painter, who had come out to India on a visit to Abanindranath Tagore some years ago; receives warm welcome from Rothenstein to whom he shows casually the English translations of his poems; Rothenstein, deeply impressed, has copies typed and sends them to Yeats, Stopford-Brooke and Bradley, all of whom are enthusiastic in their praise of the poems; Rothenstein arranges a reading at his house, where before May Sinclair, Evelyn Underhill, Ernest Rhys, Fox-Strangways, Charles Treveleyan, Ezra Pound, Alice Meynell, Henry Nevinson and others William Butler Yeats reads the poems, which create a profound impression; here, for the first time, the Poet meets Charles Andrews, then a missionary attached to Cambridge Brotherhood and working as a Professor at St. Stephens College, Delhi.

Attends an "At Home" arranged in his honour by the "Union of East & West Club"; on July 19 at the Trocadero Hotel, the authorities of the celebrated English weekly, *The Nation*, give a big party with a view to introducing the Poet to the leading English intellectuals of the day; leaves London to stay amidst pure English rural surroundings and goes to Butterton in Straffordshire, as the guest of a son of General Outram of the Sepoy Mutiny fame; returning from Straffordshire goes to another English village, Chalford in Gloucestershire; returning to London, meets Bernard Shaw, H. G. Wells, Stopford Brooke, John Masefield, Lowes Dickinson, Bertrand Russell and others; K. C. Sen translates into English the drama *Raja* ('The King of the Dark Chamber'), while Debabrata Mukherji translates his *Dakghar* ('Post-Office')—both revised by the Poet; in September purchases from Col. N. P. Sinha (Lord Sinha's brother) an old *nilkuthi* (indigo-planter's bungalow) with extensive grounds at Surul, a village lying three miles from Santiniketan (the present site of the Rural Reconstruction Centre of Visva-Bharati).

* * *

First Visit to America

SAILS for America (accompanied by Dr. D. N. Maitra) and reaches New York on October 27, 1912; proceeds to Urbana (Illinois); speaks from Unitarian chapels at several places on metaphysical topics. On November 1, 1912, the India Society of London publishes a limited edition (750 copies only) of *Gitanjali* (Song-Offerings) containing English translations of 103 poems principally from his three Bengali works—*Naivedya, Kheya* and *Gitanjali*—with an introduction by Yeats and a pencil-sketch by Rothenstein as frontispiece; the book im-

RABINDRANATH TAGORE

mediately takes the English literary public by storm and is acknowledged as the greatest literary event of the day; leaves Urbana in January 1913, for Chicago where he stays as the guest of Mrs. Vaughan Mody and lectures on "Ideals of Ancient Civilisation of India" at the University; speaks also on "The Problem of Evil" at the Unitarian Hall, Chicago; goes to Rochester to attend the Congress of Races and meets there the great German philosopher Rudolph Eucken, who warmly greets him, having become an ardent admirer on reading "Song Offerings"; reads his famous address on "Race Conflict" at the Congress of Races on January 30; goes to Boston and addresses a distinguished meeting of intellectuals there; returns to Urbana on March 10, *via* New York and Chicago, having lectured at Harvard University in between; MacMillion publishes a popular edition of *Gitanjali* followed by *Gardener* and *Crescent Moon;* the India Society brings out his translation of *Chitrangada* in English as "Chitra".

* * *

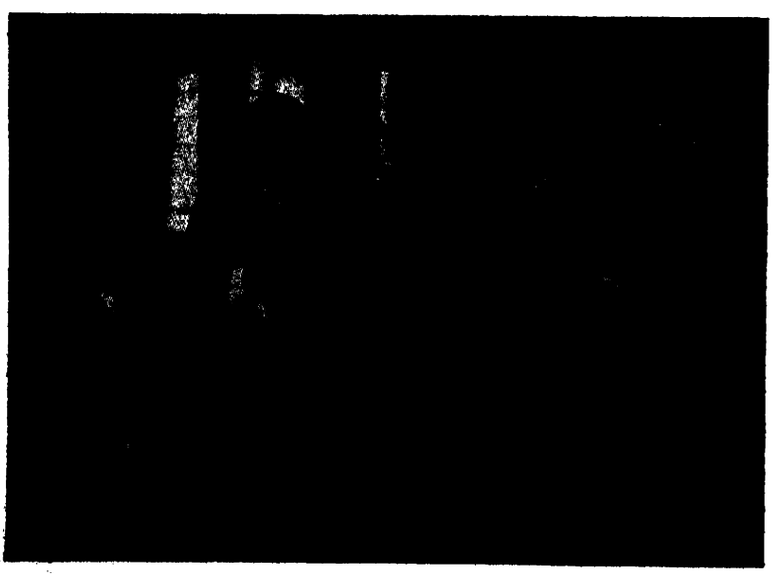
IN INDIA, on May 26, at Viceregal Lodge, Simla, Rev. C. F. Andrews reads, at a meeting presided over by the Viceroy Lord Hardinge, a paper on the life and poetry of Tagore,—His Excellency in his presidential remarks describing Rabindranath as 'The Poet Laureate of Asia; returns from America to England in June, 1913; delivers a series of lectures at the Caxton Hall, London, on Indian religion and philosophy, deploring, *inter alia*, the "retrospective and archaeological interest" taken by Western scholars in the great religious scriptures of India; (these lectures were later collected in his *Sadhana*); goes to the Duchess Nursing Home for a surgical operation for a malady which homeopathy had failed to cure; boards the "City of Lahore" on September 4, to return home; shortly before departure learns for the first time about the devastating floods in Bengal and speaks strongly in protest against the English news agencies failing to send out or English newspapers to record such news of vital importance to India; arrives in Bombay on October 4, 1913 and reaches Calcutta on October 6.

Nobel Prize and World Fame

ON NOVEMBER 13, 1913 comes to India the news that the comes to India the news that the Nobel Prize for Literature has been awarded to the Poet for his *Gitanjali*, which was acclaimed by the Swedish Academy as the greatest piece of idealistic work in literature for the year; great rejoicings take place all over the country; a large number of people of all classes go from Calcutta to Santiniketan in a special train, on November 23, to congratulate the Poet, who, however, replies with some asperity accusing most of them who had come having waited to recognise him till the West had acknowledged his poetry in this striking manner; is severely criticised for this "inhospitable reply" but is supported by Bipin Chandra Pal, who, in an article in his *Hindu Review* said: "No man of Rabindranath's position and sensibilities could have been less bitter under similar circumstances", and "the rebuke of his reply was neither undeserved nor undignified."*

* Mr. Pal further wrote:—

"He plainly told the deputation of the evident unreality of the demonstration they had got up in his honour. He knew that only a small percentage of those who formed that motley assembly had cared to read his works or had studied to understand his message. He must have seen before him others who had hitherto refused to give him their literary allegiance. And he asked them bluntly:—"What brings you gentlemen here to-day? You, whom I had failed to please so long, what have I done, pray, now to please you so mightily? It is not my worth, but the recognition of the foreigner, that has evidently worked up this sudden outburst of appreciation... I thank you for your generosity; but excuse me please, if I refuse to get drunk with you over this gilded cup of foreign wine." And Rabindranath would not have been what he is if he had failed to administer this salutary rebuke to those who evidently looked up still to European appraisers for the determination of the intellectual or moral values of their national efforts and achievements."



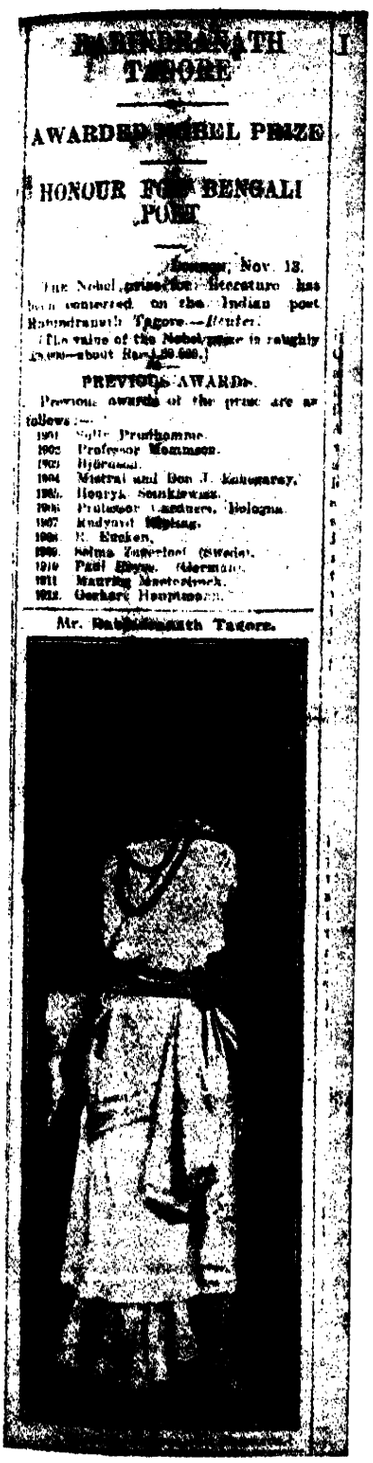
Ramsay Macdonald—then in India as a member of the Public Services Commission—visits Santiniketan and afterwards writes an article on it (*The Daily Chronicle*, January 14, 1914); is made a "D.Litt." (*honoris causa*) by the University of Calcutta, in December, 1913, at a special convocation in which similar honours were also conferred upon Prof. Paul Vinogradoff, Herman Jacobi, Sylvain Levi and other savants of Europe who had come to India at the invitation of the University; at a special reception at Government House (Calcutta) His Excellency Lord Carmichael formally hands over the Nobel Prize and Medal to the Poet.

* * *

THE house at Surul having now been fitted up with laboratory equipment for scientific research, a formal "housewarming" takes place on the first day of the Bengali Era 1321 (April 1914); Charles Andrews and William Pearson return from South Africa to Santiniketan where they had gone together "to fight", in the words of the Poet, "our cause with Mr. Gandhi and others"; the drama, *Achalayatan*, is staged at Santiniketan, the Poet himself appearing in the leading role with Pearson, who spoke Bengali beautifully; writes a foreword to a Bengali book, *Basanta-prayan*, written by Mrs. Sarajubala Das Gupta (daughter of Dr. Brajendranath Seal) in memory of her husband, Basanta Das (a brother of C. R. Das).

"Sabuj-patra" and Santiniketan

PRAMATHA CHAUDHURI (Birbal), lawyer and man of letters, starts the *Sabuj-patra* (Green Leaves) a Bengali periodical; the Poet contributes every month poems, essays, stories to this new journal which emphasises



—At the house of William Rothenstein in London in 1912

the characteristic Indian values, satirises conventionality, hollow snobbery and hazy romanticism; goes to spend the summer at Ramgarh Hills in the district of Almorah; composes poems in obvious distress of mind filled with dark forebodings of an uncertain approach of pillage and destruction; on return to Santiniketan, receives a foreign visitor, an Arab poet, named Bustanee, who had translated Tagore's poems into Arabic from the English texts of "Song Offerings", "Crescent Moon", etc.; his

RABINDRANATH TAGORE

AWARDED NOBEL PRIZE

HONOUR FOR BENGALI POET

[illegible], Nov. 13.

The Nobel prize for literature has been conferred on the Indian poet Rabindranath Tagore.—*Reuter.*

The value of the Nobel prize is roughly £9,000—about Rs. 1,20,000.

PREVIOUS AWARDS.

Previous awards of the prize are as follows:—

1901 Sully Prudhomme.
1902 Professor Mommsen.
1903 Bjornson.
1904 Mistral and Don J. Echegaray.
1905 Henryk Sienkiewicz.
1906 Professor Carducci, Bologna.
1907 Rudyard Kipling.
1908 R. Eucken.
1909 Selma Lagerlof (Sweden).
1910 Paul Heyse. (German).
1911 Maurice Maeterlinck.
1912 Gerhart Hauptmann.

Mr. Rabindranath Tagore.

—Facsimile of the announcement in a Calcutta newspaper of the award of the Nobel Prize to Rabindranath (From "The Statesman": Nov. 15, 1913).

poems are now being translated into all the principal European languages —his fame spreading all over the world; contributes to *Sabuj-patra* (July) *Strir patra* (Letter from a Wife), a short story in which rings the conflict then gradually awakening Indian womanhood to the tragedy of their position; it creates a furore and Bipin Chandra Pal caricatures the story by writing in the *Narayan* (a paper started by C. R. Das) *Mrinaler patra* (Letter from Mrinal); the *Narayan* criticises Tagore for lacking in realism and exotic writings which had no root in the soil; the Poet replies in the *Sabuj-patra* with two essays, *Bastab* and *Lokahita*, deploring, in the latter essay, the tendency on the part of those engaged in social service to patronise the common people while dealing with the problem of poverty and social uplift.

The War Begins

ON the declaration of the War in Europe, the Poet delivers a remarkable sermon at Santiniketan (August 5, 1914) following it up with an essay, *Ma ma himsi* (Thou Shalt not Hate); comes to Calcutta and reads an address of felicitations on the occasion of Ramendra Sundar Trivedi's fiftieth birthday celebration; returning to Santiniketan, goes to stay in Surul where he composes, in 46 days, 108 songs (*Gitali*) and teaches them all to his grand-nephew, Dinendranath Tagore, who was the storehouse of his musical compositions; also writes some of the poems published in the *Sabuj-patra* and later collected in *'Balaka'* and two short stories, *Bhai phonta* and *Shesher Ratri*, the last being later translated by himself and published in English as "Mashi"; goes on a visit, during the Puja holidays, to Bodh Gaya and Allahabad; moves for a few days up to Darjeeling; returns to Santiniketan but leaves again for Agra and goes to Allahabad; composes at Allahabad his famous poem 'Taj Mahal' (*Balaka*).

* * *

First Meeting with Gandhiji

THE students and staff of the Phoenix School (started by Gandhiji in the Transvaal) come to Santiniketan (in response to the Poet's invitation, previously sent, at the instance of Mr. Andrews); influenced by these new arrivals, the students of Santiniketan resolve to help the suffering jute cultivators in East Bengal by giving up using sugar and flour with meals and thus saving money for the purpose; the Poet, however, disapproves of this and writes: "the best form of self-sacrifice which they could undertake was doing some hard work to earn money"; delivers in Calcutta (February 13) a remarkable address at the inauguration of *Bangiya Hitasadhan Mandali* (Bengal Social Service League founded by Dr. D. N. Maitra); returns to Santiniketan on the 22nd February, narrowly missing Gandhiji who had come, early in February, straight from Bombay after his trip to England, to see the Phoenix School lads but, unfortunately, was hastily called away to Poona on receipt of the news of Gokhale's death; staying at Surul, writes *Phalguni* and reads the play at Santiniketan on March 4, 1915; (later it is published in the *Sabuj-patra*); welcomes Gandhiji to Santiniketan on March 6; on the 10th March, at Gandhiji's suggestion, an "experiment" is made in training the

boys to be self-supporting without the help of cooks, servants and sweepers.*

* * *

"Phalguni"

RECEIVES Lord Carmichael (Governor of Bengal) at Santiniketan on March 20, 1915; the Phoenix School students and staff leave for Hardwar with Gandhiji, who comes to take them away on March 31; staying again at Surul, composes many new songs and poems, a cycle of four stories published in the *Sabuj-patra* appears in book form under the title of *"Chaturanga"*; now commences writing a novel—*Ghare-baire*,—which is serially published in the *Sabuj-patra*; is the recipient of a Knighthood on the King-Emperor's Birthday (3rd June, 1915); Andrews and Pearson go to Fiji Islands to enquire into the grievances of Indian indentured labour; the Poet proceeds to Kashmir and composes several of his most well-known poems while at Srinagar; contributes to the Shakespeare Tercentenary Commemoration Volume a remarkable Bengali sonnet, at the request of Shakespeare Society; returning to Calcutta, reads a paper at a public meeting at the Rammohun Library on *Sikshar bahan* (Vehicle of Instruction), urging the adoption of the Bengalee as the medium of instruction at the local university; the *Phalguni* is produced at the Jorasanko house in aid of the famine-stricken people at Bankura, the Poet appearing in the dual roles of young 'Kabisekhar' and the blind, old 'baul' (Jan., 1916); returns to Santiniketan and finishes *Ghare-baire*; *Balaka* published; writes in the *Sabuj-patra* an article entitled *'Chhatra-sasan'* protesting vehemently against the repression of students after the Oaten episode at the Presidency College, drawing pointed attention to the growing estrangement between Englishmen and Bengalees.

* * *

PROCEEDS to Japan, on May 3, 1916 with Andrews, Pearson and Mukul Dey on board the "Tosa Maru"; reaches Rangoon on the 6th and is given a rousing reception; leaving on the 10th, arrives Singapore on the 15th; reaching Hongkong on the 22nd May is informed by the Captain that under orders from authorities the ship has to cut out Shanghai and proceed straight to Japan as the public had grown impatient at the prospect of seeing him; arrives at Kobe on May 29, is entertained first by the Japanese Press Association and then at a great gathering of Japanese intellectuals, when Count Okuma welcomes him with a speech in Japanese and the Poet replies in Bengali; stays for some time as the guest of Hara, the celebrated painter, to whom he dedicates "Stray Birds", later published by Macmillan; criticises the Japanese Imperialist policy against the young Republic of China and speaks, on June 17, at the Tokyo University on "The Message of India to Japan"; and on "The Spirit of Japan" in July at the Keio Gijiku University; falls immediately into official disfavour; receives and rejects an invitation from Vancouver (Canada) as a gesture against that British dominion's discriminating treatment of Indians.

Indictment of Nationalism

LEAVES for America and reaches Seattle (Washington) on September 18, 1916; is met by J. B. Pond of Pond Lyceum, a well-known American lecture bureau, and enters into a contract with him for a lecture tour in the United States; first public reception in America is given by the ladies of the Seattle Sunset Club; at the hall of this Club the Poet also delivers his first public address (arranged by Pond) on September 25, speaking on "The Cult of Nationalism', condemning the greedy Imperialism of western nations and also vigorously denouncing British rule in India; lectures next at Portland (Oregon) on the 27th, at San Francisco (California) on the 30th, where he pleads for "more of the fundamental idea of brotherhood and less of organisation"; a section of the American Press strongly criticises his speech on Nationalism; is feted by the Japanese of Frisco on October 3, and by the Los Angeles public on October 4; attends a concert by Paderewksi and has a long talk with him; reads at the Columbia Theatre, New York, one of his short stories and gives readings from the English translation of "Raja"; Ramchandra, the Sikh leader of the Indian revolutionaries banded under the "Hindusthan Gadr" party attacks the Poet in a newspaper article on the alleged ground of 'sailing under false colours by retaining the privilege of a British Knighthood and airing anti-British views'; a rumour spreads of a plot against his life by the Hindusthan Gadr Party, but the Poet refuses to put himself under police protection as he did not believe in the rumour; Ramchandra later denies, in the *Portland Telegram*, any intention to kill him; though advised by some friends to cut short his lecture tour the Poet refuses to change his plans and goes to Saint Barbara where he repeats his lecture on Nationalism; then tours lecturing through Pasadena, Salt Lake City, Chicago, Iowa, Milwaukee, Louisville and Detroit where his lecture on "Nationalism" was characterised in the Press as "sickly saccharine mental poison" (*Detroit Journal*, Nov. 14); at the very exclusive Twentieth Century Club at Cleveland he speaks against America's lust for gold; comes to New York where in an interview with the Press (Nov. 18) he denounces Western Nationalism and speaks strongly against America's anti-Asiatic policy; lectures at the Carnegie Hall in New York (Nov. 21), in Philadelphia, and again in New York at the School of Political Education on "The World of Personality"; speaks then at Boston at Mount Holyoak College on "Art", at Taramount Temple, on "Nationalism" where he receives "one of the warmest welcomes ever accorded to a lecturer in Boston" (*Boston Herald*, Dec. 6, 1916); is welcomed by President Hadley at Yale University as a "seeker after light and truth;" returns to New York for a farewell speech, on December 12, at the Amsterdam Theatre, which was packed to capacity; goes to Cleveland again to plant a tree in Shakespeare Garden; then to Colorado to see the famous springs and returns again to San Francisco where he writes the foreword to Paul Richard's book, "To The Nations" (published by J. B. Pond); leaves for Japan, on January 21, 1917 and halts *en route* at Honolulu for a day; returns to Calcutta, with Mukul De, on March 17, 1917.

* * *

The "Vichitra" Club

RETURNING to Calcutta, the Poet has a pleasant surprise in the shape of the Vichitra School of Arts and Crafts sponsored and organized by Gaganendranath, Abanindranath and Rathindranath at his Jorasanko-house; finds also another institution, the "Vichitra Club", which soon becomes the meeting place for the city's intellectuals and literary people; in the *Sabuj-patra* writes *Bhasar Katha* strongly supporting Pramatha Chaudhuri in his attempt to popularize the literary tongue and to write the Bengali language in the same way as it is spoken; comes to Calcutta for a gala celebration of his birthday by the Vichitra Club; writes short stories (*Tapaswini* and

* The practice was abandoned owing to practical difficulties. The Poet also does not believe in enforcing any code which is not the result of a spontaneous feeling for it from within. The 10th day of March is annually observed, however, at Santiniketan as the 'Gandhi Day', when the staff and students do all the work and the entire menial staff enjoy the day "off".—Ed.

Palla Number) for the *Sabuj-patra*; protests strongly against the internment of Mrs. Besant for her political activities; in Calcutta, reads, first at Rammohun Library and then at the Alfred Theatre, his famous political paper *Kartar Ichhayaa Karma* ("As the Master Wills It"), Bhupendranath Basu presiding at the latter place; composes, at the request of Pandit Madan Mohan Malaviya, his famous song *Desha, Desha nandita kari mandrita taba Veri*, which is sung for the first time at the meeting at Alfred Theatre; reads a paper on *Sangiter mukti* (Redemption of Song); in a letter to a friend in England (which is published by the Indian Press on September 7) he strongly expresses himself on the ruthless repression then practised by the Government of Bengal against political workers by imprisonment and detention without charge or trial, "in a few cases driving them to insanity or suicide"; Lord Ronaldshay, Governor of Bengal, denies the Poet's charges in a speech at the Bengal Legislative Council.

Politics Again

A CONTROVERSY having arisen among Bengal Congressmen as to making Mrs. Besant, then under internment, the President of the Indian National Congress session in Calcutta in December, 1917, the Poet warmly supports the cause of Mrs. Besant against the opposition of Surendranath Banerjea and his followers; receives, on September 8, a deputation consisting of Motilal Ghose, C. R. Das, Bipinchandra Pal, B. Chakravarti, Hirendranath Datta, Fazlul Huq, who offer him the Chairmanship of the Reception Committee of the forthcoming Congress session; is elected on September 11 as Chairman of the Reception Committee in place of Rai Baikunthanath Sen Bahadur who had been previously elected; resigns his Chairmanship in favour of Rai Baikunthanath Sen Bahadur when the controversy ends with the acceptance of Mrs .Besant as President by the 'Moderate' Party; attends the Congress meeting on the opening day when he receives a great ovation and reads "India's Prayer" (a poem) immediately after the singing of *Bande Mataram; Dak-Ghar* (Post Office) is staged by the Poet at the Vichitra Club hall, supported by Gaganendranath, Abanindranath, Rathindranath—the performance being witnessed by Gandhiji, Tilak Maharaj, Malaviyaji, Mrs. Besant and other prominent Congress leaders; meets in Calcutta, at his Jorasanko residence, E. S. Montagu, the Secretary of State, who had come out on his "Reform" mission; returns to Santiniketan and receives Sir Michael Sadler and other members of the Calcutta University Commission; writes a devastating satire on the educational policy of the Government of India (*Totakahini* 'The Parrot's Training'); coming to Calcutta, delivers a lecture on *Chhanda* (rhythm), composes the poems of *Palataka;* his fifty-seventh birthday is celebrated at the Vichitra Club.

* * *

ON MAY 9, 1918, Gourlay, then Private Secretary to the Governor of Bengal (Lord Ronaldshay) informs Andrews that the Government had received information from San Francisco, that the Poet had been connected with the young Indian revolutionaries undergoing trial, and that, it was rumoured, he had received German money for his American tour 1916 when he spoke so strongly against British rule in India. The Poet writes an indignant letter to President Wilson, and although assured of generous reception by the American public (through the American Consul at Calcutta) gives up the idea of a foreign tour which he had been contemplating for some time; receives the news of Pearson's arrest and deportation to England, at the instance of the British Government, for alleged anti-British activities in Japan and America; on the 16th May, 1918, his eldest daughter, Bela Devi (Mrs. Sarat Chandra Chakravarti) expires in Calcutta after a protracted illness; returns to Santiniketan on May 28, cancelling at the last minute a trip to Darjeeling and stays there for four months occupying himself mainly with teaching work; leaves in the autumn for a tour in Madras but stops for a few days at Pithapuram with the Maharaja and returns to Calcutta; Ajit Chakraverti dies in Calcutta (Dec., 1918); on the 22nd December, 1918 at Santiniketan the Poet explains his idea about creating an institution which would be a true centre for the different cultures of the East.

1919—1924

AGE 58—63

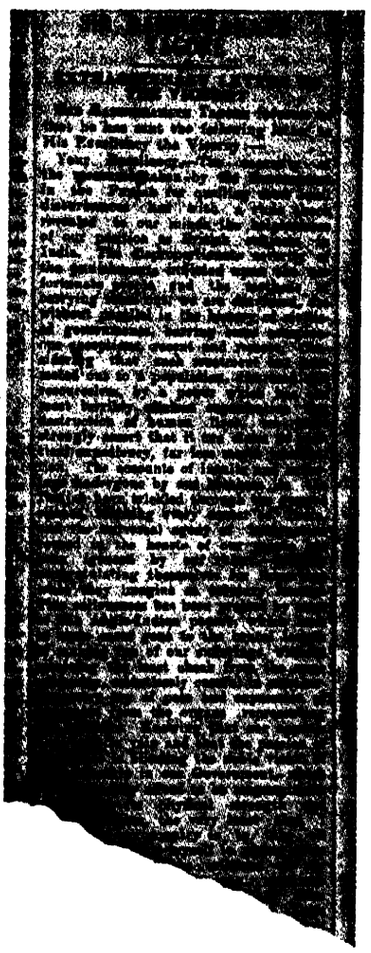
OUT on a tour of South India, the Poet arrives at Bangalore (January 10, 1919) from where he goes to Mysore, Ooty, Coimbatore, Palghat, Salem, Trichinopoly, Seringapattam, Kumbakonam, Tanjore, Madras—speaking to large and enthusiastic audiences on "The Message of the Forest", "The Folk Religions of India" and "The Centre of Indian Culture"; coming to Madras speaks as Chancellor of the "National University", founded by Mrs. Annie Besant, whose guest he was at Adyar; returns to Calcutta and speaks publicly in this city for the first time in English, to a crowded auditorium at the Empire Theatre, on "Education"; next at the Bose Institute reads "The Message of the Forest."

The Great Gesture

ON the inauguration by Gandhiji of his Satyagraha movement as a protest against the passing of the Rowlatt Act the Poet writes him a letter in which he expresses his apprehension of the movement giving rise to forces beyond control; on April 13 takes place the shooting of unarmed citizens of Amritsar at Jalianwallah Bag; follow Martial Law in the Punjab and attendant atrocities; strict censorship prevents news of official outrages reaching other provinces; the Poet comes to know of these at the end of May; not receiving support from political leaders in his attempt to go to the Punjab, he comes to Calcutta (May 27), where he fails to have convened a public meeting of protest over which he offered to preside; on May 30, 1919 he writes the "historic letter" to the Viceroy, Lord Chelmsford, renouncing his Knighthood in order to "give voice to the protest of millions of my countrymen surprised into a dumb anguish of terror". Writes mostly the sketches of *Lipika* (published in 1922).

* * *

THE nucleus of the Visva-Bharati is formed, when on July 3, 1919, *Vidya-Bhawan* is opened for advanced studies in ancient Indian literatures and later in Tibetan and Chinese with Pandit Bidhusekhar Sastri at its head; publishes "The Centre of Indian Culture" lectures; composes songs and takes classes at Santiniketan; adapts *Sarodatsav* as *Reensodh*, which is staged at Santiniketan; spends the autumn (Oct.-Nov.) at Shillong; returning to Santiniketan opens a class for dancing under two instructors brought from Manipur; visits Sylhet (December 6, 1919), Lord Ronaldshay visits Santiniketan (Feb. 1920); adapts *Raja* as *Arupratan;* goes to Gujrat, at Gandhiji's invitation, to attend an anniversary function of the Gujrat Literary Society; spends a day at Gandhiji's Sabarmati *Asram*; visits Bhavnagar and Limbdi; receives a gift of Rs. 10,000 from the ruler of Limdi for Santiniketan; goes to Ahmedabad, Bombay, Surat and returns to Calcutta on May 3, 1920.



* * *

LEAVES Calcutta for Europe on May 11, 1920 with his son and daughter-in-law; sails from Bombay on May 15; on board the boat has often

RABINDRANATH TAGORE

long talks with the Aga Khan (who, quite frequently, reads out to him from Hafiz and discusses Sufism), the Maharaja of Alwar, the Jam Saheb of Nawanagar (Ranjit Singh); translates during the voyage some of his Santiniketan sermons which are later published as "Thought Relics"; lands at Plymouth on June 5; is received by Pearson whom he meets after three years; coming to London meets Rothenstein, Hudson (the celebrated author of *Green Mansions*), Fox-Strangways (the author of "The Music of Hindostan"), Cunninghame-Graham (the author of 'Cartegena'), Nicholas Roerich (the Russian painter who had not yet risen to fame), Bernard Shaw, Prof. Gilbert Murray and others; goes to Oxford (June 19) to speak to the students at a function at which Dr. Robert Bridges, the Poet-Laureate of England, was to have presided but had later excused himself from attending; meets Col. Lawrence (of Arabian fame), who complains to him that the British Government having failed to keep any of the promises he had made to the Arabs he would never be able to face those people again; from Oxford the Poet goes to Cambridge and meets there, among others, Prof. Anderson, Lowes Dickinson and J. M. Keynes; attends a reception arranged in his honour by the Union of East & West Society, where Sybil Thorndyke, the celebrated English actress, recites a poem composed for the occasion by Laurence Binyon.

* * *

—The Poet's letter to Lord Chelmsford, the Viceroy, renouncing his Knighthood as it was published in "The Statesman" of June 3, 1919.

A Messenger of Peace

CALLS at the India Office on Montagu, the Secretary of State for India and Lord Sinha (Under-Secretary) and discusses with them the Punjab affairs, pointing out to Montagu that it was not so much the punishment of General Dyer that India asked for but moral condemnation of the crime by the British nation; signs, along with others, a letter to Premier Lloyd George suggesting Montagu as the successor of Lord Chelmsford as the Viceroy of India; visits the Rammohun Roy memorial at Bristol; meets Sir Hoarce Plunkett and "A. E." (George Russell); prepares for a trip to Scandinavia but cancels the visit at the last moment; goes to France (August 6, 1920) "with a feeling of relief" from "studied coolness" on the part of many of his English friends and admirers; stays in Paris as the guest of M. Kahn, known as "the richest man in France"; meets Professors Sylvain Levi and De Brun; visits the battlefields in Northern France and is much disturbed by the scene of devastation; goes for a few days to Southern France which he likes; prepares his lecture on "The Meeting of the East and West"; returns to Paris and meets Comtesse de Noailles, the celebrated French poetess, who tells him that she was with Clemenceau when the news of the declaration of the War came and that both turned to read from the French translation of his *Gitanjali* ("Song-Offerings") to get over the intense feeling of depression which was overpowering them; goes to Holland,

The Historic Letter to Lord Chelmsford

WHEN TAGORE RENOUNCED HIS KNIGHTHOOD

Your Excellency,

The enormity of the measures taken by the Government in the Punjab for quelling some local disturbances has, with a rude shock, revealed to our minds the helplessness of our position as British subjects in India. The disproportionate severity of the punishments inflicted upon the unfortunate people and the methods of carrying them out, we are convinced, are without parallel in the history of civilised governments, barring some conspicuous exceptions, recent and remote. Considering that such treatment has been meted out to a population, disarmed and resourceless, by a power which has the most terribly efficient organisation for destruction of human lives, we must strongly assert that it can claim no political expediency, far less moral justifiation. The accounts of the insults and sufferings undergone by our brothers in the Punjab have trickled through the gagged silence, reaching every corner of India, and the universal agony of indignation roused in the hearts of our people has been ignored by our rulers—possibly congratulating themselves for imparting what they imagine as salutary lessons. The callousness has been praised by most of the Anglo-Indian papers, which have in some cases gone to the brutal length of making fun of our sufferings, without receiving the least check from the same authority, relentlessly careful in smothering every cry of pain and expression of judgment from the organs representing the sufferers. Knowing that our appeals have been in vain and that the passion of vengeance is blinding the noble vision of statesmanship in our Government, which could so easily afford to be magnanimous, as befitting its physical strength and normal tradition, the very least that I can do for my country is to take all consequences upon myself in giving voice to the protest of the millions of my countrymen, surprised into a dumb anguish of terror. The time has come when badges of honour make our shame glaring in the incongruous context of humiliation, and I for my part wish to stand, shorn, of all special distinctions, by the side of those of my countrymen who, for their so-called insignificance, are liable to suffer degradation not fit for human beings. And these are the reasons which have compelled me to ask Your Excellency, with due deference and regret, to relieve me of my title of knighthood which I had the honour to accept from His Majesty the King at the hands of your predecessor, for whose nobleness of heart I still entertain great admiration.

Yours faithfully,
RABINDRANATH TAGORE

Calcutta,
6, Dwarkanath Tagore Lane,
May 30, 1919.

being invited there, tours lecturing through the Hague, Leyden, Utrecht is warmly received by the Dutch writes to J B Pond of his intention to visit America and receives a cabled reply that he was unable to organize any lectures for him as popular feeling in America was just then not favourable to the Poet, visits Brussels where he is received by the King of the Belgians) and Antwerp, and returns to Paris is extremely annoyed at the inexplicable failure of his letters from England and India reaching him in time comes to London, resolves to go to America, 'for they must listen to the appeal of the East", and sails with Pearson arriving in New York on October 28, 1920

Gandhiji and Non-cooperation

GANDHIJI comes to Santiniketan accompanied by Shaukat Ali in September 1920 on his way back from the Special Congress meeting at Calcutta the Santiniketan School decides not to send up boys for the Matriculation examination of Calcutta University and a large number of students of Calcutta colleges who had non-cooperated come and start village work at Surul

* * *

MEETING Press reporters at his hotel is eagerly asked about his opinion on Gandhiji's Non-cooperation and declares that he believes in the power of the spirit and never in brute force lectures at the Brooklyn Academy of Music on 'The Meeting of East and West' (Nov 10) on The Mystic Poets of Bengal at the Bremner (Philadelphia) Women's College (Nov 12) watches a game of football at Princetown (Nov 13) and returning to New York attends the fifteenth anniversary of the National Art Club lectures at New York (November 20) on The Poet's Religion is however frustrated in his attempts to raise money for Visva-Bharati encountering, at every step subtle but no less vigorous hostility engineered by powerful influences on the alleged grounds of his being anti-British and pro German at a meeting organised by the Poetry Society of New York he cannot check his feelings of disappointment goes to Chicago (February 1) and stays there for sometime as the guest of Mrs M Ely with an interval for a short lecture tour in Texas Sails for Europe (March 19 1921)

Speaks on 'The Meeting of East and West' in London (April 8) flies to Paris after three weeks and is again the guest of M Kahn meets Romain Rolland on April 17 lectures at Musee Guimet at a meeting arranged by the Societe des amis d'Orient also addresses the Comité National l'Etudes Sociale et Politiques (founded by M Kahn) on "The Public Spirit of India' (April 25), receives as a gift for Visva-Bharati a splendid library from Sridhir Rana a rich Indian pearl merchant in Paris

* * *

Life's Work" (Sept. 25 to Oct. 22, 1922); comes to Bombay on the 23rd October; goes to Ahmedabad and to the Sabarmati Asram and then returns to Santiniketan after an absence of about three months; his second brother, Satyendranath passes away in December, 1922; Lord Lytton, Governor of Bengal, visits Santiniketan; the Poet visits Sindh (Karachi and Hyderabad) Feb.-March, 1923; *Visva-Bharati Quarterly* started in April, 1923; Dr. Taraporewalla of Calcutta University lays the foundation stone of "Ratankuthi" (the guest-house for foreign visitors to Santiniketan) for which Sir Ratan Tata had donated Rs. 25,000; spends the summer at Shillong and writes there a drama, the *Rakta-karabi* (later translated into English as "Red Oleanders"); delivers a lecture on Bankimchandra Chatterjee at a meeting of Bhowanipore Literary Society (June 28); discusses current political topics with special reference to Hindu-Muslim relations, in an interview, expressing himself in favour of the idea of Hindus organising themselves but laying emphasis on the economic aspect of the conflict and suggesting that real unity can only be achieved on a fusion of economic interests of the two communities; publishes his considered views on the same subject in a contribution to the July issue of the *Visva-Bharati Quarterly* journal ("The Way to Unity"); for three days at the Empire Theatre, Calcutta, the drama *Visarjan* ('Sacrifice') is produced (August 25, 27, 28, 1923), the *old* Poet himself appearing with astonishing success as *young* Jayasimha; returns to Santiniketan; receives a cable from Italy announcing the death, in a train accident, of Pearson; writes a short drama, *Rathajatra;* issues an appeal for funds for the establishment of a hospital at Santiniketan in memory of Pearson; tours the States in Western India collecting funds for Visva-Bharati; on the invitation of Calcutta University delivers a series of lectures on Literature, speaking *ex tempore*.

Plain-speaking in Japan

LEAVES for China from Calcutta on March 21, 1924, accompanied by Kshitimohan Sen, Nanda Lal Bose and Kalidas Nag;* receives a great ovation *en route* at Rangoon, Penang, Kuala Lampur and Singapore; arriving at Shanghai on April 12, the Poet explains that the old relation between India and China was "for disinterested" human love and nothing else; and, on April 17, speaking to a Japanese audience, deprecates the Imperialist greed which had got hold of Japan and wishes that Asia should be free from the curse of Western materialism and nationalism; speaks in the same strain also, very strongly, at another meeting organised by the Anglo-American Society, is attacked by English and American papers for these speeches; Chinese students are dissatisfied with his comments against Western ideals which had powerfully captured their imagination; reaches Peking on April 23; the National University at Peking accords him a great reception on April 26; Dr. Hu Hsi, leader of the Chinese youth, meets the Poet and is converted into a great admirer of his, which reacts on students in enthusiasm for his cultural mission; after giving a few more lectures in China goes to Japan; lectures there chiefly on "International Relations", in course of which he tells the Japanese of his "deep love and respect" for them as a people but deplores that "when as a nation you have dealings with other nations you also can be deceptive, cruel and efficient in handling those methods in which the Western nations show such mastery"; meets Rashbehary Bose, the exiled Indian revolutionary, who shows great reverence for the Poet and insists on attending

* This tour was financed partially by J. K. Birla who gave Rs. 10,000.

to his personal comforts; returns to India on July 21.

* * *

THE POET is drawn into the vortex of an agitation over a speech of Lord Lytton made at Dacca praising the police and casting a slur on the women of Bengal; accedes, under pressure from mutual friends, to the request to meet Lord Lytton and help him to explain himself,—Fazlul Huq being very active to bring about the meeting; letters of Lord Lytton and Tagore simultaneously published in Indian papers on August 23 fail to terminate the agitation; returning to Santiniketan writes a letter to Lord Lytton telling him that "a considerable number of my countrymen are ready to challenge your Government to produce trustworthy evidence in support of your statement"; takes part in a tableaux performance of *Arupratan* at Alfred Theatre (Calcutta).

To South America

SAILS for South America on September 19, 1924, accepting invitation from Peru to attend the Centenary Celebration of her Independence; falls ill during the voyage; arrived at Buones Ayres is received cordially by Argentinians; due to ill health is prevented from going to Peru; rests at a beautiful garden-house at San Isadore as the guest of Victoria Ocampo, writing the poems of *Purabi*, which he dedicates to her ('Vijaya'); takes leave from the President of the Argentine Republic on December 30, 1924.

1925—1930

AGE 65—70

ON January 4, 1925, boards an Italian boat for Europe; arrives at Genoa (January 21); at Milan at a great meeting, presided over by the Duke of Milan, gives a long discourse on Music, receiving a great ovation; sits for a portrait of him by the famous Italian painter Rietti; proceeds to Venice on the 29th and is taken round the historic city with great honour; returns to India on the 17th February, 1925; shortly after his return passes away at Ranchi, his elder brother, Jyotirindranath Tagore; his 65th birthday is celebrated at Santiniketan; is visited by Gandhiji at Santiniketan (27th May); also meets Bishop Fisher of America who comes to see him and Gandhiji; on the sudden death of C. R. Das (June 16, 1925),

—In May, 1925, Gandhiji paid a visit to the Poet at Santiniketan. Centre: Gandhiji; Left: Andrews; Right: Rabindranath

the Poet, in a four-line elegy, pays to the memory of the great leader a most remarkable and touching tribute; writes to explain his own attitude towards the cult of the *Charka* (the spinning-wheel) preached by Gandhiji; at the request of his friend, Count Keyserling, writes a paper on the subject of marriage, which is published in the latter's famous "Book of Marriage"; attends the performance of *Chirakumar Sabha* (The Bachelor's Club) on the boards of the Star Theatre at Calcutta, the Poet having re-shaped it for the stage; recasts for similar performances other plays, *e.g., Sodh-bodh* (All Square) which he shapes out of the drama *Goraya-galad*, (Wrong at the Start) and *Griha-Prabesh* from the story *Shesher Ratri* (The Final Night); Sir P. C. Ray in a public speech criticises the Poet and Sir Brajendranath Seal for their staying out of the *Charka* campaign of Gandhiji; the Poet replies in an article in *Sabuj-patra* on *Swaraj Sadhan* (Working for Swaraj), definitely rejecting the *charka* as a means of attaining *Swaraj;* in the same essay, records his views on the political tension, particularly with reference to Hindu-Muslim relations; writes to Romain Rolland a letter of felicitations on the occasion of his 60th birthday in the course of which he reiterates his views against the mechanisation of humanity by Western nations by their "fetish worship of materialistic nationalism"; Prof. Carlo Formici followed by Prof. G. Tucci arrives from Italy (Nov. 21, 1925) with Mussolini's warmest tributes to the Poet and a gift of books for the Visva-Bharati, which they join as professors; on the 19th December, the Poet presides over the first session of the Indian Philosophical Congress at Calcutta; receives at Santiniketan on January 12, 1926, F. S. Marvin, the celebrated American author, sent as a representative of the League of Nations; attends the session of the All-India Music Conference at Lucknow, where he receives the news of the death of his eldest brother, Dwijendranath, at Santiniketan.

In East Bengal

GOES to Dacca on 7th February at the invitation of the University; receives Addresses from the Dacca Municipality, the "Peoples Association" and other bodies; speaks at several meetings and functions; also at Mymensingh; at Comilla presides over the anniversary celebrations of the *Abhaya Asram of* Dr. Sureshchandra Banerjee; attends the *Namasudra* (Depressed Class) Conference; is warmly received at Agartala by Maharaj Kumar Brajendrakishore of Tipperah; on his return to

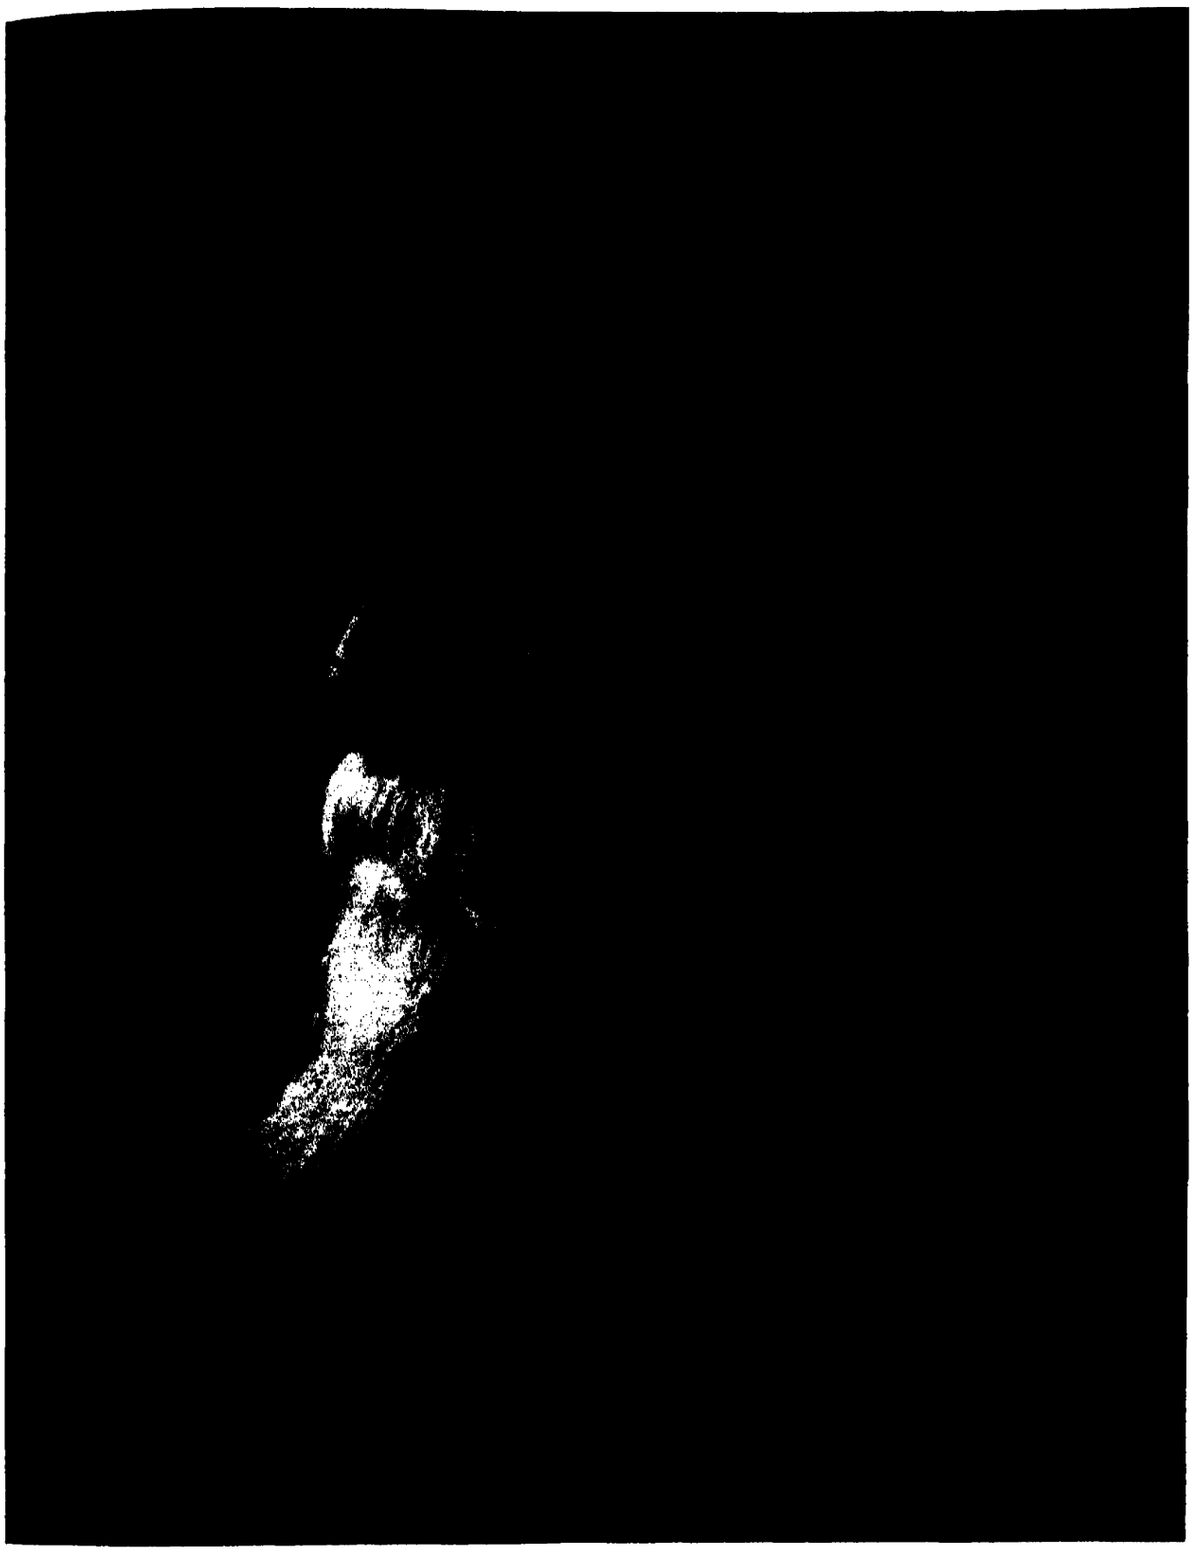
RABINDRANATH TAGORE

Santiniketan his 65th birthday (May 7, 1926) is celebrated by a gathering representative of many nations, the Maharaja of Porebandar sends a generous contribution for *Kalabhavan* (House of Arts) at Santiniketan, *Natir Puja* (The Dancing Girl's Worship) is staged for the first time at Santiniketan

Italy and Mussolini

LEAVES Calcutta on May 12, 1926, on his eighth Foreign Tour reaches Naples on May 30 and proceeds to Rome by a special train arranged under express orders of Mussolini, declares himself 'glad of this opportunity to see for myself the work of one who is assuredly a great man and a movement that will be certainly remembered in history" meets Mussolini on May 31, receives a public ovation in Rome on June 7 and next day delivers a speech on 'Meaning of Art' is accorded a reception at the Rome University meets the King of Italy on June 11, after a second meeting with Mussolini on June 13, is received by the Leonardo da Vinci Society of Florence on the 16th the next day at the University speaks on "My School", at Turin, on June 21, reads an address on "City and Village" (published in the 5th Anniversary Number of *The Calcutta Municipal Gazette* as "Wedded Partners"), after the reading Signora Lipovetaka, a noted Italian songstress, sings in Bengali three songs of Tagore, from Turin the Poet comes to Switzerland where he is met by numerous victims of Fascist oppression, shown "coloured reports" of his statements in the Italian Press in praise of the Duce,— his utterances and opinions, torn from their context presented in a different light altogether * at Villeneuve he is warmly received by Romain Rolland and meets George Duhamel J G Fraser Prof Forel Prof Bovet and others at Zurich he meets the wife of Prof Salvadori, a distinguished Italian exiled by Mussolini and at Wein he meets the prosecuting counsel at the trial of the murderers of Matteoti, the anti-Fascist Italian member of the Chamber of Deputies writes a letter to the *Manchester Guardian* in which the Poet expresses himself strongly against Fascism of which Mussolini was the High Priest, Prof Formici from Italy writes a letter of protest to the *Guardian* saying that as the constant companion and interpreter of Tagore in Italy he (Formici) denied that Tagore had ever criticised Mussolini Tagore replies that for *some time* I felt almost elated with the idea that an object lesson was being offered by Italy to show that ample room could be made for human personality in the heart of a political machine

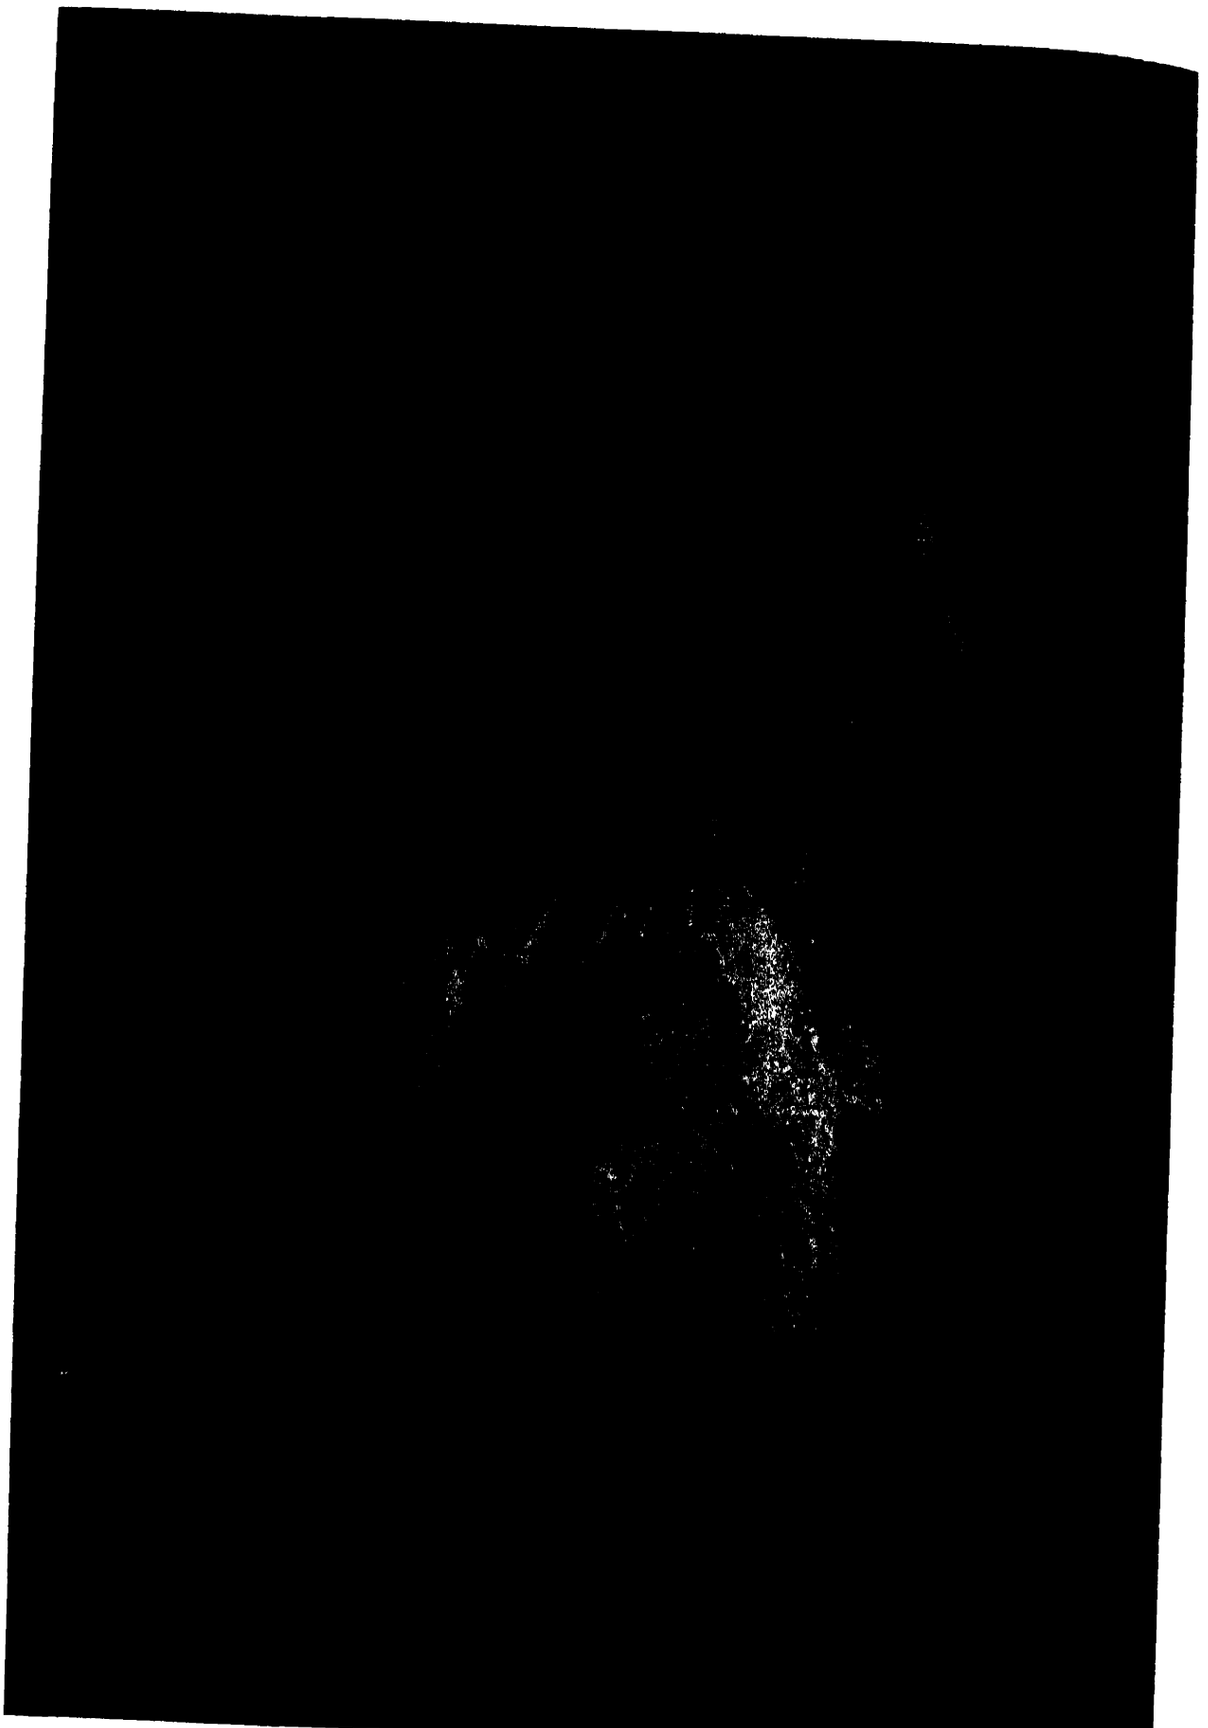
* Writes Prof V Ivanov —



'Tagore's conversations with reporters in Italy were the product of three people the reporter the interpreter and Tagore himself Over and above all this the constant murmur of a fourth element general conversation was distinctly in evidence and interfered with all his discussions without his knowledge Moreover not knowing Italian he had no means of controlling the result of this connection Rabindranath Tagore His Personality and Work by Prof V Ivanov (1939)

Like a "Conquering Hero"

IN the beginning of August accompanied by Prof and Mrs Mahalanobis who had joined him in Italy the Poet comes to England sits for Epstein for a bust of his meets Bradford Rothenstein, Robert Bridges (the Poet-Laureate) and a few other intellectuals leaves (with Lord Sinha and Prof and Mrs Mahalanobis) on the 21st August 1926 for Norway is received by the King of Norway Oslo meets at Stockholm Nansen Sven Hedin Bjornsen Boyer goes to Copenhagen where he meets the philosopher Hoffding and the famous literary critic George Brandes proceeds to Germany and arrives at Hamburg (Sept 10) next day comes to Berlin and speaks (Sept 13) at the Philharmonic Hall on 'Indian Philosophies' is received by President Von Hindenburg on the 14th is entertained by Kurt Wolfe his publisher writes from Berlin to the *Manchester Guardian* that although he had admiration for the personality of Mussolini he could never lend his support to Fascism is attacked and abused by *Popolo d'Italia* visits Dresden and Cologne on a lecture tour comes back to Berlin and leaves for Czecho-Slovakia, at Prague delivers lectures on "Art Forms" and 'Civilisation and Progress" (October 10 15 flies to Vienna in an aeroplane placed at his disposal by the German Government and receives a great welcome composes the first poem of the *Vanavani* (Voice of the Forest series) lectures at Budapest on the 26th Oct he plants a tree near the statue of the famous Hungarian poet Sandor Kisfaludy and places a wreath at the memorial of the distinguished Hungarian novelist Maurice Jokai, stays at Balaton and inscribes the poems for *Vanavani* lectures at the University of Belgrade is received by King Boris at Sofia (Bulgaria) by King Ferdinand at Bukha



—In January 1926, passed away the eldest brother of the Poet, Dwijendranath Tagore, philosopher and poet, universally respected. The two brothers are seen here in a photograph taken in 1925.

rest (Rumania) arrives at Athens on November 25, where he is made a "Commander of the Order of the Redeemer", from Greece goes *via* Turkey to Egypt, reaching Alexandria on November 27 and Cairo on December 1, a meeting of the Egyptian Parliament is adjourned in his honour and the Ministers meet him at a party where he is entertained to Arabic music; King Fuad receives him and presents him with a collection of Arabian books for the Visva-Bharati; sails from Alexandria for home concluding his "great tour of conquest not as a tyrant but as a teacher—the bearer of a new message of synthesis and harmony, culture and enlightenment".

"Natir Puja" and "Nataraj"

COMES back to India, and receives on arrival in Calcutta, at Howrah Station, a great ovation, the Mayor of Calcutta, J. M. Sen-Gupta, receiving him at the head of a large body of citizens. Goes to Santiniketan on December 19, 1926. The murder of Swami Sraddhananda at Delhi, in the Christmas week on the eve of the Indian National Congress at Gauhati, greatly shocks the Poet, who, speaking to a gathering at Santiniketan, avers that it is the very helplessness of the weakling that tempts the strong to deeds of sin and crime and appeals for mutual understanding and goodwill; on Jan. 24, 1927 at Calcutta, is staged *Natir Puja*, on February 3, issues a remarkable statement protesting against "the primitive form of despotism" which detained young men without trial under Bengal Ordinances; does not approve of the agitation against the Government's proscribing some Bengali books, reminding the writers that there was nothing manly in voicing lachrymose protest on the comfortable assumption that the Government when attacked would not retaliate, devotes himself to creating songs expressible in the form of dances and, on March 18, 1927, produces at Santiniketan, his *Nataraja*, new type of dance-drama; contributes a poem, *Vichitra*, to the first number of a new Bengalee periodical of the same name, sponsored by Upendranath Ganguli (Editor), Jatinath Ghosh, Kanti Ghosh and Amal Home, the *Vichitra* also publishes *Nataraja* illustrated by Nanda Lal Bose; fills the new magazine with various contributions from month to month; presides over the Hindi Literary Conference on the invitation of the Maharaja of Bharatpore; visits Jaipur, Agra and Ahmedabad and is feted by the Gujrat Literary Society; returns to Santiniketan on April 11; lays the foundation stone of the Prayer Hall of the Prabartak Sangha at Chandernagore and receives a purse from the Mayor of Chandernagore; goes to Shillong and writes for the *Vichitra* a novel under the title *Tin-purush* (Three Generations), which he later names *Yoga-Yog*.

In "Greater India"

ON July 12, 1927, leaves for a tour in Malaya, Java, Bali and Siam, accompanied by Sunitikumar Chatterjee, Surendra Nath Kar and others (his ninth Foreign Tour, financed partially by J. K. Birla, who donated Rs. 10,000); arrives at Singapore on the 20th July and lectures on "The Unity of Man", Sir Hugh Clifford, the Governor, presiding; after many social functions leaves for Malacca on the 27th, following an untiring round of lectures at various stations, arrives at Penang from where he proceeds to Sumatra, arrives in Batavia on August 22 and reads at a banquet in his honour a poem, "The Indian Pilgrim to Java", an English rendering of his Bengali poem *Vijayalakshmi*, which he had composed on the 21st; on the 23rd leaves for Bali; writes on board the steamer an essay, *Sahityay navatwa* (Novelty in Literature), which reflects his reaction against reports of a controversy then current in Bengal over his latest literary essay, "Sahitya Dharma", which he had contributed to the *Vichitra* just before his departure, criticising the ultra-modern tendencies in Bengali fiction, arrives in Bali on August 24; describes the natural beauty of the island in a poem, *Sagarika* (published later in *Mahua*); tours through the island with royal honours, is particularly impressed with Balinese dance-dramas, from Bali, on September 9, he reaches Soerabaja (Java), on the 12th comes to Surkarta where he opens a bridge and a street which is named after him; visits the great temple of Borobudor; leaves for Siam (now Thailand) *via* Bandung and Batavia, is warmly received by the King and Queen, also the Prince of Chantabun, a great Pali scholar; returns home on October 7; recasts his play, *Nataraja*, and produces it, under the name of *Rituranga*, in Calcutta on December 8, 1927, on January 5, 1928, receives at Santiniketan members of the Indian Science Congress; also receives the great singer Madame Clara Butt; V. Lesny, Professor of Sanskrit at the German University at Prague (Czecho-Slovakia), comes to Visva-Bharati as Visiting Professor in succession to Prof. William Winternitz; writes in *Prabasi* and the *Modern Review* on the conflict between the staff and students of the City College over Saraswati Puja celebration, deprecating the demand of the latter to perform the worship against the established traditions of the College (a Brahmo institution); attends, as President, a meeting at his Calcutta residence, arranged to settle the acute differences between two sections of Bengali litterateurs on the ultra-modern tendencies in literature; his sixty-seventh birthday is celebrated in Calcutta (May 7, 1928); on this occasion the Poet was weighed against his own books which were then given away to public libraries, the ceremony following the traditional Indian custom (*tula-dan*) of kings being similarly weighed against gold which was then given away to the deserving poor.

To Sri Aurobindo

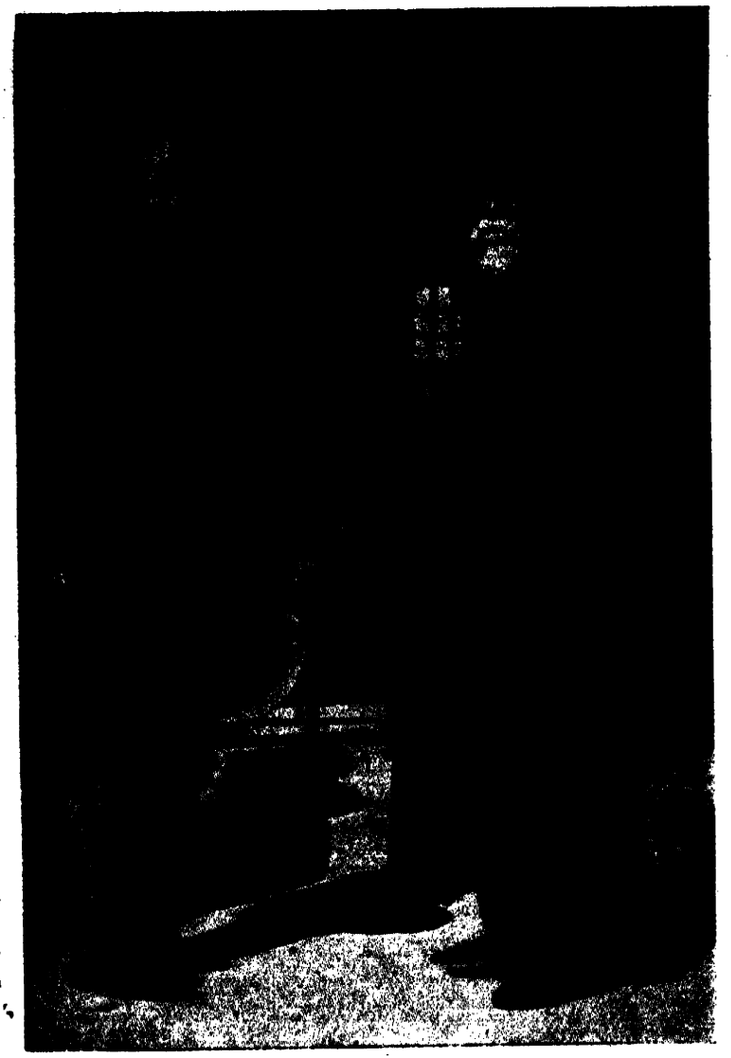
ON May 12 the Poet leaves Calcutta for England to deliver the Hibbert Lectures at Oxford but falls ill at Madras and cancels the voyage; spends a restful week at Adyar accepting Mrs Besant's invitation; proceeds from Madras to Colombo halting *en route* at Pondicherry to pay on May 29 a visit to Sri Aurobindo; records his impression of the visit in the *Modern Review*;* leaves Ceylon in June for Bangalore at the invitation of Brajendranath Seal, then Vice-Chancellor of Mysore University; here he concludes his novel, *Sesher Kabita* ('The Last Poem'); returns to Santiniketan at the end of June, in August, 1928, takes part in Calcutta at the Centenary of the Brahmo Samaj preaching a sermon from the pulpit of Sadharan Brahmo Samaj on 'The Message of Rammohun Roy', sends out a written speech to be read at the Conference of All-India Libraries Association, held in Calcutta during Christmas; Lord Irwin, the Viceroy of India, visits Santiniketan on December 17; the Poet presides at the Parliament of Religions held in Calcutta on January 27, 1929.

In Canada

AT THE INVITATION of the National Council of Education of Canada to participate at its Triennial Conference, leaves Calcutta, on February 26, 1929, accompanied by A. K. Chanda and Sudhindra Dutt; reaches Tokyo (March 26) where he stays for two days as the guest of the famous Japanese newspaper *Asahi Shimbun*; arrives at Vancouver on April 6 and delivers at the Conference his

---

Wrote the Poet —



"At the very first sight I could realise that he had been seeking for the soul and had gained it, and through this long process of realisation had accumulated within him a silent power of inspiration. His face was radiant with an inner light and his serene presence made it evident to me that his soul was not crippled and cramped to the measure of some tyrannical doctrine, which takes delight in inflicting wounds upon life. . . .

I felt that the utterance of the ancient Hindu Rishi spoke from him of that equanimity which gives human soul its freedom of entrance into the All. I said to him, you have the Word and we are waiting to accept it from you. India will speak through your voice to the World, 'Harken to me'.

Years ago I saw Aurobindo in the atmosphere of his earlier heroic youth, and I sang to him, 'Aurobindo accept the Salutation from Rabindranath'.

To-day, I saw him in deeper atmosphere of a reticent richness of wisdom and again I say to him in silence, 'Aurobindo accept the Salutation from Rabindranath'.

RABINDRANATH TAGORE

—With C. F. Andrews: 1930

famous lecture on "The Philosophy of Leisure"; next day speaks there on "The Principles of Literature"; visits the Sikh Shrine at Vancouver on April 12, and on April 14 delivers his farewell speech in Canada; invited by the Universities of Harvard, Columbia, California and Detroit he reaches Los Angeles on April 18, and, following the loss of his passport, experiences at the hands of the Emigration Officers the "special treatment" accorded to "a representative of the Asiatic peoples, an Oriental and a coloured man"; as a protest he cancels his American tour and embarks for Japan on April 20; his birthday is celebrated on board the Japanese boat by the Captain and passengers; reaches Yokohama on May 10; lectures at Tokyo on "Oriental Culture and Japanese Mission", fondly hoping that "Japan . . . will reveal an aspect of civilisation which is generally ignored in other parts of the world . . . . It should be greatly rich in the wealth of human relationship—even in politics"; is entertained by Marquis Okuma; leaves for India on June 8; *en route* is received cordially in Indo-China by the French Government and the people; arrives in Madras on July 3 and Calcutta on July 5, 1929.

IN September, 1929, the Poet delivers two lectures—*Sahityer Swarup* and *Sahityer Bichar*—under the auspices of the 'Rabindraparichaya Sabha' (Tagore Society) of the Presidency College; recasts his old drama *Raja-o-Rani* as *Tapati*, which is staged at his Calcutta residence consecutively on 26th, 28th, 29th September and 1st October—the *old* Poet appearing in the role of the *young* King Vikram; Prof. Tagagaki, a famous exponent of the art of *Jujitsu*, comes to Santiniketan at Tagore's invitation, the Poet having felt that Bengalee boys and girls stood in dire need of training in this art of self-defence; takes seriously to painting to which he devotes much time; at the invitation from the Gaekwar lectures at Baroda (January 26, 1930) on "Man the Artist"; detained unavoidably in the way, fails to attend—much to the chagrin of the organisers and disappointment of the delegates,—the nineteenth session of the Bengali Literary Conference (of which he was President-elect), his elder sister, Swarnakumari Devi, taking the Presidential Chair at the last moment (Feb. 2, 1930); on February 10, at Surul, Sir Stanley Jackson, the Governor of Bengal, opens a Conference of the workers of Co-operative Societies and announces a capital grant for Sriniketan of Rs. 5,000 only and a yearly grant of Rs. 1,000 for three years only, the insufficiency of the grant adding to the keenness of adverse public criticism.

Emergence as a Painter

ON March 2, 1930, Rabindranath proceeds from Calcutta on his Eleventh Foreign Tour accompanied by his son, and daughter-in-law; reaching Marseilles on the 26th, stays at Cap Martin near Monte Carlo as the guest of M. Kahn; meets here President Masaryk of Czecho-Slovakia; opens an exhibition of his own pictures in Paris, on May 2, with 125 exhibits; his sixty-ninth birthday is celebrated in Paris; goes to London on May 11 and then to Birmingham where he receives the news of the happenings in India [Gandhiji's salt *satyagraha*, the Dandi March, his arrest and internment, the armoury raid at Chittagong, Martial Law at Sholapur, Viceregal Ordinances declaring the Con-

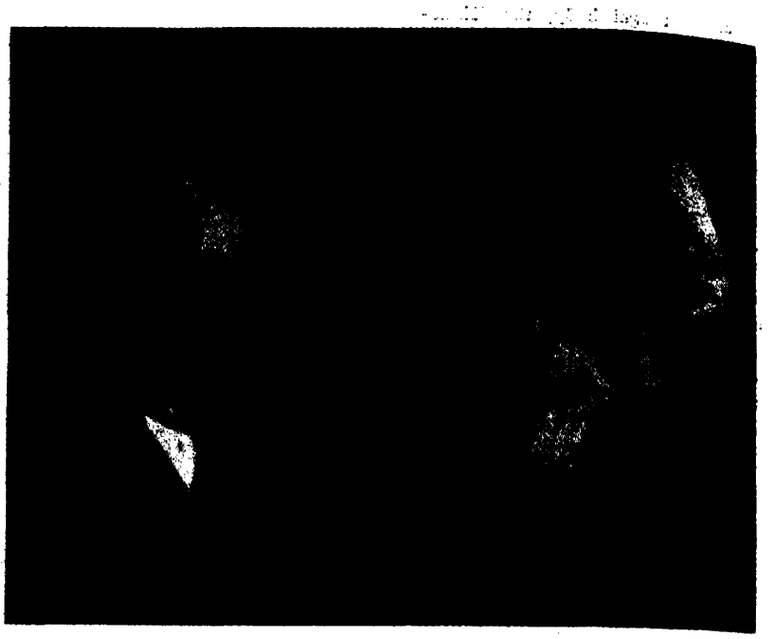
gress as an illegal body, the Hindu-Muslim riots at Dacca] which impel him to declare in an interview with the *Manchester Guardian* (May 16) against the repressive measures by the "bureaucratic irresponsible government meting out cruel and arbitrary punishment to entirely inoffensive persons . . . . . in the high-sounding name of law and order" and pleads for concerted action by the best minds of East and West as "the present complications cannot be dissipated by repression and a violent display of physical power"; comes to Oxford on the 17th and on the 19th, at Manchester College, delivers his first Hibbert Lecture; returns to London to discuss Indian affairs with Wedgwood Benn, Secretary of State for India; addresses an annual meeting of Quakers, being the first speaker not belonging to that community invited to address such a meeting within 252 years past; is heckled at the conclusion of his address for his remarks against British rule in India and replies: "Realise yourselves in our place and recall the time when your own brothers in America wanted to secure their freedom with their blood"; returning to Oxford delivers his concluding speech (The Religion of Man) on the 26th, at the Chapel of Manchester College, to one of the most crowded audiences ever seen there—the Principal of the University College, Sir Michael Sadler, declaring: "We shall never forget in Oxford the gift you have given us and the inspiration you have brought to us". Returning to Birmingham, speaks there on the 'Ideals of Education in East and West'; attends an exhibition of his paintings on June 2; writes a letter to the *Spectator* (June 7) on the political situation in India paying a remarkable tribute to Mahatma Gandhi on his "new technique of revolution"; visits Elmhirst's school, Dartington Hall, at Totnes (Devonshire).

—At Oxford with Sir Michael Sadler: 1930

* * *

PROCEEDS to Germany, reaching Berlin on July 11; meets the members of the *Reichstag* on the 12th; meets Einstein on the 14th; after the opening of an Exhibition of his Paintings, at Gallery Moller, on July 16th, proceeds to Dresden; next to Munich, where a civic reception is accorded to him at the ancient Town Hall; witnesses the famous "Passion Play" at Oberammergau which impresses him deeply; after a rapid tour through many cities, "travelling like royalty", goes to Denmark; an Exhibition of his paintings is opened at Copenhagen on August 9; goes to Geneva and spends there a few days; hears there of communal riots at Dacca and writes to the *Spectator* (Aug. 30, 1930) complaining bitterly against the silence maintained by English newspapers over the affair and maintaining that "men of vicious character have been brought in at Dacca" and "unspeakable atrocities have occurred."



In Soviet Russia

LEAVES Geneva to visit Russia accompanied by Soumendra Tagore (his grand-nephew) and Amiya Chakravarti (his Secretary); arrives at Moscow on September 11; received at the White-Russian Baltic Station by the representatives of the Society for Cultural Relations with Foreign Countries (VOKS); next day, at Voks Building, a reception is held, Prof. P. N. Petroff, the President of the Society, taking the chair; visits the Pioneers' Commune (the organisation for giving vocational training to orphans) on the 14th; the Peasants' Home on the 16th; an Exhibition of his paintings, opened, on September 17, at the State Moscow Museum of New Western Art, is welcomed by Soviet art critics as "a very great event in the history of art"; visits Moscow Art Theatre and witnesses the performances of "Peter the First", Tolstoy's "Resurrection", and "Biaderka" (an Indian love legend) at the First State Opera House; meets students and tells them of his own school in India; visits and is entertained at various institutions; delivers his farewell speech at a big reception organised in the Central House of Trade Unions on September 24.

* * *

LEAVES Russia on the 25th for Germany, and from there sails for America on October 3, 1930; writes to the *Spectator* (November 19) from America a letter deploring Gandhiji's hesitation to participate at the Round Table Conference, which, in the Poet's opinion, "could have been used as a platform wherefrom to send

his voice to all those all over the world who truly represent the future history of man"; on November 25, at the Biltmore Hotel (New York), attends a great public banquet organized in his honour by four hundred leading citizens; is received by President Hoover; delivers a public address at Carnegie Hall (New York) on December 1, and on Dec. 7, speaks on "The First and Last Prophet of Persia" at a meeting under the auspices of the Bahais; accepts the offer of Ruth St. Denis, the celebrated dancer, of raising funds through a few dance-recitals by her of his poems but gives away the money thus received to be spent in the cause of the unemployed at New York; exhibitions of his paintings are opened at Boston and New York and received by many art-critics with enthusiasm; meets Will Durant, whose book "The Case for India" had been prohibited entry into Bengal; returns to England on December 22; declines to accept the invitation to act as a mediator in the Round Table Conference wrangle over the communal question; is entertained by the Editor of the *Spectator* at a luncheon at Hyde Park Hotel (January 8, 1931), where he meets and have a long talk with Bernard Shaw; comes back home in February, 1931.

—With Albert Einstein in Berlin: 1930

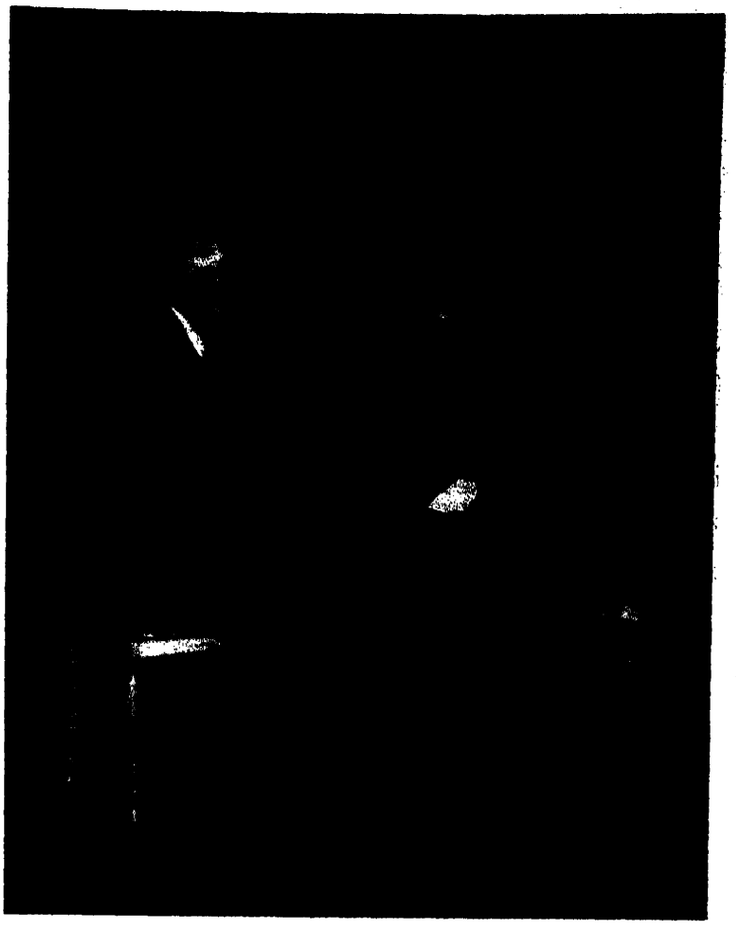
1931—1935

AGE 71—75

RETURNING to India writes a new dance-drama, *Nabin*, which is staged first at Santiniketan and then in Calcutta (Empire Theatre, March 14), the Poet reciting poems which are interpreted and visualised through dance and music; his seventieth birthday is celebrated at Santiniketan and also at many places all over India; his letters from Russia—*Russiar Chithi*—are collected and published on his seventieth birthday revealing the "profound spiritual and poetic insight and the deep social consciousness with which he had closely followed the most important page of human history."

"Rabindra-Jayanti" Inaugurated

ON the 16th May, 1931, at the Calcutta University Institute Hall, a large gathering representative of all sections of the community with Mahamahopadhyaya Hara Prasad Sastri (President, *Bangiya Sahitya Parishad*) in the chair, conveys to the Poet its warmest felicitations on his completing the seventieth year of his life and decides to celebrate the occasion in a fitting manner in Calcutta,—thus inaugurating RABINDRA-JAYANTI. A Tagore Septuagenary Celebrations Committee is appointed with the Poet's lifelong friend the great scientist Jagadis C. Bose as President, Jatindra Nath Basu as General Secretary and Shyama Prasad Mookerjee and Amal Home as Joint Secretaries. On the 18th July, 1931 this Committee adopts a Scheme of Celebration, prepared by Amal Home, deciding to celebrate the event by a festival extending over an entire week during Christmas (1931) devoted to the observance of a comprehensive programme bringing out and emphasising the Poet's life-work.



—With the children of the Pioneers' Commune in Moscow: 1930

The Hijli Protest

THE Poet visits Bhopal at the invitation of the Nawab; terrible floods, famine and pestilence devastate North Bengal to which is added acute communal trouble between Hindus and Muslims, on which he writes in the *Prabasi*, warning his countrymen against such fatal fratricide helping "the third party" in keeping India under perpetual political domination: on the 24th, 25th, 27th and 28th September is produced in Calcutta a novel musical festival, *Sisutirtha* (The Child) in aid of the flood-stricken in North Bengal; on September 30 the Sanskrit College at Calcutta confers on the Poet the title of *Kabi-sarbabhouma;* on the 13th October, when he was contemplating a trip to Darjeeling to recoup his health, occurs the tragedy at

the Hijli Detention Camp, where the guards shoot two young Bengali prisoners dead and cruelly assault a large number; the Poet again comes to the fore and becomes the spearhead of outraged public protest at a meeting, which convened to be held at the Town Hall is transferred, owing to unprecedented crowd, to the foot of the Ochterloney Monument in the Calcutta *Maidan*: he condemns "the concerted homicidal attack, under cover of darkness, on defenceless prisoners undergoing the most barbaric system of incarceration and a nerve-racking strain of an indefinitely suspended fate"; trounces in a letter to the daily press an Anglo-Indian paper "giving repeated expressions of the Christian sentiment of sympathy for the warders who had *murdered* the prisoners in their charge"; spends the autumn at Darjeeling; lends his support in an essay on "The Weavers of Bengal" to the movement set on foot by Sir P. C. Ray that Bengal should not depend on Bombay mills to clothe herself; celebrates at Santiniketan the 50th birth-anniversary of Nandalal Bose, the artist.

—With Bernard Shaw in London: 1930

'Rabindra-Jayanti' Celebrated

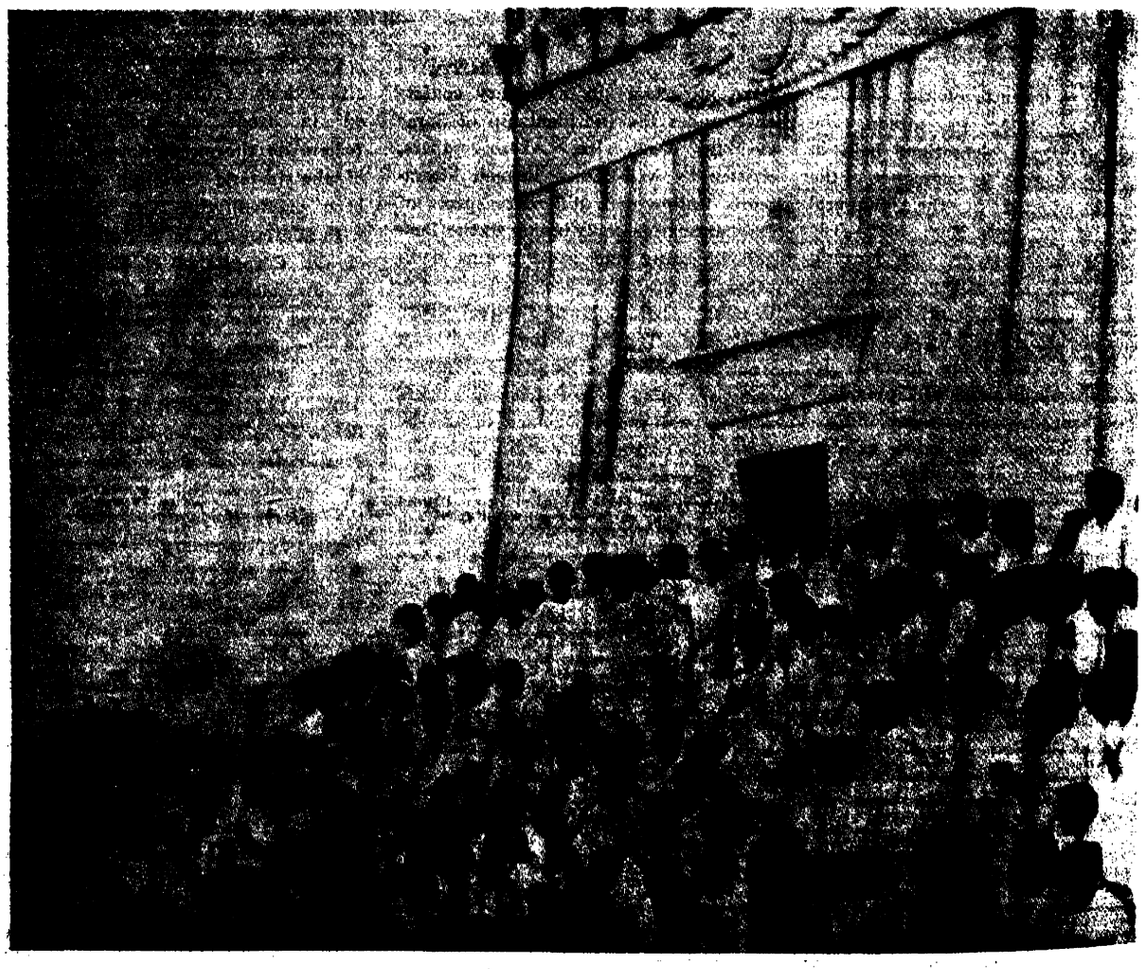
COMES to Calcutta on the 23rd December, 1931, to attend the RABINDRA-JAYANTI celebrations held in the Christmas week in pursuance of the resolution adopted at the inaugural meeting of the 18th May, 1931.—The *Jayanti* Week starts in the morning of the 25th December with the opening of a remarkable arts and crafts exhibition and a *mela* (fair) at the Town Hall and the adjoining grounds by H. H. Maharaja Bahadur of Tipperah,—the Poet being himself present and going round the galleries below exhibiting (*i*) a hundred of his own drawings and paintings, (*ii*) manuscripts and different editions of his works—English and Bengali, (*iii*) translations of his works in different languages of the world, (*iv*) works on himself, (*v*) portraits, etc., of the Poet at different periods of his life, (*vi*) gifts and presents to the Poet from different countries of the world, (*vii*) arts and crafts products of the Visva-Bharati, (*viii*) old and new Bengali art products and artistic home industries and (*ix*) pictures of the Bengal School of Painting and Indian paintings, old and new.—As a background to the exhibition (organised by Kedarnath Chatterjee assisted by Surendranath Kar) is also held a *mela* (fair) with stalls of various indigenous products, and entertainments, *e.g.*, *Kathakata, jatra, kirtan, baul gan*, folk songs and folk dances, sports and athletics.—The same afternoon sits a literary conference under the presidentship of Sarat Chandra Chatterjee, where papers, written by well-known Bengali litterateurs dealing with different aspects of Rabindranath's contribution to the Bengali literature and some poems dedicated to the Poet are read.—In the evening is held a Music Festival where thirty-five Tagore songs (beginning from the earliest period of his composition) are sung by well-known singers and a well-trained choir under the leadership of Indira Devi and Dinendra Nath Tagore.—The next day, the 26th December, Sir S. Radhakrishnan opens and presides over a conference at which distinguished litterateurs, artists, scholars and educationists, Indian and European, from all parts of India, including special delegates deputed by the different universities, read papers dealing with Rabindranath's contributions to practically all departments of human culture.—In the evening is continued the Music Festival with thirty-five more songs from Tagore.

* * *

ON the 27th December (1931) before an assemblage of several thousands of people representing all sections of the community gathered in front of the Town Hall (where on the street, facing the steps of the historic building, a *dais* has been erected) the Poet is presented with addresses of felicitations on behalf of the Corporation of Calcutta (read by the Mayor Dr. B. C. Roy), the *Bangiya Sahitya Parishad* (read by its President Sir P. C. Ray), the *Hindi Sahitya Sammelan* (read by Ambika Prasad Bajpei), the *Prabasi Banga Sahitya Sammelan* (read by Prativa Devi of Allahabad) and last, on behalf of his countrymen by the *Rabindra-Jayanti-Parisad* (The Tagore Septuagenary Celebration Committee), which was read by the greatest Bengali poetess Kamini Ray, the address itself being written by Sarat Chandra Chatterjee, the famous Bengali novelist.—The Poet replies to all the addresses separately, receiving a remarkable ovation at the end.—He is also presented with *The Golden Book of Tagore* by Mr. Ramananda Chatterjee (who had edited the Book) on behalf of the Publication Committee.—On the 28th, 29th and 30th is staged *Natir Puja* at the Jorasanko residence of the Poet, he himself appearing in the role of the Buddhist monk.—The students of Calcutta also celebrate the occasion by presenting the Poet with an address at the Senate Hall of the University of Calcutta; to

this he replies by reading a paper in Bengali, dwelling on the growth of his poetic life, which he had originally prepared for reading at the public reception on the 27th December but abandoned the idea because of its length and the cosmopolitan character of the gathering.—The RABINRDA-JAYANTI celebration, which was to be held for a week from the 25th to the 31st December, 1931 is extended till the 5th January, 1932, when at the news of the arrest of Mahatma Gandhi, Subhas Chandra Bose and other leaders along with that of the arrest of Jnananjan Neogi, the secretary of the *Jayanti-Mela*, the Celebration Committee, in view of the political situation, comes to a decision to close the function.

The Roses of Iran



THE Poet is greatly agitated over Gandhiji's arrest and cables to the British Prime Minister protesting against "the sensational policy of indiscriminate repression being followed by the Indian Government . . . . . causing permanent alienation of our people from yours"; issues a statement on the "Independence day" (January 26, 1932), which, however, is prevented from being fully published by the Bengal Censor; writes many poems at his river-side residence of Khardah, among them being a notable one on Gandhiji entitled *Prasna* (The Question) published first in the *Prabasi* magazine and later in his *Parishesh;* attends the opening of the exhibition of his paintings arranged by Mukul Dey at the Government Art School, Calcutta, in February; takes a trial flight in a Dutch aeroplane and decides to fly to Persia in response to the invitation of the Shah; meets at Santiniketan a delegation of the 'Society of Friends' from England.

* * *

ON April 11, 1932, accompanied by his daughter-in-law "takes off" at the Dum Dum aerodrome on a K. L. M. plane, preceded by his two other companions—Kedarnath Chatterjee and Amiya Chakraverti; is royally received at Shiraz where he spends a few days; pays his respects at the tomb of Hafiz; comes to Ispahan on the 23rd, *via* the ancient city of Parsepolis; after a Civic Reception at Ispahan, goes to Teheran where he spends two weeks amidst a glorious round of civic, diplomatic and private receptions; is received by Reza Shah Pehlavi at whose orders his seventy-second birthday is celebrated with great *eclat;* receives invitation from Iraq and on his way back to India meets King Faisal at Baghdad where he is accorded a Civic Reception; returns to Calcutta, by air, on June 3, 1932.

Academic Honours

ACCEPTS the invitation of the Calcutta University to take the Ramtanu Lahiri Chair of Bengali Literature and also deliver the Kamala Lectures; is presented with an Address from the University at a special Academic Reception on August 6, 1932; receives the news (Aug. 8) of the death in Germany of his only grandson, Nitindranath Ganguly; invited by C. Y. Chintamani of the *Leader* (Allaha-

—In October, 1931, when the guards at the Hijli Detention Camp shot two young Bengali prisoners dead, the Poet—at a great meeting held in the Calcutta Maidan at the foot of the Ochterloney Monument—gave expression to the anguish and indignation of the outraged public. Here he is seen reading his address with J. M. Sen-Gupta to his left.

bad) to give his opinion on the Communal Award, advises his countrymen "to take advantage of the new feeling of resentment that is sweeping intellectual circles in our country to-day against irrational communal and class differences, come to agreement between ourselves and thus remove the greatest obstacles in the path of our national self-expression"; writes at Santiniketan the prose-poems of *Punascha*, the poems of *Parishesh* and the *Kaler Yatra*, which he dedicates to Sarat Chandra Chatterjee on his 57th birthday anniversary.

Gandhiji's "Fast unto Death"

GREATLY perturbed at the news of Gandhiji resorting to his "fast unto death" (September 20, 1932) in protest against the sinister motives behind the Communal Award cancels arrangements for attending as President the forthcoming birthday celebrations of Sarat Chandra Chatterjee and after issuing fervent public appeals for removal of caste prejudices and differtial treatment between Hindus socially, rushes to Poona (Sept. 24) where Gandhiji had been lying at Yervada Jail; sends an appealing cable to Premier Ramsay Macdonald; on Sept. 26 the news is received of the "Pact", arrived at as a result of Gandhiji's fast, being accepted by the Premier; Gandhiji breaks his fast, the Poet singing by his bed-side one of his favourite songs; writes to the Zamorin a forceful letter on the question of the temple entry of Harijans in Cochin; receives Pandit Madan Mohan Malaviya at Santiniketan on December 2, 1932.

* * *

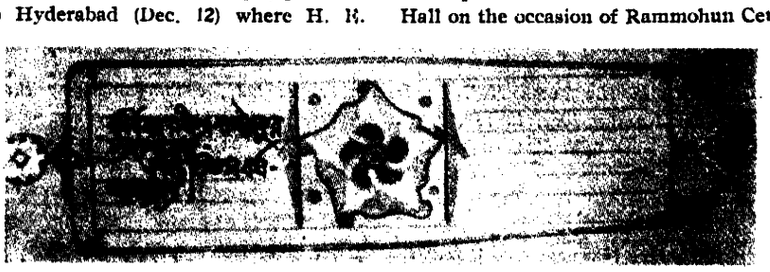
—Arriving at the Town Hall on December 27, 1931, accompanied by the poetess Kamini Ray, to receive the address of felicitations in connection with RABINDRA-JAYANTI *(Tagore Septuagenary)*

PRESIDES in Calcutta (December 11) at the Seventieth Birthday Celebration of Sir P. C. Ray and dedicates to him, "Mahatmaji and Depressed Humanity"; visits the Gosaba Village Welfare Centre established by Sir Daniel Hamilton in the Sundarbans; receives Professor Poure-Daud who had been sent to Santiniketan by the Shah of Persia; delivers at the Calcutta University the second Kamala Lecture (January, 1933); on Jan. 18 presides over the inaugural meeting of the Rammohun Centenary at the Senate Hall, Calcutta; on the 25th reads at the Calcutta University a paper on "Fusion of Knowlege"; at Lucknow on the occasion of a Conference organised (Feb. 1933) by the School of Music, his daughter-in-law produces, with a batch of students from Santiniketan, a Dance-drama, *Sapmochan*, with great success; the performance is repeated in Calcutta, at the Empire Theatre (March, 1933).

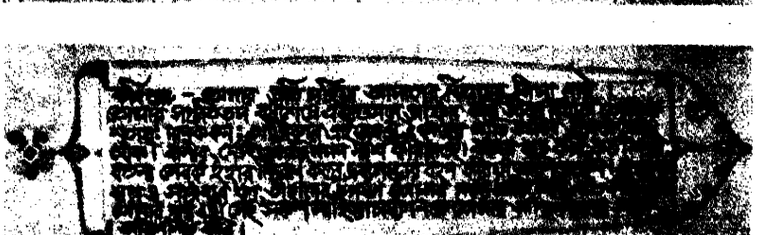
* * *

ISSUES a statement to the Press supporting V. J. Patel's efforts to check the "campaign of lies" against India, which was being sedulously carried on in Western countries (April, 1933); goes to Darjeelng; sends a telegram to Gandhiji deprecating his intention to enter into a second period of fasting, but the telegram is not received by Gandhiji; is the first to sign a leaders' memorial to the Government to release political prisoners; also telegrams to prisoners on hunger-strike at Andamans to desist; records his own and the country's deepest distress at the news of the sudden death of J. M. Sen-Gupta (July 24, 1933) while under detention; sends a message on the occasion of Wilberforce Centenary celebrations at Hull; receives Uday Sankar at Santiniketan; on September 12, stages at the Empire Theatre in Calcutta *Tasher Desh* also giving recitals from *Chandalika;* speaks on Rhythm (*Chhanda*) at Calcutta University (Sept. 16); publishes the poems of *Vichitrita* (illustrated) and dedicates the book to Nandalal Bose on his birthday

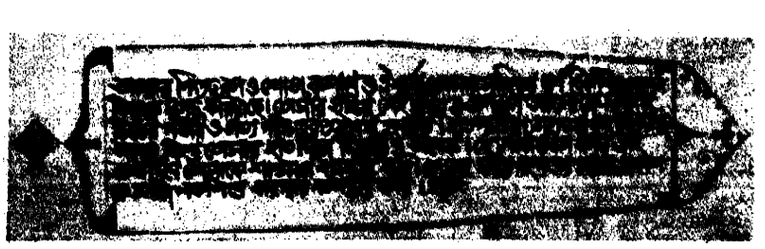
* * *



VISITS Bombay (Nov., 1933) for the "Tagore Drama Week" (organized there by the Calcutta Impresario, Haren Ghosh); performances of his *Sapmochan* and *Tasher Desh* are given by the pupils of Santiniketan, the Poet himself appearing on the stage; exhi-

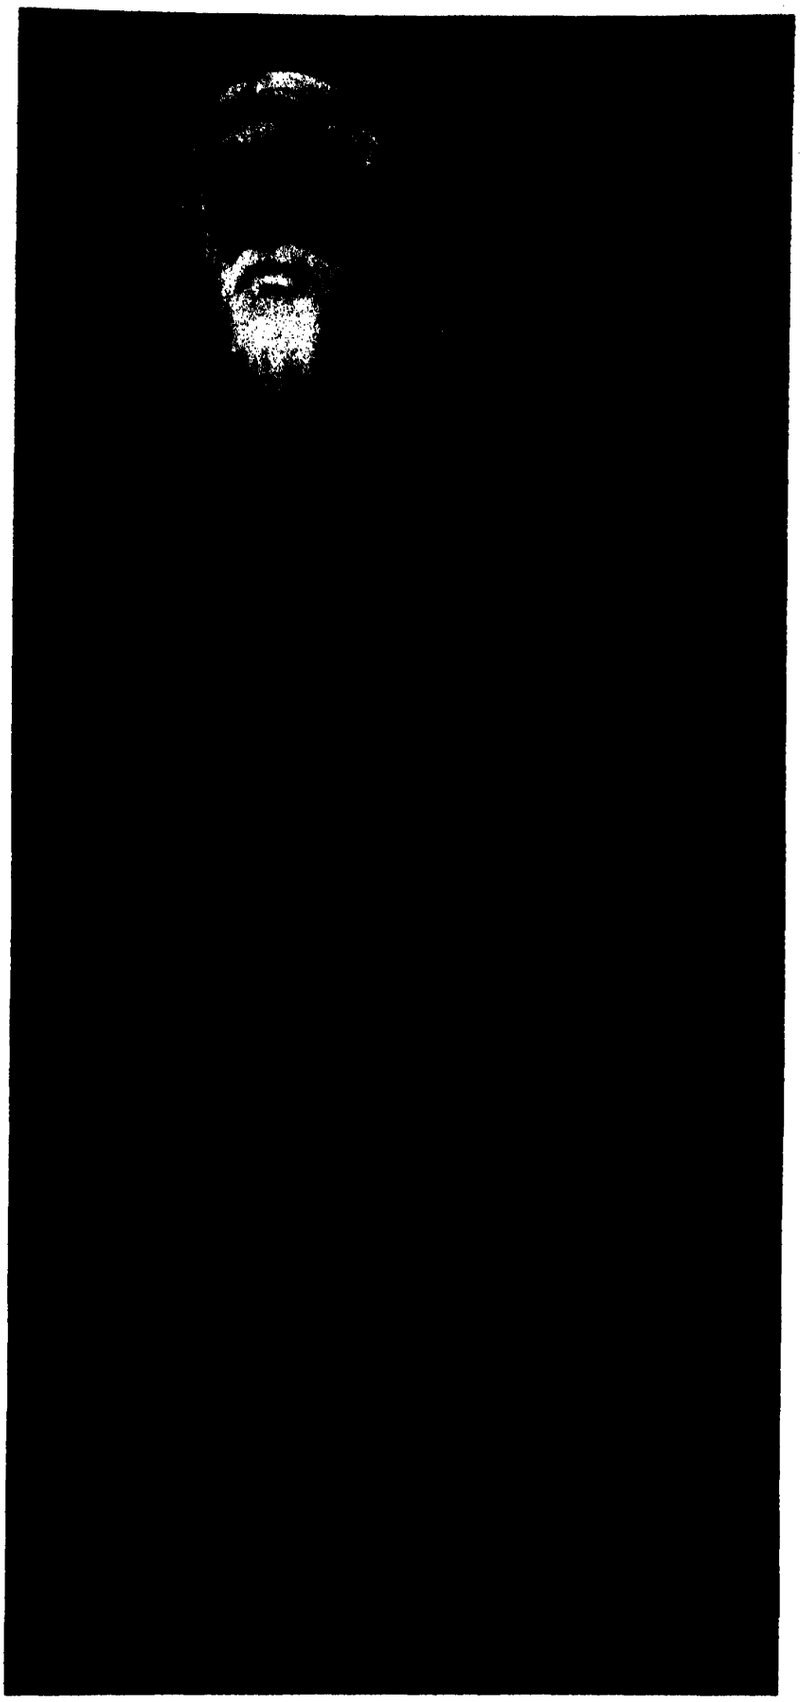


RABINDRANATH TAGORE



—On the 27th December, 1931, before an assemblage of several thousands of people representing all sections of the community gathered in front of the Town Hall, where, on the street, facing the steps of the historic building, against the North gates of the Bengal Legislative Council House, a 'dais' had been erected, the Poet was presented with addresses of felicitations by the Corporation of Calcutta, the Bangiya Sahitya Parishad, the Hindi Sahitya Sammelan, the Prabasi Banga Sahitya Sammilan and the RABINDRA-JAYANTI PARISHAD *(the Tagore Septuagenary Celebration Committee)—Pandit Bidhusekhar Shastri is seen reciting the 'mangalacharanam' while the girls of the Santiniketan hold the 'arghyapatram.'*

bitions of his own paintings and those of other artists attached to the *Kalabhaban* of the Visva-Bharati are opened in Bombay and widely appreciated; addresses several meetings in Bombay; goes to Waltair and delivers at Andhra University three lectures (Dec. 8, 9, 10) on Human Relationships; proceeds to Hyderabad (Dec. 12) where H. E. H. the Nizam, who had some years ago made a gift of a lakh of rupees to the Visva-Bharati for a chair of Islamic Culture, warmly receives him and gives another twenty-five thousand rupees; returns to Calcutta, and on Dec. 29 delivers his famous address *Bharatpathik Rammohun* at the Senate Hall on the occasion of Rammohun Centenary celebrations; speaks also at the All-India Women's Conference at Town Hall; receives Sarojini Naidu at Santiniketan on January 3, 1934; protests against the message of the Mahatma on the Bihar Earthquake (attributing the calamity to "divine vengeance on the country for its sin of untouchability"); telegraphs to Charles Andrews in England about the earthquake and appeals to all nations for help; expresses himself strongly against the anti-Gandhi agitation then on foot in Bengal; presides in Calcutta at the Jubilee Celebration of the Hindusthan Co-operative Insurance Co. Ltd. of which his nephew, Surendranath Tagore, had been one of the founders; on April 7 speaks at the International Relations Club (founded under the Carnegie Endowment for International Peace).



—The Address of Felicitations presented on behalf of his countrymen by the RABINDRA-JAYANTI PARISHAD *was written by Sarat Chandra Chatterjee and read by Kamini Ray. The address was inscribed by Nandalal Bose on plates of gold in old Bengali script.*

* * *

PROCEEDS to Ceylon on May 6, 1934, with Santiniketan artistes; *Sapmochan* staged for five nights at Colombo and then other plays; exhibition of paintings of his own and *Kalabhaban* artists also held; on May 19, visits Pandura and Christens an institution started there on the lines of Sriniketan as *Sri-Palli;* comes to Kandy and completes there his novel *Char adhaya* (Four Chapters) on June 5; goes to North Ceylon and then returns *via* Madras to Santiniketan on June 28; on August 31st receives Khan Abdul Gaffar Khan, who, on release from

CRISIS IN CIVILIZATION

Tagore's Message on Completing His Eighty Years

TODAY I complete eighty years of my life. As I look back on the vast stretch of years that lie behind me and see in clear perspective the history of my early development, I am struck by the change that has taken place both in my own attitude and in the psychology of my countrymen—a change that carries within it a cause of profound tragedy

Our direct contact with the larger world of men was linked up with the contemporary history of the English people whom we came to know in those earlier days. It was mainly through their mighty literature that we formed our ideas with regard to these newcomers to our Indian shores In those days the type of learning that was served out to us was neither plentiful nor diverse, nor was the spirit of scientific enquiry very much in evidence Thus their scope being strictly limited, the educated of those days had recourse to English language and literature. Their days and nights were eloquent with the stately declamations of Burke, with Macaulay's long-rolling sentences, discussions centred upon Shakespeare's drama and Byron's poetry and above all upon the large-hearted liberalism of the nineteenth-century English politics.

At the time though tentative attempts were being made to gain our national independence, at heart we had not lost faith in the generosity of the English race This belief was so firmly rooted in the sentiments of our leaders as to lead them to hope that the victor would of his own grace pave the path of freedom for the vanquished This belief was based upon the fact that England at the time provided a shelter to all those who had to flee from persecution in their own country Political martyrs who had suffered for the honour of their people were accorded unreserved welcome at the hands of the English. I was impressed by this evidence of liberal humanity in the character of the English and thus I was led to set them on the pedestal of my highest respect. This generosity in their national character had not yet been vitiated by Imperialist pride. About this time, as a boy in England, I had the opportunity of listening to the speeches of John Bright, both in and outside Parliament. The large-hearted, radical liberalism of those speeches, overflowing all narrow national bounds, had made so deep an impression on my mind that something of it lingers even today, even in these days of graceless disillusionment.

Certainly that spirit of abject dependence upon the charity of our rulers was no matter for pride. What was remarkable, however, was the whole-hearted way in which we gave our recognition to human greatness even when it revealed itself in the foreigner. The best and noblest gifts of humanity cannot be the monopoly of a particular race or country, its scope may not be limited nor may it be regarded as the miser's hoard buried underground That is why English literature which nourished our minds in the past, does even now convey its deep resonance to the recesses of our heart.

Extracts from the address

THUS passed the first chapters of my life Then came the parting of ways accompanied with a painful feeling of disillusion when I began increasingly to discover how easily those who accepted the highest truths of civilization disowned them with impunity whenever questions of national self-interest were involved

There came a time when perforce I had to snatch myself away from the mere appreciation of literature. As I emerged into the stark light of bare facts, the sight of the dire poverty of the Indian masses rent my heart. Rudely shaken out of my dreams, I began to realise that perhaps in no other modern state was there such hopeless dearth of the most elementary needs of existence. And yet it was this country whose resources had fed for so long the wealth and magnificence of the British people. While I was lost in the contemplation of the great world of civilization, I could never have remotely imagined that the great ideals of humanity would end in such ruthless travesty But today a glaring example of it stares me in the face in the utter and contemptuous indifference of a so-called civilised race to the well-being of crores of Indian people.

That mastery over the machine, by which the British have consolidated their vast empire, has been kept a sealed book, to which due access has been denied to this helpless country And all the time before our very eyes Japan has been transforming herself into a mighty and prosperous nation I have seen with my own eyes the admirable use to which Japan has put in her own country the fruits of this progress I have also been privileged to witness while in Moscow, the unsparing energy with which Russia has tried to fight disease and illiteracy, and has succeeded in steadily liquidating ignorance and poverty, wiping off the humiliation from the face of a vast continent Her civilization is free from all invidious distinction between one class and another between one sect and another

* * * * *

WHEN I see elsewhere some two hundred nationalities—which only a few years ago were at vastly different stages of development—marching ahead in peaceful progress and amity, and when I look about my own country and see a very highly evolved and intellectual people drifting into the disorder of barbarism, I cannot help contrasting the two systems of governments, one based on co-operation the other on exploitation, which have made such contrary conditions possible.

Thus while these other countries were marching ahead, India, smothered under the dead weight of British administration, lay static in her utter helplessness. Another great and ancient civilization for whose recent tragic history the British cannot disclaim responsibility is China. To serve their own national profit the British first doped her people with opium and then appropriated a portion of her territory As the world was about to forget the memory of this outrage, we were painfully surprised by another event While Japan was quietly devouring North China, her act of wanton aggression was ignored as a minor incident by the veterans of British diplomacy We have also witnessed from this distance how actively the British statesmen acquiesced in the destruction of the Spanish Republic.

Such is the tragic tale of the gradual loss of my faith in the claims of the European nations to civilization. In India "the misfortune of being governed by a foreign race" is daily brought home to us not only in the callous neglect of such minimum necessities of life as adequate provision for food, clothing, educational and medical provision for the people, but in an even unhappier form in the way the people have been divided among themselves. The pity of it is that the blame is laid at the door of our own society. So frightful a culmination of the history of our people would never have been possible, but for the encouragement it has received from secret influences emanating from high places

One cannot believe that Indians are in any way inferior to the Japanese in intellectual capacity. The most effective difference between these two eastern peoples is that whereas India lies at the mercy of the British, Japan has been spared the shadow of alien domination We know what we have been deprived of. That which was truly best in their own civilizations, the upholding of the dignity of human relationship, has no place in the British administration of this country. If in its place they have established, with baton in hand, a reign of "law and order", in other words a policeman's rule, such mockery of civilization can claim no respect from us. It is the mission of civilization to bring unity among people and establish peace and harmony. But in unfortunate India the social fabric is being rent into shreds by unseemly outbursts of hooliganism daily growing in intensity right under the very aegis of "law and order" In India, so long as no personal injury is inflicted upon any member of the ruling race, this barbarism seems to be assured of perpetuity, making us ashamed to live under such an administration.

* * * * *

IN the meanwhile the demon of barbarity has given up all pretence and has emerged with unconcealed fangs, ready to tear up humanity in an orgy of devastation. From one end of the world to the other the poisonous fumes of hatred darken the atmosphere. The spirit of violence which perhaps lay dormant in the psychology of the West, has at last housed itself and desecrates the spirit of Man.

* * * * *

THE wheels of Fate will some day compel the English to give up their Indian Empire. But what kind of India will they leave behind, what stark misery? When the stream of their centuries' administration runs dry at last, what a waste of mud and filth they will leave behind them! I had at one time believed that the springs of civilization would issue out of the heart of Europe. But today when I am about to quit the world that faith has gone bankrupt altogether.

As I look around I see the crumbling ruins of a proud civilization strewn like a vast heap of futility. And yet I shall not commit the grievous sin of losing faith in Man. I would rather look forward to the opening of a new chapter in his history after the cataclysm is over and the atmosphere rendered clean with the spirit of service and sacrifice. Perhaps that dawn will come from this horizon, from the East where the sun rises. A day will come when unvanquished Man will retrace his path of conquest, despite all barriers, to win back his lost human heritage.

Today we witness the perils which attend on the insolence of might, one day shall be borne out the full truth of what the sages have proclaimed:

> "By unrighteousness man prospers, gains what appears desirable, conquers enemies, but perishes at the root."

"Uttarayan"

Cities are organic expressions of culture. Until today our cities have grown up, as much of our exterior life has, chaotically. They have been imitation of Europe and their lives have flowed in channels which have been sometimes at tangent, sometimes parallel to our own. Now that India is slowly coming to her own our towns should mirror our national culture and artistic sensibility. I look forward to a Calcutta which will reflect this ideal.

Rabindranath Tagore

A MESSAGE TO THE "CALCUTTA MUNICIPAL GAZETTE" ON THE OCCASION OF ITS NINTH ANNIVERSARY, 1933

TAGORE'S WORKS—A CHRONOLOGY : 1878-1941

IN BENGALI

IN compiling the following list of books written by Rabindranath Tagore, there have been, unavoidably, certain deviations from strict chronological sequence. The list is also not exhaustive in the sense that text books written by the Poet, the various revised editions and reprints, some short stories published at different times in different collections, poetical selections have not been included. The space at our disposal did not unfortunately permit their inclusion. Our thanks are specially due to Mr. Prabhat Kumar Mukhopadhyaya, Librarian of the Visva-Bharati, and Mr. Pulin Behary Sen, Assistant Secretary in charge of the Publication Department of the Visva-Bharati,—the former for placing a detailed chronology he has prepared for the Rabindra Birthday Number of the VISVA-BHARATI QUARTERLY *and to the latter for revising and checking the list. We must also place on record the assistance we have received from 'Rabindra Rachana Panji', a comprehensive chronology of the Bengali publications of Rabindranath compiled by Messrs Brajendra Nath Banerji and Sajani Kanta Das in the* SANIBARER CHITHI *(October, 1939—March, 1940), which, however, to our regret, remains incomplete, having been brought down only to 1894.*

—THE EDITOR.

1878

Kabi-Kahini ('The Tale of the Poet': a story in verse).

1880

Bana-phul ('The Flower of the Woods': a story in verse).

RABINDRANATH TAGORE

A snow-capped volcano in undulating plain
Lifts up its proud head : near its foot
Cluster the vine and the soft streams flow.
Men come and go and build their homes
And pass their days in homely joys and fears.
The mountain keeps them company, sends to them
Its love in flowing streams and gentle rain.
And yet the mountain lives alone
In distant splendour. Lightnings flash,
The thunder shoots up tongues of flame—
Tries to reach the snowy heights in vain.
The fire of fourscore summers in your heart,
Fourscore winters' wisdom on your crest
Shine in forms of beauty in deathless verse.

Bareilly,
7-5-41.

HUMAYUN KABIR

1901

Naivedya ('Offerings' : a collection of poems).

1903-5

Chokher Bali ('Eyesore' : a novel); *Karmaphal* ('Nemesis' : a story); *Kavyagrantha* (collected poems and verse-dramas) Parts I—IX, incorporating *Smaran* ('In memoriam' : poems on the death of his wife) and *Sishu* ('Child-poems'), later issued separately; *Rabindra-Granthabali* (collected works) incorporating *Prajapatir Nirbandha*, later issued separately; *Swadeshi Samaj* (an essay); *Sivaji Utsav* (a poem).

1906

Atmasakti (a collection of political essays and lectures).
Bharatvarsha ('India' : a collection of political essays and lectures); *Kheya* ('Ferry' : a collection of poems); *Naukadubi* ('The Wreck' : a novel).

1907

Vichitra Prabandha (a collection of essays); *Chāritrapuja* ('Tributes to Great Lives'); *Prachin Sahitya* (a collection of essays); *Lokasahitya* ('Literature of the People' : a collection of essays); *Sahitya* ('Literature' : a collection of essays); *Adhunik Sahitya* ('Modern Literature' : a collection of essays); *Hashyakautuk* (humourous sketches); *Vyangakautuk* (humourous sketches).

1908

Prajapatir Nirbandha (comedy); *Prahasan* ('Comedies' : incorporating *Vaikunther Khata*, and *Goray Galad*, separately issued before); *Raja Praja* ('King and his Subjects' : a collection of political essays); *Samuha* (collection of political essays); *Swadesh* ('My country') : a collection of political and sociological essays); *Samaj* ('Society' : a collection of essays); *Sarodatsav* ('Autumn Festival' : a drama); *Sikhsa* ('Education' : a collection of essays); *Mukul* ('The Crown' : a prose drama).

1909

Sabdatattva ('The Meaning of Words' : a collection of philological papers); *Dharma* ('Religion' : a collection of essays); *Santiniketan* (Sermons delivered at Santiniketan) Parts I—VIII; *Prayaschitta* ('Penance' : drama); *Chayanika* (an anthology of poems).

1910

Raja ('King of the Dark Chamber' : a drama); *Gora* (a novel); *Santiniketan* Parts IX—XI; *Gitanjali* (Song Offerings).

1911

Santiniketan, Parts XII—XIII.

1912

Dakghar ('Post Office' : a drama); *Jiban-Smriti* ('Reminiscences'); *Chhinna Patra* ('Torn Letters'); *Achalayatan* (a drama); *Galpa Chatti* (Four Short Stories).

1914

Utsarga ('Dedications' : a collection of poems); *Gitimalya* ('A garland of songs'); *Gitali* (a collection of songs).

1915-16

Kavya-grantha (a collection of poems and dramas : in ten volumes); *Santiniketan*, Parts XIV—XVII; *Galpa-Saptak* (a collection of seven short stories).

1916

Phalguni ('Cycle of Spring' : a drama); *Chaturanga* (a novel); *Ghare Baire* ('Home and the World' : a novel); *Balāka* ('Cranes' : a collection of poems); *Parichaya* (a collection of essays); *Sanchaya* (a selection of essays).

1917

Kartar Ichhay Karma ('As the Master Wills' : a lecture).

1918

Palataka ('Fugitive' : Stories in verse).

1919

Japan-yatri (Travels in Japan).

1920

Arup Katan (A drama, adapted from *Raja*).

1921

Sikshar Milan ('Meeting of Cultures'); *Satyer Avvhan* ('Call of Truth'); *Rin Sodh* (a drama)

1922

Sisu Bholanath (a collection of poems); *Muktadhara* ('Free Current' : a drama); *Lipika* ('Letter' : Prose-poems).

1923

Vasanta ('Spring' : a musical drama).

1925

Puravi (a collection of poems); *Grihā-Prabes* (a drama); *Prabahini* (a collection of songs).

1926

Rakta Karabi ('Red Oleanders' : a drama); *Sodh Bodh* ('All Square' : a comedy); *Lekhan* (Autographs : poems).

1928

Shesh Raksha (a comedy).

1929

Parittran ('Salvation' : a drama); *Yatri* ('Traveller' : Letters from Abroad); *Yogayoga* (a novel); *Shesher Kabita* ('Last Poem' : a novel); *Mahua* (poems); *Tapati* (a drama).

1930

Bhanusinher Patraball (Letters).

1931

Russiar Chithi (Letters from Russia); *Banabani* ('The Message of the For-

est' : poems) ; *Sanchayita* (an anthology selected by the Poet).

1932

Parishesh ('The End' : poems) ; *Punascha* ('Postscript' : poems) ; *Kaler Yatra* ('March of time : two dramas).

1933

Dui Bon ('Two Sisters' : a novel) ; *Visvabidyalayer Rup* (a lecture at the Calcutta University) ; *Sikshar Bikiran* ('Spreading Education' : a lecture at Calcutta University) ; *Tasher Desh* ('Kingdom of Cards' : a farce) ; *Chandalika* ('The Untouchable Woman' : a drama) ; *Manuser Dharma* ('Religion of Man' : Kamala Lectures) ; *Bansari* ('The Flute' : a drama) ; *Bichitrita* (poems with illustration by Abanindranath Tagore, Nandalal Bose and others).

1934

Malancha ('The Garden' : a novel) ; *Char Adhyaya* ('Four Chapters' : a novel).

1935

Shes Saptak (poems) ; *Bithika* ('Avenue' : poems) ; *Sur O Sangati* (correspondence with Dhurjatiprasad Mukherjee on Music).

1936

Patraput (poems) ; *Nrittyanatlya Chitrangada* (a dance-drama) ; *Sikshar Swangikaran* ('Education Naturalised' : a lecture) ; *Chhanda* (essays) ; *Shyamali* (poems) ; *Japane-Parasye* (Travels in Japan and Persia) ; *Sahityer Pathe* (literary essays) ; *Praktani* (Address to ex-students of Santiniketan).

1937

Khapchhara (Nonsense rhymes illustrated by the author) ; *Kalantar* (essays) ; *Shey* (children's stories, illustrated by the author) ; *Visvaparichaya ; Chhara Chabi* (Rhymes illustrated by Nandalal Bose).

1938

Pathe O Pather Prante (Letters) ; *Senjuti* ('Offerings of the Evening' : poems) ; *Bangla Bhasa Parichay* (Notes on the Bengali Language) ; *Prahasinee* ('The Smiling One' : poems).

1939

Chandalika (A dance-drama) ; *Akas Pradip* (poems) ; *Syama* (A dance-drama) ; *Pather Sanchaya* (Letters from Abroad) ; *Rabindra-rachanabali* Part I (complete Bengali works, inclusive of hitherto unpublished writings : To be completed in about twenty-five volumes).

1940

Nabajatak ('The Newly Born' : poems) ; *Sanai* ('The Pipe' : poems) ; *Chitralipi* (Album of paintings, with explanatory verses) ; *Chhelebela* ('My Boyhood Days' : reminiscences) ; *Tin Sangi* ('Three Companions' : Short stories) ; *Rogasajyaya* ('In the sickbed' : poems).

1941

Arogya ('Recovery' : poems) ; *Janmadine* ('Birthday' : poems) ; *Sabhyatar Sankat* ('Crisis in Civilisation') ; *Galpa-Salpha* ('Yarns' : Stories and verses for children).

MY BOYHOOD DAYS—Translation of *Chelebela* by Marjorie Sykes.

My life when young was like a flower,— a flower that loosens a petal or two from her abundance to give them away and never feel the loss when the spring breeze woos her with insistent whispers.

Now at the end of her youth my life is like a fruit, having nothing to spare and waiting to offer herself completely with her full burden of sweetness.

—FACSIMILE OF A VERSE FROM THE MSS. OF THE POET'S "FRUIT-GATHERING"

REVIEW

KAVITA—RABINDRA NUMBER (Ashadh, 1348 B.S.): Edited by Buddhadev Bose.

The Editor deserves sincere congratulations upon this issue of his journal, if only for the wealth of its contents. Tagore's manifold activities are touched upon or discussed in some detail by writers of established reputation. Reminiscences recorded by relatives like Abanindranath, Pramatha Chaudhuri and Indira Devi Chaudhurani throw welcome light on the Poet's personal characteristics and reveal incidentally that the "child" in him is still alive. His public life as seen by cultured young men forty years ago is ably pictured by Atul Chandra Gupta. His political philosophy is subjected to erudite analysis by Dhurjati Prasad Mukerji. The place of his novels *vis-a-vis* the novels of Bankim Chandra in relation to their respective environments is the topic of a suggestive article by Nihar Ranjan Roy. From the pen of Amiya Chakravarti comes "The Vision of Rabindranath", conceived in a poetic spirit. Humayun Kabir emphasizes in a graceful manner Tagore's anti-ascetic humanism. An artist's appreciation of Tagore as a painter is embodied in an article by Jamini Roy, himself a painter of repute; three examples are set out on art-paper by way of illustration. Annada Sankar Roy's article on the Poet's latter-day life suffers from an unfortunate choice of caption; it shows defects of style evidently born of haste. Rabindranath's contributions to different literary *genres* form themes of articles mostly well-conceived. Himansu Kumar Dutt writes reasonably in praise of Tagore's talent as a song-composer, making the point that Tagorean chant is a consistent blend of indigenous folk song, "classical" music and European melody. Buddhadev Bose (the Editor) contributes a fine essay stressing the special value of Rabindranath's songs as unrivalled specimens of composition wherein exalted poetry co-operates cordially with enchanting music.

HARIT KRISHNA DEB.

FREEDOM FOR MY MOTHERLAND

Fear, the phantom demon,
Shaped by your own distorted dreams,

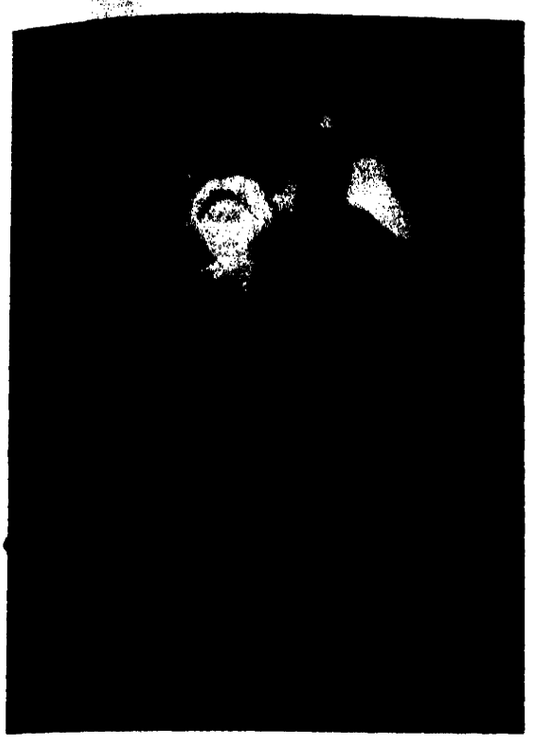
Freedom from the burden of ages,
bending your head,
breaking your back,
blinding your eyes
to the beckoning call of future

Freedom from shackles of slumber
With which you fasten yourself
to night's stillness,
mistrusting the star that speaks
of truth's adventurous path;

Freedom from the anarchy of a destiny
Whose sails are weakly yielded
to blind uncertain winds,
and the helm to a hand
ever rigid and cold as Death;

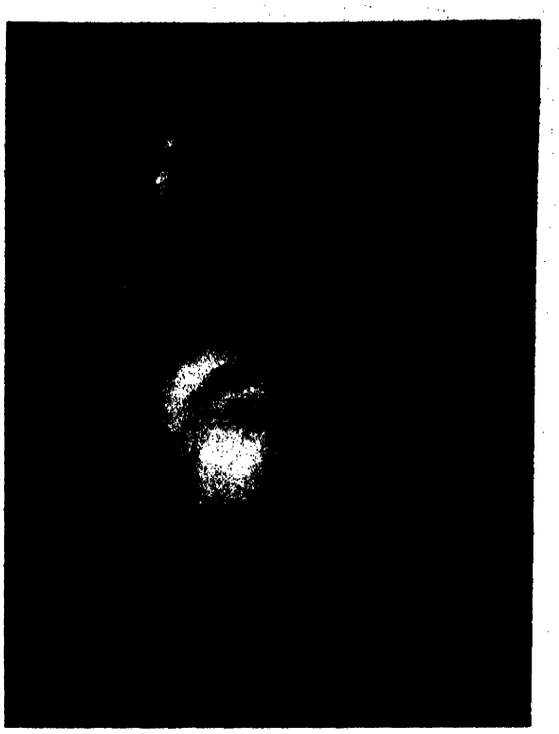
Freedom from the insult of dwelling
in a doll's world
where movements are started
through brainless wires,
repeated through mindless habits,
where figures wait with patient obedience
for a master of show,
to be stirred into
a moment's mimicry of life.

—RABINDRANATH TAGORE



REVIEW—(*Continued*)

PARICHAY—SPECIAL RABINDRA ISSUE: Edited by Sudhindranath Datta and Hirankumar Sanyal.



When the *Parichay* made its appearance ten years ago, it was acclaimed in literary circles as a journal which had revived the lost tradition of literary journalism in Bengal. Other journals have since appeared that bear the clear impress of its influence. But the *Parichay* has maintained its standard and its lead. The present issue provides convincing proof of this. Among the contributors are well-known literary figures like Mr. Hirendranath Datta and Mr. Dhurjati Prasad Mukherji. Mr. Datta, writing in a reminiscent vein, relates interesting anecdotes and mentions the leading part played by the Poet in the political movements of an earlier day. Mr. Mukherji also starts off with an anecdote, a rollickingly funny one, and discusses the political contributions of the Poet. But it is thought rather than action in which he is interested. His summing up is a brilliant piece of writing. The largest but perhaps the most interesting article is from the pen of Mr. Jivanmay Ray, who writes of Santiniketan of the long ago days before the place had become one of the "sights" of India. He gives us an intimate and charming picture of the Poet as he moved about everywhere in the *asram*, taught little boys and even organized games. And what a teacher he was! Mr. Ray, himself a teacher of experience and repute, is moved to ecstasy as he speaks of Rabindranath sitting among small boys and opening to them the magic portals of the realm of knowledge. And with these excellent contributions must be mentioned the frank and outspoken comments by the Editor on some of the articles. They are delightfully trenchant.

There is also an excellent translation by Bishnu Dey of an article on Rabindranath Tagore which Ezra Pound, the famous Poet and Critic, wrote for *The Fortnightly Review of March*, 1913. The date is important. It was immediately after the English *Gitanjali* had taken literary Europe by storm but some months before the award of the Nobel Prize was announced. Mr. Hirankumar Sanyal, one of the Editors writes on 'Rabindranath as a Journalist' and gives most interesting quotations from old journals that reveal the Poet as an entertaining writer on all manner of current topics ranging from entomology to cosmology. But his political comments were the most brilliant products of Rabindranath Tagore's journalistic pen.

LIFE & WORK

OF

RABINDRANATH TAGORE

A Quest for Selfhood

By

NIRAD C. CHAUDHURI

I

OF M. André Maurois's *Ariel* or the Life of Shelley it was said that the cardinal mistake of the book was that it sought to depict Shelley minus his poetry. In regard to Rabindranath Tagore it is the easiest thing to run to the other extreme—to become engrossed in the poet at the expense of the man That would be a grievous error because—to put the most obvious objection first—he is many things as good or nearly as good as a great poet. He is a great short-story writer, in fact, one of the very greatest of them with world literature as the standard of reference. He is a novelist, if not of the same standard of technique and inspiration as in his short stories, at all events one of the three greatest Bengal has produced, and Bengal's achievement in fiction is not something which can be brushed aside as merely provincial. Then, he is a critic and essayist, journalist, and populariser of knowledge He is a philosopher, a religious teacher, and a religious practitioner. He is an educationist, a social reformer, a pioneer in practical Swadeshi, a deep political thinker without being one of the official, academic and conventional kind. He is a musician both as composer and virtuoso, and an actor of remarkable powers and imaginative insight. Last of all, in his old age he has shown himself to be a painter, unclassed and unclassable perhaps, but in this field also displaying a bewildering wealth of romantic fancy. Further, it must be recalled that he it was who supplied the inspiration—the seed thought—of the modern Indian school of painting founded by Abanindranath Tagore. All this shows an amazing range of interests and attainments, and even then one is not sure that the list of his significant achievements has been run through.

Naturally, no one could or would claim that all that he has written, done or taught is of equal excellence, but even after the rigidest allowance for unevenness has been made, the lowest common factor of quality remains so high that this alone precludes the idea of considering him as one thing rather than something else. This is the first argument against appraising him piecemeal, but even more than that any attempt at sampling him or judging him by one set of achievements is bound to be misleading for the simple reason that such a method would take the critic further and further away from the fundamental motive force of his life, that force in truth which makes his life a unity in spite of its manifold facets, a force which not only prevents him from degenerating into a Jack of all trades but on the other hand makes him Jack unfrittered, unified and whole, in spite of an immense and deliberate variety of effort. In reality Rabindranath is Jack realizing and discovering himself in and through all his trades.

That may not be the sort of life-formula which finds favour with the citizens of the highly specialised modern world, but it is the formula which explains Leonardo da Vinci, Goethe, and Leibnitz. Rabindranath is a humanist, the greatest humanist India has produced, and one of the greatest the world has known. Any researcher can discover for himself after a little preliminary wrestling with the material how toughly Rabindranath and his life-work refuse to be sliced up into monographs.

II

THE great driving and unifying power in Rabindranath's life is the quest for personal enrichment. From his individual standpoint all his activities are only part of an undivided and ceaseless quest for self-realization through manifold contact with the world and life. He has never sought individual salvation away from the world ;—my salvation will not come through renunciation, I want to live among men, he has himself said. That explains why Rabindranath's faith in life on this earth is as unwavering and strong as his faith in life beyond the gate of death. There

have been great men for whom the contemplation of the fact of death has proved too great a deterrent in the way of taking a continued interest in life. For Tolstoy, death posed the final and the most baffling dilemma of life, and it is bound to be more or less so with every man capable of reflexion. Very often the moralist has been led by death to a mere denunciation of the world as an illusion and mockery—an arid and withering philosophy at best—but the mystic, or rather the man with the true spiritual temper, has almost invariably sought refuge in the contemplation of an eternal beatitude which to him has made even the good things of the world of small worth. "And if any have been so happy as truly to understand Christian annihilation, ecstacies, exolution, liquefaction, transformation, the kiss of the spouse, gustation of God, and ingression into the divine shadow, they have already had an handsome anticipation of heaven; the glory of the world is surely over, and the earth in ashes unto them." Or, again, in the words that have been put in the mouth of St. Thomas Aquinas in explanation of his silence and inactivity after his vision at Mass in Naples:

"My writing is at end. I hav seen such things reveal'd
That what I hav written and taught seemeth to me of small worth
And hence I hope in my God, that, as of doctrin
Ther wil be speedily also an end of Life!"

These are typical mystical reactions to the world. Mystical faith has nothing in common with that other sterile brand of religiosity which makes men live in the Slough of Despond and turn upon life as certain poisonous and fierce snakes are believed to turn upon themselves. It is a joyous creed, seeking to transform the joy of life into another and, what the mystic believes to be, a higher, a purer, and a more enduring form of joy. Nevertheless, it creates a mood of unworldly elation which tends to blunt the keen edge of the more human joy of life, and to blanch its radiance as the sun does that of the moon. It is only necessary to turn to St. Francis to see how not even the most child-like and sincere adoration of Nature could turn away the true mystic from voluntary abnegation of all the gracious, kindly, and consoling things that the physical universe has to offer to us. That, one should say, is the mystic way, the very essence of mysticism. But curious as it may seem, with all his deep and sincere religiousness, all his plain inclination to mystical faith Rabindranath Tagore is an exception to that rule. He is a mystic and a humanist at the same time, certainly a remarkable phenomenon in a man with such staunch faith in the life which is believed to lie beyond death, and looking forward to death for his final liberation from the bonds of human imperfections and worldly transitoriness.

Rabindranath Tagore's philosophy of life seems to have, not one, but two faces. If it has anchored itself in the faith in an eternal existence transcending death, it has not fastened itself less exultantly to the existence which will be cut off inexorably by the unexplained mystery of death. For all the strength of his faith in an after-life, he feels as poignantly as any blind, clinging, trusting child of mother earth could that life, her supreme gift, so far as the individual's memory is concerned, comes but once to man; he is certainly unable to get over the fact that within the bounds of one birth and one death alone are we given the sole unbroken stretch of consciousness in which we can see and feel achievement added to achievement, experience enriching previous experience, tint laid on tint; perhaps he is also not unmoved by the thought that the joy arising out of the expectation of life after death or rebirth could at the utmost be an achievement in faith but could never be an achievement in experience

III

MY knowledge of the history of mysticism is too imperfect for me to be able to say whether it has any parallels to offer to Rabindranath's paradox of being a mystic and worshipper of mother earth at the same time. Abbé Brémond, who has written with truth and justice about the similarities and dissimilarities between the poetic and the religious experience would perhaps have said that there was nothing startling in this inasmuch as it was only an extension of the paradox of Rabindranath's being a poet. Abbé Brémond admits similarity between the mystical and the poetical activity; in fact, he has given one of the best expositions of the inter-connectedness of the two; but at the same time he holds poetic activity to be only a roughly sketched, confused, and imperfect reproduction of mystical activity, so that the poet, according to him, is only a mystic by fits and starts and a mystic who has missed his vocation.

Perhaps the point would become clearer if I were to quote the words of an eminent theologian whom Brémond consulted. "You are right," the theologian wrote to Brémond, "in saying that poetry is a kind of prayer which does not really pray which imitates prayer; which employing some of the resources of the deep-seated soul—in which lies its excellence—which gives at a discount an *ersatz* of the religious solution. Good as a medium and as a bait in derationalizing *Animus*, poetry awakens and stimulates *Anima* but it remains good only in so far as it gives rise to the nostalgia for an absolute satisfaction of which it remains radically incapable; it becomes even dangerous in proportion as it comes to regard itself as perfect and independent and as attaining the object at once ideal and real which only religion can have a foreboding of, anticipate and give."

Can one extend this diagnosis and say that, not simply as a poet but as a philosopher as well, Rabindranath's universally admitted mysticism is not the real thing, but only a make-believe or a substitute and that it is nothing more than a projection of his humanism and earth-loving credo? It requires a scholar and an expert in the history of religious thought to answer that question, into which a dabbler in literary criticism had better not allow himself to be trapped unawares. But in the history of Hindu religious creeds, and particularly in certain folk cults which have held sway among the Indian masses in the last three or four centuries, there is evidence of an in-

tense faith in supra-mundane life going hand in hand with a child-like clinging to mortal existence. Even mendicants with their back turned on the world and going about with the beggar's bowl have sung with poignant conviction about the value of life and with equally poignant regret of its transience. In Rabindranath's combined mysticism and humanism one often detects insistent notes of these folk creeds. Anyway, the fact remains that in him the consciousness of the supra-mundane and the mundane life is almost equally balanced, and that the ever present sense of annihilation, albeit bodily to his thinking, has led him to set a value on life which no epicure could match.

IV

ABOVE everything else, this attitude has cast its indelible stamp on his life and life-work, so that without it one finds no key to the variety of his interests and activities. He values life, and he feels equally strongly its evanescence. Therefore, he has turned to life and the world with all the strength of his immense vitality to garner his harvest while it was day. If he has been selective in this quest, he has been so only in his preferences and not in *à priori* exclusions. He has felt his way forward to each kind of activity that could contribute to the sum-total of his being almost as instinctively as a creeper spreads out its tendrils towards the sun. Or rather, to vary the metaphor, he has gone about much as a dowser does with his wand and has struck at each source of life-giving water that he has come upon In all the wide range of his activities extending from poetry to politics he has spread out the tentacles of his consciousness all around him till the whole world seemed to be of the very stuff of his own being.

There is something elemental and stark and even ferocious, in this quest for self-hood. Such a manifestation of individualism reminds one of a cycle of plant life :

"Consider a plant—its life—how a seed faln to ground
sucketh in moisture for its germinating cells,
and as it sucketh swelleth, til it burst its case
and thrusting its roots downward and spreading them wide
taketh tenure of the soil, and from ev'ry raindrop
on its dribbling passage to replenish the springs
plundereth the freighted salt, while it pricketh upright
with its flagstaff o'erhead for a place in the sun,
anon to disengage buds that in tender leaves
unfolding may inhale provender of the ambient air:
and, tentacles or tendrils, they search not blindly
but each one headeth straightly for its readiest prey;
and haply, if the seed be faln in a place of darkness
roof'd in by men—if ther should be any ray or gleam
how faint soe'er, 'twil crane and reach its pallid stalk
into the crevice, pushing ev'n to disrupt the stones."

This quotation will recall to the readers of Rabindranath the revealing passage in one of his letters in which he compared himself to a plant on the newly emerging earth.

> "I can very well remember, ages ago when the young earth had just raised her head from her sea-bath and was greeting that day's just risen sun, I, coming from where no one knows and carried on the crest of the first wave of life, had shot up as a plant in her virgin soil. Then it was that on this earth I first drank the light of the sun with my entire body under the blue sky ; I waved myself like a little child in blind but glad stirrings of life ; I hugged my earthy mother with all my roots and took my fill ; my flowers blossomed and my shoots came forth in unreasoning delight."

It was not enough for Rabindranath's love of the earthly existence that he should absorb the world into himself through the senses ; he wanted a closer contiguity. That contiguity, to his thinking, could be realized only through physical contact, and only such physical contact as plants have with the earth. It is not surprising that such passionate attachment to the earth should seek to assimilate all that there is assimilable in this world ; it could be also expected to lead Rabindranath to attempt something more ambitious,—to seek to save his individuality from the vast welter of the collective existence of man, to make it an epitome of human life, a perfect microcosm in the macrocosm.

In this again we meet the contradiction noticed above between the mystic and the humanist Rabindranath. The true mystic thinks little of individuality and still less of worldly permanence. His existence is not separative but unitive, his trend is towards generalization and not individualization. Believing himself to be merged in the absolute, he has little use for those particular and relative manifestations which, piled layer on layer, constitute the existence of the individualist. To the mystic "ceaseless quest for the diuturnity of our memories into present considerations seems a vanity almost out of date, and superannuated piece of folly," not only because it is a contradiction to his beliefs to try to extend an existence whose death he daily prays for but also because for him true duration is not a relative property of matter, but an absolute thing, "which maketh pyramids pillars of snow and all that's past a moment."

V

BE that as it may, we have to take Rabindranath as he is, and cannot cast him into a pre-set mould, and that fact has a profound significance for a proper understanding of his artistic activity. As has already been said, the entire body of his artistic, intellectual, and even social activities is part of his quest for self-hood. He is not one of those magic master-minds in painting, music or poetry, who throw aside gems of art for man's regard or disregard in response to an urge they cannot help and once it is obeyed have no further pre-occupation with the result. Cézanne, for example, put away his canvases once they were finished and never again looked at them. Rabindranath, one should imagine, proceeds on quite another line, and exactly remembers what mile-stone each of his works forms

in the growth of his personality. This is not an uncommon happening with men of letters, whose studies go to form a personality no less than a book. In fact, Mark Pattison used to maintain that the most important product of study was not the book but the man. This attitude is, however, rarer among creative artists. But among these relatively rare instances must be included the case of Rabindranath Tagore.

A man whose creative and critical activity (with whatever it may be concerned—things of the mind or practical endeavour) merges into the process of creating and forming himself, and whose humanism is as wide as Rabindranath's, is bound to be both versatile and eclectic. Rabindranath's versatility and eclecticism are amazing. Not only do they include activities rarely ever undertaken by a single individual, but they also embrace emotional, ethical, and intellectual shades assumed to be mutually destructive or contradictory. Rabindranath's liberalism has not prevented him from giving one of the best expositions of Hindu conservatism from a philosophical standpoint, although his contempt for Hindu conservatism as popularly practised is well-known. He has felt alternately drawn towards asceticism and sensuous enjoyment of life, towards nationalism and internationalism, towards extreme sophistication as well as folk cultures and beliefs. In certain of his short stories, he has shown himself to be in perfect imaginative contact with certain types of life with which one should least have expected him to be familiar—for example, the life of the urban middle-class, on the one hand when at its most staid and commonplace and on the other when touched with internal corruption and decay.

VI

IF versatility is one side of Rabindranath's quest for self-hood, it has another characteristic aspect in the fact that he has all through his life been a rebel. He has received his share of loyal, and even fanatical, devotion from a small band of followers, but more often he has voyaged alone, in strange silences with his soul. One can go further and say that he has had to fight his way out through an environment stonily unsympathetic when it was not consciously hostile, so that with perfectly good a title he can call his life *My Struggle*. In fairness to his countrymen, let us however add that the bitterness of Rabindranath's struggle is owing as much to his own intractability as to commonplaceness, stupidity and lack of imagination in the society in which he was born and had to work.

"Oui, l'œuvre sort plus belle
D'une forme au travail
Rebelle,
Vers, marbre, onyx, émail

Comme un soulier trop grand,
Du mode
Que tout pied quitte et prend!
* * * *
Sculpte, lime, ciselle;
Que ton rêve flottant
Se scelle
Dans le bloc résistant!"

I do not know whether Rabindranath has ever thought of these lines of Théophile Gautier in connexion with his poetic craft, but in shaping his life and personality he has certainly proceeded in a manner whose principle the lines sum up with perfect justice. He has not rhymed handily and obviously with his fellows, nor has he put his feet in shoes which were a little too large, so that every foot could get into and get out of them.

Modern psychology tells us that the desire to rise above one's environment and to achieve personal significance is universal, no one is above or below it. But here the difference in degree is as big as the difference in kind, and the common man's search for self-hood bears no proportion, qualitatively and quantitatively, to Rabindranath's. So uncompromising, so idealistic, and so demoniac in a sense has he been that he has not only driven himself hard but has also exasperated, distraughted, and trodden on the toes of the men among whom he has had to work. Naturally, they are almost as sore as he himself is, and as a result at times both malevolent and malicious

Rabindranath's struggle against his environment started with his school days, and has continued Any other man would certainly have been left morally scarred by it. It is not that there is not in Rabindranath, too, a strain of disillusioned bitterness Certain sentences in his prose writings rasp out a lack of charity about his fellow-countrymen, which hurts and rankles. But these rare and passing moods do not mar the permanent serenity, courage, and magnanimity of his nature. That is due above everything else to the internal discipline of the man which has tempered an almost morbidly sensitive nature to an unwavering contemplation of life, and tamed his inherently anti-social philosophy of life, into a recognition of the existence and needs of other men. For one less chastened, a sensibility like Rabindranath's would have been a source of untold agonies. No one can say that Rabindranath has not suffered ; it is all too evident in his life and works, but for all that he has gone through he has not succumbed to bitterness or frivolity, the two refuges of weak characters.

Truly, Rabindranath's anger is not for us, however much we have misunderstood him. He will not, like Dante, sleep in far-away Ravenna because Florence, his mother city, has been ungrateful His indignation, his intolerance, his pen, his sword, are reserved for a higher crusade. Against tyranny and obscurantism of every sort he has nursed and nurses a hatred which resembles the implacability of a child made to suffer humiliation in silent un-understood anguish. It is these that he has hated with all the strength of his masculine hatred. It is only against them that he has all along been the great rebel. But no, that word does him an injustice, he has been more than a rebel, he has been a fighter, and a fighter without fear and without reproach.

—From a photo taken at Santiniketan 1930

RABINDRANATH as A TEACHER

By

NARESH CHANDRA SENGUPTA

I

WHEN we talk of education we think of the school and the word teacher calls up the picture of a somewhat severe gentleman sitting at a desk and talking to youngsters in the forms

Yet everybody knows that there is more education than we get at schools and more teachers than we know or acknowledge All our life from birth to death is in a sense one long drawn course of education and teachers are all around us They are young and old learned and ignorant high placed and lowly,– from all men we come across we learn some thing

But among all these myriads of teachers who educate us there are some men who stand out above others—men of letters for instance The books they write teach us—not merely text books designed for the purpose of teaching but all books And among men of letters there are just a few who come only once in a time and who by their work leave such an impression upon the making of the mind of the generations who come after them that they can well be called the makers and teachers of whole generations and some of them of the whole of mankind

Rabindranath was born to be such a teacher His long life is in fact a long course of instruction of his people and it would be no exaggeration to say that to more than one generation of Bengalis he stands in the position of a great teacher who has taught them to learn a beautiful language which he has made and to use it for their own purposes he has instructed them in the finer shades of poetic art which before him were unknown in Bengali literature and by learning to appreciate which Bengali culture has assuredly taken a big step forward in poetic education he has opened up to us beauties of nature in a way in which no one else before him did, he has taught us to know life and to laugh and weep at its infinite varieties which he has depicted for us he has given us a philosophy of life which is sublime and elevating and given us a training in national and individual self respect which has had a defi-

nite effect in raising the moral stature of the generations who have been nursed on the literature of Rabindranath.

By his voluminous contributions to the literature of Bengal and his great personality standing out against his contemporaries, he has thus had a much greater share in moulding the lives of the Bengalis of to-day than any other single man, so that it may be said with justice that a good part of the intellectual and moral equipment of the mind of Bengal to-day owes its source to him. He has been a teacher in a much bigger sense than the school master can ever aspire to be. But, perhaps at least for a great part of his life he was unconscious of his role as a teacher or of the tremendous success he was destined to have as such. For he started his life as—and for a pretty long time continued to believe himself to be—a mere worshipper of beauty, a singer of songs, whose task would be done if he could only make the life of his reader a little brighter and a little more joyous than it had been before. It was only rather late in life apparently that he assumed the conscious role of a teacher and wielded his influence as such with telling effect.

Reading his earlier poems one feels that he understood himself to be a runaway from life—one who more or less played with his life and merely made merry with his pipe. A time came, however, as indicated in his poem— 'এবার ফিরাও মোরে' —when he turned back from what he thought to be a more or less useless life and definitely undertook the task of teaching men to live a fuller, nobler and a more effective life.

It was, perhaps, in one of those moods—when, unconscious of his great role as a teacher in a fuller sense, he was filled with the idea of the futility of a mere poet's life —that he conceived the idea of standing out as a teacher in a more direct but a far narrower sense. He conceived that he could give the boys of Bengal much better and healthier education on much more improved methods than the education that was given in the schools of those days; and at Santiniketan, where his great father had built an *Asram*, he conceived the idea of the school which would be different from the types of schools in Bengal in those days.

II

RABINDRANATH'S own education was very unorthodox. He never took kindly to the shackles of school discipline but revelled in freedom both in the choice of his reading and in the mode of his life. He loved to be in communion with Nature and imbibed a great deal from such communion which has enriched the literature that he has given us. As a teacher Rabindranath, therefore, naturally preferred the modern ideas of freedom in education and believed more in instruction in intimate contact with Nature rather than in the cribbed school rooms.

Ideals naturally played a far greater part in the conception and development of this school than they do in most educational institutions of this country. Informed by his own experience of the futility and cramping influence of common school education and by his knowledge of educational ideals of the past and present in India and the world, and inspired by the thought of the lessons of ancient India—where young pupils repaired in early youth and spent years in a happy pursuit of learning in healthy and invigorating environments, their whole life in charge of their teacher—and by the life and work of educational idealists like Pestalozzi, Rabindranath's fine poetic imagination wove round these thoughts a great ideal of an institution where a full and complete education would be given to his pupils. The pupils like the *Brahmacharis* of the past would live in the Asram, free of the turmoil of busy town life, free of unhealthy environments, and free to develop their character and individuality in an atmosphere of academic, artistic and spiritual life. Their teacher would take charge of their whole life during the years at school and guide and mould it and help to make it grow into a healthy, beautiful and useful one. Instruction would be given to each on most up-to-date methods, and, instead of an atmosphere of gloom and irksome regulation, there would prevail an atmosphere of joy and freedom in which, under the influence of the great personality of their teacher, they would imbibe, with knowledge, a fine artistic mind and temper full of joy of life and joy in nature and society of their fellow men.

Ideals like these went to the make-up of the life of the school to which Rabindranath had devoted his life and which he has led to an astonishing degree of success.

But the actual success he achieved in the instruction given in the school is not a complete measure of the value of his ideas. His idealism was higher than anything he could achieve within the limitations under which he had to work. Besides, education is a whole-time job to the man who wants to be a teacher, and he can hardly afford to be anything else. His pupils have to be, if not the sole, certainly the principal interest in his life. The multifarious activities in which Rabindranath gradually found himself occupied left him comparatively little time for that absolute and single-minded devotion to the work of teaching in the school that was needed to enable him to achieve a fuller realisation of his ideas.

Luckily, however, Rabindranath was blessed with assistants of no mean merit in his great work. Other teachers than Rabindranath himself had outstanding personalities and made a definite mark upon the pupils. Besides, the intimate contact with a man of the genius and calibre of Rabindranath was itself an educative factor of no small value. His school, therefore, was not an inconsiderable success and apart from what results it could show in the sphere of the intellectual development of its pupils, it developed a striking individuality of its own in the domain of Art. The work of the pupils of Santiniketan in various departments of art is well known, and it has not only made a place for itself in the public esteem but has greatly influenced the artistic

culture of Bengal and India as a whole.

With the development of the school and partly as a result of the contacts that Rabindranath made in his several tours to the West and the East, Rabindranath conceived the idea of a new type of university, which would be not only a centre of high culture in itself but would be a meeting ground of the cultures of the whole world. This idea he has tried to embody in the Visva-Bharati which has attracted to his provincial sanctum the best talents from all parts of the world.

III

RABINDRANATH'S interest in the education of the people of Bengal and of his discontent with the cramping methods of education followed in schools and colleges was not a sudden growth. It had grown on him from his youth and he had taken more than one occasion in the early years of this century to ventilate his ideas of what education ought to be, notably during the time that he was the editor of the *Banga-Darshan*.

When in 1906 in connection with the agitation against the partition of Bengal a great wave of nationalism passed over the province and showed itself in dissatisfaction with almost everything which the British connection had brought to the country, one of the manifestations of that spirit was a revulsion against Calcutta University. The first movement was one started by the students for the boycott of the Calcutta University. Agitation had carried that idea to a high emotional pitch, and it seemed that the University and its colleges ran a great risk of being abandoned by the students.

Some of the more thoughtful amongst the leaders of those days took in hand this movement, which started as a purely destructive one, and tried to lead it along constructive channels. They conceived the idea of starting a national university—a university which would strike a new path of its own leaving the old rut of the State universities.

With this idea Rabindranath found himself in great sympathy. It seemed to promise to him the fulfilment of his own dreams of university education as it ought to be. He, therefore, readily joined the small band of thinkers who busied themselves in working out the conception of a national university. He addressed meetings and spoke of his own ideals, and by all accounts he was going to take a great active part in the formation and development of a national university.

But an atmosphere of political turmoil is possibly the worst under which a true university can be moulded. The scheme for the national university had not gone very far when heated controversies arose ; and, between men each of whom had his own educational or political ideas to forward and those who had control of the financial resources which alone could bring a university into existence, the idea of a national university made its weary way through acrid controversies with results very short of the ideals of a national university, as Rabindranath would conceive it. When the project ultimately took its shape in the form of the National Council of Education, a great deal of the political ferment among the students which had given the first impetus to the idea had died out. Educational ideals of men like Rabindranath Tagore found little in the finished product to inspire them. Thus, though Rabindranath allowed himself to be associated with the institution at its start, he shortly ceased to take any further interest in it.

After that, his educational ideals and activities were strictly confined to his school at Santiniketan to which he was then able to give more undivided attention than later. Shortly afterwards, however, Rabindranath was dragged out of his seclusion into the open when there was a sudden accession of world-wide appreciation for his work leading ultimately to the Nobel Prize. Great as was the value of this popularity and appreciation to himself and his people and tremendous as was the educative influence which it has enabled him to exercise upon the people of the world as a man of letters, it naturally tended in a certain measure to diminish the volume of his direct educational efforts. Yet, on the other hand, it brought to the institution which he had started at Santiniketan an amount of support, sympathy and inspiration from the whole world that, under the inspiring guidance of his ideas and with such direct assistance that he was able to give to it, it has now grown into a university which has an individuality of its own, very different from that of other educational institutions.

The direct educational efforts of Rabindranath, great as they have been compared with the achievements of lesser men, are however, comparatively insignificant by the side of the far far greater work that he has done in building up the mind and culture of more than one generation of men, primarily in Bengal and indirectly all over the world, by merely being a great poet and a great all-round man of letters.

"HEWERS OF TEXTS AND DRAWERS OF BOOK-LEARNING"

"LET me say clearly that I have no distrust of any culture because of its foreign character. On the contrary, I believe that the shock of such extraneous forces is necessary for the vitality of our intellectual nature.

"What I object to is the artificial arrangement by which foreign education tends to occupy all the space of our national mind, and thus kills or hampers the great opportunity for the creation of a new thought-power by a new combination of truths. It is this which makes me urge that all the elements in our own culture have to be strengthened, not to resist the Western culture, but truly to accept and assimilate it; to use for our sustenance, not as our burden; to get mastery over this culture, and not to live on its skirts as the hewers of texts and drawers of book-learning."

—*Rabindranath Tagore*

My First Impressions of RABINDRANATH

By

PRAMATHA CHAUDHURI

BROWNING in one of his poems asks: 'Did you see Shelley plain?"—I did see Rabindranath 'plain', for the first time, fifty-five years ago. His name at the time was familiar to me, but not his writings. In the summer of 1886 he came to see my late brother, Ashutosh Chaudhuri, who had just returned from England. We were living in Krishnagar at the time, and it was in our house there, that I first saw him.

My brother and Rabindranath started for England in the same boat in 1881, and it was as fellow-passengers that they came to know each other. Rabindranath was accompanied by his nephew Satyaprasad Ganguly, and they both came back from Madras for some reason or other; while my brother proceeded to England. But in these few days my brother had become an intimate friend of Rabindranath. That is why the Poet came to Krishnagar, and I had the opportunity of seeing him. I was then in my teens, and Rabindranath was twenty-five.

I was immensely impressed by his appearance. From my boyhood I was unusually sensitive to physical beauty. When I saw him, I felt that I had never before set eyes on a handsomer man. He was fair and tall, and had a splendid figure and a remarkably beautiful face. His eyes were large, his nose was straight and his forehead broad and high. Such a combination of strength and beauty I had never seen before. I also noticed that his whole person was informed with exuberant vitality.

On this occasion I had no opportunity of talking to him. I had just recovered from a serious illness, and with my shaven head and emaciated face, I did not like to appear before strangers. Even if I had been my usual self, I would not have dared to engage in conversation with him. But I heard Rabindranath talk with my brother and his companions from behind the purdah; and I was so deeply impressed by the cleverness and wit of his talk, that I felt myself a pigmy before this gigantic intellect. The coruscations of his spirit were as brilliant as they were effortless. I was overjoyed to find that he never used Calcutta jargon, that his language was as light as it was bright, and as refined as it was captivating. He impressed me from the very first as a superman, both in body and mind. I am not prone to admiration by temperament, but Rabindranath compels one's admiration. His personality is so overwhelmingly superior to that of the average man. We all pass in the crowd, but not he.

II

I AM talking of my original impression, which is still vivid in my memory. And the public has since discovered that my instinctive appreciation of his greatness was not unfounded.

I have known him rather intimately for fifty-five years, and have had no occasion to change my opinion. My impression of Rabindranath's greatness was akin to perception. It was born of half-intuition and half-observation. In a word, it was a revelation.

I have said that at that time I was not familiar with his writings. That does not mean that I had not read a line written by him. I came to Calcutta when I was a little over thirteen and stayed here for nearly three years. I had read his "*Bhagnahridaya*" (Broken-heart) when I was a student of the Hare School, and I must confess that the book did not appeal to me. It struck me as a monotonous and sentimental *Kabya* (poetry), although it contained one magnificent passage about the starry heavens. No Bengali poet had hitherto portrayed such a vision of the infinite and its awe-inspiring character. It was as new as it was great. I speak from memory, and I hope it has not played me false.

Later in life I met in Leopardi a poem on the same theme, of great beauty and power. But in those days this Italian poet was unknown to me, and I believe Rabindranath was also wholly ignorant of Leopardi's poems.

I mention these facts to show that I first came to know Rabindranath in flesh and blood and not through his writings.

III

TODAY I shall refrain from saying anything about Rabindranath's poetic genius. I began by saying that I saw Rabindranath plain, and I want to confine my mind, as far as possible, to this first impression. People may accuse me of saying more about myself than the Poet. But that cannot be helped. I can only relate my own impressions, and not those of others.

I will mention only one other thing. At that time I also heard Rabindranath sing. In those days I was very fond of music, and used to associate with people who could sing and handle Indian musical instruments; and I knew the names of many *Ragas* and *Raginis*, and could also recognise them when sung or played.

Rabindranath sang a few songs, —a *tuppa* of Nidhoo Babu, one of his own recently-composed songs, and a Hindi song. His voice took me by surprise. It was a powerful tenor voice of extraordinary range. His style of singing was also quite different from that of others. It was practically free from interminable trills, and I felt that he had

Reminiscences of RABINDRANATH

By

INDIRA-DEVI CHAUDHURI

I

REQUESTS for reminiscences of the Poet come pouring in from all sides. Every periodical—whether daily, weekly, monthly or quarterly—is having, or has had, its Special Rabindra Number, replete with articles from various writers on various aspects of his genius; and the only fear is lest they should unwittingly repeat themselves in the process. How difficult it must be to say different things at different times on one and the same subject. Though I have heard it said that once when Rabindranath was in Bombay, Sarojini Naidu presided at four meetings held in his honour, and spoke about him from different points of view each time. But then, there is only one Sarojini!

Memory, that fickle maid, (I suppose she is feminine) refuses to be coerced. If you jog her, she jibs; if you woo her, she flies; if you let her go, she browses. It is when you least expect it that scenes from the past live again in your imagination. But print and page wait for no man,—or woman either; so it is either now or never. It would seem in this case that even age is an advantage, as the older you grow the more memories you are supposed to store up.

Unfortunately, all these celebrations and contributions are overcast with the gloom of the Poet's illness, and we can only hope and pray that his splendid constitution and exuberant vitality will once more drag him and us out of the Slough of Despond, which is so foreign to his nature. *'Ananda'* has been his watchword throughout his life. May *'Ananda'* dwell with him evermore.

II

THIS much is true, that few people are now living, who have been so closely associated with Rabindranath since childhood as we have. He accompanied my parents to England, and some of our earliest memories are connected with that country, though they have become pretty hazy, owing to the distance of time. Where are they gone, the old familiar faces of those who were our constant companions at that time? Some are dead, some are living, but separated by a death-in-life estrangement that is almost worse. Verily, as my uncle says in one of his songs, even in this life we pass through many transmigrations.

All that I can now recollect of England, apart from personal memories, are the songs my uncle used to sing to us, of which I have spoken elsewhere. In fact, music runs like a thread of gold through all the past, and it is difficult to keep away from the subject. I remember my uncle accompanied us on the return trip home, after a stay in England of about two-and-a-half years, and such a severe storm arose one day, that rails had to be put round the dinner-table to prevent the crockery from falling and smashing. But children are supposed to be immune from seasickness. I also remember singing "The Last Rose of Summer" to the Captain, when all the other passengers were down,—but whether that was on this occasion or another, I am not quite sure. Fancy remembering that the names of the boats we travelled by were the *Oxus* and *Meinam* (probably belonging to the P. & O. Co.), a minor detail which only serves to illustrate the vagaries of memory. Are those leviathans still in existence, I wonder?

III

THOSE who are fond of children have to put up with a lot, as everyone knows; and presumably, the amount of their long-suffering and patience is the standard by which their affection is tested. We must have plagued my uncle a good deal in those days, but I dont remember his ever getting vexed with us. Probably we were not so extraordinarily naughty either, compared to the spoilt children one sees now-a-days!

When in Calcutta, we never stayed for long in the family house at Jorasanko; but when we did, we usually occupied the rooms on the second floor, which now belong to Rabindranath. On one such occasion I remember how cut up he was at the death of my uncle Jyotirindra's wife, of whom he was very fond and who was very fond of us too. The story goes that she was so simple-minded, that when one of her favourite nephews told her he had passed a certain examination in the "fourth division", she believed him implicitly and was about to arrange a feast in his honour, when some kind friend exposed the trick that had been played upon her! They were very fond of pets, and I remember the big cages full of birds that used to stand in the verandah, and the man who brought insects to cater for them, and the little pocket monkey that seemed to have a special aversion for little girls. I recall another occasion when all the ladies of the family were in a high state of excitement because Bankim Babu (Chatterjee) was coming to visit my uncles, and how they made frantic efforts to peep at the great man from behind the shutters; which shows how greedily they must have devoured his novels when they first came out. Has it been possible for the succeeding generation to capture that first fine rapture amidst the plethora of modern novels, as of everything else?

As a side issue, I suddenly remember our old *pundit*, Hem-

The Poet with his niece Indira Devi, Mrs. P. Chaudhuri, and his nephew the late Surendranath Tagore: 1886.

chandra Vidyaratna of the *Adi* Samaj, who came to teach us Sanskrit. He was a typical Brahmin *pundit* to look at, though somewhat stout; but as we kept nodding our sleepy heads most of the time, our proficiency in that divine language has remained somewhat limited. Also, his pronunciation (in the intervals of taking snuff) was most atrocious (may his soul rest in peace)! The Tagore brothers have always been great sticklers for correct Sanskrit pronunciation, and their voices also were naturally powerful and well-modulated,—ideal voices for singing, reciting and play-acting, in all of which they, especially Rabindranath, excelled. Hence, together with music, the drama also occupies a large share in our childhood's memories.

IV

MY UNCLE, of course, had his own friends (though not many) and his own literary societies, to some of which I accompanied him. His tall, handsome figure crowned with long curly locks (at about the age of twenty-five), is familiar to the Bengali general public by now, thanks to there being so many pictures of him at all ages. How wonderfully well he takes, and what an exhibition could be held of his photographs alone! And what a cruel fate it is that has now shorn his magnificent head of its splendour, and deprived his glorious senses of their keenness!

He often accompanied us on our annual visits to my father in Bombay, and it was from Karwar, near Goa, that he came back home to get married. We lived mostly in different rented houses in the southern quarter of Calcutta, and my uncle's family often came and stayed with us. In one such house the opera *Mayar Khela* was composed; in another *Visarjan*

The Poet's second brother the late Satyendranath Tagore and his wife Jnanadanandini Devi. With them and their children—Indira Devi and Surendranath—Rabindranath spent two-and-a-half years in England.

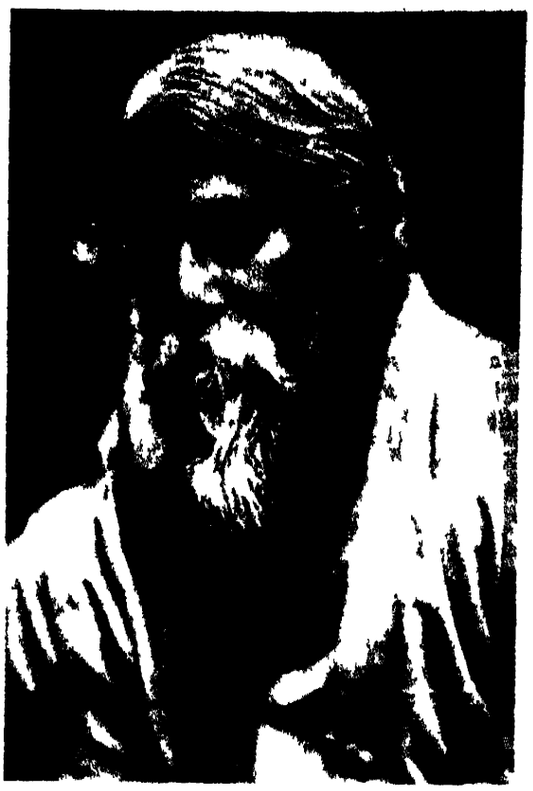
was read out to us and *Raja-o-Rani* staged by members of the family. The *Kheyal Khata* was another great institution, in which all and sundry were invited to set down their random thoughts. There are many entries in this *khata* in my uncle's beautiful handwriting, which now alas! has become the shaky ghost of its former self. Another family album which would, I am sure, prove of great general interest is the series of picture-riddles in which correspondence was regularly carried on for a long time between Simla and Calcutta.. It is a lasting shame and regret that one book from each set is missing. My uncle always had a taste for drawing, now I come to think of it; but it was overshadowed by the sister arts and has only lately come into its own.

What else is there to say, that has not been said already by others, or by himself in his own inimitable language?—As my mother used to say, the Tagore brothers have written their own autobiographies and left nothing to be added. All that can be added is the fervent wish that his life long *Sadhana* will not have been in vain, and that his countrymen will not allow his beloved *Visva-Bharati* to languish for want of support, but will strive to keep alive its traditions and atmosphere and ideals as far as possible, so that the desire of his heart and the ambition of his life may be fulfilled

---

MY FIRST IMPRESSIONS OF RABINDRANATH

—*Continued from page 5*



cultivated the *Dhrupad* style of singing.

Now-a-days his songs are constantly discussed. That he does not care for the classical style of singing *Kheyal* and *Tuppa*, is obvious. Vocal acrobatics are repugnant to him. But if *Dhrupad* and *Thumri* are considered to be classical, then his songs can also be called classical. Remember that I have used the term "classical". That this style is absolutely different from the new-fangled styles of *Kheyal* and *Tuppa*, must be obvious to all lovers of Indian music. *Bhajans* are never sung in the manner of *Kheyal* and *Tuppa*, because in *Bhajan* the words have a value of their own. Rabindranath's songs are full of significant words, and the *Dhrupad* style lends itself to their singing. Like his whole personality, his songs are characterised by indomitable vitality.

RABINDRANATH TAGORE AT DRESDEN

By

RAMANANDA CHATTERJEE

A photo taken in Germany in 1926

IN 1926 the League of Nations had invited me to visit Geneva in order to have direct personal knowledge of its work, including that of its International Labour Organization as also to be present at the meetings of the League of Nations Assembly and the League Council that year. After staying at Geneva for as many days in September 1926 as I thought necessary I left for Berlin.

It takes about 22 hours to reach Berlin from Geneva. I left the latter town one morning at about 11, and reached Berlin the next morning at about 9. On the day of my arrival which was a Saturday, Rabindranath Tagore who was lecturing in various towns of Germany was not at Berlin. He was to lecture and recite poems at Dresden on the Monday following, and his dramatic piece *The Post Office* was also to be played there in its German version. So I started for that town in the morning in the company of Mrs. Rathindranath Tagore and Mr. Arabinda Mohan Bose. Arriving there at about 1 P.M. we did not go at once to the hotel where the Poet was staying. He was to lecture in the evening and the play was to come off after the lecture. So we wanted to see the town first. It is an old town, the capital of Saxony, situated in a charming valley on the Elbe. It occupies both banks of the river, the parts of the town on the left and right banks being connected by several bridges, of which the Albert Bridge is a masterpiece of architecture. On account of its architecture and splendid art collections, its artistic and educational reputation, public squares and gardens, and its charming promenade on the Elbe, Dresden had the reputation of being a pleasant and attractive town.

We finished our lunch at the railway station restaurant and from there we went to see the famous picture gallery which forms part of the famous Dresden museum. When we had almost reached its entrance a photographer armed with a camera, suddenly made his appearance and politely asked us to stand in front of him for a short while. I told him that I was not Tagore but only a countryman of his, though the lady in our company was Tagore's daughter-in-law. He snapped us—perhaps because there was a Hindu lady in our company clad in the graceful sari. I asked him to send me a print to my Berlin address with a bill, which he never did.

The picture gallery is one of the finest collections in Europe out of Italy and then (1926) contained about 240 paintings mainly by Italian and Flemish masters. Raphael's Sistine Madonna is considered the gem of the collection. It is kept in a separate room by itself in a sort of shrine, and is visited by large numbers of persons. The appreciation of some of them is purely aesthetic, but many almost adore it. Other masterpieces are Titian's 'Tribute Money' and Correggio's Magdalene' and 'Da Notte'. I did not like the fat nude women in some of the large Flemish paintings. I do not speak here as a puritan. The nude figures were not at all even artistic. As Mrs. Rathindranath Tagore is herself an accomplished artist, she would often draw my attention to some particularly fine specimen of painting. While we were going the round of the rooms, a German lady

accosted me and said in English: "May I have your permission to speak to you for a few minutes?" I replied at once: "Certainly you may. But you have made a mistake. I am not Rabindranath Tagore, I am only a countryman of his. The Hindu lady with us is Tagore's daughter-in-law and an accomplished artist." Thereupon she said, pointing to her companions, who also were persons of her sex: "I thought so, but *they* insisted that you were Tagore." No one who has seen Rabindranath Tagore can mistake anybody else for him. The reason why this aged Indian with a long grey beard was mistaken for the Poet by some persons at the Venice railway station, then in Geneva at the first meeting of the League of Nations Assembly in September, 1926, next twice at Dresden and, lastly, in the dining car of the railway train by which we were going from Prague to Vienna in the company of Tagore, who, being then indisposed, was resting in his compartment, was that it had become known all over the Continent that he was touring in Europe, and so it was thought by people who had never seen him or his portraits, now in this country or place, now in some other, that he was there. Owing to these mistakes the Poet once humorously proposed in Berlin that I should go to a certain town which he was to visit the next day and personate him and read out his lecture there!

From the picture-gallery we went to see the palace, an imposing building. But we were too late, it was then closed. But one part of it was open. It was the 'Green Vault', containing a valuable collection of precious stones, pearls and curios, and articles in gold, silver, ivory, etc. One of the care-takers pointed out to us some of the gems which had come from India. India has enriched many a country and town, but herself remains poor. The Public Library, the churches, the factories, etc., for which Dresden is famous, I had no time to see. I, however, saw an international exhibition of modern paintings which was then being held there. Artists from all countries of Europe and from America had sent their works there. I do not now remember whether Japan was represented, but India was not. The collection was very large. The paintings were, however, too modern for an old-fashioned man like myself, who, moreover, cannot pretend to be an art critic or connoisseur. Though Mrs. Tagore and I could appreciate a few works of art, I could not make out what real or imaginary objects or ideas many of them represented. I could only see that their colour scheme was striking. Within the same extensive area, there was also an international exhibition of gardening and of flowers. Models of many famous historical gardens, including at least one—I forget which—belonging to India, were kept there. And there were other models suggesting how gardens might be planned. As for the flowers, they were one mass of colour. From the exhibition grounds we went by tramcar to the hotel where the Poet was putting up. The car was overcrowded; many could have only standing room. But when I got into it, some of the passengers, including some girls, seeing an old man standing, stood up to make room for me. This politeness to an unknown old foreigner showed their good breeding.

II

WE WENT to the big hall where the Poet was to lecture, a few minutes before the time fixed. It could accommodate some three or four thousand persons. There was not a single unoccupied seat. Some persons had to remain standing. A large section of the audience consisted of women. Many men and women could understand what the Poet said in English. Others, the majority, understood the lecture from the translation in German delivered fluently in a sonorous voice by Pandit Tarachand Roy, Professor of Hindi in Berlin University. Each paragraph delivered by the Poet in English was followed by its German translation by the Pandit—a Punjabi gentleman. There were many reporters, about half being women. The reporter who was obviously taking down the whole lecture verbatim was a woman. After the lecture, the Poet recited many of his English and Bengali poems. The lecture and the recitations were frequently applauded. His poems, particularly those from *The Crescent Moon*, were highly appreciated, so much so that he had to recite more poems than he had originally intended to do. I remember that he had to recite "Defamation", quoted below from *The Crescent Moon*, at least twice, if not thrice:—

"Why are those tears in your eyes, my child?

How horrid of them to be always scolding you for nothing?

You have stained your fingers and face with ink while writing—is that why they call you dirty?

O, fie! Would they dare to call the full moon dirty because it has smudged its face with ink?

For every little trifle they blame you, my child. They are ready to find fault for nothing.

You tore your clothes while playing is that why they call you untidy?

O, fie! What would they call an autumn morning that smiles through its ragged clouds?

Take no heed of what they say to you, my child.

They make a long list of your misdeeds

Everybody knows how you love sweet things—is that why they call you greedy?

O, fie! What then would they call us who love you?"

III

WHEN the lecture and recitations were over, we made our way with difficulty through crowds of people to the theatre. On coming out of the hall where the Poet had lectured, we found the footpath so crowded that it took him and his companions some minutes to get into their cars, which had to move slowly through the streets thronged with crowds eager to have a look at him. When the conveyances reached the theatre, there was again some delay in entering it on account of the road and footpath in front of it being choked with jostling crowds. In

the theatre also there was not an inch of space left unoccupied. Considering the unfamiliarity of the subject and of the *dramatis personae*, the acting was creditable. Some of the dresses were rather funny. I do not, or I should not, say this in a fault-finding spirit; for Bengali male and female costumes are unfamiliar to Germans. I should rather congratulate the management of the theatre on having procured a palm-leaf umbrella for the Mōrol (মোড়ল), Bengali ornaments for Sudhā, the bamboo carrier of curds for the curd-seller, etc. The part of Amal, the sick boy, was played by a young actress. At Prague also, both in the Czech and German theatres, actresses played that part. Everywhere, the parts of the boys also who came to play with Amal, were played by actresses. Both in Germany and Czechoslovakia the Poet asked why actresses played these parts. He was told that boys could not be had there to play these parts. Boys of Amal's age could not enter into his feelings and sentiments. It is different in Bengal and with Bengalis living outside Bengal. Some Bengali boys have played the part of Amal to perfection. I do not know whether *The Post Office* has been staged anywhere in India by non-Bengalis. So I cannot say whether non-Bengali boys have played the part of Amal, and, if so, how. When the play was over, the proprietor or manager of the theatre read out a highly respectful and appreciative address to the Poet, who received an ovation also from the audience.

IV

IN the hotel where the Poet stayed, I found him, morning and evening, calmly and patiently autographing scores of some work or other of his, translated into German, and brought to him by strangers. The waiters and waiteresses of the hotel were not behindhand in respectfully bringing him such books for his signature—so cultured were even they. He had also to autograph packs of visiting cards of people quite unknown to him. So I suggested humorously that if he had fixed a fee for his autograph, he could have made some money: In reply he simply smiled and referred to the lack of business instinct in his mental make-up and to his failure to win the grace of the goddess Lakshmi.

It was not merely autograph-hunters who sought his favour. Artists of sorts were also in evidence. He yielded to the importunities of a portrait-painter who wanted only fifteen minutes' sitting to execute a pencil or crayon sketch of him. The first attempt of this artist was a failure. So, too, the second. The Poet gave him a third chance. When the man had finished, Rabindranath asked me, "Does it not look like Michael Madhusudan Dutt?" With that he autographed the portrait, which did indeed bear more resemblance to Madhusudan than to Rabindranath. Did the Poet's question imply, one wonders, that there was no harm in admitting a portrait to be his own *provided it was that of some poet!*

V

FROM Dresden the Poet came back to Berlin. His daughter-in-law, Mr. and Mrs. Prasanta Mahalanobis, Prof. Tarachand Roy, Mr. P. C. Lal and myself accompanied him. In the train Mrs. Mahalanobis (Rani Devi) regaled the Poet with chocolates, which he enjoyed like a child. I must admit that I, too, had my share. During the journey the Poet said many things, grave and gay, worth recording in permanent form; but I am sorry I did not take any notes. Their flavour would be lost, if I attempted to give their mere substance from memory in English translation. Nevertheless, I venture to record two observations of the Poet. The epithets "sujalām, suphalām, shasyashyāmalām", in the "Bande Mataram" song, said he, could not be so appropriately applied to Bengal or all other parts of India in all seasons as to many parts of Europe. I had seen only a few regions of that continent. Of them the Poet's remark appeared to me to be correct. We have to compete with the people of those parts so favoured by Nature. It is a difficult but not a hopeless task.

Another thing which the Poet told us was that a European editor of note, a friend of his, had told him that the people of Europe were generally ignorant of things Indian and Indian affairs. So if he could get some reliable and well-informed Indian writer to write on contemporary Indian events and problems with the world situation as their context, his contribution would be published, and European readers would be able easily to understand the state of things in India.

TAGORE AT BERLIN

BERLIN, June 3, 1921—Rabindranath Tagore, the Indian Poet, was here today. A beautiful specimen of the apostle, with flowing hair and beard. More inpressive in appearance than most of the conceptions of Christ. A slow, smooth, quiet voice, which rather charmed me. He has had a tremendous reception in Scandinavia and Germany. Helen [Lady D'Abernon, a daughter of Lord Rosebery, a former British Premier] went to one of his readings yesterday, but not only could not get into the room but could hardly get into the street,—so great was the crowd.

TAGORE says, he has talked with most of the intellectuals here and finds the German mind looking about for some new philosophy. . . . . He had been greatly impressed by the depth of hatred against the French. . . . . He gave it as his opinion that the result of the war had been a great coarsening of feeling throughout Europe, a great indifference to disorder and human suffering. To him all Europe is alike; one European is like another European; our culture and our characteristics are similar: no European realises how much identity there is nor how small are the divergencies between countries whose main stock-in-trade consists of nationalistic antipathies.

—From 'The Diary of Viscount D'Abernon', British Ambassador in Berlin from 1920-26, Vol. I, pp. 179-80.

RABINDRANATH

and

THE POLITICAL AWAKENING

in

INDIA

By

SURESH CHANDRA DEB

I

RABINDRANATH TAGORE has completed eighty years of life in this world. In an address delivered on the Bengalee New Year's Day (14th of April last) he indicated the change that had taken place both in his own attitude and in the psychology of his people during these years. Our poet has struck a note of pessimism, and well he might when he surveyed the betrayal of human hopes and the disruption of the order of things that for about two centuries had been holding together the various elements in this country. He has been a witness to this vast transformation in our country, to the various ways in which forces, conscious and unconscious, influences, personal and impersonal, alien State policy and national policy, have acted and reacted on one another, and sought to remake this country of four hundred millions of people in the pattern of their own imaginings.

Only three years before Rabindranath opened his eyes to the light of day in this land "gleaming with the golden glory of the sun", had been defeated the attempt of "the supporters of the lost cause of the Marhattas and the Moghuls" to regain control over the machinery of State from the hands of the British. But that attempt gave notice to the new rulers that they needed to be particularly careful in handling people who appeared to be as clay in the potter's hand. The generation of educated men, English-educated men, which preceded Rabindranath had begun to question and criticise British methods of administration and enlightenment introduced into India.

From certain points of view this class appeared to fulfil Macaulay's hopes that the system of education he was inaugurating would produce a race of men "Indian in blood and colour, but English in tastes, in opinions, in morals and in intellect", prepared to do battle on behalf of "Anglicism" as against the norms and forms of Eastern life. They rebelled against the traditional life and conduct of their countrymen, and appeared to concentrate all their criticism and condemnation on the crudities and morbidities in India's social and religious institutions. But this habit once acquired soon learns to spare no authority, sacred or profane. The socio-religious revolt in the Indian *intelligentsia* presaged an order and quality of mind that soon showed itself to be less disposed to regard an executive order as a decree of Providence, and appeared to be more conscious of positive rights secured by statutes and enforceable in law. As in other fields of activity and development so in this Raja Ram Mohun Roy was the pioneer in helping the evolution of a watchful and openly organised political life in India. Around him gathered men who fought for justice and equity in society and State, organised themselves for the redress of the grievances of their people and the assertion of their rights as citizens. At that time and for a long time after, these rights were spoken of as inhering in British citizenship. But soon they came to be claimed as "rights of men." Raja Ram Mohun Roy accepted British rule as a period of tutelage. But he could foresee a time when Britain would prefer or ought to prefer to have India 'as a willing province, an ally of the British Empire" than "troublesome and annoying as a determined enemy."

Among the co-workers and followers of Raja Ram Mohun Roy are to be found names which belonged to the Tagore family. Rabindranath's grandfather, Dwarka Nath Tagore, was one of them. His father, Devendra Nath Tagore who is known as "the Maharshi", was the first Secretary of the British Indian Association, an organization of the landlords in Bengal who were "notoriously outspoken and independent in their utterances", to quote the testimony of Sir Richard Temple, Lieutenant-Governor of Bengal during the seventies of the last century. Raj Narayan Basu, maternal grandfather of Aurobindo Ghosh, refers in his autobiography to a characteristic of Rabindranath's father—his avoidance of Europeans—which represented a phase in the evolution of Indian Nationalism:

> "Devendra Babu is . . . . averse to intimate relation with Europeans, because there existed a difference between him and Europeans in relation to the matters pertaining to India . . . . Principal Lobb of Krishnagore once wrote to a paper: 'The proud old man does not condescend to accept the praise of Europeans'."

It was into this inheritance in things material and things spiritual that Rabindranath was born. And as he grew in years he grew up in an atmosphere of returning self-respect that had began to vibrate in the Indian air, as the principles and practices of British administration stood revealed in their racial arrogance. By that time leaders of Indian Society had been able to throw off a part of their apologetic attitude with regard to their social and religious institutions. By the middle of the 19th century the "discovery of Sanskrit" by the West enabled her scholars to reconstruct Indian history and throw over the life and conduct of the Indian people a halo of dignity and wisdom in painful contrast to that of their present life. As an instance the founder of the Communist philosophy can be quoted as acknowledging the world's debt to ancient India when he spoke of her as "the source" of Europe's languages and religions, whose people represented "the type of the ancient German in the Jat and the type of the ancient Greek in the Brahmin". Karl Marx promised the "regeneration" of

স্বদেশী সমাজ

—Opening lines of a comprehensive scheme of socio-political reconstruction of Indian society drafted by Rabindranath in 1904 following his famous address on 'Swadeshi Samaj'. The scheme, which envisaged the organisation of the forces and resources of the country independent of all association with the bureaucratic administration and Britishers, was privately circulated.

IT was Rabindranath who had first preached the duty of eschewing all voluntary associations with official activities, and of applying ourselves to the organisation of our economic, social and educational life, independently of official help and control.

THOUGH the boycott of British goods, as a protest against the partition of Bengal, originated with others, and was adopted by the political leaders of the country, in public meeting assembled, in the Town Hall of Calcutta, it was Rabindranath who first propounded an elaborate scheme for the practical boycott of the administration to the farthest limits that the laws of the land allow us to do.

THE idea of the Rakhi Celebrations, first inaugurated on the 16th of October, 1905, the day when the partition was formally effected, as a standing protest against the official attempt to devide the Bengalee race, originated with Rabindranath.

BIPIN CHANDRA PAL
in his "Indian Nationalism :
Its Principles and Personalities"

that country whose "gentle natives" were "even in the most inferior classes, *plus pins et adroits que les Italiens* (subtler and cleverer than the Italians) who, notwithstanding their languor, have astonished the British officers by their bravery."

II

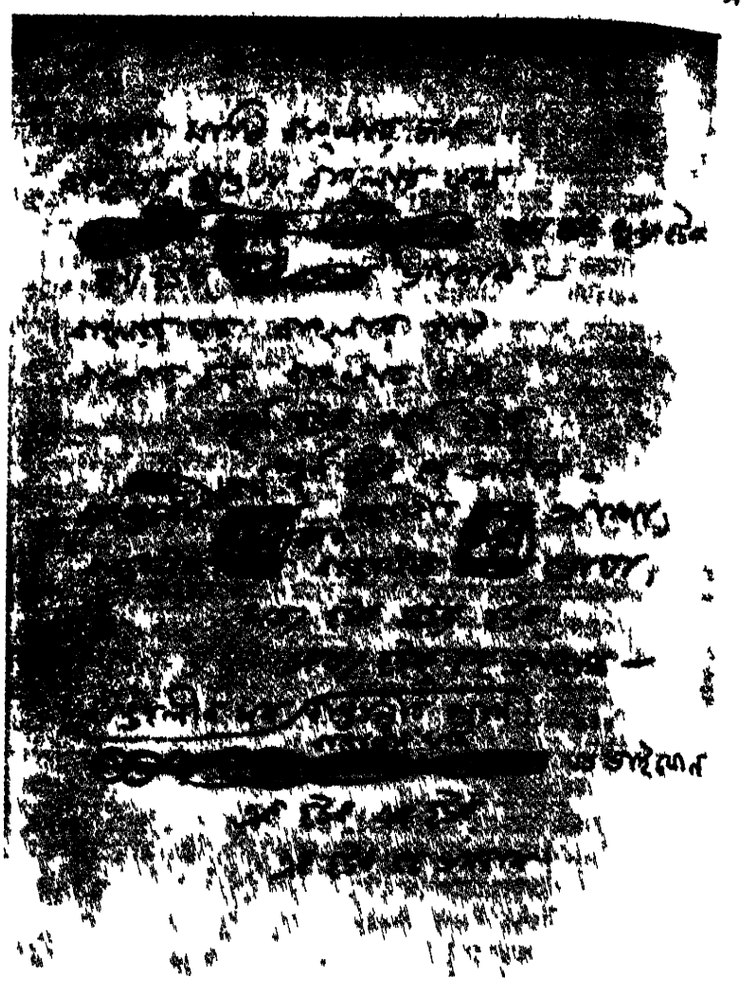
AS RABINDRANATH was growing into youth there appeared the *Bangadarshana* with Bankim Chandra as its guide and philosopher—Bankim Chandra who, as Bhagiratha, brought, by the strength of his *tapasya*, the flood of ideas and sentiments that made for strength and beauty in our national character. This was the imagery that Rabindranath himself used in paying a tribute of tears to the memory of this "morning star" of renaissance in Bengal. This estimate has been confirmed by history. The miracle of awakening during the seventies of the last century was not confined to Bengal alone. In Western India, at Poona, almost at the same time was started the *Nibandha-Mala* which did in Maharashtra what the *Bangadarshana* did in Bengal. Vishnu Sastri Chiplunkar was the power behind this institution—he who has been called "the father of Nationalism in Maharashtra" by Narasimha Chintamon Kelkar in his biography of Balwant Gangadhar Tilak. It is a curious phenomenon that "literary men" in India should be the first to challenge the ruling ideas of politics in India. These ideas may be summarised as follows. Britain had rescued India from anarchy, from social atrophy, from intellectual torpidity. India must accept Britain's tutelage if she hoped to have a fuller and more self-respecting life; her people must put themselves into the British Kindergarten out of which they would emerge better men, capable of ensuring ordered and civilized existence. Against this belief the "literary men" raised the first standard of revolt; they appeared to be more sensitive to the insult of this arrangement than the politicians.

The story related thus far has brought us to the years when Rabindranath was stirring his wings for the flight. The Jorasanko house of the Tagores had been one of the nurseries of the new sense of self-respect, of the new spirit of self-assertion in the country. Rabindranath's elder brothers—Dwijendra Nath, Jyotirindra Nath—and Raj Narayan Basu were the priests of this new dispensation. The sensitive and retiring youth that Rabindranath was at that time quickened under their influence into the organ voice of a "new departure" in the political thought and conduct of the country. The first inst-

mations of this change were given in two papers read at meetings of the *elite* of Calcutta The first paper was read in the month of *Chaitra* of the Bengalee year 1290, that is fifty-seven years back when Rabindranath was 23 years old, the second was read a year and a half later Extracts from these will reveal the mind that Rabindranath brought to the consideration of the political problems of the country

"We may appear to be gaining as Government granted us one privilege after another But who cared to enquire after the injury that unknown to us occurred? Do we not as often cry out—"victory to the profession of begging!"

Carry on agitation by all means but direct it to your own people educate yourselves educate your people"



"If you desire to instil into your fellow-countrymen the virtues of citizenship, do one thing Save one Indian at least from the oppression of the Englishman let him feel and understand that the Englishman and Fate are not convertible terms let him for once feel the glory of victory let him for once see just revenge overtake the oppressor Then will national self-respect sprout in the heart of the commonalty of the land"

* * *

"The peasant stood or sat gaping as the lecturer from the town was speaking passionate words of patriotism and singing national songs, then did he yawn, close his eyes and drowse When he returned home he told his wife that the Babu from Calcutta had sung very well the songs of Satya Peer But when this insensitive man caught in the immensity of danger finds while drowning that his fellow-country men were coming forward with hands outstretched to save him then will he learn the lesson of patriotism that will last as long as he lives When our children find that on all sides our countrymen are eager to help one another, then it would not be necessary for them to learn the meaning of patriotism from an English book They would learn from work not from words"

III

SINCE THEN, from 1833 to the present day in everything that he has written, on every occasion that he has spoken, Rabindranath has made self-reverence, self-knowledge and self-control the corner-stones of our national regeneration On every string of the

—Fascimile of the great Rakhi song composed by the Poet initiating the Rakhi bandhan ceremony to symbolise the unity of Bengal on October 16 1905—the day the partition of the province was given effect to by Lord Curzon

mind—love passion, pathos raillery humour anger—did this master craftsman strike to break the charm that held us captive to the belief that national salvation could be secured by the lustiness of tongue and voice It was an uphill task till 1900 it appeared to be a cry in the wilderness when Providence sent us a genius for Governor-General and Viceroy of India Then were heard rumblings of a change in the spirit of our dreams which showed that the seeds sown by the 'literary men had fallen on soil that had not been as sterile as our politicians had believed Only those who had the bliss of responding to the message of these "literary men" could say how life had meant differently to them because these men had lived and worked Because we had looked into the eyes of Surendra Nath Banerjea, of Balwant Gangadhar Tilak of Rabindra Nath Tagore, of Bipin Chandra Pal, of Upadhyaya Brahmabandhav, and of Aurobindo Ghosh, have come within the range of their spacious eyes, we have been different from our immediate ancestors This became possible because "literary men" in Bengal, in India, had prepared the ground for them, had sown the seed that appeared of a sudden to have sprouted into a generous harvest of noble thoughts, of far reaching aspirations of high audacity and of reckless sacrifice Of the literary men who had worked for this miracle of awakening Rabindra Nath had the rare good fortune to have played an active part in affairs during the opening years of this century From a singer of songs he shaped himself into the prophet who could utter flaming words to the assembly—words that burnt out all that was mean and weak within us It is this prophetic fervour that we saw burning as we sat, one among the students in the hall of the Metropolitan Institution (now the Vidyasagar College) where he invoked before our eyes the glory and the grandeur and the tenderness of the Mother, risen from the heart of Bengal to whose service he had dedicated himself in 1888 In the *Parityakta* (Forsaken) the poet has spoken of this initiation

"As I stood under the canopy of heaven
disappeared all fear and shame
I could feel that in this world
Even for me there was some work

So I stood in my country one morn
and prayed with folded hands
Accept, O Mother, all my life
that I consecrate to Thee!

IV

WE FELT this fervour enveloping us in the Minerva Theatre as the Poet drew for us the lineaments of the *Swadeshi Samaj* that had maintained the autonomy of Indian social life under any number of foreign rulers. We were uplifted by this fervour at the Town Hall of Calcutta where he read his paper *Abastha & Bybastha* at a meeting organised by the conductors of the *New India* (Bipin Chandra Pal's Weekly). Out of this emotionalism and idealism in Bengal sprang up "the new Nationalism of India."* The memory of those days abides with many of us, giving a new shape to our thoughts and actions, a new purpose to life, imparting a new beauty to the "patient, submissive, family-loving, family-clinging" life of the villages of Bengal.

Rabindranath was the singer and prophet of the new nationalism. He was the maker of its sacraments. The idea of the *Rakhi-Bandhan* celebration on the 16th of October, 1905, the day on which the partition of Bengal was sought to be effected, was his. There was stoppage of all work, there was *a-randhan*, non-cooking, which enlisted our women in the service of the religion of patriotism. This discipline of self-control prepared us for the evening ceremony when we met one another in our thousands and tens of thosands, and tied round one another's wrist the ochre-coloured thread as a symbol of brotherhood that would stand guard over the honour of our people, over the interest and honour of the least and poorest amongst us.

As law-giver of the new dispensation he drew up a scheme of self-organisation of the forces and resources of the country, independent of all voluntary association with the bureaucratic administration. This *Swadeshi Samaj* of ours had enabled our ancestors to save the graces and accomplishments of our social life from the "repeated floods of new sovereignty which swept over the land." And the renovation of this *Swadeshi Samaj* has been the theme of all that Rabindranath wrote and spoke during more than half a century. The material and spiritual poverty that afflicted our country was principally due to the "absenteeism" of the natural leaders of Indian society lured away from our villages to the towns. To this seat of disease Rabindranath has been one of the first to direct the people's attention. He has also prescribed the needed medicine, and attempted to organise its distribution. Blinded by a "school-taught obsession" we have not co-operated with this noble work. The consequences of that failure confront us to-day.

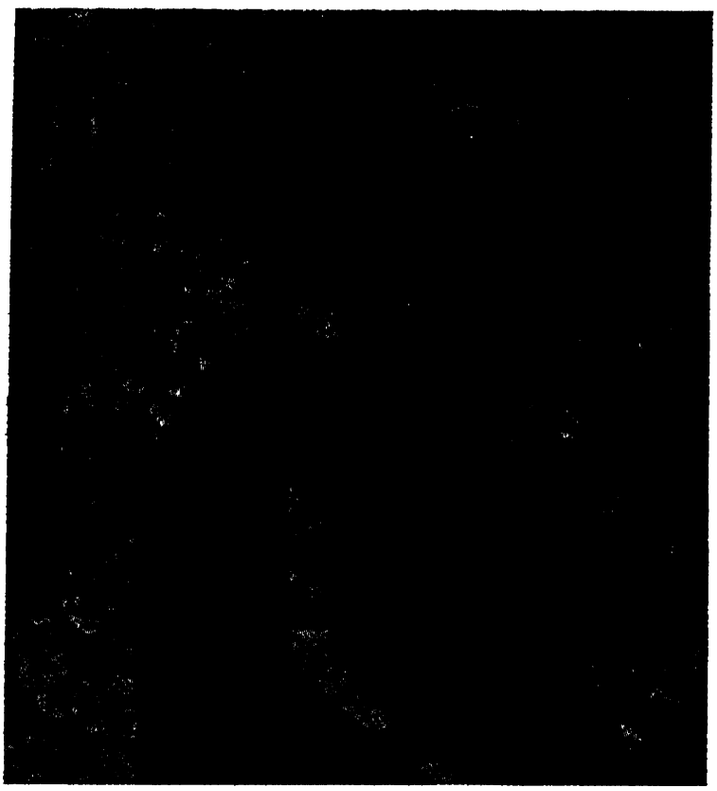
V

AS A HEALER of these distempers the poet has sorrowed with the poor and the lowly, the nation that dwells in the cottage. He has striven to put into the tongues of the dumb, of the pale, of the ignorant masses amongst us the language of protest and grim purpose. For their relief, for their education in manhood he has laid out at Santiniketan and Sriniketan seed-plots for a healthier, simpler and humaner life—self-reliant but unaggressive, rooted in honest labour but disdaining to exploit the labour of others, unafraid because knowledge illumined the path and wisdom guided the journey. These seed-plots have become patterns of constructive nationalism in India. It has taken Indian politicians more than a quarter of a century to realise the value of Rabindranath's work, to realise that this *Sadhana* they must undertake if they meant to renew their strength and recover their heritage—the heritage of India, described by Will Durant, as

> "the tolerance and gentleness of a mature mind, the quiet content of the unacquisitive soul, the calm of the understanding spirit, and a unifying love for all living things."

* Dr. Zacharia's "Renascent India".

RABINDRANATH AND THE SWADESHI MOVEMENT



"RABINDRANATH'S worship of Motherland did not exhaust itself in mere sentimental effusions over her natural beauties or her glorious past- his patriotism had a more virile and constructive aspect. And this explains why when there surged over Bengal in 1905 the waves of an awakened self-consciousness and nationalism, he was found in the very forefront of the national movement, inspiring it with the soul-stirring national songs, stabilizing the emotional excitement with his thoughtful discourses, instinct with the spirit of constructive nationalism, elevating the movement out of the rut of sordid materialism and blind race-hatred by the momentum of his Catholic idealism. When the beautiful *Rakhi-bandhan* ceremony was instituted to affirm the unity of Bengal inspite of official fiats, it was Rabindranath who pronounced its *mantra*.

"If Surendranath Banerjea represented the practical side, and Bipin Chandra Pal and Aravinda Ghosh the passionate side, Rabindranath Tagore incarnated the idealistic side of the new Indian nationalism. When in course of a few years out of the fumes of the *Swadeshi* movement emerged the spectre of terrorism, Rabindranath uttered his solemn voice of warning, pointing out that this new phenomenon was alien to the spirit of Indian culture and would lead the country to a morass from which it would be difficult to emerge unscathed. It was in those stirring days that the masculine prose of Rabindranath's pen burst forth in its splendid virility, and almost eclipsed the Poet himself. And I can say with the deepest conviction that the patriotic young man of the present day cannot do better than study the magnificent discourses of Rabindranath of a quarter of a century ago, his *Swadeshi Samaj*, his *Desha-nayak*, his *Samasya*, his *Path O Patheya* and other pieces now published in the collections *Raja-Praja*, *Swadesh, Samaj* and *Samuha;* if the young man does it he will equip himself far more effectively for political life than by idly imbibing the inane froth that issues out of the daily press to-day."

—SIR P. C. RAY
in 'The Golden Book of Tagore'

"TAGORE gave Bengal a great ideal to transfer her allegiance to—one that soon struck music out of the chords so long silent in her race-consciousness, and started an upheaval of her national spirit. How that spirit grew and gathered invincible strength within the span of a decade was demonstrated by the way it re-acted to Lord Curzon's unwitting effort to drive the point of his sword into it. How one's memory rushes back to the stupendous Town Hall gathering, vibrant and quickening with a new hope, hungrily drinking in Tagore's singing of *Sonar Bangla*, and joining in the chorus with him! How the wonderful songs of freedom flowed from his pen one after another to intensify the new-found patriotism of the Bengali, to nerve him for the struggle in which he would be inevitably involved in seeking and insuring his new freedom! And the speeches that he delivered in quick succession in the same year appeared to be the direct revelation of his seer's madness. Bengal bowed to Tagore. And his soul seemed to be floating in among Bengal's men and women, like his *Sonar Tari*, with beauty in the prow and truth at the helm, and its precious load of golden corn, his gathered and garnered love for the motherland. Not an avenue of our reawakened life but reaches back to Tagore."

—B. C. CHATTERJEE

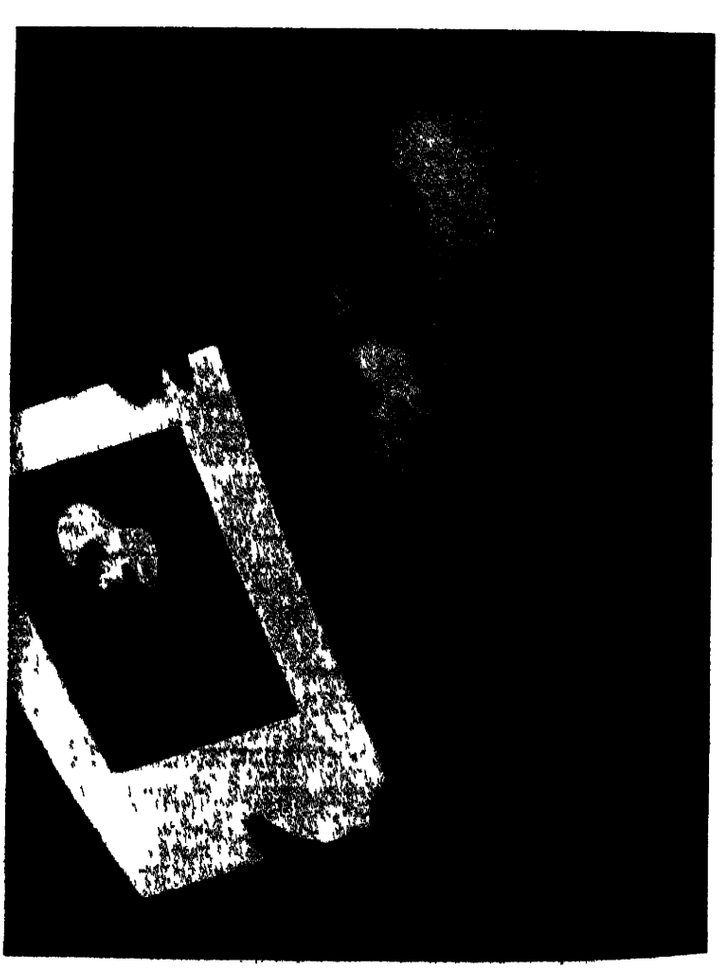
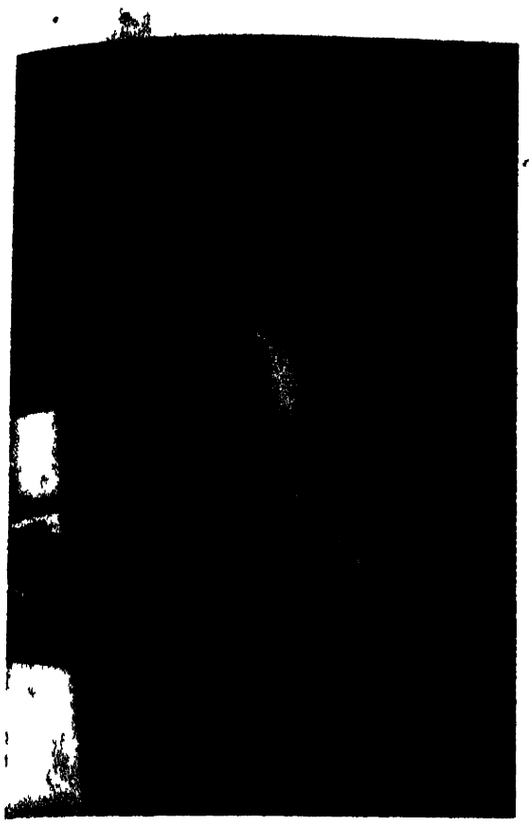
THE VISIBLE DREAMS of RABINDRANATH TAGORE



By

COMTESSE DE NOAILLES

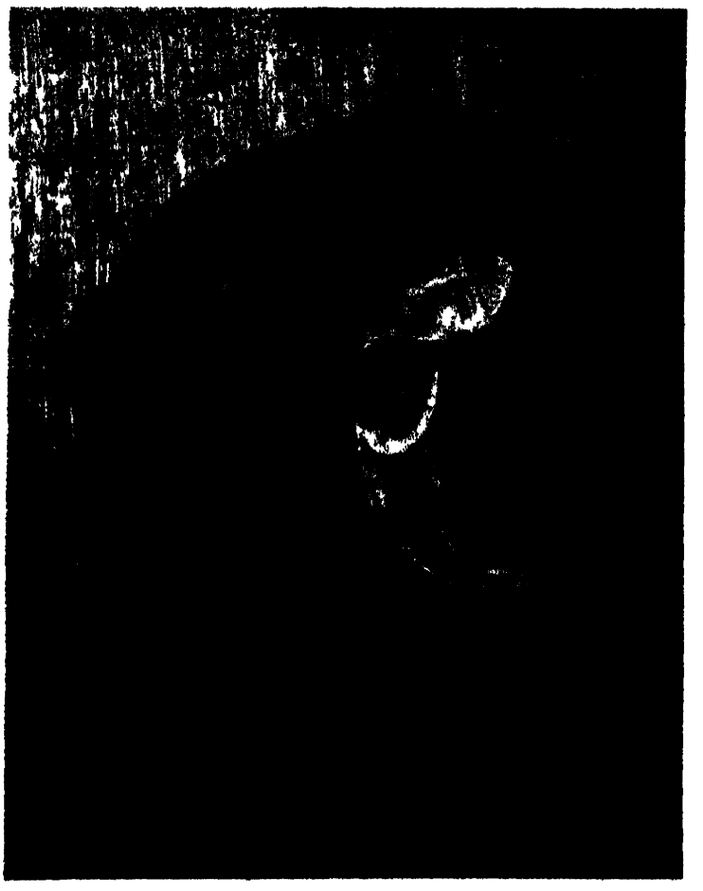


IT is now ten years since I had the rare good fortune, which touched me to the heart, of taking a walk with Rabindranath Tagore on a cool evening, in a magnificent garden laid out in imitation of the East, on the banks of the Seine. The tall stature of the Poet clad in linen, his velvet tread on the golden gravel, his face of a prophet (who is not exasperated by, but accepts and shapes his destiny), his peaceful hands which appeared to have the power of enriching and consoling mankind, seemed a sufficient explanation of the rose-trees of Bengal lifting themselves proudly on the two sides of his regal walk!

How noble he was and unstinted, this wise man, in communion with himself, enigmatical and yet transparent, like the silver sea!

To-day, Tagore presents to our admiring gaze that immense part of his dream of which he had spoken already in his famous stanzas: "I comprehend the voice of the stars and the silence of the trees. One day, I would meet, outside myself, the joy which resides behind the screen of light . . ." Words of fire lighting up the whole future! Man takes

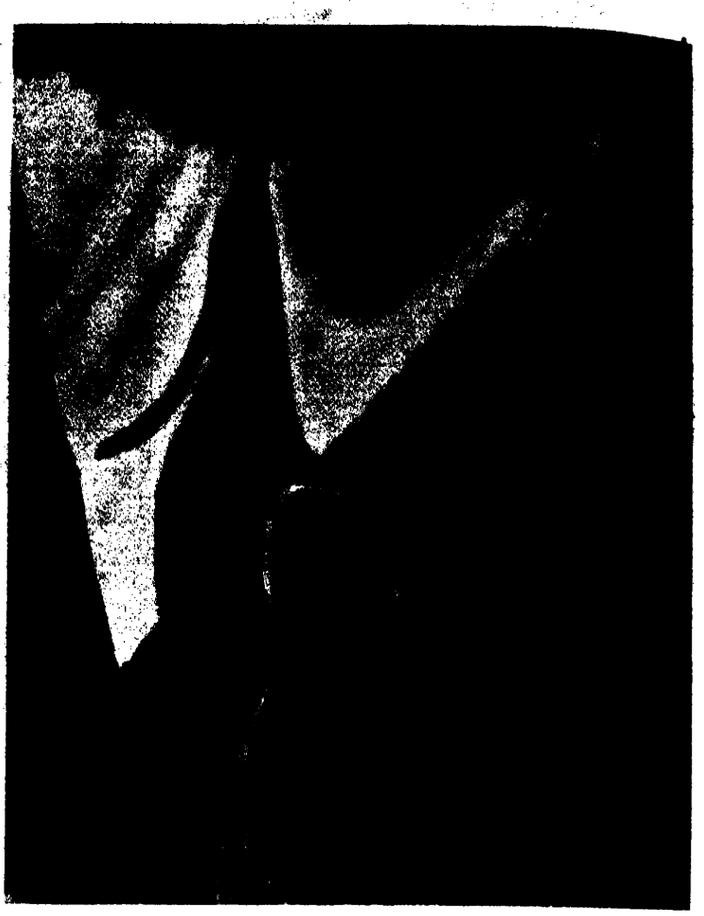
—With one of his drawings



The Last painting

time to attain to a clear knowledge of himself Suddenly he knows and then, again, he does not know Tagore, the magician, who with his fingers raised, without fear of any check, had attempted to pacify the furious winds and who declares to have cured with his intense will power the mortal sting of the scorpion is timid before his creations, to the fineness and brilliance of which each one of us is a witness We praise him quite naturally , as for him, he doubts, questions, hesitates and smiles

*
* *



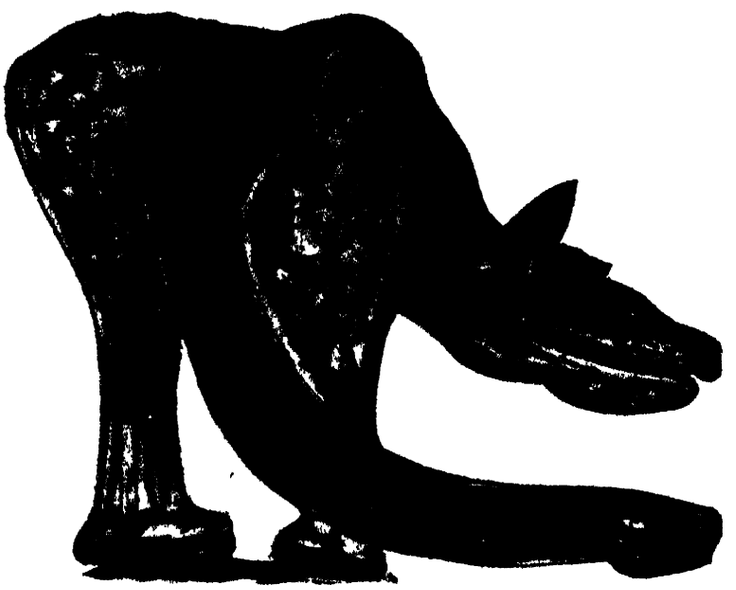
WHILE he had been writing his books interspersed with invisible stars, the pictorial work of Tagore crowded around him like a dancing multitude, not known to his reason, coming from all parts of the world to his happy island Socrates taught the famous principle "Know thyself" No doubt, daughter of the Greeks that I am, I would not repudiate this great precept which urges intelligence to be on its guard, to take its stand on logic, to put away from itself splendid dreams insistent on taking shapes in created forms But there is not one single commandment for the spirit He Tagore has suffered the eyelids of his universal soul to grow heavy and dull It is not used up his efforts to be nothing but himself has consented to see the break up of the elements of which his dreams are formed,—and suddenly is presented to us a prodigious work making him multiple and diverse Behold his

intimate people, his secret inmates, his surprising multitude! Praised be the destiny which has caused brilliant new fruits to spring up on the tree whose roots had stretched out for a long time!

*
* *

IT IS highly interesting to know how Tagore, an intelligent dreamer, had been led to his startling creations which charm the eye and make it travel in countries where the plausible is affirmed to be more true than the real! With his beautiful hand, of the colour of white dove, he wrote his poems, and in the margins of the manuscript, intoxicated suddenly by an ineffable elixir, he felt himself carried away far from the narrow and rigorous labour and handed over to the ungovernable forces of the imagination. He sketched, then developed, perfected the treasures of the unknown, a pupil obedient to a celestial guide. It is thus that he who possesses the gift of tears and weeps without knowing the cause of his regret, feels the mysterious dew forming on his face an inexplicable network of liquid lace, gazed on by the angels.

*
* *



THE PICTURES of Tagor which begin like the entry c the spirit into sleep by dream and vague spirals, define then selves in the course of thei remarkable execution, and one i stupefied before this masterl creativeness which reveals itsel as much in the trifling as in th vast. The gloomy stain, th snowy white, the reds, the greens the violets issue from limbs an reconstruct a living universe Tagore, whose charming song have whispered to us so many subtle affirmations, now present to us the mystery of the multi plicity of man, of the plenti ful ancestral influence, hastening on the feet of phantoms, with th laughter of the magicians!

We read in William James "We do not possess the key t our reservoirs." Ah! How thi sigh contains much more o certainties than of regrets.

Why has Tagore, the great mystic, suddenly, without knowing, set at liberty that which in him scoffs, banters and perhaps despises? Certainly, beauty has the greatest part in the designs and colours of the poet; the noble faces, the proud attitudes, the

grace of the world of waters, and such "deep as the night where, it would seem, the happiest lovers of Shakespeare are gathered together, transport us to a paradise so substantial that it does away with the notion of death. But how are we not to dread those profiles of corpulent gluttons and sensualists with whom Cervantes made us acquainted? How are we not to have an unquiet heart before those satanic masques, lean, crimson, ghastly,—seen obliquely, sharp like the knife, appearing like incarnations of craftiness and joyful treachery? But, also, how charming it is to discover the cunning poise, cleverly obtained, of the two pigeons! How funny, illusive, in its posture of the coquette who drives desire to despair, is the antelope, suspended as it were, and how one would think it to be flying!

—I love you and have more admiration for you, Tagore,

since when you made to us such rich and sometimes such cruel confidences; but, would I ever find again the great ingenuous angel that you were, when your silent feet, on the garden gravel, made me think of my sins, imaginary perhaps, and of your sublime innocence?

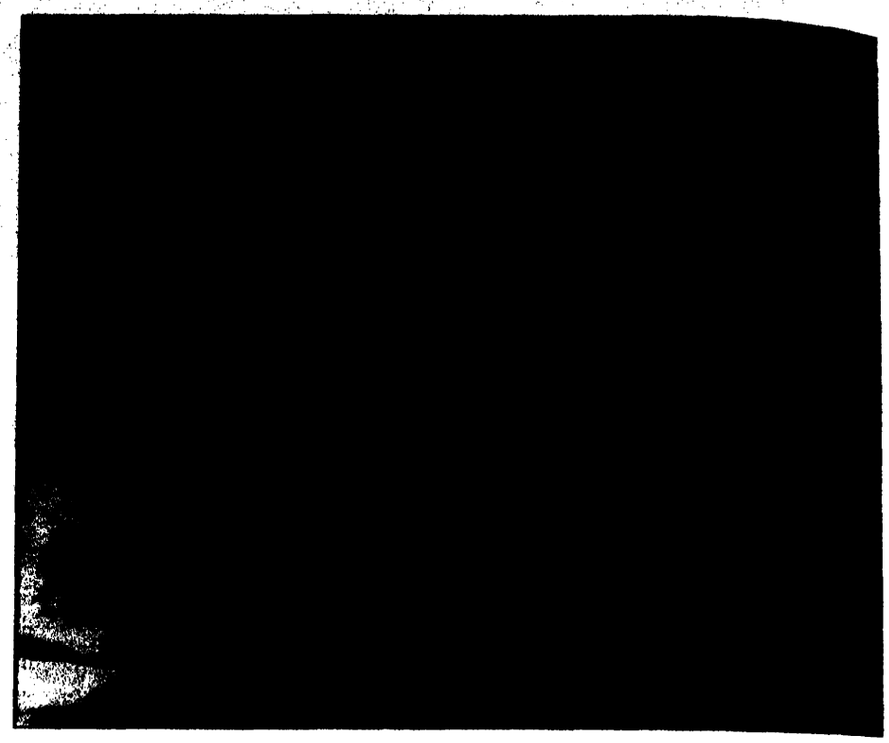
[*Translated from French*]

—Foreword to the catalogue of an exhibition of Tagore's drawings and paintings held at Galerie Pigalle, Paris in May 1930

MY PICTURES

By

RABINDRANATH TAGORE



AN apology is due from me for my intrusion into the world of pictures and thus offering a perfect instance to the saying that those who do not know that they know not are apt to be rash where angels are timidly careful I, as an artist, cannot claim any merit for my courage; for it is the unconscious courage of the unsophisticated, like that of one who walks in dream on perilous path, who is saved only because he is blind to the risk.

THE only training which I had from my young days was the training in rhythm, the rhythm in thought, the rhythm in sound. I had come to know that rhythm gives reality to that which is desultory, which is insignificant in itself. And therefore, when the scratches in my manuscript cried, like sinners, for salvation, and assailed my eyes with the ugliness of their irrelevance, I often took more time in rescuing them into a merciful finality of rhythm than in carrying on what was my obvious task.

IN the process of this salvage work I came to discover one fact that in the universe of forms there is a perpetual activity of natural selection in lines, and only the fittest survives which has in itself the fitness of cadence, and I felt that to solve the unemployment problem of the homeless heterogeneous into an interrelated balance of fulfilment, is creation itself.

MY pictures are my versification in lines. If by chance they are entitled to claim recognition it must be primarily for some rhythmic significance of form which is ultimate, and not for any interpretation of an idea, or representation of a fact.

Tagore's Letters

By

DHURJATI PRASAD MUKERJI

VOLTAIRE is reputed to have flooded his world with letters. We marvel at this busy man's voluminous correspondence. Kings and Princes were proud to receive them and replied in their own hands. They were flattered by the fulsome praise in which Voltaire excelled and wrote back in honeyed words of their great debt and gratitude. Probably, another pen was used to kindle those who were ready to catch the flame from that glowing brain. Those were glorious days when leisure called for the goose-quill and, therefore, epistles in the form of essays. Even a young man wasted two sheaves to get a guinea from an old aunt. Ideas required elaboration and style flourished in the process. In our own younger days, village kinsmen sent their Bijoya greetings in two pages of note sheets. We manage them now in set telegram-forms. The fact is that we have become slaves of time and lost our leisure. But there is a more important reason. Letter writing flourishes as an art in the hands of detached people during courtly but critical periods in history. In the days of conformity exegesis is the order ; when values are being re-valued, letters release the surplus irresponsible energies involved in experiments and creation. Poetic tradition was being recast as a backwash of the French Revolution, when that supremely isolated individual, Keats, was privately maturing ; and he poured himself out in that great series of letters which are as much a claim to his greatness as his Odes. D. H. Lawrence could not accept the mechanical and sophisticated civilisation of the day and scattered pell mell the seeds of new life. Even the delicate, shy, Katherine Mansfield gave in the pages of her letters the minutest reactions of her extraordinarily sensitive mind.

India, too, has had her reputed critical phases. In Bengal, the transformation of values was brisk. Nor was there any dearth of keen minds to realise what was happening. Yet, barring Tagore, no eminent man has been a great letter-writer. Next to him comes Pramatha Chowdhuri, whose sparkling letters are a treasure to their recipients. Vivekananda's correspondence is full of vigour and high seriousness. But there the list ends. Surely, it is not the fault of the language. After Tagore, it is foolish to say that the language is not tractable for epistolary purposes. After "Birbal", you cannot say that wit, clarity and precision are barred out by our philology. The lapse is due to deeper causes than the absence of leisure. There is something wrong with our mental habits. We may be keen in intellect, but we are uncritical in intelligence. We are not sensitive and observant enough. Or is it that our phases have not been critical enough ?

II

LOOK at Tagore's letters. Their first characteristic is that most of them are written from abroad to friends in India. Europe, Russia, Persia, Java, Japan, America are the venues. Excepting the famous Bhanu Singha's letters to a young girl, the majority of the letters written from India also are written from outside Bengal. This proves that even Tagore needs distance for detachment. The second feature is equally striking. Nearly all the travel-epistles are evaluating in tone. The poet learns the best in foreign cultures and simultaneously appraises them. English customs, Japanese manners, Japanese dance, Persian national endeavours, Russian collective farms and enterprises—the inwardness of all is intuitively comprehended along with their deficiencies. Originally, Tagore's travel-diaries were also letters. They betray a mind that is willing to accept and to reject on the basis of a standard, which is

Indian culture as he would like it be in the light of its ancient heritage and modern contacts The wider canvas makes his foreign letters impersonal and philosophical; but letters they remain in their intimate sensibilities, in the spirit of quick give and take, in the dynamics of the panorama which he observes, in the humour of the details that do not escape his eyes.

There is another batch of published letters that belongs to a different genre I refer to *Bhanu Singha's Patrabali* again This volume, in my opinion, is unique Tagore's capacity to enter into the minds of the child and the adolescent is unrivalled Only a few months ago he has once more proved it beyond doubt by his *Chhele Bela*—a book that is even superior to Tolstoy's similar work That capacity is in full play in Bhanu Sinha's letters Of course, the child who was the fortunate other party was herself a genius for her age She had suggested amendments to the Poet's poems and fables! And the Poet bloomed out in response in all the glory of his wit, in the utmost delicacy of his sensibility Subtlety in the simplest words and syntaxes makes a muslin of these letters A shot *muslin* again, if that were possible, for colours chase each other with every change in the light fall No these letters are not trifles They are only the gods play at the foot of Olympus on beds of asphodel

III

I KNOW of an opinion that holds that Bhanu Sinha's letters are the only genuine letters that the Poet has written The reason for such a view is a supposition, which has been recently fostered by certain English critics viz that epistolary expression should be of the writer off his duties. A letter-writer, true to his genus, it is held, is an artist in *mufti* A presumption like this is neither historically nor aesthetically valid. Abelard's letters are as grave as Henry James's or Flaubert's. The aesthetic point involved here is whether or no there is a difference between seriousness and heaviness It is not simply a question of taste By these comments I do not suggest that it is not possible to produce beautiful letters without a philosophical approach and serious view But such letters do not survive They please the passing moments Letters need not be personal to be charming If the personal element comes in, human relationship is easily established—that's all

But I have not so despaired of human nature as to think that it is constantly seeking physical contacts Who does not know that personal, private, light touches have been recently held to be the tests of good essays? I wonder what Bacon and Emerson would have thought of this opinion that takes E V Lucas and Robert Lynd as master-essayists *The Essays of Elia* are not exhausted by the Roast Pig Similarly, Keats did not exhaust himself in his letters to Fanny Browne Cowper will be quoted But I have always looked away from the sight of the Stricken Deer So Tagore's letters are great, because they are serious without being heavy, because they can be light as gossamer when he likes, and because they show the inner working of a great mind They are an integral part of his genius They have been generously bestowed on all sorts of people, including a Viceroy and they are all treasured From them have evolved his paintings—but that is, as Kipling would say another story

"THE POET'S REPUBLIC" A TYPICAL TAGORE LETTER

PLATO threatened to banish all poets from his Republic Was it in pity or in anger I wonder? Will our Indian Swaraj when it comes to exist pass a deportation order against all feckless creatures who are pursuers of phantoms and fashioners of dreams who neither dig nor sow bake nor boil spin nor darn neither move nor support resolutions?

I have often tried to imagine the banished hordes of poets establishing their own Republic in the near neighbourhood of that of Plato Naturally as an act of reprisal His Excellency the Poet President is sure to banish from the Rhymers Republic all philosophers and politicians Just think of the endless possibilities arising from feuds and truces of these rival Republics—peace conferences deputations of representatives institutions of busy secretaries and permanent funds having for their object the bridging of the gulf between the two adversaries Then think of the trivial incident through which a hapless young man and a melancholy maiden coming from the opposite territories meet at the frontier and owing to the influence of the conjunction of their respective planets fall in love with each other

There is no harm in supposing that the young man is the son of the President of the Philosophers Republic while the maiden is the daughter of that of the Poet's The immediate consequence is the secret smuggling of forbidden love-lyrics by the desperate youth into the very heart of the commentaries and controversies of the two contradictory schools of Philosophy the one professed by the yellow turbaned sages proclaiming that *one* is truth and *two* is an illusion and the other which is the doctrine of the green turbaned sages asserting that *two* is truth and *one* is an illusion

Then came the day of the great meeting presided over by the Philosopher President when the pandits of the two factions met to fight their dialectic duels finally to decide the truth The din of debates grew into a tumultuous hubbub the supporters of both parties threatened violence and the throne of truth was usurped by shouts When these shouts were about to be transmuted into blows there appeared in the arena the pair of lovers who on the night of the full moon of April were secretly wedded, though such intermarriage was against the law When they stood in the open partition between the two parties a sudden hush fell upon the assembly

How the unexpected and yet ever to be expected event mixed with texts liberally quoted from the proscribed love lyrics ultimately helped to reconcile the hopeless contradiction in logic is a long story It is well known to those who have had the privilege to pursue the subsequent verdict of the judges that both doctrines are held to be undoubtedly true that *one* is in *two* and therefore *two* must find itself in *one* The acknowledgement of this principle helped to make the intermarriage valid, and since then the two Republics have successfully carried out their disarmament having discovered for the first time that the gulf between them was imaginary

Such a simple and happy ending of this drama has caused wide-spread unemployment and consequent feeling of disgust among the vast number of secretaries and missionaries belonging to the institutions maintained with the help of permanent funds for the preaching of Union those organizations which were so enormously perfect in their machinery that they could well afford to ignore the insignificant fact of their barrenness of result A large number of these individuals gifted with an unerring passion for doing good are joining the opposite organizations which have their permanent funds in order to help them to prove and to preach that two is two and never the twain shall meet

That the above story is a true one will I am sure be borne out by the testimony of even the august shade of Plato himself This episode of the game of hide and seek of one in two should be sung by some poet and therefore I request you to give it with my blessing to Satyendranath Datta [the famous Bengali poet greatly loved and admired by Rabindranath Tagore He has since unfortunately, died] that he may set it in those inimitable verse forms of which he is a master, and make it ring with the music of his happy laughter"

—From "Letters To A Friend"

SHELIDAH IN SUMMER AT THE PERIOD WHEN THE POET RESIDED THERE

Redrawn for the "Gazette" from sketches made then by the writer

"*MY* RABINDRANATH"

AN INTROSPECTION

IT was many years ago. To the Jorasanko residence of the Poet came a joyous lad, humming an indistinct tune, his upper lip, adorned with the faint dawn of a moustache, quivering with emotion. The lad was an enthusiastic autograph-hunter. He had come with certain hopes and with a sprinkling of the ego so natural at his age. The Poet had no time to see him; instead, he wrote his name on a piece of notepaper and sent it down to the lad. That was only half success. The lad's vanity was hurt, for he had come with the idea of holding an intimate conversation with the Poet, incidentally to display his wisdom, another name for ignorance. But he was glad to possess the signature, although not in his cloth-bound little book.

Circumstances, a few years later, brought this lad, grown then to youth, into close contact with the poet and with his family.

IT was a summer's day. The projecting stones on the Calcutta streets, for tar macadam was then unknown, were throwing back the burning rays of the sun mercilessly into the eyes of pedestrians, coachmen, and half-hooded horses dragging heavy iron-tyred hackney carriages. Such a carriage stopped at the door of the young man's residence in the early afternoon and Rabindranath, alighting gently, came in. Entering the room he was surrounded instantly by the members of the young man's family, who welcomed him with cordial greetings. On every face was an inexplicably expectant smile. But on the face of Rabindranath, the consummate actor, there was a look of consternation. In a vibrant, but almost hushed, voice, he asked the young man, "When did I borrow this money from you? If I did I must repay." The young man looked aside with a mysterious grunt. Some of the young audience chuckled. Then, slowly, Rabindranath produced from a capacious recess in his beautiful flowing robe, a note of hand in which the Poet promised to pay a thousand rupees on demand! It was a clever piece of forgery, for the young man was a bit of an artist. The note was on the autograph-sheet gathered some years ago, and the signature, therefore, was genuine. It bore a date of the last month of the Bengali year. Neatly, in pencil, Rabindranath had written the words, "First April," under that date.

The bubble having burst, there was laughter all round, and it was subdued only when Rabindranath said, "Well, I knew the joke, but I also knew that it was an invitation, and, behold, I am here! I will repay you all, in due course." Then followed his music, with interludes of cold *sharbet*. The songs he sang were his own, of course, and sung in that gloriously sweet and virile style, which was his unique gift. The old harmonium, euphemistically called an organ, remained unopened at its corner, for the poet never could stand its unresponsive categorical notes. His own voice created the music, created the atmosphere, and what an atmosphere!

The sun had gone down. The pleasant south breeze was sweeping over the broad street, bringing peace and comfort with it. But the greater joy was in that musical atmosphere. After the Poet had left, the members of the young man's family remained silent for a while, engrossed in beauty and melody. This was the story with

which the "young man", now mature in years, opened the conversation when I approached him to tell me something about Rabindranath.

"RABINDRANATH", he said, "is a stupendous personality composed of countless complexes, and you can hardly describe him. Try it, if you like. You begin by saying that he is a poet; then you hasten to add that he is a story-teller, a composer and singer of songs, a teacher and educationist of uncommon patience and discernment, a director of fundamental thoughts, a creator of language and styles, a something or other. In reality, you can only see him from a single angle for the moment, realising instantly that there are many other angles of which you must take cognisance. You multiply substantives and adjectives, you go on elaborating one aspect or another, till you are either baffled or self-satisfied. Indeed you can perceive him only to the extent of your own projected consciousness, limited by the scope of your knowledge. And many a person, under such a condition, have tried to judge him, criticise him, or praise him. In most such cases they have ended in failure, even often without knowing that they have. I have seen others who were hidebound in 'isms' trying to put him in a category. Their failure was ignominious,—only their anger expressed itself in calling Rabindranath futile, contradictory, even worthless. Rabindranath is such an intricate product of synthesis, created by both his inheritance and self-culture, that he defies analysis. Yet, without the help of the analytical process, minds like yours and mine can hardly expect to realise Rabindranath. And all the while the real Rabindranath is perhaps eluding us, smiling in the crimson dawn or the orange-brown dusk of Santiniketan.

"Well, then, I'll tell you something about *my* Rabindranath. You need not take the slightest pain to ascertain whether the touches in my portrait conform to the reality of the subject, for my picture is entirely *my* own. It is an introspection.

"About the time of the autograph-note-of-hand incident, Rabindranath came to our house one morning, radiant, yet reserved, as usual then. It was a time of his extreme mental concentration, as I shall tell you presently. In his hand was a book. I was engaged, at the moment, in giving a final polish to my shoes, a habit I maintained for many years for the sake of an aesthetic appreciation of cleanliness. I got up and bowed, shoe in hand. He smiled and said, "Now, leave that shoe; there may be meanings other than respect when one bows with a shoe in hand. Instead, take this book and give yourself a mental polish." The book was Herbert Spencer's *First Principles*. 'Read the book,' he said, 'as an index to knowledge, as a means to an end, not as the end itself.'

"SOON after this, one day, I was accompanying him down the Gorai river. We were coming from Shelidah, where, as you know, the Poet resided for several years in almost perfect seclusion. We were coming to Kustia to catch the train. The little white painted 'green boat' glided like a swan on the crystal clear blue-green summer waters of the Gorai. The air was still, the light was brilliant. The almost imperceptible ripples reflected tiny diamonds from patches on the water where the sun struck them at the proper angle. The atmosphere was ethereal, and one practically forgot the boat, the train, and even Calcutta, the destination. I was really taking a journey more intellectual than physical. I told him that I had read Spencer, and it had left me with a void. It had made me realise that I knew so little of the facts themselves not to speak of the principles. My mind was in a state of turmoil. Yet, almost childishly, I wanted to know the fundamental realities of the universe, and that too in double quick

RABINDRANATH AS HE LOOKED WHEN THE WRITER FIRST MET HIM

time. Could he explain, for instance, how I could join the inanimate nature with the animate?

"THE POET smiled. It was the same smile, conceivable at fleeting moments, which illuminated the benign faces of the *Rishis*, the seers of our ancient world, when they sat down to enlighten their pupils in the shades of their *Asram* groves.

"All this happened at the commencement of the century. Modern atomic physics had not even been seriously thought of. Yet I heard a discourse on the gigantic powers stored up in, and frequently released from, the kernel of the minutest particle of matter. The biggest conglomeration of them behaved also in harmony, not in divergence. That not mere force, but consciousness as well, might dwell in all things. That quality itself might be the foundation of everything conceivable. That even beyond quality there might be an entity of unification, perhaps bereft of all attributes.

"If Herbert Spencer was one of the foretellers of the process of Evolution, which Lamarck and Darwin later made perfect, Rabindranath was the foreteller of modern physics. Indeed he was more. He was the foreteller of the philosophical background of science, of which only a faint glimpse is being perceived today. He was still greater, for he signified the ultimate spiritual reality, call it the inexplicable symbolical value of the unknown quantity, if you like.

"That discourse in the little green-boat on the Gorai opened the golden gate for me. Don't you see, *my* Rabindranath is ever the *guru*, the teacher pre-eminent?

"I WAS telling you of the period of utmost concentration in his life. Such it was as I saw it. It was at Shelidah that he retired for quiet contemplation. That, perhaps, is the process through which every genius must pass, a genius who has to give a message to humanity, who has to bring hope to the forlorn. Thus did Buddha and Christ retire, thus does the modern scientist shut himself up in his laboratory. Such a period is one of discipline, or organising thoughts, of deciding upon a course of action. Rabindranath had decided to take action. We see the effect in the great institution, the Visva-Bharati, of to-day. It had a slender beginning, you know, but the idea and the ideal have always been there. They had their genesis at Shelidah.

"He was staying for a few days, during this period, at Giridih, with his friend the late Mr. Srischandra Majumdar, himself a literary man. It was in the evening, and the sun had just gone down beyond the distant hills. The dust in the air was tinged blood-red. He came out of his room looking agitated. The red glow caught his flowing curls and beard. His eyes had a far look. We were on the lawn, a rather noisy crew, including his son Rathindranath and Maharaj-Kumar Brajendra Kishore Deb Barman of Tripura, trying to convince Mr. Majumdar that he looked ten times better after I had trimmed his beard in the French style that morning. As the Poet arrived we became silent. He declared that he had settled about the school at Santiniketan, and he was going to Calcutta that instant to consult a few educationist friends on certain points. He was off, catching the outbound train by almost a fraction of a minute. When he returned a few days later, we read the signs of contentment and relief in his beaming countenance.

"It was a dynamic action, this sudden departure for Calcutta for consultation. It was induced by the concentration through which he had been passing during this period. It was not a whimsical action, although we may love to call it so, particularly in the case of a poet. He took it because nothing that he has done has ever been a halfway measure. He is thorough, and he apparently takes infinite pains to achieve a result. Only in his case he is unconscious of the effort or of the pain, for he has not to grope about as we do. His almost superhuman intellect gives him a discernment, which, in the absence of any other adequate expression, I would describe as akin to clairvoyance.

"And when the decision about the establishment of the institution at Santiniketan was taken, a lady, whose interest in the Poet was great, asked him if he had considered the matter well, at any rate its financial aspect. The Poet replied that such an affair as he was embarking upon, was not like a commercial undertaking. There was no question of making profits, unless the dissemination of knowledge and the formation of character of children were by themselves considered profits. Again, no such venture as he was contemplating was ever brought to success by calculations. I came to know, however, that this lack of calculation had made the Poet give practically his all for the cherished cause. It had also made that gentle and benevolent lady, his wife, contribute her all as well for the cause of her husband. Will Bengal be ever grateful and remember this?

"His concentrative days at Shelidah, were, to my mind, also the days of virile expression of his genius. Almost speechless, he would devote himself to ceaseless work, from dawn to dusk and often far into the night. Occasionally he would relax and give us a reading of his poems and prose writings. He would sing us his wonderful songs of those days, the cadence and melody of which would make us dumb with admiration and joy. And sometimes he would explain to us the significance, the underlying facts and principles, of his own writings, of those of the great poets and authors, of scientists and philosophers. That was real teaching. Not only the matter, but the mode also, was illuminating and inspiring. The analogies and imageries, the precise facts and inevitable logical conclusions, kept us spell-bound.

"WELL, I have seen Rabindranath in other aspects, but always as a teacher.

"A youngman whom he befriended, stole his books. He was excused. A servant pilfered

—THE POET'S BOAT ON THE RIVER PADMA.

his clothes, his services were retained. Several men 'borrowed' money from him, and after a short period of absence, re-appeared to borrow again. Their request was granted. Numberless persons vilified him in the name of criticism. They were never unwelcome. Unthinking men often trod on his toes. The pain was borne with a smile. Never did I hear him decry the culprit. The man did not matter. Indeed he was an object to be redeemed if possible. But in no instance did I ever find him making a compromise with the crime, sin, lapse or even negligence. There his wrath expressed itself in terrible fury. The iniquity was condemned without mercy. It was a repetition of this same phenomenon when he wrote to the Viceroy relinquishing his Knighthood, after the Jalianwalla-bag incident. The letter had no reference to men, but the condemnation of the act was terrible. On occasions like this I returned home with an object lesson, but my silent sympathy went to the Poet who suffered so much on account of such iniquities. Yet at times I thought that perhaps those sufferings were inevitable for teachers, for their object was to make men better.

"I have seen Rabindranath under the shadow of calamities. It pains me to recall the occasions even at this distance of time for the sores in my heart are still raw. Every man is natural, and either at his maximum or minimum, in the presence of death. Rabindranath has suffered the loss of some of his near and dear ones. Saturated with grief he undoubtedly was, but indomitably firm in outward expression. How his mind worked, nobody can now tell, not even perhaps he, but there was the sign of resignation, born out of a living faith in his Providence. His minimum in the presence of death was always great, his maximum great beyond the range of any yard stick of yours or mine. Sitting silent by his side in sympathy and humility, I realised on these occasions what superhuman strength of endurance worked in his bosom. Rabindranath is as brave as he is great.

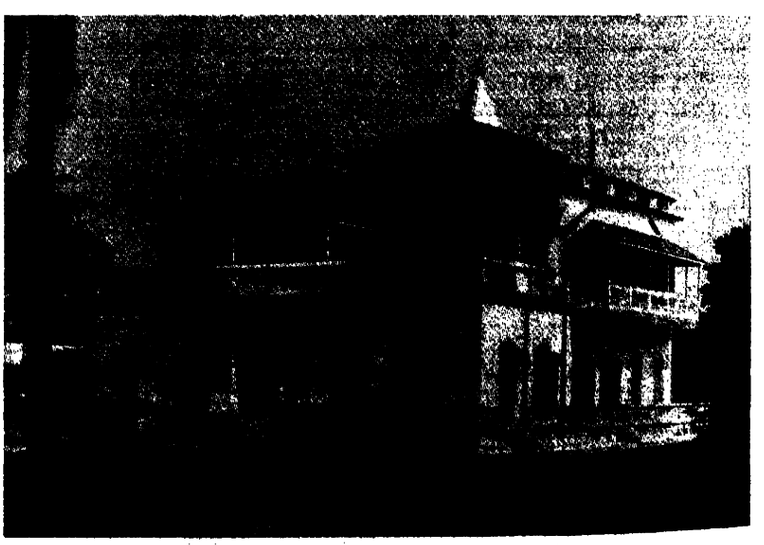
"YOU, who have studied the Poet's writings threadbare, have heard his speeches, listened to his songs, followed his career to the minutest details as under a microscope ; you realise, perhaps fractionally even then, the multiple personality of this unique great man of this age. You call him the inspirer of the modern thoughtful humanity, you call him a great balancing factor in an unequal weighing scale, you call him the revealing co-ordinator of things western and eastern. Perhaps you are right. But, to me it appears that you still leave important factors out.

"You have seen Rabindranath marching in glory over the world, in the veritable manner of an Emperor, not as a conquering tyrant, but as a great teacher, the bearer of a new message and the prophet of a new culture. You have stared in wonder when this same Emperor blended his perceptions in the realisation of the little pleasures and pains of the humble peasant.

"You are struck dumb by the versatile knowledge of this self-made man. From astronomy to biology, from the intricacies of the linguistic structure of Sanskrit to the almost inconceivable refinements of the teachings of the Upanishads, you find him perfectly at home anywhere and at any time. In poetry and in prose, in Bengali and in English, in all his writings, you discover this versatility, that is to say, if you have the clue to such knowledge. The vibrations of his music reach the uttermost regions of even the unknown nebula, as they stir up the innermost recesses of your individual soul. Time and space seem to vanish, they retain no meaning. Only you are full of a kind of inexplicable and intense joy. I tell you, even if everything is forgotten in the unknown future, the Poet's songs will still continue to inspire, chasten and soothe our great-grand-children removed a thousand generations forward. Rabindranath has achieved immortality.

"I read the accounts of a traveller in distant Iceland. Walking all day and worn out with fatigue, he arrived at the door of a clergyman in a remote village, a village consisting of a few huts at the furthest limit of the world, where communication was almost absent. After being welcomed and fed on frugal fare, the traveller was astonished to find in the 'library' of the clergyman a set of Rabindranath's works. *I* was astonished to learn that the words of the Poet had broken down geographical and racial boundaries even where man is scarce. They had touched the fundamental chords of humanity. It was a queer sensation, for I felt that both the clergyman and I were reading Rabindranath and thinking of him together. Through such an agency man can become a friend of man even when strife is unbridled.

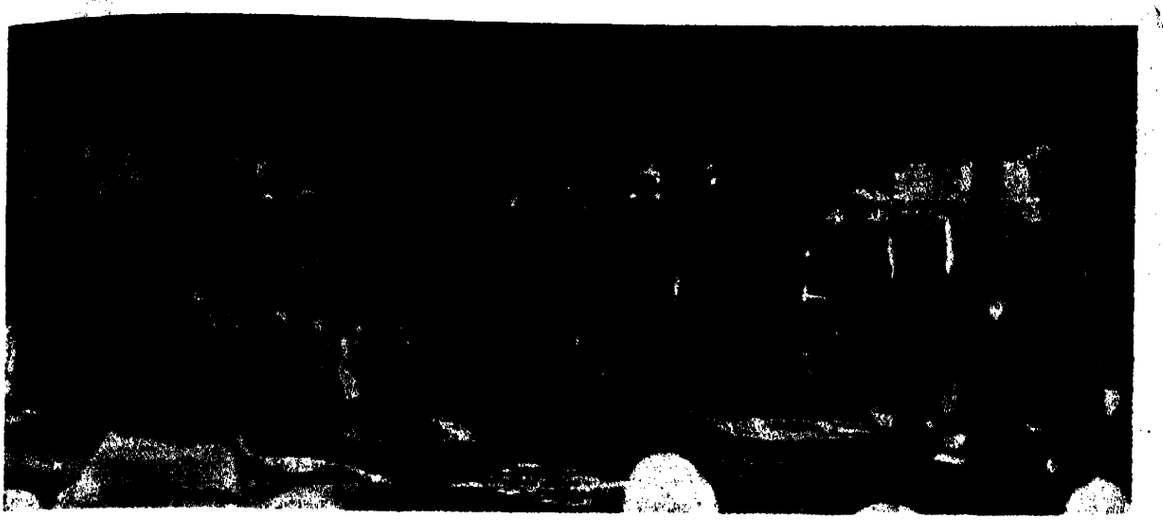
"MANY more years elapsed. After over three decades I found myself at Santiniketan, on an almost accidental visit. I was practically compelled to accompany a friend, loved and honoured by me, and who is also a friend of the Poet and his family. The Poet was sitting on the verandah of 'Udayan' (the residence). His Secretary announced the arrival of my friend and of a certain person (here he pronounced my name in a little distorted way, unfamiliar to the Poet). I was behind my friend, on purpose, and outside the Poet's direct view. As he greeted my friend, I appeared and, bowing down, took the dust of his feet. The instant he saw me, he cried out, without restraint, without study, without the least trace of any assumed formality, 'Oh, is that you,' and he called out to me by my old familiar name. The rest was an emotional breakdown on my part, and you need not hear of it. Perhaps the Poet too was not unmoved. He is so intensely human.



"Two days later we were at lunch. The Poet's daughter-in-law had procured some *hilsa* fish, knowing my weakness for the commodity, a rarity at Santiniketan. She was coaxing me to eat more, as I was telling her how her mother-in-law made me eat the fish to my heart's content at Shelidah. The Poet was at the head of the table listening to the glowing description of my escapades in bygone days. Then suddenly, with a reminiscent smile, he said, 'Yes, you know, *Bouma*, (addressing his daughter-in-law) it must be said that I have treated him (me) right royally to *hilsa* fish; also to many other things, including the *kirtan* (song) in *Bhairabi* (the tune). And without the loss of an instant he sang, 'Oh, thou lord of my life, thou, not easily attainable (even) by devotion—,' He sang only a few lines. Tears unchecked and unashamed flowed down my cheeks. Through the haze I could perceive the glistening moisture in the Poet's own eyes. He was thinking of days gone by. I was translated decades back. The lunch ended abruptly. Silently we departed, each to his room.

"THE supreme human element in Rabindranath is, to me, the quintessence of his life. This element is not soft sentimentality. It is the powerful capacity to understand and embrace all things human, to regard them in their true perspective, and to extend to them the brimful cup of sympathy. I yield to none of you in my regard for him, but my love for this lovable man is a thousand times greater than my regard.

"Now, I have told you something of *my* Rabindranath, as I have created him. My picture is that of introspection, as I told you before. My stock-taking is my own, not that of Rabindranath or of you. He may, in reality, be different. Your own Rabindranath may also be something else. But I am not disturbed. If mine be an illusion, I tell you, there is joy in that illusion. And I want to close my eyes with the possession of that joy untarnished."



* * *

The narrator become silent, and I had not the heart to break his silence; I left him even without saying good-bye.

THE 'KUTHI-BARI' AT SHELIDAH—THE POET'S RESIDENCE

RABINDRANATH TAGORE and

॥ यत्र बिश्वं भव्यतेक नीड़ं ॥
Where the whole World finds its Shelter

—Dr. Brajendra Nath Seal addressing the inaugural meeting of the Visva-Bharati at Santiniketan, Dec. 22, 1921.

THE VISVA-BHARATI

By

PRASANTA CHANDRA MAHALANOBIS

I

THE Visva-Bharati was formally founded on the 22nd December, 1921. It was not, however, a new institution; it had grown gradually out of the Santiniketan Asrama, and its formal inauguration was merely the outer expression of an inward development. For a fuller understanding of the ideals of the Visva-Bharati it is, therefore, necessary to look back into the past history of Santiniketan.

The Asrama has become what it is by and through its association with many living personalities. Two among them stand out prominent, Maharshi Devendranath Tagore, the founder of the Santiniketan Asrama, and Rabindranath Tagore, his son and the founder of the Visva-Bharati. Behind them both stands the spirit of Raja Ram Mohun Roy.

The site of the Santiniketan Asrama was originally a bare spot, in the midst of an open country, and was notorious for being the haunt of dacoits. Here Maharshi Devendranath came on one of his journeys, and he was so attracted by the place that he pitched his tent under two trees, the only two to be seen there, and spent his time in meditation and prayer. These *Saptaparni* trees are still to be seen at one extremity of the Asrama, with the open plains stretching out before them to the western horizon. On the marble slab which marks the place of his meditation is inscribed in Bengali the text of the Maharshi's meditation :

tini āmār prāner ārām; māner ānanda; ātmār śānti
"He is the repose of my life; joy of my heart; peace of my spirit."

The Maharshi's love for the place of his meditation wrought in it a complete transformation. Rich soil was brought over, trees and shrubs planted, and a garden and orchard laid out. A house was built, and later on, a temple. When the place had thus become a thing of beauty Maharshi dedicated it, as an Asrama, to the public under a Trust Deed endowing it with an annuity of Rs. 6,000, for the use of everyone who wished to meditate on God, free from all

Visva-Bharati represents India where she has her wealth of mind which is for all. Visva-Bharati acknowledges India's obligation to offer to others the hospitality of her best culture and India's right to accept from others their best.

Rabindranath Tagore

antagonism of creed and sect. The only things forbidden were speaking ill of any religious sect, vulgar amusements, and flesh foods.

II

FOR a long time, for nearly 30 years, there was very little activity in Santiniketan. The temple was devoid of worshippers; only a paid minister kept up a formal daily service. Visitors were few and far between. Maharshi knew quite well that nothing was being done there, and yet he never grew impatient and never had any doubts about its future.

Thirty years later, when Rabindranath thought of founding a boarding school at Santiniketan, he immediately received the warm approval of his father. The *Vidyalaya* (school) was started on the 7th Pous, 1309 Bengali era (December 1901). Rabindranath's immediate object was to found a school where the children would live a happy life and have as much freedom as possible; where study would not be divorced from life; where the inmates would participate in one communal life; and live in harmony with the surroundings of nature. But the underlying ideals reached far deeper.

The forest homes of ancient India always had a special appeal to his mind. The "Message of the Forest" occurs again and again, almost like a refrain, throughout the Poet's writing in verse and prose.

> "The forest, unlike the desert or rock or sea, is living; it gives shelter and nourishment to life. In such surroundings the ancient forest dwellers of India realized the spirit of harmony with the universe and emphasized in their minds the monistic aspect of truth. They sought the realisation of their soul through union with all."

The two chief sources of his inspiration, the *Upanishads* and the classical themes of Kalidasa, both had their setting in a background of the ancient forest homes of India. *Tapovana* was Rabindranath's heritage from ancient India.

> "Our ideal institution will be situated under the shadow of trees in the open country far from the turmoil of cities. The teachers will carry on their own studies and teach, and the students will learn and grow up in an atmosphere of peace and quietness. If possible, gardens and farm lands will be attached to the *Vidyalaya*. The pupils will help in the farming operations in looking after the cattle and in milking cows. In their leisure hour they will dig the soil, plant trees and water them. Classes will be held under the trees, and boys will learn roaming over the field with their teacher. In this way an intimate contact with nature will be established not merely through the emotions but also through work and toil."*

Let us not forget that another ideal was also working in his mind. He felt keenly the divorce of the existing educational system from our everyday life. He wanted to lay the foundations of education on the firm basis of the life of the people; to use the vernacular as the medium of instruction; to draw inspiration from our own folk-literature and popular traditions. These were years just preceding the beginning of the Swadeshi Movement, when all Bengal woke to a new consciousness of its own responsibility and gained a new confidence in its own powers. These were years characterised by an intense longing to go back to the country, both literally and spiritually.

In this atmosphere the school was started in 1901. Appropriately enough, the late Brahmabandhab Upadhyaya, a great patriot and an ardent nationalist, took charge of it. Although by faith a Roman Catholic he loved intensely the customs and traditions of his country. The school started under his supervision with two teachers, Pundit Shivadhana Vidyarnava (who went away after a short time) and Jagadananda Ray (who worked actively as a teacher in Santiniketan for a third of a century until his death in 1933), and five boys—two of them being the Poet's eldest son Rathindranath Tagore, and Santosh Chandra Majumdar, who came back to the institution after finishing his education in the United States and served it loyally until his death in 1926.

I am taking the following description of school life in Santiniketan in the early days from the late Ajitkumar Chakravarty's Bengali pamphlet on "Brahma-Vidyalaya":—

> "They used to walk barefooted throughout the year and except cooking, did everything with their own hand. After the morning wash students and teachers gathered under the trees near the present library building and chanted Vedic hymns. Everybody used to put on *cheli* (sacred silk) before saying prayers, and classes were almost invariably held under the open sky in the shade of the trees. Altogether life was closely modelled on the asramas of ancient India."
>
> "At first the students were not charged any fees. The Poet did not want any mercenary motives to interfere with the sacred bond between teacher and pupil, and the school was maintained in the beginning from the slender resources of the founder himself. After some time he was however obliged to introduce the fee system, which was at first fixed at Rs. 15 per month.

For a long time the Poet met with little sympathy from his countrymen. very few could understand the inward significance of his institution. Many people thought it to be a mere caprice of the poet, or possibly a reaction against western modes of living. He had, however, the silent approval of his father the Maharshi on his side. The Maharshi realized that the Poet's efforts were directed to a new synthesis, and gave the new institution his blessings.

Brahmabandhab's political sentiments however proved too strong to allow him to remain engaged in purely educational work for a long time, and his connexion with the institution ceased about one year after the starting of the school. In the third year of the Vidyalaya a great personality joined the institution. This was Satis Chandra Ray of whom the Poet has written:—

> "He was barely nineteen, but he was born with a luminosity of soul. In him the spirit of renunciation was a natural product of an extraordinary capacity for enjoyment of life. He had a wonderful soul, living in a world of ideas, keenly responsive to all that was beautiful and great in the realm of nature and of human mind. He was a poet who would surely have taken his place among the immortals of world literature if he had lived, but he died when he was twenty thus offering his services to our school only for the period of one short year. His powers of appreciation were of the keenest and he possessed the rare faculty of being able to kindle others with the joy of his own appreciation. He lived with the students and worked with them, inspired by the spirit of the Asrama."

It was an irreparable loss when he died of small-pox in Santiniketan itself in January 1904. His place has never been filled in these long years.

In the summer of the same year Mohit Chandra Sen came as the *Adhyaksha* (Head of the Institution). He had an intense sympathy with the aims and ideals of the institution and brought to it a vast erudition and deep scholarship. His scheme of education was planned on a most comprehensive scale, and he did not spare himself to carry it out in practice. The number of

* Translated from the Bengali essay "Sikhsa-samasya".

students increased considerably, and the arduous duties of looking after the complex details of administrative work led to a series of breakdowns of his health. In 1904, he left the institution and soon after death removed him from the small band of Santiniketan workers.

Then came a time of stress and strain. The Swadeshi movement broke in tumult all round the Asrama. To Rabindranath it came as a splendid opportunity for initiating a great movement for constructive work. His intimate knowledge of the deplorable condition of our village life had convinced him that our real problem was centred round village reconstruction. To him politics was only a secondary thing; during the height of Swadeshi days he had said unequivocally that "the ultimate object of political work is to mould the mind of the people into unity" He said: "We must look after our own interests, carry on our own work, earn our own welfare, do everything ourselves." Speaking of our impoverished and helpless villages he said · "It will not do merely to remove wants; you can never remove them completely, the far greater thing is to rouse the will of the people to remove their own wants" In 1905 he wrote

> "The down-trodden and despised, who have become callous to insults and oblivious of even the rights of their humanity must be taught the meaning of the word 'brother' Teach them to be strong and to protect themselves, for that is the only way Take, each of you, charge of some village and organize it. Educate the villagers and show them how to put forward their united strength, so that they may in co-operation better their wretched lot. Look not for fame or praise in this undertaking. Do not expect even the gratitude of those for whom you would give your life, but be prepared rather for their opposition."

Although Rabindranath joined the Swadeshi movement with the full fervour of his own nature, he would not allow Santiniketan to be drawn into the whirlpool of politics. The inhabitants of the Asrama often fretted and chafed, but he constantly reminded them that the ideal of the Asrama was something different.*

It was not surprising therefore when in the midst of the Swadeshi movement Rabindranath, however, suddenly returned to Santiniketan, and renewed his intimate contact with the life of the Vidyalaya. Ajitkumar Chakravarti also joined the institution about this time and for a long time exerted a profound influence in the life of the Asrama by stimulating the intellectual activities of the Asrama, and by spreading its message far and wide through his own writings until his death in 1918.

From the time of his coming back to Santiniketan, Rabindranath was gradually laying more and more emphasis on the unifying principle manifesting itself throughout the whole course of the history of India. More than thirty years ago he had declared:

> "In India, the history of humanity is seeking to elaborate a definite synthesis. The history of India is not the history of Aryan or non-Aryan; it is not the history of the Hindus, nor a history of only Hindus and Muslims taken together. Of late the British have come in and occupied an important place in India's history. This was not an uncalled for or accidental intrusion. If India had been deprived of touch with the West, she would have lacked an element essential for her attainment of perfection. On us today is thrown the responsibility of building up a greater India, in which Hindu and Muslim and Christian, the dark skinned and the white-skinned, will all find their place."

III

IN 1913, Rabindranath left for England on his now famous *Gitanjali* tour. On the eve of his departure the Asramika Sangha (Association of ex-Students) was started with 10 foundation members. One of the objects of the Sangha in its original form was to enlist the sympathies of the outside public in the work of the Asrama. This was a very significant feature of the new association, it definitely opened the doors of the Asrama to outsiders It showed that the time for expansion had come

In Europe, the Poet felt deeply the same need for opening wide the gates of the institution. In 1913 he wrote in a letter.

> "All our vagueness will disappear if we can place our institution in the light of the whole world. If we confine our institution within the local limits of the time and space of our country, it will lose its purity. The development of a complete manhood is our object and we must not aim at anything less than this."

It was just at this time that C. F. Andrews and W. W. Pearson offered their services to the institution. They came back with the Poet in 1914 ready to help him and to share in his work at Santiniketan. They brought a new element to the school itself. Their coming made it clear that the Santiniketan Vidyalaya must no longer remain merely as a school which should be more free and happy than other schools, but that it must seek to give expression to wider ideals representing humanity itself. Pearson served the institution till his death in 1923. Charles Andrews was Upacharya (Vice-President) when he passed away in April 1940.

In 1916, he toured in Japan and America, and delivered the well-known lectures on Nationalism which contain his indictment of the modern nations which had become organized as machinery of rapine and destruction. The contrast between the aggressive spirit of the modern West and the peaceful ideals of the ancient East becomes increasingly vivid. When he returned to his own country his thoughts naturally turned to the heritage of ancient India He felt the need for an institution which would be a true centre of human culture.

On the 22nd December 1918, a special meeting of students, teachers, ex-students and well-wishers of the Santiniketan Asrama was held in the mango grove in Santiniketan, in which Rabindranath explained his ideas about the (new developments) creation of an institution which would be a true centre for the different cultures of the East. The Poet coined the word 'Visva-Bharati' at this time; *Visva* in Sanskrit means the world in its universal aspect; *Bharati* is wisdom and culture.* The Visva-Bharati was to be the centre of learning for the whole world. Appropriately enough the following Sanskrit text was selected as the motto of the Visva-Bharati:

> *Yatra Visvam bhavati eka-nidam*:
> —*'Where the whole world forms its one single nest.'*

From 1919 systematic arrangements were made for advanced studies in Buddhist literature, Vedic and Classical Sanskrit, Pali, Prakrit and later on Tibetan and Chinese. Pundit Vidhusekhar Sastri, as head of the Vidya-bhavana, worked for its success with single-minded devotion till 1934 when he joined Calcutta University With him was associated from the very beginning Pundit Kshitimohan Sen Sastri, the present Head of the Vidya-bhavana.

---

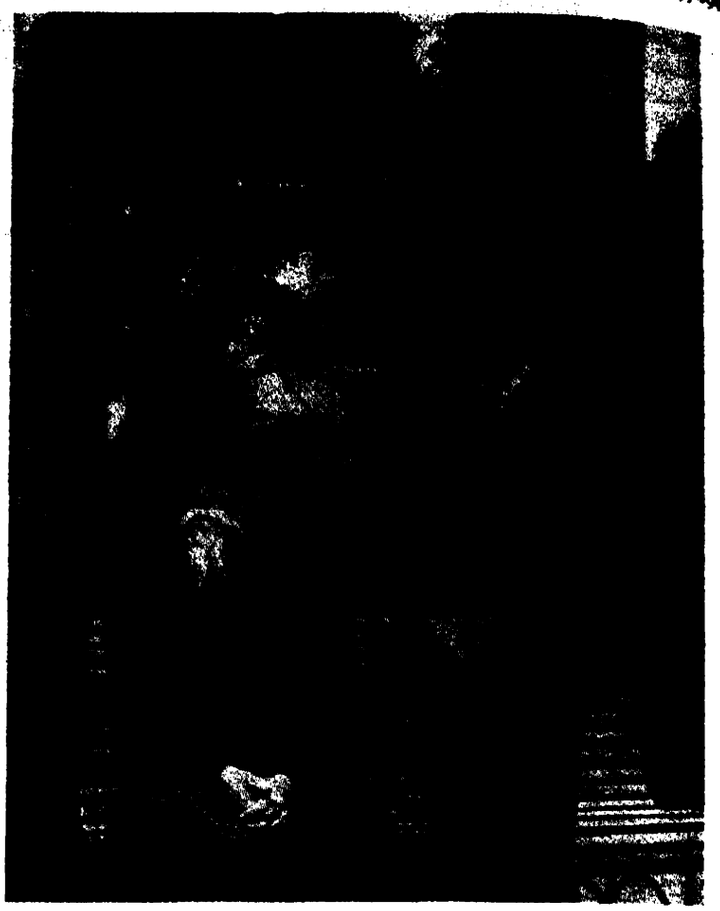
* He took an active part in the foundation of the Bengal National Council of Education, which was set up as an independent organisation in opposition to the official University of Calcutta He worked hard in its cause, made plans, raised money, organised, and gave systematic course of lectures on literature (collected and published later on in book form as *Sahitya*) to the students. A proposal was made for linking up the Santiniketan school with the National Council of Education, but nothing came of it

* There is an allusion to India (*Bharata*) in the word *Bharati*, which thus also represents the Spirit of India.

Art and music had always occupied an important place in Rabindranath's scheme of education, and in 1918 he succeeded in establishing the Kalabhavana, the School of Art and Music as an integral part of the educational institutions in Santiniketan. Nandalal Bose joined the new institution soon after its inauguration, and has made it the greatest centres of art teaching in India.

IV

AFTER the end of the Great War, Rabindranath undertook a long tour in 1920-21 in Europe and the United States. He spoke everywhere on the need of the meeting of East and West in a common fellowship of learning and a common spiritual striving for the unity of the human races.



In America a young Englishman, L. K. Elmhirst, saw the Poet, and offered his services for founding an Institute of Rural Reconstruction near Santiniketan. Elmhirst believed that the perfect balance of civilisation could only be preserved by achieving a harmonious adjustment between the city and the village. This fitted in very well with the Poet's own ideas. In 1918, he had asserted in his lectures on the *Centre of Indian Culture* that it must also be a centre of economic life :

> "It must cultivate land, breed cattle, feed itself and its students; it must produce all necessaries, devising the best means and using the best materials, calling science to its aid. Such an institution must group round it all the neighbouring villages, and vitally unite them with itself in all its economic endeavours."

In 1915, Rabindranath had purchased a large plot of land at Surul, and had started experiments in agriculture, cattle-breeding, and village work. Things were, however, not progressing quite well; and Elmhirst's offer came at an opportune time. The Poet immediately decided to give Elmhirst full scope for making experiments at Surul.

When he returned to India in 1921, the non-co-operation movement was at its highest. Although great pressure was put upon him from all sides, he steadfastly refused to join it. He could never agree to isolating India from the stream of world thought and progress. In the midst of unprecedented political unrest and excitement, and against the whole force of the current of popular sentiment he expounded his own views with great courage in two lectures, *The Call of Truth and the Meeting of Culture* (1921). He said :

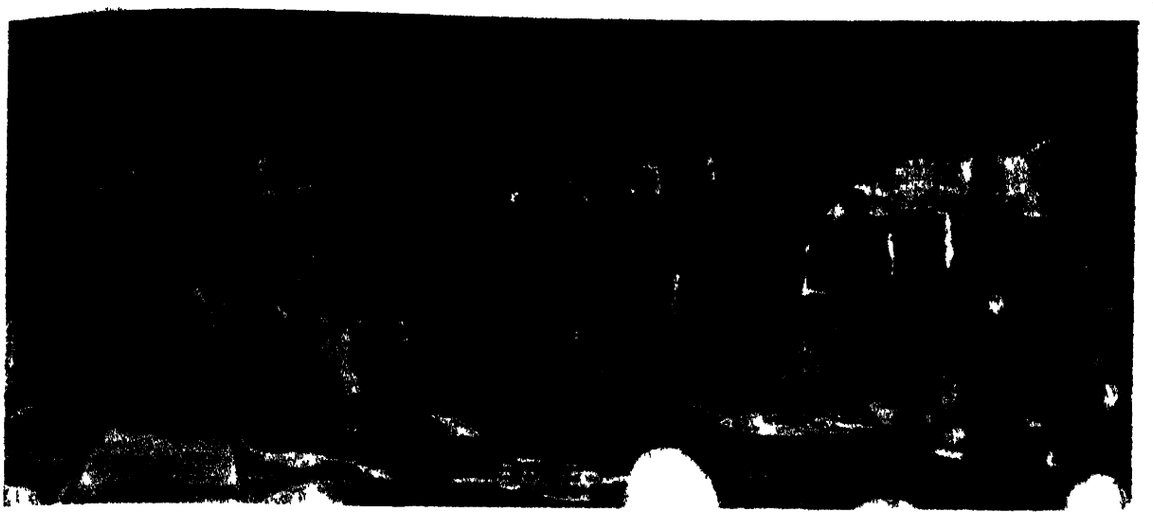
> "It is a fact of unique importance in the history of the world to-day, that the human races have come together as they had never done before . . . . The mentality of the world has to be changed in order to meet the new environment of the modern age.
>
> "It has been said in our scriptures: *'atithih devo bhava'*, asking us to realize that the Divine comes to us as our guest, claiming our homage. All that is great and true in humanity is ever waiting at our gate to be invited. It is not for us to question it about the country to which it belongs, but to receive it in our home and bring before it the best we have.
>
> "Our wealth is truly proved by our ability to give, and Visva-bharati is to prove this on behalf of India. Our mission is to show that we have a place in the heart of the great world; that we fully acknowledge our obligation of offering it our hospitality."

—With Prof. Sylvain Levi, the first Visiting Professor of Visva-Bharati.

Rabindranath founded the Visva-Bharati in December, 1921, and proclaimed that Visva-Bharati was India's invitation to the world, her offer of sacrifice to the highest truth of man. He placed before the new institution a threefold programme :

> *To concentrate in Santiniketan, in the midst of the Asrama Vidyalaya, the different cultures of the East, especially those that have originated in India or found shelter in her house :*
>
> *To lay in Sriniketan the foundation of a happy, contented and humane life in villages: and finally,*
>
> *Through the Visva-Bharati as a whole, to seek to establish a living relationship between East and West, to promote international amity and understanding and fulfil the highest mission of the present age—the unification of mankind.*

V



THE Visva-Bharati was organised as a non-profit-making Society registered under Act XXI of 1860. In the shaping of the constitution a large share was taken by Surendranath Tagore who as Vice-President, Editor of the *Visva-Bharati Quarterly*, and in other ways served the Institution in the sphere of cultural activities for nearly twenty years until his death in 1940.

Rabindranath made over to Visva-Bharati by a trust-deed the land, buildings, library and other properties at Santiniketan belonging to the Vidyalaya, the entire amount of the Nobel Prize, and the copyright of his Bengali books. Since then he has made further contributions out of the sale proceeds of his English books; and has worked untiringly for raising donations and subscriptions for the Institution.

In 1921, besides the Asrama school (Vidyalaya) a research department

Where the whole World finds its Shelter

Dr Brajendra Nath Seal addressing the inaugural meeting of the Visva Bharati at Santiniketan Dec 22 1921

THE VISVA-BHARATI

By

PRASANTA CHANDRA MAHALANOBIS

I

THE Visva-Bharati was formally founded on the 22nd December, 1921 It was not, however, a new institution, it had grown gradually out of the Santiniketan Asrama, and its formal inauguration was merely the outer expression of an inward development For a fuller understanding of the ideals of the Visva-Bharati it is, therefore, necessary to look back into the past history of Santiniketan

The Asrama has become what it is by and through its association with many living personalities Two among them stand out prominent, Maharshi Devendranath Tagore, the founder of the Santiniketan Asrama, and Rabindranath Tagore, his son and the founder of the Visva-Bharati. Behind them both stands the spirit of Raja Ram Mohun Roy

The site of the Santiniketan Asrama was originally a bare spot, in the midst of an open country, and was notorious for being the haunt of dacoits Here Maharshi Devendranath came on one of his journeys, and he was so attracted by the place that he pitched his tent under two trees, the only two to be seen there, and spent his time in meditation and prayer These *Saptaparni* trees are still to be seen at one extremity of the Asrama, with the open plains stretching out before them to the western horizon On the marble slab which marks the place of his meditation is inscribed in Bengali the text of the Maharshi's meditation

Tini āmār prāner ārām mānser
ānanda ātmār śānti
He is the repose of my life, joy of
my heart peace of my spirit

The Maharshi's love for the place of his meditation wrought in it a complete transformation Rich soil was brought over, trees and shrubs planted, and a garden and orchard laid out A house was built, and later on, a temple When the place had thus become a thing of beauty Maharshi dedicated it, as an Asrama, to the public under a Trust Deed endowing it with an annuity of Rs 6,000, for the use of everyone who wished to meditate on God, free from all

Visva-Bharati represents India where she has her wealth of mind which is for all. Visva-Bharati acknowledges India's obligation to offer to others the hospitality of her best culture and India's right to accept from others their best.

Rabindranath Tagore

antagonism of creed and sect. The only things forbidden were speaking ill of any religious sect, vulgar amusements, and flesh foods.

II

FOR a long time, for nearly 30 years, there was very little activity in Santiniketan. The temple was devoid of worshippers; only a paid minister kept up a formal daily service. Visitors were few and far between. Maharshi knew quite well that nothing was being done there, and yet he never grew impatient and never had any doubts about its future.

Thirty years later, when Rabindranath thought of founding a boarding school at Santiniketan, he immediately received the warm approval of his father. The *Vidyalaya* (school) was started on the 7th Pous, 1309 Bengali era (December 1901). Rabindranath's immediate object was to found a school where the children would live a happy life and have as much freedom as possible; where study would not be divorced from life; where the inmates would participate in one communal life; and live in harmony with the surroundings of nature. But the underlying ideals reached far deeper.

The forest homes of ancient India always had a special appeal to his mind. The "Message of the Forest" occurs again and again, almost like a refrain, throughout the Poet's writing in verse and prose.

> "The forest, unlike the desert or rock or sea, is living; it gives shelter and nourishment to life. In such surroundings the ancient forest dwellers of India realized the spirit of harmony with the universe and emphasized in their minds the monistic aspect of truth. They sought the realisation of their soul through union with all."

The two chief sources of his inspiration, the *Upanishads* and the classical themes of Kalidasa, both had their setting in a background of the ancient forest homes of India. *Tapovana* was Rabindranath's heritage from ancient India.

> "Our ideal institution will be situated under the shadow of trees in the open country far from the turmoil of cities. The teachers will carry on their own studies and teach, and the students will learn and grow up in an atmosphere of peace and quietness. If possible, gardens and farm lands will be attached to the *Vidyalaya*. The pupils will help in the farming operations in looking after the cattle and in milking cows. In their leisure hour they will dig the soil, plant trees and water them. Classes will be held under the trees, and boys will learn roaming over the field with their teacher. In this way an intimate contact with nature will be established not merely through the emotions but also through work and toil."*

Let us not forget that another ideal was also working in his mind. He felt keenly the divorce of the existing educational system from our everyday life. He wanted to lay the foundations of education on the firm basis of the life of the people; to use the vernacular as the medium of instruction; to draw inspiration from our own folk-literature and popular traditions. These were years just preceding the beginning of the Swadeshi Movement, when all Bengal woke to a new consciousness of its own responsibility and gained a new confidence in its own powers. These were years characterised by an intense longing to go back to the country, both literally and spiritually.

In this atmosphere the school was started in 1901. Appropriately enough, the late Brahmabandhab Upadhyaya, a great patriot and an ardent nationalist, took charge of it. Although by faith a Roman Catholic he loved intensely the customs and traditions of his country. The school started under his supervision with two teachers, Pundit Shivadhana Vidyarnava (who went away after a short time) and Jagadananda Ray (who worked actively as a teacher in Santiniketan for a third of a century until his death in 1933), and five boys—two of them being the Poet's eldest son Rathindranath Tagore, and Santosh Chandra Majumdar, who came back to the institution after finishing his education in the United States and served it loyally until his death in 1926.

I am taking the following description of school life in Santiniketan in the early days from the late Ajitkumar Chakravarty's Bengali pamphlet on "Brahma-Vidyalaya":—

> "They used to walk barefooted throughout the year and except cooking, did everything with their own hand. After the morning wash students and teachers gathered under the trees near the present library building and chanted Vedic hymns. Everybody used to put on *cheli* (sacred silk) before saying prayers, and classes were almost invariably held under the open sky in the shade of the trees. Altogether life was closely modelled on the asramas of ancient India."
>
> "At first the students were not charged any fees. The Poet did not want any mercenary motives to interfere with the sacred bond between teacher and pupil, and the school was maintained in the beginning from the slender resources of the founder himself. After some time he was however obliged to introduce the fee system, which was at first fixed at Rs. 15 per month.

For a long time the Poet met with little sympathy from his countrymen. very few could understand the inward significance of his institution. Many people thought it to be a mere caprice of the poet, or possibly a reaction against western modes of living. He had, however, the silent approval of his father the Maharshi on his side. The Maharshi realized that the Poet's efforts were directed to a new synthesis, and gave the new institution his blessings.

Brahmabandhab's political sentiments however proved too strong to allow him to remain engaged in purely educational work for a long time, and his connexion with the institution ceased about one year after the starting of the school. In the third year of the Vidyalaya a great personality joined the institution. This was Satis Chandra Ray of whom the Poet has written :—

> "He was barely nineteen, but he was born with a luminosity of soul. In him the spirit of renunciation was a natural product of an extraordinary capacity for enjoyment of life. He had a wonderful soul, living in a world of ideas, keenly responsive to all that was beautiful and great in the realm of nature and of human mind. He was a poet who would surely have taken his place among the immortals of world literature if he had lived, but he died when he was twenty thus offering his services to our school only for the period of one short year. His powers of appreciation were of the keenest and he possessed the rare faculty of being able to kindle others with the joy of his own appreciation. He lived with the students and worked with them, inspired by the spirit of the Asrama."

It was an irreparable loss when he died of small-pox in Santiniketan itself in January 1904. His place has never been filled in these long years.

In the summer of the same year Mohit Chandra Sen came as the *Adhyaksha* (Head of the Institution). He had an intense sympathy with the aims and ideals of the institution and brought to it a vast erudition and deep scholarship. His scheme of education was planned on a most comprehensive scale, and he did not spare himself to carry it out in practice. The number of

* Translated from the Bengali essay "Sikhsa-samasya".

students increased very considerably, and the arduous [illegible] of looking after the complex details of administrative work led to a serious breakdown of his health. In 1904, he left the institution and soon after death removed him from the small band of Santiniketan workers.

Then came a time of stress and strain. The Swadeshi movement broke in tumult all round the Asrama. To Rabindranath it came as a splendid opportunity for initiating a great movement for constructive work. His intimate knowledge of the deplorable condition of our village life had convinced him that our real problem was centred round village reconstruction. To him politics was only a secondary thing; during the height of Swadeshi days he had said unequivocally that "the ultimate object of political work is to mould the mind of the people into unity" He said: "We must look after our own interests, carry on our own work, earn our own welfare, do everything ourselves." Speaking of our impoverished and helpless villages he said: "It will not do merely to remove wants; you can never remove them completely; the far greater thing is to rouse the will of the people to remove their own wants" In 1905 he wrote

> "The down-trodden and despised, who have become callous to insults and oblivious of even the rights of their humanity must be taught the meaning of the word 'brother' Teach them to be strong and to protect themselves, for that is the only way Take, each of you, charge of some village and organize it. Educate the villagers and show them how to put forward their united strength, so that they may in co-operation better their wretched lot. Look not for fame or praise in this undertaking. Do not expect even the gratitude of those for whom you would give your life, but be prepared rather for their opposition."

Although Rabindranath joined the Swadeshi movement with the full fervour of his own nature, he would not allow Santiniketan to be drawn into the whirlpool of politics. The inhabitants of the Asrama often fretted and chafed, but he constantly reminded them that the ideal of the Asrama was something different.*

It was not surprising therefore when in the midst of the Swadeshi movement Rabindranath, however, suddenly returned to Santiniketan, and renewed his intimate contact with the life of the Vidyalaya. Ajitkumar Chakravarti also joined the institution about this time and for a long time exerted a profound influence in the life of the Asrama by stimulating the intellectual activities of the Asrama, and by spreading its message far and wide through his own writings until his death in 1918.

From the time of his coming back to Santiniketan, Rabindranath was gradually laying more and more emphasis on the unifying principle manifesting itself throughout the whole course of the history of India. More than thirty years ago he had declared:

> "In India, the history of humanity is seeking to elaborate a definite synthesis. The history of India is not the history of Aryan or non-Aryan; it is not the history of the Hindus, nor a history of only Hindus and Muslims taken together. Of late the British have come in and occupied an important place in India's history. This was not an uncalled for or accidental intrusion. If India had been deprived of touch with the West, she would have lacked an element essential for her attainment of perfection On us today is thrown the responsibility of building up a greater India, in which Hindu and Muslim and Christian, the dark skinned and the white-skinned, will all find their place."

III

IN 1913, Rabindranath left for England on his now famous *Gitanjali* tour. On the eve of his departure the Asramika Sangha (Association of ex-Students) was started with 10 foundation members. One of the objects of the Sangha in its original form was to enlist the sympathies of the outside public in the work of the Asrama. This was a very significant feature of the new association; it definitely opened the doors of the Asrama to outsiders. It showed that the time for expansion had come.

In Europe, the Poet felt deeply the same need for opening wide the gates of the institution. In 1913 he wrote in a letter:

> "All our vagueness will disappear if we can place our institution in the light of the whole world. If we confine our institution within the local limits of the time and space of our country, it will lose its purity. The development of a complete manhood is our object and we must not aim at anything less than this."

It was just at this time that C. F. Andrews and W. W. Pearson offered their services to the institution. They came back with the Poet in 1914 ready to help him and to share in his work at Santiniketan. They brought a new element to the school itself. Their coming made it clear that the Santiniketan Vidyalaya must no longer remain merely as a school which should be more free and happy than other schools, but that it must seek to give expression to wider ideals representing humanity itself. Pearson served the institution till his death in 1923. Charles Andrews was Upacharya (Vice-President) when he passed away in April 1940.

In 1916, he toured in Japan and America, and delivered the well-known lectures on Nationalism which contain his indictment of the modern nations which had become organized as machinery of rapine and destruction. The contrast between the aggressive spirit of the modern West and the peaceful ideals of the ancient East becomes increasingly vivid. When he returned to his own country his thoughts naturally turned to the heritage of ancient India He felt the need for an institution which would be a true centre of human culture.

On the 22nd December 1918, a special meeting of students, teachers, ex-students and well-wishers of the Santiniketan Asrama was held in the mango grove in Santiniketan, in which Rabindranath explained his ideas about the (new developments) creation of an institution which would be a true centre for the different cultures of the East. The Poet coined the word 'Visva-Bharati' at this time; *Visva* in Sanskrit means the world in its universal aspect; *Bharati* is wisdom and culture.* The Visva-Bharati was to be the centre of learning for the whole world. Appropriately enough the following Sanskrit text was selected as the motto of the Visva-Bharati:

> *Yatra Visvam bhavati eka-nidam:*
> *—'Where the whole world forms its one single nest.'*

From 1919 systematic arrangements were made for advanced studies in Buddhist literature, Vedic and Classical Sanskrit, Pali, Prakrit and later on Tibetan and Chinese. Pundit Vidhusekhar Sastri, as head of the Vidya-bhavana, worked for its success with single-minded devotion till 1934 when he joined Calcutta University With him was associated from the very beginning Pundit Kshitimohan Sen Sastri, the present Head of the Vidya-bhavana.

---

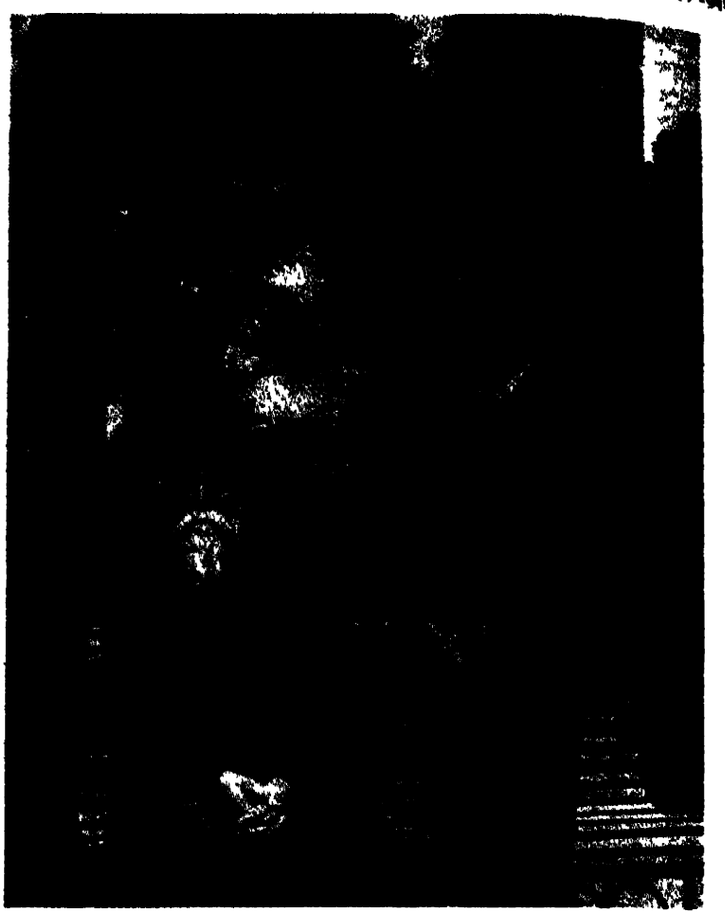
* He took an active part in the foundation of the Bengal National Council of Education, which was set up as an independent organisation in opposition to the official University of Calcutta. He worked hard in its cause, made plans, raised money, organised, and gave systematic course of lectures on literature (collected and published later on in book form as *Sahitya*) to the students. A proposal was made for linking up the Santiniketan school with the National Council of Education, but nothing came of it

* There is an allusion to India (*Bharata*) in the word *Bharati*, which thus also represents the Spirit of India.

Art and music had always occupied an important place in Rabindranath's scheme of education, and in 1918 he succeeded in establishing the Kalabhavana, the School of Art and Music as an integral part of the educational institutions in Santiniketan. Nandalal Bose joined the new institution soon after its inauguration, and has made it the greatest centres of art teaching in India.

IV

AFTER the end of the Great War, Rabindranath undertook a long tour in 1920-21 in Europe and the United States. He spoke everywhere on the need of the meeting of East and West in a common fellowship of learning and a common spiritual striving for the unity of the human races.



In America a young Englishman, L. K. Elmhirst, saw the Poet, and offered his services for founding an Institute of Rural Reconstruction near Santiniketan. Elmhirst believed that the perfect balance of civilisation could only be preserved by achieving a harmonious adjustment between the city and the village. This fitted in very well with the Poet's own ideas. In 1918, he had asserted in his lectures on the *Centre of Indian Culture* that it must also be a centre of economic life :

> "It must cultivate land, breed cattle, feed itself and its students, it must produce all necessaries, devising the best means and using the best materials, calling science to its aid. Such an institution must group round it all the neighbouring villages, and vitally unite them with itself in all its economic endeavours."

In 1915, Rabindranath had purchased a large plot of land at Surul, and had started experiments in agriculture, cattle-breeding, and village work. Things were, however, not progressing quite well; and Elmhirst's offer came at an opportune time. The Poet immediately decided to give Elmhirst full scope for making experiments at Surul.

When he returned to India in 1921, the non-co-operation movement was at its highest. Although great pressure was put upon him from all sides, he steadfastly refused to join it. He could never agree to isolating India from the stream of world thought and progress. In the midst of unprecedented political unrest and excitement, and against the whole force of the current of popular sentiment he expounded his own views with great courage in two lectures, *The Call of Truth and the Meeting of Culture* (1921). He said :

> "It is a fact of unique importance in the history of the world to-day, that the human races have come together as they had never done before . . . . The mentality of the world has to be changed in order to meet the new environment of the modern age
>
> "It has been said in our scriptures *'atithih devo bhava'*, asking us to realize that the Divine comes to us as our guest, claiming our homage All that is great and true in humanity is ever waiting at our gate to be invited. It is not for us to question it about the country to which it belongs, but to receive it in our home and bring before it the best we have.
>
> "Our wealth is truly proved by our ability to give, and Visva-bharati is to prove this on behalf of India. Our mission is to show that we have a place in the heart of the great world; that we fully acknowledge our obligation of offering it our hospitality."

—With Prof Sylvain Levi, the first Visiting Professor of Visva-Bharati

Rabindranath founded the Visva-Bharati in December, 1921, and proclaimed that Visva-Bharati was India's invitation to the world, her offer of sacrifice to the highest truth of man. He placed before the new institution a threefold programme :

> *To concentrate in Santiniketan, in the midst of the Asrama Vidyalaya, the different cultures of the East, especially those that have originated in India or found shelter in her house :*
>
> *To lay in Sriniketan the foundation of a happy, contented and human life in villages and finally*
>
> *Through the Visva-Bharati as whole, to seek to establish living relationship between East and West, to promote international amity and understanding and fulfil the highest mission of the present age—the unification of mankind*

V

THE Visva-Bharati was organised as a non-profit-making Society registered under Act XXI of 1860. In the shaping of the constitution a large share was taken by Surendranath Tagore who as Vice-President, Editor of the *Visva Bharati Quarterly*, and in other ways served the Institution in the sphere of cultural activities for nearly twenty years until his death in 1940

Rabindranath made over to Visva-Bharati by a trust-deed the land, buildings, library and other properties at Santiniketan belonging to the Vidyalaya, the entire amount of the Nobel Prize, and the copyright of his Bengali books Since then he has made further contributions out of the sale proceeds of his English books; and has worked untiringly for raising donations and subscriptions for the Institution.

In 1921, besides the Asrama school (Vidyalaya) a research department

The closing scene of 'Dak-Ghar' (Post-office) staged at the Jorasanko House in December 1917 before a distinguished gathering of political leaders assembled in Calcutta for the Indian National Congress presided over by Mrs. Annie Besant. The Poet appeared on the stage supported by his nephews Gaganendranath and Abanindranath and his son Rathindra.

TAGORE *and* CALCUTTA

By

BUDDHADEVA BOSE

IT is remarkable how minor a part the city of his birth plays in the works of Rabindranath Tagore. His short stories are mostly about village life—about middle-class Bengalis who, twenty to fifty years ago, lived more in the country than in the city. In his novels and in some of the stories Calcutta does appear, but it seems clear that Tagore could never really love the city. The generation that has just passed used to look upon the village as the real home and the metropolis as a more or less unsavoury place where business compelled one to stay. In the main, this attitude is reflected in Tagore's fiction. It is true that his *locale* is often Calcutta, but he is never quite at home, never really comfortable in the stuffy, congested city, and seems to be ever on the lookout to escape into the open spaces of the country. There is a typical instance in *Naukadubi*, where the hero and heroine are made to undertake a long steamer journey from Goalundo to Ghazipore. It is an escape not for the characters alone, but for the author too. We should have thought that the journey was terribly long, but neither the ill-fated lovers nor their author seems to be in any hurry to reach a destination. Oppressed by the city through long chapters, Tagore himself is not over-anxious that this journey should end.

II

NOBODY ever loved Nature better than Tagore. He loves Nature in its entirety, but he specifically loves two landscapes, both Bengali. The rivers and green spaces of East Bengal, and the embrowned, undulating plains of Birbhum—these two form the general background to his entire works. He has given us numerous and unforgettable pictures, but those have hardly strayed from these two points; they are like subtle and intricate patterns woven round a central theme. A born master of description, he has seldom, if ever, graced Calcutta with a song or with one of those brilliant strokes of pen which vivifies the most familiar objects of everyday life. It is with plain disgust that the city is mentioned in his poetry, as in a rejected passage of *Premer Abhishek;* and in one of the most beautiful poems (as, I think, they should be called) of *Lipika*, all the squalor of city life is brought out in one enchanted sentence. Lately, Tagore has written a splendid poem on the city—splendid and terrible in its fury against the dehumanising influence of modern cities. In this case, the hands that were raised to curse did *not* come down in blessing.

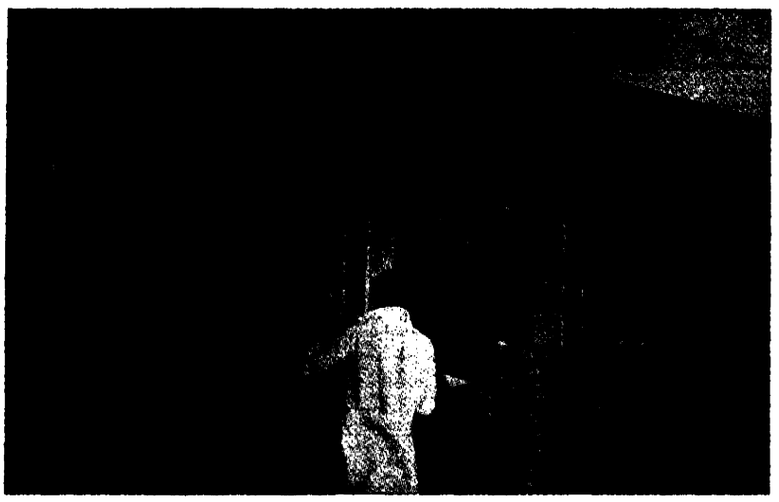
In his later works, however, Tagore seems to be more kindly disposed towards Calcutta. A new attitude towards contemporary life can be detected in his writings since *Parishesh*. In this volume as well as in *Punashcha* and other recent books of poetry there is a good number of sketches of urban life, and the stories of *Tin Sangi* have much of Calcutta in them. It would appear that the poet is at last reconciled to the inevitable; even now he does not love the city—that would be impossible—but he seems to have got over at least a part of his natural aversion for Calcutta.

III

BUT every lover of Calcutta will be grateful for the brilliant picture of old-world Calcutta that Tagore has given us in his latest autobiographical fragment, *Chhelebela*. *Chhelebela* is a great book, and the English translation is creditable. The book has to be relished word by word, phrase by phrase, as one enjoys rich rare wine, but apart from its literary quality, it is valuable as a document. As a description of nineteenth-century Calcutta, there has been nothing like it since *Hutom Panchar Naksha*. This is not to suggest that the two books are in any way similar. There is this important difference that while the earlier book records observations by a contemporary, *Chhelebela* is suffused with memory's golden light. Words are few and significant; instead of the critical spirit natural to a close contemporary, there is that intense and poignant love which one feels for things one has experienced, but are now irrevocably lost. Every little tone of colour, every fugitive shadow, the very fragrance and glow of those long lost days have been recaptured in these pages for generations of readers to come. A few quotations from the English translation, *My Boyhood Days*,* are irresistible:—

> "Business was not the breathless rush that it is now. Clerks would take a good pull at the hookah before starting for office, and chew their betel as they went along. Some rode in palanquins, others joined in groups of four or five to hire a carriage in common, which was known as a 'share carriage'. . . . Women used to go about in the stifling darkness of closed palanquins; they shrank from the idea of riding in carriages, and even to use an umbrella in sun or rain was considered unwomanly."

The colourful life in the streets goes side by side with a lonely boy's wanderings in his vast ancestral house. Here are a few lines describing his solitary evenings on the roof of the house:



> "The light of day begins to grow murky. Once more, with a gloomy spirit, I make the round of the roof. I

(Continued on page 41)

* MY BOYHOOD DAYS—by Rabindranath Tagore—translated from Bengali by Majorie Sykes—second edition (April, 1941)—92 pages—Published by Visva-Bharati, 6/3, Dwarkanath Tagore Lane, Calcutta—Price Rupees Two only.

he was led to a rude seat beneath an ancient tree—a low stone block topped by two slabs of marble, marking the spot where Maharshi Devendranath Tagore was in the habit of sitting in meditation during his life of communion with God. For the Maharshi, "an austere figure, driven restlessly to and fro over the land by an absorbing quest —no less than that of God", came here sometime in the middle of the nineteenth century and found peace and raised a temple of worship. The name "Santiniketan" dates from then.

The guest-house near the temple or *Mandir*, as it is called at Santiniketan, was for a long time the only two-storied building in the whole settlement. Today there are several such buildings. The library building, the boys' and the girls' hostels, the *Cheena-bhavana* or the Hall of Chinese Culture, all are two-storied buildings. There are others which, though not two-storied, are quite impressive all the same. One of these, the European Guest-house, is known as *Ratan-kuthi* after the name of its donor Lady Ratan Tata. But the most impressive of all is the group of buildings in the part of the settlement known as *Uttarayana*, where the Poet and his family have their residential quarters. The largest building in this area—the *Udayana*—offers an interesting study in architecture with its straggling form, its irregular contour, its combination of severity with decorative exuberance. Within a stone's throw of it are four equally interesting but much smaller buildings in all of which the Poet has lived at some time or other: *Konark*, the oldest in this group, now occupied by his Secretary, Anil Kumar Chanda; *Syamali*, the famous mud-hut; *Punascha*, which, by the way, is also the title of one of his later poetical works; and last, in order of time, *Udichi*, a tiny two-storied structure, which is a gem of the remarkable architectural style evolved at Santiniketan, thanks to the resourcefulness and sense of design of Surendranath Kar. But more wonderful than all these is the garden at Uttarayan—partly ornamental, partly landscape—which Rathindranath Tagore and Pratima Devi, the Poet's son and

RABINDRANATH TAGORE AND THE VISVA-BHARATI

—Continued from page 29

was (Vidya-bhavana), a school of art (Kala-bhavana), a small section for girls (Nari-bhavana), and the nucleus of a college (Shiksha-bhavana) were already in existence at Santiniketan. There was also the Sriniketan Institute of Rural Reconstruction at Surul.

With the inauguration of the Visva-Bharati rapid developments took place in many directions. The Poet laid special stress on the programme of inviting distinguished scholars from abroad as Visiting Professors among whom may be specially mentioned the names of Sylvain Levi from France, M. Winternitz from Czechoslovakia, Sten Koncw from Norway, Formici and Tucci from Italy, and Germanus from Hungary. Although it has not been possible, owing to lack of funds, to continue the full programme of visiting professors, a distinctive feature of the Institution has also been the very large number of persons from abroad who have come to live and work in Santiniketan and Sriniketan.

On the institutional side also there has been a steady progress. A permanent section for Zoroastrian studies was started quite early with the help of funds raised by Parsi sympathisers in Bombay. A department of Islamic studies was added in 1927 with the magnificent gift of one lakh of rupees from H. E. H. the Nizam of Hyderabad. Sino-Tibetan researches had been originally initiated in 1921; in 1935 the Sino-Indian Society was founded with the Poet as president; a full department for Chinese studies was started a little later with the help of funds raised by Chinese friends and a magnificent collection of one lakh of Chinese books was received from China; and the Cheena-bhavana (Chinese Hall) was opened in April 1937. A little later a special section for Hindi studies was added; and a new building, the Hindi-bhavana, was opened in January 1939. In the sphere of vernacular education a new scheme, Loka-shiksha-samsad—a system of external examinations through the medium of the Bengali language—was started in 1937.

In the beginning music lessons used to be given in the Kala-bhavana (School of Art). Season festivals were started by the Poet in 1922. Gradually dance recitals were added; and competent dancing teachers were brought over to Santiniketan from Manipur, Gujerat and South India. Parties of boys and girls from Santiniketan, often under the personal leadership of the Poet himself, gave music, dance and drama recitals in Calcutta and other important places in India from time to time. Finally, the school of music and dancing was organised as a separate department as Sangeeta-bhavana; and was placed in charge of Dinendranath Tagore, who was the great custodian of Tagore music until his untimely death in 1935.

At Sriniketan also many developments have taken place. Village welfare, Brati-balaka (boy scouts), agriculture and village education have always formed an important part of the programme. The possibilities of organizing village health societies on a co-operative basis was successfully demonstrated quite early, and has served as a model for the expansion of village health service all over Bengal. In recent years great advances have been made in the revival of village arts and crafts specially in textiles, pottery, wood and leather work which command a growing market extending not only over the whole province but in other parts of India as well.

Rabindranath Tagore started the Vidyalaya at the age of 40. During exactly half the period of his eighty years, Santiniketan has remained the chief centre of his activities. Under his leadership the Visva-Bharati has become an institution unique in character and significance in our country. Jawaharlal Nehru truly remarked that he who has not visited Santiniketan has not seen India.

The hostel of the Kala-Bhavan (Arts College) with bas reliefs on its outer walls

Photo—S SHAHA

daughter in-law have coaxed with infinite skill and patience out of the stubborn almost impossible soil of the Birbhum uplands

Talking of buildings I am reminded of the huge *Kuthi* which dominates Sriniketan—the sister settlement which has almost become a part of Santiniketan At one time the Sriniketan *Kuthi* belonged to the East India Company from whom it passed into the hands of the late Lord Sinha whose home at Raipur is within easy walking distance of Santiniketan It was here that the Poet planted with the help of Mr L K Elmhirst a centre for rural welfare activities as part of his Visva-Bharati scheme Since then the centre has expanded other buildings have sprung up and Sriniketan like Santiniketan is a flourishing settlement through the activities of which the Poet hopes to realize his long-cherished dream of founding an University as an integral part of the life of the surrounding countryside

III

THE casual visitor does not see much of this life unless he chooses to walk out, across stretches of bare upland and along dusty roads, into the villages which surround these settlements Then he will find many signs of the rural welfare activities of the Visva-Bharati villages, schools, dispensaries, co-operative societies He will meet there men and women, belonging to the poorest stratum of Indian society. They remember with affection the name of the late Kalimohan Ghosh, who became associated with the Poet in the early days of his school at Santiniketan and later dedicated himself to the cause of village uplift for he carried to them the message of awakening—the message of "Gurudeva" at the mention of whose name these poor people's faces gleam with gratitude The visitor to the villages will probably also meet boys splendid specimens of growing manhood especially if he selects a *sal* village—who have been organized as scouts by the workers of Sriniketan You should watch their performance at the annual rally at the time of the anniversary celebration of Sriniketan in February It would be a sheer delight

Not less important than these is the work of the crafts department at Sriniketan In the Hall of Industries you will be given a demonstration of the working of whatever craft you are interested in—weaving carpentry tanning leather-work or pottery You will also be offered for sale beautiful products turned out by the workmen here the designs on which bear the impress of the Santiniketan school of art which Nandalal Bose has made famous the world over.

Village work and crafts at Sriniketan, painting and research at Santiniketan, are the different aspects of the work of the Visva-Bharati that so impresses a visitor during even short day's stay But if you want a more intimate glimpse of the place you must remain there for a longer period extending over several days or, perhaps, weeks Then, probably, you will meet some of the old residents like Kshitimohan Sen who possesses the rarer gift of being able to instruct, entertain and inspire at the same time You will meet others who are new-comers but over whom Santiniketan has already cast its strange spell And, between them, if you are a sensitive person, you will catch something of the spirit that holds together this wonderful community

But nothing reveals the spirit of Santiniketan or Sriniketan more truly than the many festivals which mark there he passage of time Whether the occasion is the advent of the spring or the start of the ploughing season the planting of trees or the gathering in of the harvest the keynote is the same the realization of the intimate bond that ties man to the earth the merging of the soul of man into the soul of nature The sweep of colourful robes the cadence of swaying bodies and the exquisite melody of the Poet's songs combine to express the very rhythm of nature—the procession of the seasons as they pass in cloud and rain the cooling breezes of spring and the scorching winds of Vaisakh that blow in little tornadoes the red dust on the roads and the fallen leaves in the glades

—The 'Udayana (where the Poet now resides) with its straggling form, irregular contours and its combination of severity with decorative exuberance is a striking example of architecture

Photo—S SHAHA

IV

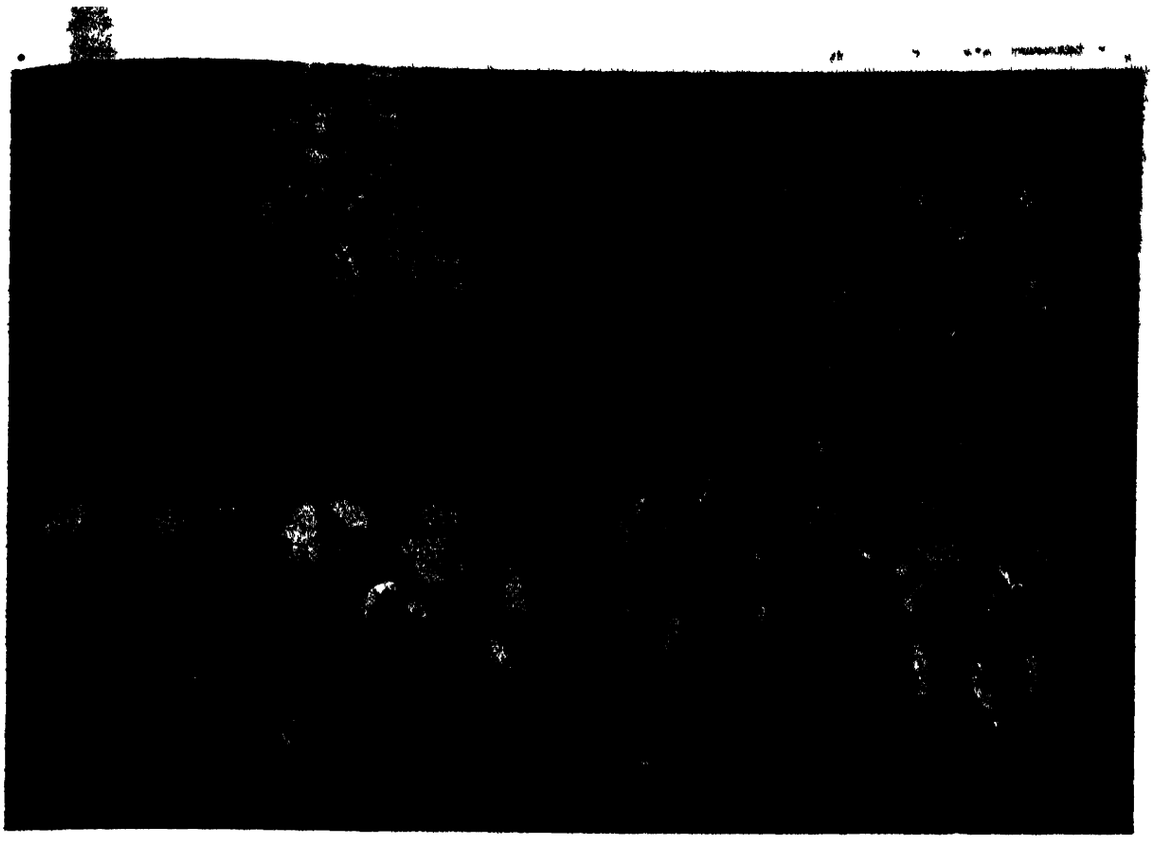
THUS, as the seasons change and the years roll on, both Santiniketan and Sriniketan continue to grow, their activities expand, their areas encroach more and more upon the open spaces which surround them. It is inevitable that in this process of expansion mud-huts should make room for buildings of brick and mortar, that carts should be pushed off the roads that lead to and away from the settlement by cars and buses and trucks, that the hurricane lantern should be replaced by the electric lamp. Something of the old-world charm of the place may disappear as a result of these changes. But much still remains.

—The garden at Uttarayana, partly landscape partly ornamental.
Photo—H. SANYAL

Around the settlement, nature in her varying moods still holds sway in the undulating meadows criss-crossed by irregular depressions that look like miniature ravines. Here and there are clumps of trees, clusters of huts, patches of paddy field. These give to the settlement a setting and a character which make an unforgettable impression on every visitor and deeply influence the residents of the place. Inside the *asram*, too one feels the touch of nature at almost every spot. But none has felt it more keenly than Rabindranath Tagore. The moonlight caught up in the foliage of the famous *sal* avenue, the flush of spring in the *madhavi* creeper in the shade of which classes are held every morning and afternoon, the wind soughing in the *venu-kunja* (bamboo-grove) which gives its name to a hut where Dinendranath, "the custodian of my songs", lived for many years, gleam in the vivid imagery and break into the incredible tunes of his poems and songs. For, if the spell of the Poet's personality is the secret of what I have vaguely described as the 'atmosphere' of Santiniketan, Santiniketan, too, has cast her spell on the Poet, the prince of spell-binders.

SANTINIKETAN SCHOOL SONG

By



RABINDRANATH TAGORE

[Translated from the original Bengali by the author]

SHE is our own, the darling of our hearts, the Santiniketan.
Our dreams are rocked in her arms.
Her face is a fresh wonder of love every time we see her,
For she is our own, the darling of our heart.

IN the shadows of her trees we meet,
In the freedom of her open sky,
Her mornings come and her evenings
Bringing down heaven's kisses,
Making us feel anew that she is our own, the darling of our heart.

THE stillness of her shades is stirred by the woodland whisper;
Her 'amlaki' groves are aquiver with the rapture of leaves.
She dwells in us and around us however far we may wander.
She weaves our hearts in a song making us one in music,
Turning our strings of love with her own fingers,
And we ever remember that she is our own, the darling of our heart.

—Girls heralding the advent of spring in the mango-grove—a typical ceremony at Santiniketan

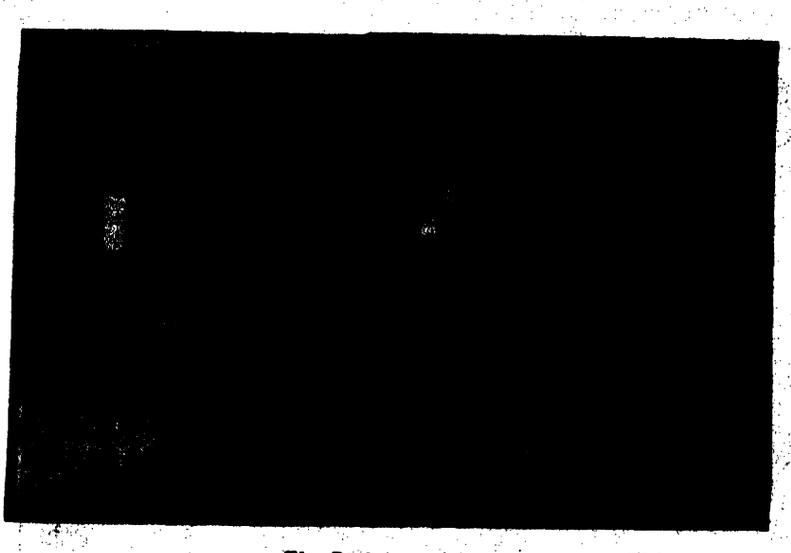
A POET'S DREAM

By
ADRIENNE MOORE

IMPRESSIONS OF SANTINIKETAN OF A VISITOR FROM ABROAD

SANTINIKETAN is an anomaly not only in India but also in the world of to-day It stands as an island of peace—a poet s dream—amid carnage and terror travail and turmoil In India it stands apart from the surging undercurrents Only in Santiniketan can one freely come and go one can in spite of the world dream dreams artists can paint and poets can create



Because of its peculiar character Santiniketan makes two completely opposite reactions on those who come here One is either caught into the folds of dreamland or violently repelled Repelled not by the beauty but by the import The reaction depends on whether one can leave the outside world behind upon entering the magic portals of Santiniketan It is a place that either soothes the soul and lulls it into a forgetfulness of the turmoil without the gates or else tears it to shreds due to the contrast The mind races like a motor beyond control at 110 miles an hour There are accordingly, those who see in it a panacea for the aching world and those who find it superfluous, —the dream of a forgotten, nearly dead existence What place, their minds demand is there for such an oasis when, all around the world bleeds and suffers? In any case, no one can leave Santiniketan without some benefit Both turmoil and peace are good for the soul

— Syamali", the famous mud hut of the Poet into which he moved on his birthday in 1935
Photo—S SHAHA

II

SANTINIKETAN has a personality of its own It emanates from its core —Rabindranath Tagore Long ago the father of the Poet built in Santiniketan a charming retreat. The emerald mosses of its pillars and the shadows of its ample trees still welcome transient guests The Victorian glasswork pergola of its courtyard is the chapel where, just after dawn, each morning, students can assemble for simple prayers. Small offerings of flowers—the

—The Poet framed in the doorway of "Syamali".
Photo—H. SANYAL

dew still fresh on their petals—lie on the low tables of white marble; simple prayers are recited. Sometimes the low moan of Indian music lends its charm.

Around this nucleus the Poet built his school. But Santiniketan has extended and expanded. The school for little ones has grown into a college, a school of art, of music and dance. There are private homes. One is surprised by the size of Santiniketan. The spirit of intimacy has a hard time surviving amid such expansion. The Poet tends to become a legend. Gone are the days when he wandered around the grounds and spoke to the students and told stories to the little ones. His restless spirit carried him from house to house. It is said there is hardly an old building on the grounds in which the Poet has not lived. If some spot struck his fancy, there he would reside.

But the spirit of Rabindranath Tagore dominates Santiniketan,—his music, his poetry, his ideas. The presence of the Poet at any meeting is synonymous with a blessing. It is an event of major importance when the patriarchal Tagore clad in his unique robes and with his majestic appearance lends colour to a scene.

But the personality and appearance of Tagore are not more unique than the world in which he lives—the countryside which is Santiniketan. The high, arid plains of ochre and henna lie flat like a rolled tennis court for miles and miles. One can see the edge of the world in all directions. Standing upon the plain, you feel like the pivotal centre of the universe. The horizon bends to make a cup of the sky. Sometimes one feels as high as the sky. Walking on the open plain, one can reach up and touch the heavens; the mind and soul expand. Other times one is caught like a fish in a bowl. The high curve of heaven is a glass wall separating you from the infinite. Its weight rests upon you, pressing down upon the heart and mind, until the body cries out in agony.

—From "Syamali" the Poet went to "Punascha", built mainly of mud reinforced with coal-tar.

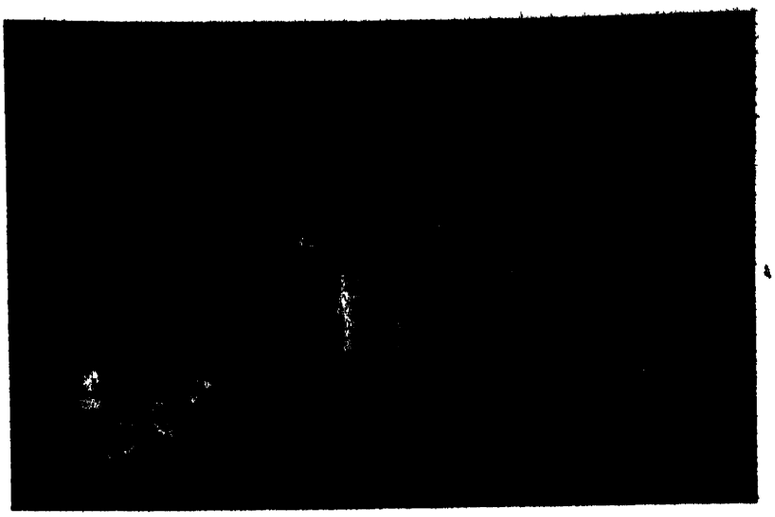
III



THE EYE is delighted by the red earth, the gracious green of the full-bosomed trees after the rains. There are the lolling cowherds: men burnt black from the sun. And along the paths across the plain from a far point of compass to you comes a line of Santal women in single file. Tall and stately they walk, their hips swaying,—on their heads, earthen or brass pots. Their full breasts point like the chalices of passion flowers under their shabby clothes. Scarlet hibiscus adorn their hair and dramatize their ebony skins.

Occasionally, in the dusk hours, hurrying home to low, muddy villages, one can see a Santal boy with bow and arrow,—perhaps of the very same pattern used 2500 years ago by his ancestors before the Aryan conquerors came. Certainly, clothes do not bother him. He is content with his short loin cloth, his immaculately swept mud house, perhaps a cow and a string bed. Who should want more? He lives with and is of nature. Two thousand five hundred years have passed as a day. As he races with the setting sun to his village without lights, he notices the swaying of a gaunt palm against the sky and sees the ripple of young rice

green in the [illegible] fields. But no poet he. He thinks [illegible] the intoxicating juice he can get from the palm on the morrow and the [illegible] of painful toil ahead of him among the rice buds He is of the earth His poetry is life

Santal villages abound in the neighbourhood of Santiniketan They are distinguishable from Bengali villages by the fact that the latter often have two-storey houses and are not so clean But the rhythm of life seems to be practically the same Their silence is broken by the creaking of the grinding stone and the thud of the grain beater Dawn is still the alarm clock sunset—the curfew

Though these villages are not very close together, there is a feeling of population density One cannot go for a walk anywhere without meeting people Santiniketan belongs to the fields around it It cannot ignore them The poverty of the people living in their world of the era of Noah working thinking living as though the institution had never come is the most appalling thing Amid these people the students of Sriniketan—the Rural Reconstruction Centre of Visva Bharati—go and work a baffling task with the hard clay soil without means of irrigation in one of the driest spots in Bengal

—The Poet at a dance recital given by the girls of Santiniketan on the last Bengali New Year evening (April 14 1941) when the Visva Bharati celebrated his Eightieth birthday

Photo—S SHAHA

IV

SUNSET at Santiniketan comes with a rush but lingers long for this is the top of the world and just over the edge dawn comes on the other side —at least that is how one feels One is content to manage with the few hours of electric light available and go to bed by 10 o clock unless one sits out under the stars which cobweb the heavens and listens to the low hum of the electric plant breaking the otherwise noiseless night But this is a luxury for life in Santiniketan begins with dawn The pattern of the peasant is followed with dead silence in midday —the hours of toil extending from 7 in the morning to 11 and from 2 in the afternoon till 5 o clock Then there are games or walks dinner a little conversation and bed However dreamy the locale and spirit there is work to be done at Santiniketan and it *is* done A poet s dream is being realized here—slowly but steadily

---

TAGORE AND CALCUTTA—*Continued from page* 37

gaze down at the scene below where a procession of geese has climbed out of the tank People have begun to come and go again on the steps of the *ghat* the shadow of the banyan tree lengthens across half the tank the driver of a carriage and pair is yelling at the pedestrians in the street '

But for the carriage and pair it would be difficult to believe that it is a Calcutta scene But Calcutta was much less of a city when Rabindranath was young

They are all here in this little book—the kerosene lamp whose "brilliance amazed us", the old fashioned lazy talkative domestics, the *jatra-wallas*, the snake charmers, the dacoits and wrestlers, gipsies and vagrant musicians, the piles of *pan* and the lovely ladies who prepared them Altogether, old world Calcutta lives in these pages, and in one brilliant paragraph, Tagore draws a sharp contrast between Calcutta as he remembers it and Calcutta as it is now

> When I was a little boy Calcutta city was not so wakeful as it is now Nowadays as soon as the day of sunlight is over the day of electric light begins The oil mills are still the steamer sirens are silent the labourers have left the factories the buffaloes which pull the carts of jute bales are stabled in the tin roofed sheds But the nerves of the city are throbbing still with the fever of thought which has burned all day in her brain But in those old times which we knew, when the day was over whatever business remained undone wrapped itself up in the black blanket of the night and went to sleep in the darkened ground floor premises of the city Outside the house the evening sky rose quiet and mysterious

Looking across the space of so many years, Tagore is now able to love the Calcutta he knew as a boy, and the Calcutta *we* know he just tolerates

CAMEOS

By

VANGUARD

IT was a wet September evening in 1936 We were driving back home after an interview with Tagore, then staying in a suburb of Calcutta My companion was an Englishman—a young professor of literature, who had just had his first glimpse of Tagore He was impressed with the Poet's personality But he had so many things to ask about him There was still something that he had yet to figure out about Tagore After a pause he asked me how the people the common people, regarded Tagore I replied 'Well, we consider him as our national poet But he is a votary of no narrow nationalism he has condemned in no unmistakable terms the system that is dominating our country, but he has sought refuge in a broad humanism" "Yes, but," he asked once again, "would you call him a People's Poet, a poet who would portray the life, struggle and aspirations of the common man—the toiler in the field and the factory?" I do not remember what answer I could mumble out then, but it was not something that fully satisfied either him or me at the time As I returned home, the question came back over and over again Is Tagore a people's poet?

II

TWO years later, the scene shifts This time my friend was an Indian in London, who at one time had been a student at Santiniketan He had settled in England after a struggling academic career We were discussing about André Gide who had just come back from the Soviet Union and had started a tirade against that country It was a shock to the progressive circles and was broadcast all over by the reactionary press What a depressing feeling it was to find the great French writer in the camp of the enemies of the U S S R ! Little by little our discussions veered round to the favourite topic as to whether it was possible for the intellectuals to be above the battle and retreat into the Ivory Tower like the Eyeless in Gaza while the world was being enveloped in a desperate struggle of power-politics, and culture stifled all around, no body could remain neutral without helping the cause of reaction. Particularly was it true in a dependent country like ours, and, I asked, if our intellectuals were alive to their responsibility Many were not, but how was Tagore? Was he socially conscious? Did he realise the issue at stake? Profit *versus* the People —does he really know on which side he should stand? My friend kept quiet for a moment, and then, from under a huge pile of books, he drew out a dusty file of type-written pages It was an English translation of Tagore's *Letters from Russia,* and he told me the story behind it

Years back when this youngman was absorbed in his research, there came to him a copy of Tagore's *Letters from Russia* He started translating it and he did it at a time when he was nearly stranded But he felt a sense of responsibility towards his *Gurudeva* and was anxious that Europe should know where Tagore stood in this crisis of progress The impression that the West retained about Tagore with "the lotus and the crescent moon" was out of date It was time that they should know him again as the realist who had reacted to the sufferings of exploited humanity With this end in view, he translated the book, and Bertrand Russell willingly wrote a foreword to the proposed English edition From the Poet himself came glad consent and everything was arranged but, at the eleventh hour, unexpected circumstances came in the way, and the book was never published

III

AS I listened to his reading of the manuscript till midnight I realised what an unbelievable loss it had been that the book never saw the light of day, for it might have given Tagore a new recognition in the West, more impressive and more significant than what he had received on the publication of *Gitanjali.* This time he would have received more coveted laurels than the Nobel Prize, the gratitude of struggling millions from Spain to China With what clear understanding he could delineate the ruthless working of imperialism in his own country and compare it with the tremendous material and moral progress in the Soviet Union. Here was Tagore as something more than a poet and philosopher Though not one of them, he had felt with his own heart the misery and starvation of the common people, and he had the courage to admit the great social advance made under a system which destroys the propertied class to which he himself belongs Here was the great humanist who would never hesitate to condemn exploitation to welcome a better order of things

IV

SUMMER 1939 An international students' delegation was visiting a concentration camp of the Spanish refugees in the south of France It was a small party but comprised many nationalities from the Chinese and the Indian to the Yugoslav and the American The visit was intended to demonstrate youth's common front against Fascism and Imperialism and for the purpose of conveying the greetings of the world students to the youth of Spain as the vanguard of the People s struggle against Fascism The camp was situated right at the foot of the Pyrenees, near the frontier and had a population of 18,000 —mostly from the Army of the Ebro, which included men from all walks of life—writers artists doctors, workers, peasants clerks and shopkeepers,—men from all parts of Spain and beyond,—men of the famous International Brigade who came and fought shoulder to shoulder with the Spanish people because they realised that the front of Peace Freedom and Democracy was indivisible and could be defended against not by rival imperialisms, but by toiling millions out to build a new world

The French commandant did not allow us to enter the camp which was under military control and was surrounded by barbed wire for miles around He was polite but would not let us go in, lest the French Government would be exposed as to the appalling treatment that had been meted out to the sons of the sister democracy of Spain Daladier and Bonnet, the Chamberlains of France, who with their gang had abetted the Fascist attack on Spain were now, by imprisoning these valiant fighters, acting as the gaol-warders of Hitler and Mussolini The alternative that was offered to these brave soldiers of democracy was either work in the labour-gangs in France or

a passage back to Spain to face Franco's firing squads.

We were allowed to interview about 20 people picked out of the camp There were Brazilians, Poles and Chinese in the International Brigade Of the Spaniards, most of them in that particular camp were students from Colleges and Universities One of them had been working in the University of Madrid on a thesis on literature for his doctorate, before the Fascist rising in 1936 We talked to each other in broken French, and he asked me a number of questions about India He had heard a lot about Gandhi, Tagore and Nehru Of these, he ruled out the first for, as he said, "Gandhi wanted to put the hands on the clock back while we are out to create a new and better world" But Tagore and Nehru, he continued, were different, though they might be under the personal spell of Gandhi He had read the works of Tagore in French, and had listened to portions of Nehru's Autobiography read out by his comrades at the front He wanted to know what Tagore's attitude was towards Fascism Fortunately I had then just read the Poet's reply to Noguchi, and I told him about that He was happy and remarked 'He might not be coming from the ranks of the people, but he is sensitive and he is honest He is on the side of progress and justice"

And he added after a pause "You know Fascism can never be effectively fought by imperialist governments – that is why to-day we are in prison in the so-called democracy of France These governments might one day stand against Hitler and Mussolini when their own interests would be touched, but Fascism will never die so long as Imperialism survives, and it is for the common people to rise and smash up the present system of exploitation In that struggle, the intellectuals will be called upon to make their choice Many would be frightened and go over to the side of the bosses But the better type, men like Malraux, Fox, Cornford and Lorca who fought along with the peasants and the workers—and men like Tagore and Rolland, Toller and Sinclair, who have sent their greetings from a distance,—these would all be on our side. Many of them might not take part in the actual fighting, many would abhor the violence that would show itself in the process, but they would at least be honest when, moved by the agonies of suffering humanity to-day, they would welcome the birth of the new world of peace, freedom and happiness. By themselves they would not be able to build such a world, but they would welcome its construction when the toiling man would be enthroned They would no doubt be individualists and their reactions would be entirely emotional Yet they would be our valuable allies in the struggle Would you regard Tagore as one of them?" I did not have to hesitate to give him the proud answer "Yes, we regard him so"—and was reminded of the foggy night in London when we read the translation of the *Letters from Russia* and of the monsoon evening in Calcutta when the Englishman asked me 'Would you call him a People's Poet?"

V

THINGS have moved since then and moved rapidly I do not know what has happened to the young Spanish student Perhaps he went back to Spain that is Franco's prison, or fell into the hands of the Gestapo after the betrayal of France, or if he is one of the few lucky ones, has escaped to some other part of the world, ever ready to carry on the real People's struggle against Fascism. But Tagore has not belied our hopes, he has reacted magnificently to the sufferings of toiling humanity trying to sever the bonds that bind them. Even in this evening of his life, he has shown the alertness of youth in tearing off the mask from the face of Fascism and Imperialism alike As I read and re-read his New Year's Message, "CRISIS OF CIVILISATION", there came back to my mind the face of the young comrade from Spain behind the barbed wire in the concentration camp, and I remembered the ringing words of Rolland, written on May Day 1934 on the advent of German Fascism "The decisive conflict has begun It is no longer permissible to keep aloof . . . Appeal to life against death, against that which kills, against these ravages of humanity the forces of money, drunk with gold, the Imperialisms drunk with power, the dictatorships of the great companies, and the various forms of Fascism, drunk with blood Working man, here are our hands We are yours Let us unite Let us close up our ranks Humanity is in danger!"

TRIBUTE

POET OF BENGAL! you belong to the world—
The world that was and is yet to be—
The world of words, unfettered and free,
Which Man's imagination casts in a mould
Of truth and beauty and immortal glee

Maker of our Music! how shall we sing
In praise of the Muses unless you join
In chorus with us and play as our king—
As the king of our hearts—and give us your coin
With the stamp of your mind and genuine ring?

Teller of stories in the lyrical vein!
Who has not felt the throb and the thrill?
Who has not knelt at your feet for the skill,
The witchery, the wisdom, the wile without stain,
And, kneeling for nectar, not drunk to his fill?

Eternal child from the kingdom of Heaven!
You've come to our soil for your play on this Earth,
You've played with the children and proved your worth
To be reckoned as fit for the meed that's given
By God to his progeny born for re-birth

—*HARIT KRISHNA DEB*

THE POET WANTS A STREET-NUMBER

A Letter From Rabindranath Tagore

SOME years ago the Poet was out to find a street-number in Calcutta, but he failed The system of numbering, or rather, as he put it, the lack of it, baffled him. In the letter below—which he sent to the Fourth Anniversary Number of the *Calcutta Municipal Gazette* (November, 1928), he put forward a suggestion "for consideration by our City Fathers", which, he believed, would assist both citizens and strangers to the city "uninitiated into the mysteries of street-planning". It might please the Poet to know that at least one of his suggestions has since been given effect to

SANTINIKETAN,
8th November, 1928

My Dear Amal,

I am glad that you asked me for a few lines for the Anniversary Number of the *Municipal Gazette* Your kind invitation has given me an opportunity of putting forward a suggestion for consideration by our City Fathers

I had the misfortune some time ago to try to discover a house with a street-number, which, doubtless for some excellent municipal reason, was occult for a mere citizen like myself After many journeyings, up and down the road, in desperation I turned for help—to a Policeman, I had forgotten that we are unique in the world in the matter of our Police force, for, though in other lands the Policeman may have grey matter in the brain, our national brand has merely red material on the head,—perhaps more decorative, but undoubtedly not quite so useful The hiatus in the numbering of the houses was apparently unnoticed by even the people in the locality, for, when appealed to, they could make merely large and infutile gestures

The present system of numbering houses and planning streets may be a splendid way of training the young generation to become future Livingstones But the course is, perhaps, too difficult, and I sometimes wonder if Livingstone himself would not have found exploration in Darkest Africa easier than fruitful exploration in the City of Palaces. And, for those of us who have little inclination for exploration, this scheme is extravagant both in time (perhaps a slight matter) and in petrol (which, certainly, is a matter for momentous consideration)

It should not be a very difficult task to assist both citizens and strangers to the city, uninitiated into the mysteries of street-planning, in their adventurous undertaking of trying to discover places and houses in Calcutta The lamp-posts might be easily utilised for hanging from them plates bearing useful information, and I believe that though the quality of illumination emanating at night from many of the city lamp-posts might conveniently be a matter of civic discussion, the utility of these plates pendant from the lamp-posts will be freely recognised by all It would enable even me to discover a house mystically numbered let us say, 99-1-N, Cornwallis Street *

I would suggest that an enamelled or painted board should be attached to each lamp-post On the board should be the following information —

(*a*) the number of the houses in the street between the lamp-post and the next lamp-post on either side, an arrow would indicate whether the numbers are in the ascending or in the descending order, *e.g.*,

48←——56 56——→64

(*b*) the name of any street or lane opening out of the street and the number of the house from which such street or lanes begins; *e.g.*,

60, Ram Chandra Dutta Lane.

As there are lamp-posts on either side of the street, it is unnecessary to point out whether the street or lane is on the right or the left

(*c*) the names of all public buildings or important places, lying between lamp-posts, should also be entered if any private individual or business firm wishes to have his name on the direction-plate, it might be a source of income to the Corporation It is quite conceivable that many shops or even private individuals may be willing to pay well for the publicity of the plates

At the place where each important street begins, there may be put up a large board stating prominently the more important streets opening out from the street and also any important public places to be seen along this street Here again, a considerable revenue may be acquired by permitting business-firms or private individuals to have their names on these boards

The cost of providing these plates and boards should not be prohibitive if steps are taken to encourage business-firms to have their names on the plates and boards, the cost would, perhaps be practically nothing But in any case the assistance to the public would be so great that any expenditure should be considered a legitimate charge on the municipal revenue A beginning might be made with the more important of the streets

Wishing your paper all success

I am,
Yours sincerely
RABINDRANATH TAGORE

AMAL HOME, Esq.,
Editor, "Calcutta Municipal Gazette",
Calcutta.

SENIOR AND JUNIOR CLERKSHIP EXAMINATIONS

CORPORATION RESOLUTION ON APPOINTMENT OF SUCCESSFUL CANDIDATES

The Corporation at their meeting dated March 7, 1941, considered the recommendations of the Committee of Examinations dated February 12, 1941, regarding the appointment of successful candidates in the last Senior and Junior Clerkship Examinations and resolved :-

I (a) That for the Senior Grade clerks, the names of the following 16 successful candidates, arranged in order of merit and according to the communities to which they belong, be approved under Rules 26 and 27 of the Recruitment Rules as adopted by the Corporation on the 15th February, 1939, and that the appropriate Committee be asked to appoint them in existing and future vacancies in terms of the two rules quoted above

Non Scheduled Caste Hindus

1 Babu Sailajananda Bhattacharjee
2 Babu Baidyanath Bagchi
3 Babu Anil Kumar Mukerjee
4 Babu Batuk Sanyal
5 Babu Saradindu Narayan Ghose
6 Babu Arun Kumar Mukerjee
7 Babu Dwijendra Lal Guha.
8 Babu Narayan Ch Banerjee
9 Babu Bireswar Bhattacharjyee
10 Babu Dhanurdhari Bose

Moslems

1 Mr Abdul Quasim
2 Mr Md Murtaza
3 Mr Md Anisur Rahman
4 Mr S Md Mahabood Alam
5 Mr A S M Mukhlisur Rahman

Scheduled Caste Hindu

1 Babu Gajendra Narayan Das

(b) That after absorption of the abovementioned persons, appointments be made from amongst the remaining successful candidates for the purpose of filling up subsequent vacancies; also, that a further competitive examination be held with a view to making up the requisite quota for Moslems and Scheduled castes

II (a) That for the Junior grade clerks, the names of the following 11 successful candidates, arranged in order of merit and according to the communities to which they belong, be approved under Rules 26 and 27 of the Recruitment Rules as adopted by the Corporation on 15th February, 1939, and that the appropriate Com-

mittee be asked to appoint them in existing or future vacancies in terms of the resolution quoted above:—

Non-Scheduled Caste Hindus.

1. Babu Pran Gopal Saha.
2. Babu Rabindra Nath Basu.
3. Babu Hemendra Nath Bhattacharjya.
4. Babu Sisir Kumar Dutt.
5. Babu Rabindra Nath Ghose.
6. Babu Tarak Nath Das Gupta.
7. Babu Gour Hari Mitra.
8. Babu Amalendu Roy.
9. Babu Harendra K. Pal Chowdhury.
10. Babu Jitesh Ch. Bagchi.

Moslem

1. Mr. Abdur Rauf

(b) That after absorption of the aforementioned persons, appointments be made from amongst the remaining successful candidates for the purpose of filling up subsequent vacancies; also, that a further competitive examination be held with a view to making up the requisite quota for Moslems and Scheduled castes

III. That in view of the fact that some of the departmental candidates have done well, both in the Senior and Junior Clerkship Examinations, it be a direction that in the case of promotion as between other departmental candidates and those who have competed for the Examinations, the successful departmental candidates in order of merit shall be given preference.

Heads of Departments have been asked to keep in view the directions in submitting their recommendations for appointment of clerks.

CORPORATION CENTRAL LABORATORY

THE MAYOR OPENS NEW PREMISES

In opening the new premises of the Corporation Central Laboratory on Saturday, the 21st December, 1940, Mr. A. R. Siddiqi, the Mayor of Calcutta, delivered the following address:—

CITIZENS AND FELLOW-COUNCILLORS,

I am indebted to Mr. Sailapati Chatterji, the First Deputy Executive Officer, for affording me an opportunity, at the opening of these new premises of the Corporation Central Laboratory to-day, to address you on a subject on which we, who are entrusted with the welfare of this great city, do not appear to have bestowed sufficient attention. In my inaugural address as Mayor, I had told the Corporation that we had not taken advantage of the medical and scientific talent available to us in Calcutta and which its possessors were prepared to place at the service of the city *gratis*. We all know the uses to which science is being put to-day but that should, all the more, lead us to an intensification of our efforts to harness its incalculable powers in increasing the sum of human happiness. It is true that we have a committee or two consisting of scientists and experts for advising the Corporation but a systematic programme, for harnessing these talents in a planned manner, does not seem to have been made.

We Councillors are not usually experts on the varied subjects which confront us in the discharge of our duty to the citizens. We must realize this fact and feel conscious of our deficiency. The different facets of a modern city have intimate relations with science and technique and to the degree that we can be advised on these matters by experts to that extent shall we be able to develop Calcutta into a model city. It is true that we have experts within the organization of the Corporation itself but it is equally true that our efficiency would be increased greatly by the voluntary services the scientists are prepared to place ungrudgingly at the disposal of their city. These experts have the additional advantage that, having no material interest in the Corporation itself, they are likely to have a broader outlook than Corporation officials and they, therefore, will tender their advice, without fear or favour, both as citizens and scientists.

There are certain aspects of our city life for which we require the immediate organization of expert Advisory Boards. We have, for instance, the problem of Food-supply, which is obviously of first importance. It has many sides, for instance, purity, dietetic value, supply, preservation, transport, distribution and particularly research. The subject has, thus, scientific, technical and organizational aspects. It is notorious that in spite of legislative Acts and hordes of officials to control food adulteration, we are far from ensuring a pure food-supply nor is the price of such commodities as milk, fish, eggs, and other goods of great nutritional value, as low as it might have been with proper organization and control. The principal foodstuffs, which lend themselves to the greatest adulteration are *ata*, milk and milk preparations like ghee, and edible oils like mustard oil. The control of the purity particularly of these three types of foodstuffs is of supreme importance. Tentatively, I would suggest that the Corporation, apart from designing more efficient methods requiring the control of the adulteration of these products, both in manufacture and in sale, might itself run zonal stores for the sale, in a pure state, at least of these three principal commodities. If the immediate establishment of these model stores, in the different parts of the town, is not feasible, we may even start with a Central Store. This would have a two-fold effect. First, the citizens will know where foodstuffs of certified purity are available and, secondly, these stores would have a salutary effect on privately owned shops dealing in them. It is also desirable that

measures should be devised to deal with the fish and cabbage rings and other similar organizations, but the line of progress should be in the direction of the municipalization of all markets in the city. As a further step I would also like to see community kitchens and restaurants run by the Corporation in busy and congested areas where, nutritious, well-balanced and palatable meals, prepared under expert guidance, are served at a low cost. The meals served here would become models for other restaurants and even for ordinary households.

Allied with this is the question of the supply of nutritious and health-giving food to the citizens This laboratory which we are opening to-day will, I hope, prove of service in this regard but the Corporation should also initiate, encourage and support nutritional investigations in collaboration with the existing institutions in Calcutta, with a view to make our efforts more effective scientifically. These steps would require detailed consideration from many angles, not the least of them the financial one, but I have no doubt in my mind that, provided our efforts are sincere and well-directed, we can achieve a large measure of success, even with the resources, both in funds and in goodwill, that we have at our disposal. It is for the detailed consideration of these aspects of the problem that I would urge the formation of a permanent Advisory Board for Food and Nutrition, which would guide us with competence and authority.

I might refer next to the question of Public Health. Diseases like cholera, typhoid, small-pox and malaria, which levy a large toll in life and efficiency and produce periodic panics, are almost entirely preventable Our backwardness is nowhere exemplified better than in this that these diseases, which were no less rampant in Europe even fifty years ago, have been completely stamped out. Can we not do so in Calcutta, if we but will it? If routine work or apathy is replaced by an acute sense of civic responsibility, can we not improve the present position of this city in Public Health? What justification can there be for uncovered dustbins and uncovered lorries carrying refuse with wind blowing it and scattering infection? Is it impossible to induce or compel householders not to throw refuse into the open street? Is it impossible to prevent pedestrians from spitting and throwing *pan* juice, banana peels and cocoanut shells on the streets and otherwise making them dirty, by a judicious combination of educative propaganda and firm legal action? What have we done so far in cleaning up *bustees* and providing decent cheap houses for the poorer people, with adequate sanitary arrangements and sufficient filtered and unfiltered water-supply? Could not vaccination against various diseases be enforced more rigorously and universally, not only during epidemic seasons but throughout the year? Is even the vaccination that we apply, properly carried out under scientific control? Have we adequately utilised the medical research institutions for researches necessary for our purpose? Have we got adequate hospital accommodation in this city or sufficient medical welfare clinics for advising the poorer citizens both in preventive and curative aspects and for affording medical relief at a low cost? Should we not have an adequate number of maternity and child-welfare centres? Have we got any home for old, infirm, blind and deformed persons? What have we done to check vagrancy and mendicancy—the two institutions which take the palm as carriers of disease? All these are vast and complicated problems, which must be tackled with knowledge, efficiency and prudent economy, if we wish to develop Calcutta into a clean and healthy city.

Closely connected with the preventive aspect of Public Health is the question of recreation and the physical culture of our citizens, particularly the young. There should be a regular movement for physical fitness and for that joy that wells up from a sense of perfect well-being. I wish to see more laughing faces among the boys and girls around us. I would like to see physical drills and parades every week of 50,000 boys and girls in the *Maidan* and sport festivals each year. We should have proper organisation, parks and play-grounds for providing all these facilities, for physical culture and recreation.

In order to consider these problems there should be an Advisory Board for Health and Physical Fitness. As its scope is vast, it should have different Committees set up for the different specific problems, for instance, (1) Hospital Committee or Committee for the care of the sick, (2) Committee for Preventive Medicine, (3) Committee for Sanitation, (4) Committee for Maternity and Child-welfare, (5) Committee for Industrial Hygiene, (6) Committee for Physical Fitness and Recreation, (7) Committee for Scientific Research and other Committees, that may be necessary. The Committee for Sanitation, however, would have a very comprehensive scope of work concerning streets, *bustees*, water-supply, drainage and sewage disposal and may itself be a Board with different Committees It is essential that all proposals concerning Health and Sanitation should be well-balanced and co-ordinated. The Board for Health and Physical Fitness should direct its attention to Medical and Public Health Research. Respiratory troubles like cold and influenza and bowel disorders like dyspepsia due to ill-balanced high carbo-hydrate diets are too common among children and among our undergraduate community. Malaria, small-pox and cholera affect a considerable proportion of the population during particular seasons. I would like the Corporation to sponsor research schemes on these problems to be carried out in the existing medical research institutions. The Indian Institute for Medical Research has carried out interesting and useful work on bowel disorders and respiratory troubles and a scheme of research on immunity against malaria is being actively pursued. Such investigations are of paramount importance if we intend to combat these devitalising ailments in a methodical manner and on sound scientific principles

This leads us at once to the question of establishing a well-equipped Research Hospital in our city There are hospitals where, in the course of routine treatment, investigations of great importance are carried out but it is an undoubted fact that a hospital with different sections devoted exclusively to research on different problems, so that the liaison between laboratory research and clinical investigation may be established effectively, would be of immense service not only to the public but also to the medical profession. We have the men who could run an institution of this character, and I am hopeful enough to believe that we have sufficient public spirit and generosity that would fulfil this crying need of the city.

There is already an Advisory Board for water-supply. It is doing excellent work for which the citizens of Calcutta cannot be sufficiently grateful. The experts of the Irrigation Department of the Government of Bengal, the Commissioners of the Port of Calcutta and the engineers in the Water Works Department of the Corporation have been watching with disquietude the formation of sand-banks at the three points where the Bhagirati, the Jalangi and the Mathabhanga branch off from the Ganges. The volume of head water these used to bring to the Hooghly has dwindled considerably with the result that saline water has been creeping upward and, occasionally, reaches Palta, which when originally selected as the source of our drinking water-supply, was far beyond the line of salinity. The problem assumed acute proportions in 1936. But that is not all. With a lesser volume of water and a slower current the silt is not washed away to the sea and the level of the bottom of the river near Calcutta is rising. Dredging alone will not keep the channel for ocean-going steamers clear and Calcutta may cease to be the great international port it is to-day. The prospect, if not immediately dangerous, is indeed disturbing. Here again we need scientists to help, advise and guide us.

The Mosquito Control Committee is also doing useful work. Experiments carried out by Bengal Nagpur Railway experts, in Garden Reach, have succeeded, in a small area, to such an extent that it is possible to sleep there without mosquito nets. It should be possible to enlarge this area so as to cover the whole of Calcutta. In the boats on the rivers and canals round our city there is a type of mosquito which

is capable of carrying the germs of that dreadful disease Yellow Fever. If precautions are not taken in time and scientific advice not sought, the havoc may have to be calculated in millions of men and money. The pestilence is reported to be travelling from West to East Africa. Ships and Airplanes may bring it to our shores.

I would also urge the formation of an Advisory Board for Education. The Corporation has done valuable work regarding primary education but it can do more. Its scope has to be widened to include technical education. The absence of a Polytechnic where boys and men, working in day time may get scientific and technical training of an advanced nature, in the evening, is keenly felt.

There is the question of the supply of nutritious food to school-going children. The provision of free or cheap milk and of a full meal of the required nutritional standard, to every child and adolescent in the schools of this city every day, would indeed be a goal worth striving after. For this purpose the Corporation may run what are called "Kitchen Factories," where these meals could be cooked on a large scale under scientific guidance and control with due regard to cheapness, palatability, variety and nutritive value and distributed among the schools.

My concrete proposal, therefore, is to set up a number of Advisory Boards consisting of scientists, technologists and experts, which may include also the officials of the Corporation, to advise the different Committees of the Corporation and also the Corporation itself on specific problems and to have a co-ordinating Central Advisory Board representing all these different Advisory Boards. It is important in this connection to emphasise that the advice given by these Boards should not be treated merely as recommendatory. It should be implemented by the Corporation to the utmost of its ability. In contrast with the dignity attaching to Boards which function to advise Governments or Corporations in other countries, and the convention that has grown up to treat their advice as mandatory, almost as executive decisions, there is too often a tendency in our country to ignore such advice and to substitute for it decisions made by non-experts, who happen to be in positions of authority. These can be and often are more harmful than beneficent. We must gradually build up this sound convention in Calcutta.

I have discussed the question of the establishment of these boards with some eminent scientists and medical men and also with a few colleagues of mine in the Corporation. The proposal has received unqualified support in every quarter. Details are being worked out and I am hoping that in the very near future, when the scheme is ready, it will be placed before the Council of the Corporation for its final sanction. The very fact that we have met to-day to open the new premises of the Central Laboratory of the Corporation is a happy augury. It will play an important role in carrying out a good many of the suggestions I have made and become a valuable adjunct in furthering the activities of the Boards in many directions. You will find that its new habitation and equipment are worthy of undertaking the ambitious task I have tried to place before you in outline this afternoon.

It has been said that a people gets the Government it deserves. It is also true that a city gets a municipality it is fit for. The Corporation alone will not succeed unless the citizens cease to tolerate filth and dirt. I have no doubt that if we the Citizens and Councillors pull our weight together, we can achieve a large measure of success. Let not political differences blur the vision of our common civic responsibility. Let amity born of common creative effort grow from more to more and heal our torn and wounded corporate life. Let us turn a new page and initiate a new chapter.

A History of the Corporation Central Laboratory

by

Mr. Sailapati Chatterji, M.A., B.L., First Deputy Executive Officer

on the occasion of the opening of the new premises of the Laboratory at Hogg Buildings by the Mayor of Calcutta on Saturday, the 21st December, 1940.

I consider it a proud privilege to be allowed to give to such a distinguished gathering a short history of the Corporation Central Laboratory. The Corporation Laboratory was established towards the latter eighties of the last century by the first wholetime Health Officer of Calcutta, Dr. W. J. Simpson (afterwards Sir William Simpson) who held that post from 1886 to 1897. Previous to this, Professors of Medical College used to hold appointment as part-time Health Officers. Dr. Simpson was not only the first but the greatest of our Health Officers. In fact he was one of the pioneers of Tropical Medicine and it was at his instance that the first properly trained Analysts Dr. J. N. Dutt, M B., and Dr. S. B. Ghosh, M.B., were appointed in the Corporation in the early nineties after they had been given a preliminary training at the Calcutta Medical College Laboratory

Prof Haffkine, Dr Simpson (Health Officer) and Dr. J N Dutt (Chief Analyst) giving Cholera Inoculation in a Calcutta bustee, 1894

The early history of the Corporation Laboratory is the history of the birth and development of the anti-cholera inoculation in India which has proved to be one of the greatest boons which science has conferred on suffering humanity. The investigation regarding cholera prophylactic really began with the discovery in 1883 by Professor Koch (perhaps the greatest of all bacteriologists) of the Coma Bacillus (known as Koch's Bacillus) in the intestines and the intestinal discharges of cholera patients in Egypt Dr. Simpson was in Egypt at the time of Koch's discovery and closely collaborated with the latter when Koch came to Calcutta to test his Egyptian discovery. His Egyptian observations received complete confirmation from his Calcutta investigations and Koch was able to satisfy himself that the Coma Bacillus stood in intimate relationship with the production of cholera. The epoch-making discovery by Professor Koch of Coma Bacillus as the causative agent of cholera was completely established as a result of work carried out in the Corporation Laboratory.

Following on Koch's discovery of Coma Bacillus came the researches of Professor Waldemar Haffkine C.I.E., which resulted in the discovery of cholera prophylactic vaccine which is now effectively used wherever there is an outbreak of cholera. Haffkine's name will always be associated with this great achievement. Haffkine as a youngman set about to discover a method by which a vaccine could be prepared that would protect the body against the poison elaborated by the Coma Bacillus. After patient research Haffkine got his vaccine and was able to demonstrate with Coma Bacillus, that he had discovered a vaccine which would protect animals against the fatal disease caused by the cholera bacillus. This was the first stage of Haffkine's research.

The next stage was to test the value of anti-cholera vaccination on human beings by observing its effect on communities where cholera existed in endemic or epidemic form. Lord Dufferin, a former Viceroy of India, who was then the British Ambassador in Paris took a keen interest in Haffkine's researches and arranged that Haffkine should be given all possible facilities to visit every part of India to carry on his investigations. Dr. Simpson received Haffkine with open arms when the latter came to Calcutta in 1893. The Corporation Laboratory was placed unreservedly at Haffkine's disposal and Simpson deputed his able lieutenants including Dr. J. N. Dutt and Dr. S. B. Ghosh to assist Haffkine in his work and to learn from Haffkine the method of preparing the vaccines. The result of two years' (1893-94) inoculation and investigation showed that mortality among the inoculated as compared with that of the un-inoculated gave a reduction of more than 72 per cent. or in other words, in houses where inoculations were performed and which were subsequently visited with cholera, there occurred for every eleven deaths amongst the non-inoculated, three deaths among a similar number of inoculated. Thus the Corporation Laboratory played an important role not only in establishing the malevolent nature of Koch's Bacillus but also the usefulness of Haffkine's cholera vaccine as a prophylactic.

There was another epoch-making event in the early history of the Corporation Laboratory which showed the wonderful foresight, thoroughness and promptitude with which Dr. Simpson did his work, *viz.*, the precaution taken against *the introduction and lodgment of Plague in Calcutta.* Plague broke out in Bombay in September, 1896 The news of the outbreak appeared in the papers on the 24th September and in two days' time Dr. Simpson had taken all possible steps to prevent its introduction into Calcutta. On the day following that on which he got the news, Dr. Simpson sent his assistant Dr. J. N. Dutt to Bombay to ascertain from bacteriological examinations the nature of the disease prevalent there. This was quick work and the celerity with which the Corporation Laboratory under Simpson's direction took up the investigation excites our wonderment, inured as we are to the long delays of the present day.

Haffkine was in Bombay when the plague appeared in that city and with his characteristic thoroughness he set about finding a prophylactic vaccine for plague as he had already done for cholera. His investigations were carried on for a period of 10 years, the major part of his research being done in the Corporation Laboratory, where he was ably assisted by Dr. J. N. Dutt, Dr. S. B. Ghosh and others. The outbreak of plague in 1897 in Calcutta provided Haffkine and his co adjutors materials for observation and research and investigations were carried on assiduously, till in 1908 Haffkine was able to place before the Royal Society of Medicine the result of his researches. He was able to prove to the satisfaction of the scientific world that not only his vaccine acted as a protection against plague, but that inoculation applied to a person already infected, mitigated the virulence of the attack.

Such in brief was the work of Haffkine in the discovery of the cholera and plague prophylactic vaccine and the Corporation Laboratory under the inspiring guidance of its great Health Officer Simpson was a close co-adjutor with the great bacteriologist in his monumental works. Dr. Simpson had another able young man to assist him in his plague work whom I find present here to-day. He is Dr. Sundari Mohan Das who is now 84, but I am glad to say, still going strong.

There was another pioneer work which was carried out in the Corporation Laboratory *viz.*, the investigation regarding the purity of drinking water in Calcutta. In 1909 Major Clemesha, Sanitary Commissioner for Bengal was deputed by Government to study this question and for a whole year he worked in the Corporation Laboratory. He was assisted in his investigation by Assistant Surgeon Dr. Charu Chandra Sinha and V. Govinda Raju (now Rao Bahadur) and a series of elaborate experiments was also carried out later on with the water at Pulta where no local laboratory existed at that time. As a result of these investigations, the underground reservoir at Wellington Square and Halliday Park (now called Muhammad Ali Park) were closed down and the overhead reservoir at Tallah came into existence. In course of his experiments Clemesha laid down the technique of water examination and a workable standard for the tropics for judging the potability of water. This was the standard which the Corporation Laboratories both at Calcutta and Pulta closely followed till a new standard was laid down in 1937 by the London Ministry of Health

Another landmark in the history of the Corporation Laboratory was the pioneer work done by it in determining the standard of purity of foodstuffs especially of Indian Ghee. Buffalo Ghee is peculiar to India and it was in this Laboratory that analytical work in respect of Ghee and mustard oil was carried on for 8 to 10 years before a standard was worked out. The work was initiated by Dr. S. B. Ghosh and was completed in 1920 by our late Chief Analyst Dr. T. K. Ghosh. The Corporation Laboratory was also responsible for working out the standard of purity of other foodstuffs like milk, *chhana*, *dahi*, *khoa*, flour, *ata*, *tea*, etc. In milk analysis the determination of lactose as one of the constants was introduced to obviate the difficulty of determining pure cow's milk from adulterated buffalo milk. This did not trouble the continental Analysts as buffalo milk was not in use there.

In 1924 the Corporation appointed a Food Standard Sub-Committee of which Col. Stewart, Director of Public Health, was a member. The members of the Food Standard Committee which included many other scientific men went very thoroughly into the question of the purity of foodstuffs, carefully scrutinised the results recorded in the Corporation Laboratory and after deliberations lasting for nearly two years laid down standards of purity for important articles of food on the basis of results obtained in our Laboratory. These were accepted by the Government of Bengal without any alteration when on 20th March, 1928 they by a notification laid down the standards of the following foodstuffs under Section 422 of the Calcutta Municipal Act:—Milk, *dahi*, *chhana*, *khoa*, *ghee*, butter, mustard oil, cocoanut (edible) oil, wheat flour (*maida*), *ata* and tea.

The Corporation Central Laboratory is thus the inheritor of a glorious tradition, associated as it was in the past, with such world figures as Koch, Haffkine, Simpson, Clemesha. It may well feel proud in having set the standards for important foodstuffs like milk, ghee, mustard oil, etc., which were adopted by Government and incorporated without any change or alteration in the Bengal Food Adulteration Act. But the Laboratory should not rest on its oars and live on its past achievements. Now that it has got a better habitation and more up-to-date equipments than what Haffkine and Simpson had, they should emulate the work and uphold the tradition of these great masters.

The direction in which the Corporation Laboratory should now turn its attention, is the fixing of standard for drugs and new kinds of foods which have become popular. Both foods and drugs have assumed new values. Ideas about nutrition have been revolutionised. The importance of some dietary essential factors like vitamins and minerals in the protection of our system has been established. Manufacturers of artificial foods have not been slow in placing on market food products alleged to contain the various vitamins. Not only the determination of the chemical constants of such artificial foods but their effect on system has to be ascertained.

The same is true of drugs also. Remedial agents obtained by more or less complicated processes of synthesis, organo-metallic compounds, glandular products, sera and vaccines, malt and cod-liver oil preparations are daily being placed on the market with high sounding claims They have to be examined and their standards fixed.

The Drugs Enquiry Committee (1930-31) under the Chairmanship of Col Chopra dealt extensively with the question of drug-adulteration in India. After subjecting a large number of samples to careful analysis the Committee came to the conclusion that a very large number of commonly used medicine like quinine, aspirin etc. were either adulterated or below strength.

As a result of the labours of the Drugs Enquiry Committee a Bio Chemical Standardisation Laboratory has been established in 1937 in the All-India Institute of Hygiene under the auspices of the Tropical School of Medicine. This Laboratory is at present collecting data which would prove very useful in working out standards in future. There is also a Nutrition Laboratory in the Institute where important nutrition problem is being investigated. Our men should be trained in these laboratories to enable them to carry on investigations regarding drugs and nutrition value of food products. I am sure the Institute of Hygiene and the Tropical School would only be too glad to impart to our men the required training.

The legal powers possessed by Government and the Corporation to take action against spurious drugs and food products are fairly ample Under the definitions of "adulterated" (Section 3, Sub-Section 2) and "misbranded" (Section 3, Sub-Section 42) the Corporation can take action but before that can be done the standards will have to be fixed by Government The Local Government have the power to declare the normal constituents of any drug and determine by rules what deficiency in constituents or additions of extraneous matter will raise a presumption that the drug is not genuine or injurious to health. The Corporation Laboratory in collaboration with Government Laboratories will take steps to work out these standards so that Government may take action under their powers.

List of Text Books approved by the Primary Education Standing Committee for Corporation Free Primary Schools for the year 1941.

CLASS IV.

Vernacular reading.—

(A) *In Bengali*—Any one of the following—

1. Sahaj Parah Part IV by Jogendra Nath Gupta (Sanskrit Press Depository)
2. Mukulika Part IV by Manika Koyal (Mati Book House)
3. Sachitra Sisu Sahitya Part IV by Kali Prasanna Vidyaratna (Sur & Co.)
4. Sahitya Dipika Part IV by Muhammad Jinat Ali (Muslim Book Depot).
5. Bangla Path Mala Path IV by Dr. Md Sahidullah (Provincial Library, Dacca).
6. Balya Path Part IV by Rai Bahadur Khagendra Nath Mitter (J. C. Banerjee).
7. Parar Bai Part IV by Jyotis Ch. Roy (Siksha Sangha).
8. Primary Sahitya Part IV by Khan Bahadur Asanullah. (Mukdumi Library and Asanullah Book House.)
9. Sahitya Mukul Part IV by Kalidas Roy U. N. Dhar & Co.)
10. Supath Part IV by Probodh Ch. Sen (Kamala Book Depot).

Supplementary reading.—

1. Ram Krishna Katha O Galpa by Swami Premghanananda Udbodhan Karyalaya) (*for boys.*)
2. Nivedita by Sm Sarala Bala Dasi (Do.) (*for girls*).

(B) *In Hindi*—Any one of the following—

1. Nabin Hindi Reader Part III by Gopi Saran Saxena and Devi Dutt Sukla (Indian Press Ltd).
2. Hindi Bodh Part IV by Matramull (P. C. Dwadash Sreni & Co., Aligarh).

(C) *In Urdu*—Any one of the following of which No. 4 is compulsory :—

1. Urdu ki Tesri Ketab by Maulvi Md. Ismail (Author).
2. Ghunchai-i Urdu, Part IV by S Shafi Haider Kauser (Star Book Depot)
3. Nai Kitab Part IV Jamia Millia, Delhi
4. Mukaminal "Tarana" by Dr Sir Muhammad Iqbal.

Vernacular writing :—

(A) *In Bengali*—

1. Lipi Siksha Part IV by Arun Ch. Dev (P. C. Mazumdar & Bros.)

(B) *In Hindi.*—

1. Adarsha Lipi Mala Part IV (The Indian Press, Allahabad).

(C) *In Urdu.*—

1. Urdu Mashq-ki-Copy No. 4 (Haji Md. Sayeed & Sons.)
2. Urdu script letter writer (Syed Abdul Wasey Jafri.)

Religious Instruction :—

(A) *In Bengali*—Same as in Class III

(B) *In Hindi.*—Balak Dharma Siksha by Rishi Lochan Sharma (Calcutta Pustak Bhandar).

(C) *In Urdu*.—(Compulsory).

1. Quran Pak by Jamia Millia Islamia, Delhi.
2. Rasala i-Diniyat Part III by Majlis Nisab Diniyat, (Govt. of H. E. H. the Nizam of Hyderabad).

(Optional.)—

3. Sarkar-ka Durbar by Maulvi Ilyas Ahmed Mujibee, Jamia Millia Islamia, Delhi.

In Bengali—(*For Moslem Children*)—Any one of the following:—

1. Diniyat-O-Quran Siksha Part IV by Maulana Md. Abdus Subhan (Islamia Library, Dacca).
2. Diniyat-O-Quoran Path Part IV by A. Z. Noor Ahmed.
3. Diniyat-O-Qoran Siksha Part IV by Maulana Md. Idris.

Arithmetic:—

(A) *In Bengali*—Same as in Class III.

(B) *In Hindi*—Any one of the following:—

1. The Modern Arithmetic Book I Parts 1 & II by K. C. Bhattacharje (Indian Publishing House).
2. Sishu Ganit Part III by Tileswar Roy (Calcutta Pustak Bhandar).

(C) *In Urdu*—Same as in Class III.

History:—

(A) *In Bengali*—Same as in Class III.

(B) *In Hindi*—Any one of the following:—

1. Bharat-ka-Itihas by Pandit Sidhi Nath Misra (Pustak Bhandar)
2. History of India by Sriram Bari (Hindi Prachanak Pustakalaya)

(C) *In Urdu*—Any one of the following:—

1. Tarikh-Hind by Safi Haider Kauser (Star Book Depot).
2. Tarikh-i-Hind, Part II by Prof. Akhtwar Hossain (Moulvi Abdus Satter)
3. Tarikh-Islam-kisachi-Kahaniyan Part I by Jamia Millia Islamia, Delhi.

Supplementary Reading.—(For Class III & IV)—

1. Tarikh Hind-ki-Kahaniyan Part II by Jamia Millia Islamia, Delhi.

Geography:—

In Bengali—Same as in Class III.

In Hindi—Any one of the following:—

1. Nabin Prathmik Bhugole by Ramnagin Lal and Ram Sakal Singh (Pustak Mandir).
2. Saral Bhugole Siksha by Rani Lochan Sarma (Calcutta Pustak Bhandar).

In Urdu—Same as in Class III.

Atlas:—

Any one of the following:—

1. Manchitre Prithibi by Amal Chandra Ghose (Book Corporation Ltd)
2. Oxford School Manchitra (Oxford University Press).

Science:—

In Bengali—Same as in Class III.

In Hindi—Any one of the following:—

1. Prathamik Bijnan by Sudhir Kumar Shoma and Gopi Saran Saxena (Indian Press, Allahabad).
2. Saral Bijnan Bodh by R. Shanker and S. S. Kaul (Bala Sahitya Prakasaka Samity, Calcutta).

In Urdu—Same as in Class III.

Observation Lessons.—For teachers' use.

In Bengali—Same as in Class III.

Hygiene :—

In Bengali—Same as in Class III.

In Hindi—Cleanliness & Health by Dr. R. N. Bansikar (Calcutta Pustak Bhandar)

In Urdu—Same as in Class III

Civic Hygiene :—*In Bengali, Hindi & Urdu*—Same as in Class II

English :—

Any one of the following :—

1 A Way to English, Book I, (Oxford University Press)
2 The New India Readers, Reader No. I (Gold Quin & Co. Ld.)
3 Moti Reader by Dr. Sanaullah & P. K. Samaddar (Moti Book House)
4 My Reader by Khan Bahadur H. A. Khan and A. L. Das Gupta (A. C. Das Gupta)
5 Baby Reader by Dr. A. F. M. K. Rahman (Modern Library, Dacca)
6 Jubilee Reader by J. L. Banerjee (M. L. Dey & Co)
7 New Bengal Reader by P Gupta (New Bengal Press)
8 Modern Reader by N. Mitra (F. Ahmed)
9 Macmillan's Primary English Course Reader I (for Urdu Schools)

English Writing :—

Any one of the following :—

1 Jubilee English Copy Book, Book II by Abul Fazal Muhammad
2 Model Copy Book No. 2 by A. T. Dhar (Ashutosh Library)

Drawing :—

Rekha Ankan Part I by Purna Ch. Ghose (Book Co. Ltd.)

Drill :—See Remarks under Infant Class

Manual Work—According to the Syllabus.

CLASS III

Vernacular Reading.—

(A) *In Bengali.*—Any one of the following :—

1 Sunity Sikaha Part II by M. Huq and Afzal-ul-Huq (Moslem Publishing House)
2 Prathamik Sahitya Part III by P. C. Mukherji (Bengal Printing & Publishing Co)
3 Mohan Path Part III by Manoj Bose (Biswanath Bros)
4 Naba Niti Sudha Part III by U. N. Das (S. C. Ghose)
5 Sulekha Part III by Khan Bahadur Moulvi H. A. Khan and A. L. Das Gupta (A. C. Das Gupta)
6 Adarsha Bangla Sahitya Part III by Madhu Sudan Deb (P. C. Majumdar & Bros)
7 Suruchi Path Part III by Sahadat Hossain (Itikatha Book Depot)
8 Parar Bai Part III by Jyotish Ch. Roy (Associated Publishing Co)

Supplementary Reading :—

1 Sib O Buddha by Sister Nivedita (Udbodhan Karyyalaya)
2 Galpe Chittaranjan by L. M. Sen Gupta (Deshapriya Library)

(B) *In Hindi.*—Any one of the following—

1 Bala Sahitya, Part III by Bhubaneswar Mishra (Hindi Pustak Agency).
2 National Hindi Reader Part III by K. K. Sarma (Hindi Pracharak Pustakalaya)
3 Bodh Bikash Part III by R. N. Singh and R. R. Sastri (Pustak Mandir)
4 Hindi Parichay Part III by I. S. Srivastava (Calcutta Pustak Bhandar)

(C) *In Urdu* —Any one of the following prose :—

1 Nasim Gulshan-i-Urdu, Part III by Maulana Md. Idris (author)
2 Hindustani Reader Part III (Macmillan & Co)
3 Nai-Kitab Part III by Jamia Millia Islamia, Delhi

Poetry —(Compulsory)

1 Bachon-ke Ismail by Sayeed Ansari (Jamia Millia, Delhi)

Vernacular Writing :—

(A) *In Bengali* .—

1. Lipi Siksha Part III by Arun Ch. Deb (P. C. Mazumdar & Bros).

(B) *In Hindi* :—

1. Hindi Hasta Lipi, Part III by Girija Sankar Verma Atur (Calcutta Pustak Bhandar).

(C) *In Urdu* :—

1. Urdu Mashq-ki Copy, No 3. (Haji Mahammed Sayeed & Sons).

Religious Instruction —

(A) *In Bengali* :—Any one of the following :—(for Hindu children).

1. Sishuder Dharma Siksha by J. N. Tarkatirtha (author).
2. Prathamik Hindu Dharma Parichay Parts I & II by A. K. Sarkar & R. P. Banerjee (Sarkar & Co.)
3. Hindur Dharma by Sukumar Mitra (B. B. Banerjee)
4. Dharma Parichay Parts I & II by Swami Nirvedananda (New Book Stall).
5. Chhotoder Dharma O Karma by Asoke Nath Sastri (Associated Publishing Co.)

(B) *In Hindi* :—Same as in class IV.

(C) *In Urdu* :—(for Moslem children).

1. Rasul-i-Pak by Abdul Wahid Sindhi (Jamia Millia Islamia, Delhi).
2. Resala-i Diniyat Part II by Majlis Nisab Diniyat, (Govt. of H. E. H. the Nizam of Hyderabad)

In Bengali (for Moslem children) :—Any one of the following :—

1. Diniyat O Quran Siksha Part III by Maulana Ashanullah (Rasidia Library).
2. Diniyat O Quran Path Part III by A. Z. Noor Ahmad (Students' Supply Co.)
3. Quoran O Diniyat Siksha Part III by Moulana A. Subhan and Kasi Amir Hossain. (Islamia Library)

(A) *Arithmetic in Bengali.*—Any one of the following—

1. Sishuranjan Ganit Prasnamala Parts III & IV by K. P. Basu (K. P. Basu Library).
2. Adhunik Ganit Bikas Part III by Nalini Ranjan Sen Gupta (Mahamaya Book Depot).
3. Primary Ganit Parts III & IV by Faziltun Nessa (Mukdumi Library & Asanullah Book House Ltd).

4. Saral Sishu Ganit Part III by J. K. Sarkar and D, N. Biswas (Chakravarty & Sons).
5. Sishu Ganit Parts III & IV by D. P. Ghose (Modern Book Agency)
6. Prathamik Ganit Part III by Khan Bahadur Abdur Rahman Khan (Provincial Library).
7. Ganit Sopan by Bhabani Charan Roy (revised edition) Kalipada Roy).
8. Ganit Mukul Parts III & IV by Chintaharan Roy (Sree Durga Library).

(B) *In Hindi*—Any one of the following—
1. Saral Anka Ganit Part III by Chandra Sekhar Panday and Ram Sakal Singh Visarad (Vidyasagar Library).
2. Primary Mohajani Zamindari Siksha by Sridutt Singh and I. D. Singh (Pustak Mandir).
3. Sishu Ganit Part III by Tileswar Roy (Calcutta Pustak Mandir).

(C) *In Urdu.*—Any one of the following.—
1. Tahsil-ul Hisab by Moulvi Mohammad S. Athar (Haji Md. Sayed & Son.)
2. Saidi Arithmetic Part III by Hoti Lal Gour (Haji Mahammed Sayeed & Sons).
3. Makhzan-i-Hisab Part III by Khawdjah Dil Mohammad (Macmillan & Co)

History.—
(A) *In Bengali*—Any one of the following—
1. Sisuder Bharat Itihas by Khan Bahadur Abdur Rahman Khan (Dacca Library)
2. Chhotoder Itihas by Narayan Chandra Banerjee (National Publishing House)
3. Bharatbarsher Itihas by Abdus Sattar (Haji Abdul Majid).
4. Prathamik Bharatbarsher Itihas by Satyananda Roy and Nihar Ranjan Ray (U. N. Dhar & Co.)
5. Sishu Ranjan Bharat Itihas by Ramesh Ch. Majumdar and Nalini Kanta Bhattasali. (N K. Bhattasali.)
6. Bharatbarsher Saral Itihas by Rajani Kanta Gupta (Sanskrit Press Depository).
7. Chhotoder Itihas by Jainal Rahim (Book Co Ltd.)

(B) *In Hindi*—Any one of the following—
1. History of India by Ram Sakal Singh Visharad (Pustak Mandir).
2. Bharat-ka Itihas by Pandit Sidhi Nath Misra (Pustak Mandir).
3. History of India by Sri Ram Beri (Hindi Pracharak Pustakalaya).

(C) *In Urdu*—Any one of the following .—
1. Tarikh-Hind by Safi Haider Kauser (Star Book Depot).
2. Tarikh-hind Part I by Prof. Akhtar Hossain (Haji Md. Sayeed & Sons).

Supplementary Reading :—
1. Tarikh-Hind-Ki-Kahaniyan Part I by Jamia Millia Islamia, Delhi.

Geography—
(A) *In Bengali*—Any one of the following :—
1. Prathamik Bhu Parichay by Madan Mohan Vidyabhusan (Book Corporation Ltd.)
2. Chhotoder Bhu Parichay by Dhirendra Kumar Dutt (Chittaranjan Guha)
3. Bhougolika by Bimalendu Kayal and Maulvi Asmatullah (Mati Book House)

4. Parthamik Bhugole Siksha by Haridas Mukherjee (New-Bengal Press)
5. Saral Bhugole Path by Bidhu Bhusan Das Gupta (Das Gupta & Sons)
6. Bhugole Manjusa by Binayendra Banerjee (Digest Book House)
7. Primary Bhugole Path Part II by Nabi Nawaz Khan Lodi (Liakat Publishing House)
8. Prathamik Bhu Parichay O Samaj Bidhan by Nazir Ahmed Chowdhury and Hemanta K Sarkar (Sarkar & Co.)
9. Adhunik Bhugole Path by Abdus Samad (India Library)
10. Adhunik Bhu Parichay by Ajit Kumar Banerjee (Oxford University Press)
11. Abhinaba Bhu Parichaya by Amalesh Ghose (Indian Publishing House)
12. Chheleder Bhugole Part I by Kumud Ch. Roy Chowdhury (Kamala Book Depot)

(B) In Hindi—Any one of the following :—
1. Saral Bhugole Parichaya by Raghu Nandan Pathak (Hindi-Pracharak Pustokalaya)
2. Prathamik Bhugole Parichaya Part I by Ram Sakal Singh (Pustak Mandir)
3. Bangala-ka-Bhugole by Jagadish Narain Tewary (Hindi Pustak Agency)

(C) In Urdu—Any one of the following :—
1. Geographia-i-Jadid by Elish Ch. Ghose and Fakir Chand Mehra (Indian Press Ltd., Allahabad)
2. Jadid Primary Geography Part II by Safi Haider Kauser (Star Book Depot)

Map Drawing :—In Urdu—
Map Drawing Part I by Safi Haider Kauser (Star Book Depot)

Science—
(A) *In Bengali*—Any one of the following :—
1. Chhotodar Bijnaner Alo by Md. Sahabuddin (Islamia Library)
2. Bijnan Manjusa by Dr. Jyotirmoy Banerjee (Digest Book House)
3. Prathamik Bijnan Parichay Part II by Dr. Jogendra Nath Maitra (Book Co. Ltd.)
4. Prathamik Bijnan Parichay by Sarada Ranjan Roy (Sri Sri Ram Krishna Book Stores)
5. Bijnan Prabesh Part II by Kshiti Nath Ghose (Kamala Book Depot)
6. Sahaj Bijnan by Dr. Devi Prosad Roy Chowdhury (Nritya Lal Seal's Library)

(B) *In Hindi*—Same as in Class IV.

(C) *In Urdu*—Any one of the following :—(For Class III and IV)
1. Urdu Primary Science by Safi Haider Kauser (Star Book Depot)
2. Ibtedai-ilm-e-Science by Sudhir Kumar Shome and Gopi Saran Saxena (Indian Press Ltd., Allahabad)

Observation Lessons—(for teacher's use) Any one of the following :—
In Bengali—
1. Prakritir Rup by Kali Charan Kar (Gouri Book Depot)
2. Paryyabekshan Siksha Part I by Jagadananda Roy (Book Co. Ltd.)

Hygiene.
In Bengali—(*For Boys*)—Any one of the following :—
1. Chhotoder Swasthya Part II by Khan Md. Moinuddin and Dr. Golam Majid Chowdhury (Students' Library)
2. Sachitra Swasthya Katha Parts III & IV by Dr. Subodh Kumar Sen (Book Co. Ltd.)
3. Swasthya Bidhi by Dr. Jogendra Nath Maitra (Book Co. Ltd.)

(For Girls) :—Any one of the following :—

1. Balikader Swasthya Rakaha by Anukul Ch. Sastri (Gupta & Sons)
2. Balikader Swasthya Bidhi Part I by Dr. Jogendra Nath Maitra (Book Co. Ltd.)
3. Swastha Katha Garhasthya Bijnan by Dr. Subodh Sen and Sm. Nila Sen (Book Co. Ltd.)

In Hindi—Any one of the following :—

1. Swasthya Sopan by Sambhu Narayan Roy (Saroda Pusthak Bhander)
2. Saral Swasthya Parichaya Part II by Ram Bichar Pandey (Pustak Mandir)
3. Cleanliness and Health by Dr. R. N. Bansikar (Calcutta Pustak Bhandar)

In Urdu—

1. Tandurusti-ki-pahli-kitab by Macmillan & Co.

Civic Hygiene—

In Bengali—Same as in Class II

In Hindi—Same as in Class II

In Urdu—Same as in Class II

English.—Any one of the following :—

1. A way to English, Primer (Oxford University Press)
2. Young India Reader Primer by S. N. Banerjee (Standard Book House.)
3. New Sunshine Reader, Primer by Latika Ghose (Indian Publishing House)
4. A Beginners' Primer by Humayun Z. A. Kabir (Provincial Library)
5. Child's Phonic Primer by K. K. Mookerjee (Indian Publishers)
6. New Indian Readers Primer by Lilabati Nag (Presidency Library)
7. Taj Primer by Rezaul Karim (M. L. Dey & Co.)
8. Baby Primer by Dr. A. F. M. K. Rahman (Modern Library, Dacca)
9. The School Primer by D. L. Sarkar (Bina Library)
10. The Lotus Primer (Anglo-Hindi) by Ram Lochan Sarma (Calcutta Pustak Bhandar)
11. Modern Empire Primer (Anglo-Urdu) by Khan Bahadur Ahsanullah (Mukdumi Library)

English Writing.—Any one of the following :—

1. Primary Copy Book No. I by R. C. Chakravarty (Chakravarty Chatterji & Co.)
2. Ideal Copy Book Part I by A. K. Das Gupta (Das Gupta & Sons.)

Drawing—Any one of the following :—

1. Rekha Ankan Part I by Purna Chandra Ghose (Book Co. Ltd.)
2. Chitran Part IV by Samar De. (Biswanath Das)

Manual Work—According to the Syllabus.

Drill—See remarks under Infant class.

CLASS II

Vernacular Reading.—

(A) *In Bengali.*—Any one of the following—

1. Sahitya Sopan, Part II by Dr. Sunity Chatterjee, Priyaranjan Sen and Enamul Haque (Sen Roy & Co.,)
2. Manjuri by Binayendra Banerjee and Ushashi Bose (Digest Book House)
3. Naba Niti Sudha Part II by Upendra Nath Das (S. C. Ghose)
4. Aloke Mala Part II by Golam Mustafa (author)
5. Dipika by Amalangshu Sen (Sudhir Kumar Das Gupta)
6. Sahitya Kalika Part II by Khan Bahadur Abdur Rahman Khan and A. K Koy (Dacca Library)
7. Sunity Sopan Part II by Ibrahim Khan (Rashidia Library)
8. Probhat Part by Gurudas Chatterjee and Ganesh Ch. De (Oriental Book Depot)
9. Naba Sishu Siksha by Asoke Banerjee (K. Banerjee)
10. Kanak Path Part II by Moulvi Taibuddin Ahmed (Adarsha Library)

(B) *In Hindi*—Any one of the following.

1. Nabin Hindi Reader Part II by Tejeswar Dutt Johury (Calcutta Pustak Bhander)
2. Sahitya Promode Parts II & III *for the early, middle and final stages of the class.* (Pathsala Press, Patna)
3. Bodh Bikash Part II by Prof Ramnarain Singh and Raja Ram Sastry (Pustak Mandir)
4. Bala-Batika Part II by Suryadeo Ojha and Ramashis Singh (Hindi Pustak Agency)

(C) *In Urdu*—Any one of the following—

1. Nai-kitab Part II by Jamia Millia Islamia, Delhi
2. Nasim Gulshan-i-Urdu Part II by Moulana Md. Idris (Author)
3. Hindustani Reader Part II (Macmillan & Co)
4. Islamia Urdu-ki-Dusri-kitab by Taher Rezvi and Maulvi Shibli Ibrahimi (Islamia Library)

Vernacular Writing—

In Bengali—Any one of the following—

1. Adarsha Lipi Part II by Lilabati Debi (Tara Chand Das & Sons).
2. Adarsha Lipi Part III by Ashutosh Dev (P. C. Majumdar & Bros).
3. Adarsha Lekha Part II by Gazi Jamila Akhtwar Khatun (Indian Book Club)

In Hindi—Any one of the following—

1. Nagri Lipi Bodh Part III by Palak Dhari Singh (Vidyasagar Library)
2. Hindi Hastalipi Part III by Girija Sankar Verma Atur (Calcutta Pustak Bhandar)

In Urdu—Any one of the following—

1. Urdu Mashq-ki-Kitab No. III by Haji Abdul Quyum (Quayumi Press)
2. Star Copy Slip No. 3 (Star Book Depot)

Religious Instruction—

In Urdu—

1. Hamarey Nabi by Prof Syed Nawab Ali (Jamia Millia Islamia, Delhi)
2. Resala-i-Diniyat Part I by Majlis Nisab Diniyat (Govt. of H E H the Nizam of Hyderabad)

In Bengali—Any one of the following—(For Muslem Children)

1. Diniyat-O-Quran Siksha Part II by Moulana Abdus Subhan (Islamia Library)
2. Diniyat Siksha Part II by Moulana Md Idris (author)

Arithmetic—

(A) *In Bengali*—Any one of the following—

1. Prathamik Ganit Siksha Part II by B N Mukherjee (U N Dhar & Co)
2. Naba Sisu Ganit Part II by Saroda Prasanna Das (K L Pal)
3. Nutun Sisu Siksha Patiganit Part II by N D Banerjee and Manmatha Banerjee (Indu Book Depot)
4. Prathamik Patiganit Part II by Ram Ch Bose (K B Bose)
5. Prathamik Ganit Part II by Md Khorshed Ali Khan (Great Eastern Library)
6. Sahaj Ganit Siksha Part II by Moulvi Md. Moinuddin (Afsar Library)
7. Ganit Prabesh Part II by Dr Ahiuddin Mahmud and S. Nahar (Bulbul Publishing House)
8. Anker Boi Part II by S C Dutt (N N Chattopadhyaya)
9. Prathamik Patiganit Part II by Kedarnath Dutta (S K Dutta)

(B) *In Hindi*—Any one of the following—

1. Sishu Ganit Part II by Tileswar Roy (Calcutta Pustak Bhandar)
2. Lower Primary Arithmetic by Ram Lochan Sharan (Do)

(C) *In Urdu*—

1. Saidee Arithmetic Part II by Hotilal (Hajee Md Sayed & Sons)

Geography—

(A) *In Bengali*—Any one of the following—

1. Chhotoder Bhu Parichay by Giribala Sen Gupta (A. C. Sen Gupta)
2. Bhugole-O-Bijnaner Ka, Kha by Moulvi A Ali & S K Das (Presidency Library)
3. Bhugole-O-Bijnan by Dr Kamakshya Charan Banerjee (N C Banerjee)
4. Bhugole-O-Bijnan Parichay by Charu Ch Sen Gupta (Students' Supply Co.)

For teachers' use—

1. Chotoder Bhugole-O-Bijnan Siksha by Abdur Rashid (Kohinoor Library)

Geography—

(B) *In Hindi*—Any one of the following—

1. Kalkatta-ka-Bhugole by Ram Sakal Singh (Pustak Mandir)
2. Bach-u-ka-Bhugole Part I by Ram Kumar Goenka (Author).
3. Kalkatta-ka-Saral Bhugole by K K Sarma (Hindi Pracharak Pustakalaya)

(C) *In Urdu*—

1. Jadid Primary Geografia Part I by Safi Haider Kauser (Star Book Depot).

Observation Lessons—

In Bengali—for teacher's use—Any one of the following.

1. Paryyabekshan Pranali by H K Bhattacharjee (Ashutosh Library)
2. Paryyabekshan Sahaya by Kazi Motahar Hossain (A. Z. Khan)

Hygiene—

(A) In Bengali—Any one of the following—

1. Saral Swasthya Katha by Dr A. K. Roy (Sarbamangala Library)
2. Saral Swasthya Bidhi by Dr. J. N. Maitra (G N Maitra)
3. Prathamik Swasther Katha by Dr N. B. Mandal (Sri Sri Ram Krishna Book Store)
4. Chhotoder Swasthya Part I by Khan Md. Moinuddin and Dr. Golam Majid Chowdhury (Students' Library)

(B) *In Hindi*—
1. Sishu Swasthya Parichaya by Sib Kumar Tewari (Hindi Pracharok Pustakalya)

(C) *In Urdu*—
1. Usul Sehat Part I by Safi Haider Kauser (Star Book Depot)

Civic Hygiene—
1. Sahar Swasthya by Bijoy Ratna Majumdar (In Bengali, Hindi and Urdu) (Author)

Drawing—
1 Chitra Rekha Part I by Susbama Devi (N C Banerjee)

For teachers' use—
1 Chotoder Chhabi Anka Part III by Purna Ch Chakravarty (School Library)

Manual Work—
According to Syllabus.

Drill—
See remarks under Infant class

CLASS I

Vernacular Reading—

(A) *In Bengali*—Any one of the following—
1. Supath Part II by Probodh Ch. Sen (Kamala Book Depot)
2 Bangla Dwitiya Path by Khan Md. Moinuddin (Al-Hamra Library)
3 Lekha Parah Part II by Amina Meher (Provincial Library)
4 Parar Boi Part II by Jyotish Ch. Roy (N. N. Chattopadhyay)
5 Sisu Bhasa by Ashutosh Das Gupta (S. N Das Gupta)
6. Komal Path Part I by .Paresh Ch. Goswami (R. M. Goswami.)
7 Mohan Path Part II by Monoj Bose (Biswanath Das & Sons)

(B) *In Hindi*—Any one of the following—
1 Hindi Parichay Part II by I. S. Srivastava (Calcutta Pustak Bhandar)
2 Bodh Bikash Part I by Raja Ram Sastri (Pustak Mandir)
3 Sisu Sahitya Kusum Parts I & II (*Part I for early stage and Part II for advanced stage*) (Pustak Bhandar)
4. National Hindi Reader by Keshari Kanta Sarma (Hindi Pracharak Pustakalaya.)
5. Barna Parichaya Part II by R. R. Sastri & R. S. Singh Bisharad (Pustak Mandir.)

(C) *In Urdu*—
For the first stage—Any one of the following—
1. Nasim Gulshani-i-Urdu Part I by Moulana Md. Idris (Author)
2 Gunchse-i-Urdu Part II by Safi Haider Kauser (Star Book Depot)

For the Second Stage—
1 Nai-Kitab Part I (Jamia Millia Islamia, Delhi)

Vernacular Writing—

(A) *In Bengali*—Any one of the following :—
1. Lekha Sekha by Ashutosh Das Gupta (Author).
2. Adarsha Lekha Part I by Qazi Jamila Akhtar Khatun (Indian Book Club).
3. Chheledar Hater Lekha Part II by Narendra Nath Neogi (S. C. Sett).

(B) *In Hindi*—"Takhta" writing—Any one of the following :—
1. Hindi Hasta Lipi Part II by Girija Sankar Varma Atur (Calcutta Pustak Bhandar).
2. Nagri Lipi Bodh Part II by Palakdhari Singh (Vidyasagar Library).

(C) *In Urdu*—"Takhta" writing according to any one of the following:-
1. Urdu Mashq-ki-Kitab No. II by Haji Abdul Quyum (Quaymi Press.)
2. Star Copy Slip No. 2 (Star Book Depot).

Religious Instruction—
In Urdu—
1 Islami Talim Part I by Safi Haider Kauser (Star Book Depot)

In Bengali—Any one of the following—(For Moslem children).—
1 Diniyat O Quran Siksha Part I by Moulana Md Abdus Sobhan (Islamia Library)
2 Talim-i-Diniyat Part I by K M Akhtar Hossain and Kasimuddin Ahmed (Grand National Library)
3 Diniyat Siksha Part I by Moulana Md Idris (Indian Book Club)

Arithmatic—
(A) *In Bengali*—Any one of the following.
1. Prathamik Ganit Bikas Part I by Manada Charan Gupta (Dev Library).
2. Sisu Ganit Part I by Ashutosh Das Gupta (S. N. Das Gupta).
3. Sisu Ganit Part I by D. P. Ghose (U. C. Bhattachrjee).
4. Sisu Ranjan Ganit Prasna Mala Part I by K. P. Bose (K. P. Basu Library).
5. Primary Ganit Part I by Faziltunnessa (Mukhdumi Library and Ashanullah Book House).
6. Amar Ganit Part I by A. H. M. Baset (Baliadi Publishing House).
7. Nutun Ganit Part I by Md. Sahabuddin (Kohinoor Library).
8. Saral Patiganit Part I by Biswanath Chatterjee (S. C. Soor),
9. Adhunik Ganit Bikas Part I by N. R. Sen Gupta (Mahamaya Book Depot).

(B) *In Hindi*—Any one of the following:—
1. Saral Anka Ganit, Part I by Chandra Sekhar Pandey & Ram Sakal Singh Bisharad (Vidyasagar Library).
2. Lower Primary Arithmetic By Ram Lochan Sharan (Pushtak Bhandar).
3. Sishu Ganit, Part I by Tileswar Roy (Calcutta Pustak Bhadar).

(C) *In Urdu*—
Saidee Arithmetic Part I by Master H. L. Gour. (Haji Sayeed & Sons.)

Observation Lessons—For Teachers' use.
Same as in Class II.

Hygiene.—
To be taught conversationally according to the syllabus by means of pictures and models or simple demonstrations about things which boys can see with their eyes. No books are prescribed for use by pupils.

Drawing—For teachers' use.
1. Chotoder Chabi Anka Part II by P. C. Chakraburtty (School Library).

Drill.—See remarks under Infant class.

Manual Work—
According to the syllabus.

INFANT CLASS.

Vernacular Reading.—

(A) *In Bengali—(for Upper Infant class)*—Any one of the following—

1. Bangla Pratham Path by Khan Md Moinuddin (Al-Hamara Library)
2. Probhati by Ushashi Bose and Binayendra Banerjee (Digest Book House)
3. Saisab Siksha by Kshitish Ch Bagchi (Nrityalal Seal's Library)
4. Tajmahal Path Part I by Bondey Ali Miah (Mirza Mohiuddin)
5. Amar Boi Part II by Ramendra Sundar Sanyal (Sisu Sahitya Mandir)
6. Sachitra Balya Path by Gopal Ch. Banerjee (D. Banerjee)
7. Chotoder Parah by Anath Nath Basu (Siksha Sangha)
8. Aloke Mala Part I by Golam Mustafa (author)
9. Saisab Siksha Part I by Sm. Sarat Kumari Devi (Arun Ch. Roy)

For Lower Infant Class—Any one of the following—

1. Pratham Parah by Asit Kumar Haldar (Jogendra Publishing House)
2. Chhotoder A, Ah, Ka, Kha, by Giribala Sen Gupta (A. C. Sen Gupta)
3. Bangala Path Part I by Lilabati Roy (P. C. Deb)
4. Amar Boi Part I by Ramendra Sundar Sanyal (Sisu Sahitya Mandir)

Supplementary Reading :—

1. Ramayane Ka, Kha by Satya Charan Chakravarty (Sree Guru Library

(B) *In Hindi*—Any one of the following—

1. Manohar Pothi by Ram Lochan Saran (Pathsala Press, Patna)
2. Barna Bikash by Baij Nath Singh (Pustak Mandir)
3. National Hindi Primer Parts I & II by Sri Krishna Chandra Beri (Hindi Pracharak Pustakalaya)
4. Barna Batika by Thakur Ram Ashis Singh (Hindi Pustak Agency)

(C) *In Urdu.*—Any one of the following—

1. Urdu Primer by Moulvi Shafiq Athar Fazil (Haji Md. Sayeed & Sons)
2. Asan Urdu Part II by Gopi Saran Saxena and S. Mumtaz Ali (Indian Press, Allahabad)
3. Ghuncha-i-Urdu Part I By Safi Haider Kauser (Star Book Depot)

Vernacular Writing.—

(A) *In Bengali*—Same as in Class I

(B) *In Hindi*—

"Takhta" writing—According to any one of the following:—

1. Hindi Hasta Lipi Part I by G S Varma (Atur Calcutta) Pustak Bhandar)
2. Nagri Lipi Bodh Part I by Palakdhari Singh Visharad (Vidya-sagar Library)

(C) *In Urdu*—

"Takhta" writing—According to any one of the following—

1. Urdu-Mashq-ki-Kitab No. 1 by Haji Abdul Qaum (Qaum Press, Cawnpore)
2. Star Urdu Copy Slip No. I (Star Book Depot)

Religious Instruction—

(For Moslem Students)

The three "Kalimas" to be taught orally

Arithmetic.—

No text books are prescribed for use by the pupils. The subject is to be taught according to syllabus.

Observation Lessons—

To be taught according to syllabus. No text books are necessary

Drawing—For teachers' use—

1 Chotoder Chhabi Anka, Part I by P. C Chakravarty (School Library)

Hygiene—

To be taught according to syllabus. No text books are necessary.

***Hygiene Charts*—issued by the Publicity Department of the Calcutta Corporation are to be kept in all schools.**

***Drill*—No text books are prescribed for or used by the pupils. Teachers should consult a book on this subject which will cover the syllabus.**

No deviation from this List is permissible in C. F. P. Schools.

A. BARUA,
Education Officer to the Corporation of Calcutta.

CENSUS AND CALL FOR ENUMERATORS

Employees' Claims For Exemption Deprecated In Official Circular

Particular attention of all concerned is drawn to the following extract from Circular No 207 C., dated the 28th January, 1941, issued by Mr R A. Dutch, Superintendent of Census Operations in Bengal. All Heads of Departments in the Corporation are also being specially invited to assist in the coming Census enumeration in the light of the following :—

"I find that some misapprehension persists regarding the degree to which the routine of official or semi-official institutions will be affected by the appointment of their employees as enumerators. This misapprehension has led, in some cases to requests for wholesale exemptions, and in other cases, to the return of large numbers of *parwanas* which have been issued To allow exemptions to this extent would deprive Calcutta of enumerators and reduce the census to chaos

2. The census period extends from the 19th February to 4th March **Many office heads appear to think that their clerks will have to be exempted from their office duties throughout this period. This idea, if it is entertained, is quite erroneous.** The greatest number of persons an enumerator is likely to have to deal with is only 300 If he is totally exempted from his routine duties, two or at the most, three days should suffice **The prolonged period of 15 days for enumeration has been fixed entirely because in this census as in all others, we have to consider the position of an enumerator who must go on his rounds outside office hours.** An enumerator, who cannot be spared from his office, is expected to work either before or after his attendance in office, and for this purpose **he is allowed 15 days to enumerate a maximum of 300 persons.**

3 It is natural for individuals to object against the imposition of additional unrewarded tasks, and **undoubtedly the tendency is to exaggerate the difficulties. It is exactly here that I solicit the cooperation of heads of offices It would help the situation immensely if they would impress on their subordinates the plain fact that census duties are a statutory obligation and cannot be evaded.** If it is brought clearly home to the selected enumerators that they cannot shuffle out of this work, and that, if they cannot be spared from their office, **they must find time in their leisure, there is no apparent reason why office routine should be much disorganised,** especially when it is understood that the enumeration of 300 persons (in many blocks less) is not excessively onerous

4. In most cases it will be found that the enumerator's block is situated in the Ward in which he resides. Where the block is situated outside the Ward in which he resides, the payment of the actual tram or bus hire will be considered.

5. For those clerks fortunate enough to work in offices controlled by the Local Government, **it is probable that that Government will recommend heads of offices to relieve enumerators of their routine duties on six specified days, and on other days to allow them to attend office later than usual. No doubt, some discretion will be left to the heads of offices.** I have neither the power, nor, most emphatically, the desire to interfere in the internal discipline of Government Offices. I would merely suggest that where, in a given office, a large number of the staff have been recruited for enumeration, extreme disorganisation may be avoided, if such concessions as may be considered permissible, are allowed to different batches, on different dates. A particular concession may facilitate the enumeration of a block in a few

days. In that case, one batch may enjoy that concession for one period; and a second batch for the successive period and so on. So long as the first round is concluded not later than March 1st, it does not matter when it begins in any particular block, or when it ends. The second round, extending from March 2nd—4th is a simple affair, involving only the correction of the record for omissions and, in a few cases, alterations On March 5th, enumerators must attend at a place specified by their supervisor or charge Superintendent to return their pads, and prepare their extracts. It is hoped that this explanation will mitigate the anxieties which many heads of offices have felt, and enable them to see their way to extend their fullest co-operation for the proper performance of the census operations in Calcutta.

6 Where specific claims for exemption have been made, these will be dealt with individually on their merits by the Special Officer Many cases have already been dealt with. Where the person appointed is on leave, or resides outside Calcutta, or where he is a keyman who can on no account be spared, a claim for exemption will be allowed But where exemption is claimed for the bulk of the persons appointed (usually on the mistaken notion that they must all be granted holidays throughout the census period), I trust, I have no other course but to direct the Special Officer to refuse exemption. I trust that the reasons I have offered in the foregoing paras, will sufficiently attest that my action in so doing does not spring from arbitrary or ill considered harshness but from sheer necessity."

BENGAL LEGISLATIVE ASSEMBLY LIBRARY

Supplement to the "Calcutta Municipal Gazette," Saturday, the 22nd February, 1941.

THE CORPORATION BUDGET: 1941-42

CHIEF EXECUTIVE OFFICER'S STATEMENT

THE following statement of the Chief Executive Officer, Mr J C Mukerjea, in connection with the Budget Estimates of the Corporation of Calcutta for 1941-42 *was presented at the meeting of the Corporation on Monday, the* 10*th February*, 1941 —

The Budget Estimates for 1941-42 prepared in accordance with the provisions of the law will be found laid on the Secretary's table An abstract of the estimates has been circulated to the members of the House. This is the second Municipal Budget since the commencement of the war and as I pointed out on the last occasion when presenting the Budget for the current year, we are as profoundly affected by the war as any other similar institution It is not difficult to see that the civic work depends to a very large extent on the availability and the cost of materials It is a matter of common knowledge that in India prices of materials have, due to the war, gone up considerably. In framing our Budget we have therefore to bear in mind the need for readjustment so as to be within the limits of our means The year's work has revealed in consonance with our apprehension that the prices of articles that we required have increased in some cases to 200 per cent. We think we can congratulate ourselves that notwithstanding the abnormal situation created by the war we have been able to keep our head above water No essential civic duty has been neglected and in some cases some improvements have been effected It may be we have had to apply the prunning knife to some of the projects which some of us are anxious to get completed The Finance Committee has been very carefully considering their relative importance and sanctioning release of funds only in cases of absolute necessity We shall have to postpone some of these projects till normal conditions re-appear Notwithstanding this disadvantage, I think I can say that we have spent a fairly large amount on useful works of improvement. The need for moderation however cannot be gainsaid and will continue so long as the existing situation continues

I have for sometime past been drawing the attention of the House to the immediate necessity of improving our finances. The principal sources of the income of the Corporation are derived from rates and taxes Unlike other bodies we are more or less circumscribed. We have no option to adopt measures, excepting a few that are mentioned in the Act, for augmenting our income With a limited means at our disposal we have been able to perform as much as could possibly be done; but a modern progressive city cannot now be content with improvements that appeared to suffice in days gone by New ideas have come within the scope of civic administration, which requires adequate resources Unless we have the means we cannot tackle them. In this city of ours there is a persistent demand for further improvements in all directions and we need money for them Not that there is no desire to make such improvements, but in every direction we find that we are handicapped. I have been for some years past putting forth suggestions for the improvement of our finances and in this connection I should like to make a reference to my statement in connection with the current year's Budget estimates. I press the case for increase in our income with as much emphasis as it is possible for me to do. I am afraid we have not received as yet any help from

Government. The Government have recently been making great efforts to increase their income, *e.g.*, raising the petrol tax, introducing the Sales Tax (which is now before the Council) etc. They have however neglected us. If they need more money, we also need more money and is it unreasonable on our part to expect Government to help us in this matter? I suggest that the Corporation should take up the matter at once in all seriousness and a Committee should be entrusted with the work of getting in touch with Government as quickly as possible. In this connection the recent decision not to levy any tax on petrol is somewhat unfortunate as from this source we could have received quite a decent sum for our funds as a recurring income. In my view the matter deserves reconsideration and I hope the Corporation will see their way to modify their decision. If there can be no objection on the part of Government to levy a petrol tax, I am unable to see what objection can there be in regard to the Corporation levying a small tax, which they are entitled to under the provisions of the Calcutta Municipal Act. There may be some difficulty in the working of the provisions but means should be found to overcome them. The Education Cess is another source of income that should be imposed.

It has been pointed out on many occasions that we are shouldering a burden of about Rs 15 lakhs from the ordinary revenues of the Corporation for a purpose which requires a special cess. It is hardly fair to throw this burden on the general revenue. It may be that the payment of this cess is distasteful to the ratepayers or citizens, but they must be prepared to pay for an object which is now considered to be one of the primary duties of a civic body. If we are anxious to remove illiteracy and impart primary education, we must be prepared to pay for it. This matter should no longer be neglected and a decision arrived at in the course of the following year. There are some other matters to which I made a reference in my statement last year. I do not wish to repeat them here, but I hope that a Special Committee will be appointed to take this question during the year so that the next Budget may include receipts from these heads.

Efforts that we have made for getting a larger share out of the proceeds of the Motor Vehicles taxation have so far proved fruitless This income is one that should go, properly speaking, to the local body after deduction of necessary expenses for realisation. It was prior to the Amendment Act which took away the collections from the hands of the Corporation, entirely a source of income for the local body. While giving due credit to the Government for realising more than what the Corporation could realise, I think there are more cogent reasons why the local body should get the entire nett proceeds. The principal reason why the collection has gone up is no doubt due to the fact that it is made through the help of the Police, who have powers which the Corporation never enjoyed. If the Government take away the whole or portion of small incomes that are available to us, it will not be possible for the Corporation to carry on with any degree of success some of the legitimate works that properly belong to a local body. It is important therefore that we should make strong representations to Government and explain to them the need for considerate treatment, as without their assistance the Corporation under present conditions cannot function properly.

If a comprehensive scheme is framed for future work for the Corporation, it will be found that we have not addressed ourselves to many such projects, as for example, the housing of the poorer classes, providing sanitary dwellings for our own menial staff, adequate pure milk supply for the people of Calcutta, all round improvement of bustees, adequate distribution of water supply, providing additional maternity homes, systematic examination of food-stuffs and drugs etc Before long all these will have to be taken up, but no substantial achievement could be possible without adequate financial resources. I hope the importance of augmenting our resources will be fully realised

and no further time should be lost in taking steps to make it a *fait accompli.*

There has been some little improvement in our revenue from consolidated rates. This is a welcome sign no doubt and if maintained will lessen our anxieties to some extent. We shall not however expect much relief from this source as the valuations appear to have reached a peak. For the time being however the Assessor's estimated demand of Rs. 199 lakhs as against his last year's demand of Rs. 196 lakhs is a satisfactory feature.

The position of the Drainage Outfall Scheme needs a word of explanation. Of the main works as stated last year, the Storm Water Channel from Kulti to Bantala—a length of 17 miles—has been completed and is now in operation. The construction of the Pruss Sedimentation tank, the total estimated cost of which is Rs. 11,42,000 has been taken in hand and the work is in progress. The department propose to take up the excavation of the remaining portion of the D. W. F. Channel at an estimated cost of Rs. 2,68,000 during the next year. There will still remain the question of making this channel pucca as per the original scheme. This will have to be taken up as funds are available. When these two items are completed practically the whole of the original outfall scheme will have been given effect to. Practically the whole length of the service road has been constructed and is in use now. So far as the internal drainage scheme is concerned, the total estimated cost is Rs. 65 lakhs against which a sum of Rs. 42,36,000 was available for expenditure including Rs. 39,25,000, being the raised loan for the project and Rs. 3,11,000 balance of loans of other projects diverted to this scheme. At present works to the extent of Rs. 8,59,000 are in progress These include works of great importance, such as the construction of Storm Water and Dry Weather Flow Pump House in Dhappa Lock Pumping Station, costing about Rs. 2,24,500, construction of 6 ft. dia. brick sewer in Canal West Road from its junction with Halsi Bagan Street and Grey Street Extension in connection with the intercepting sewer at a cost of Rs. 1,36,500, construction of 8 ft. dia. brick sewer in Canal West Road from Mohanlal Street to Grey Street Extension at a cost of Rs. 1,96,200, construction of 9 ft. dia. brick sewer in Canal West Road and Galiff Street up to the junction with Cornwallis Street at a cost of Rs. 1,17,400. There are proposals for further works in connection with the scheme costing about Rs. 6 lakhs but no funds have yet been provided for them. It will be necessary for us to get these works completed and unless we could raise a loan it would not be possible to take them up. The question of raising a loan to complete the internal and outfall drainage schemes is of primary importance and every means should be explored in order to establish a borrowing capacity.

Although the financial situation has slightly improved, yet there is no margin between the recurring income and recurring expenditure for any loan. One of the ways of restoring the position will be to get all our new works done, not out of revenue but from loan. If that were done, large sums may be set free to establish a borrowing capacity. This question had been raised on the last occasion, but the matter had rested there. It will be for the Corporation to decide whether for some time in future this method should not be adopted. I trust however that the Budget Special Committee and the Corporation will give this matter the consideration that it deserves.

An interesting suggestion has been made by the Engineering Department for the purchase of a number of tractors and trailers (tank bodies)—one set of one tractor and two trailers—each for Manicktolla, Cossipore, District III and District IV—for the removal of night soil. It is considered by them that this will be a great improvement, minimising the nuisance which has been responsible for much adverse comments in several quarters. The estimated cost of this scheme is Rs. 32,000. I have however made no provision in my Budget proposals

as the scheme has not yet been considered by the Committee or the Corporation. If it is decided to be adopted, every effort will be made to find funds for it.

The question of implementing the water supply in certain areas has received consideration, but as any improved distributory system will involve very heavy expenditure as a loan project, no progress has been made.

The dispute with the Garden Reach Municipality regarding the installation of the Venturi meter has now been settled. The Garden Reach Municipal main system will now be connected with the Venturi meter and the quantity of water supplied will now be definitely ascertained.

I should like to take this occasion to thank on behalf of the Corporation Dr. J. B. Grant, Director of the Institute of Hygiene and the members of the Water Supply Technical Advisory Board, established in connection with the filtered water supply. They have been indefatigable in their work and have succeeded in obtaining very valuable information. We are grateful to them for the time they have spared for this work voluntarily and the trouble they have taken in ascertaining facts. I believe according to them Calcutta water is of a very high standard of purity and the belief entertained in some quarters as regards its potability is wholly unfounded. This is indeed very reassuring and should set all doubts at rest.

As I have stated before there are certain matters to which our attention has not yet been sufficiently directed. The question of pure and adequate milk supply for the public of Calcutta had cropped up off and on, but nothing tangible has so far resulted. The only thing which has been done so far is a loan of Rs. 50,000 to the Co-operative Milk Societies Union Ltd. which they have since repaid. A well organised system for the supply of pure milk appears to be a *desideratum*. In the absence of any definite conclusions no provisions can be made in our Budget.

It is regrettable that we have not been able as yet to tackle the question of housing for the poorer classes. Before the war this used to be a question of questions in modern European and American cities. Much work has been done by the Borough Councils and County Councils in this direction Slums have been cleared and in their places beautiful sanitary buildings have been put up, to be let to the poorer classes on very reasonable rates of rent. Many cities which had the unenviable distinction of possessing most insanitary slum areas had become after clearance well laid-out sanitary buildings. In Calcutta not to speak of the poorer classes we have not yet been able to provide sanitary dwellings for our own scavengers and carters. A sum of Rs. 1 lakh has been set apart in the Budget for this purpose, but unless we are really serious and up and doing, this will remain unspent and the existing conditions will continue indefinitely. Many of our bustees are the plague-spots of the city. They require immediate improvement. Our Mayor feels this very keenly. It would be a gigantic task for the Corporation to improve all the bustees out of their own funds and if there is non-co-operation from the bustee owners, very little can be done. We can no longer remain indifferent. If Calcutta is to become a beautiful city, these plague-spots must be changed beyond recognition, similarly as they have done in Western countries. This may require legislation, but if there is no other way out of it, this will have to be done. Housing of the poorer classes and improvement of slum areas have now assumed first rate importance and it will be for us to devise ways and means to put our ideas into operation.

I have briefly touched in my statement the work that we have done and the work that still remains to be done. I shall now deal with some of the salient points before I discuss the Budget in detail.

Consolidated Rate.

The current year's Budget Estimate is Rs. 1,87,04,000 against which the revised estimate is Rs. 1,91,00,000 and the new estimate is Rs. 1,94,00,000. The increase in the revised estimate is mainly due to the arrear realisation of Rs. 2,81,000 from the Port Commissioners in the second quarter of this year due to the revaluation of their properties in King George's Docks.

The estimate for the next year shows an increase mainly due to the arrears expected from the settlement of the rates of the Government House (about Rs. 3 lakhs) besides other arrears in the hands of the Assessor, the Collector and the Law Officer which amounts to nearly Rs. 8 lakhs. It is expected that the general revision of certain wards, *viz.*, 5, 7, 8, 20, 21 and 29 will give an increased income. I am glad to say that the collection of rates has been satisfactory. Up to the 3rd quarter there has been an excess collection of Rs. 8 lakhs over the collection of the previous year. This has been most welcome.

License Taxes, Markets and Building Receipts.

The receipts from the License taxes, Markets and Building construction have been greatly affected. The prevailing economic depression as also the high prices of materials now ruling are primarily responsible for the loss in receipt.

Sale of Water.

This has also been greatly affected owing to the War as a smaller number of ships are coming to this port. There is a likelihood of a further reduction in this revenue if the abnormal conditions continue.

The dispute with the Garden Reach Municipality regarding the cost of installation of the Venturi Meter has as stated above been settled. It is expected that the receipts from sale of water to that Municipality will now be stabilised. In this connection it is to be mentioned that it is time that the rate for supply of water to the Garden Reach Municipality should be revised to bring it into conformity with the prices charged elsewhere. In the new Budget the cost of water supplied to that Municipality has been estimated at the rate of eight annas per 1000 gallons. The rate for Garden Reach had been fixed somewhat low by Government as the Municipality has to pay the loan charges for their portion of the Water Supply System. That consideration should no longer have any force.

It is also to be mentioned that for the current year's budget a new scale of receipts for supply of water for non-domestic purposes had been fixed by the Corporation last year and on that basis an increased provision had been made. It has however been found that there were certain defects in the new scale of fees and accordingly the matter has been placed before the Water Supply Committee for their rectification. As this has not been finally settled the enhanced revenue has not been received this year. It is expected that this will materialise next year.

Sale Proceeds of Land.

Last year, the Corporation authorised the Chief Executive Officer to sell the available surplus lands as included in a schedule approved by them. Accordingly some lands have been sold; and a sum of Rs. 4,65,000 has been realised from the sales this year against the Budgest estimate of Rs. 4,13,000. Next year also Rs. 2,55,000 is expected from the sale of some other plots of land still to be sold.

Profit from Workshop.

We have been called upon to accept for execution in our Workshops some works of the Military department of the Government in connection with the War. It has been estimated that the profit from these undertakings will not be less than Rs. 3,000 per month or Rs. 36,000 per year. In our new Budget this amount has been shown as profit from the Workshop.

Contribution for Preparation of a Map of Calcutta.

In connection with the preparation of a Map of Calcutta it was expected that 70 per cent. of the cost would be borne by the various public utility concerns and the Government Telegraph Department. But this expectation has not materialised as Government sanction to such levy of contribution has not yet been received. It is also for this reason that the progress of preparation of the map has been greatly retarded. It is expected, however, that next year Government sanction will be available and effect can be given to the realisation of the contributions.

The International Situation.

As regards our expenditure, the effects of the war on the supply of various materials are being felt very greatly this year. Prices have gone up, in some cases very considerably, particularly of coal, petrol and lighting materials. In the current year's Budget due to the absence of any particulars regarding the extent of such increases, no enhanced provision was made to meet the increased cost. In the Budget Estimates as framed provision has been made on the basis of the increase already operating.

In pursuance of the Corporation resolution passed early in the current year the provisions for contributions to the various institutions such as Hospitals, Charitable Institutions, Primary and Technical Schools, etc., have been reduced by 25 per cent. both in the revised estimate for the current year as well as in the new estimate for 1941-42. This has effected a saving of about Rs. 2½ lakhs.

No decision has yet been arrived at as to the amount of the contribution to be paid to the Calcutta Improvement Trust which now amounts to about Rs. 20 lakhs per annum. It would appear that the Calcutta Improvement Act when framed contemplated a contribution of Rs. 7½ lakhs from the Corporation. If that was the intention of the Government, the sum now paid appears to be a high figure not thought of at the time. The question now arises whether it should be allowed to stay where it is or brought into conformity with the objects and estimates of the framers of the Act.

The Estates and General Purposes Committee have adopted a scheme very kindly prepared by our Councillor Mr. Speller which it is hoped will reduce the expenditure on Telephones considerably. Effect of this scheme should be observed in the next year's Budget.

NEW WORKS FOR THE NEXT YEAR.

In the new Budget the total provision for New Works is Rs. 9,77,200 of which Rs. 5,21,500 is for works carried over for which funds have been released, Rs. 55,700 is for works carried over for which no funds have yet been released and Rs. 4 lakhs for additional works altogether new. The Corporation while considering the current year's Budget accepted the principle that from the current year (1940-41) the maximum amount to be provided for New Works out of Revenue should be fixed

at Rs. 4 lakhs, any New Works in excess of that amount being undertaken out of loan. The effect of this reduction of the new works out of Revenue will be fully perceptible when the large carried over provisions get wiped out probably during 1942-43 decreasing the recurring expenditure by Rs. 2 lakhs, thus improving the borrowing capacity by that amount.

Out of the new provision of Rs. 4 lakhs, Rs. 2½ lakhs has been allotted for bituminous road surfacing works in the districts and the added areas and Rs. 1½ lakhs has been provided in lump to be placed under the Chief Executive Officer for expenditure in the Districts and the added areas for urgent works.

While on the subject of new works, I should like to point out as was done in the Budget Special Committee last year that if no new works are provided for in the Revenue Fund Budget but all such works are included in the Loans Budget, the whole of Rs. 6 lakhs which has been accepted by Government as the recurring portion of the total estimate for New Works, may be released improving our borrowing capacity very largely. It would seem that the interests of the Corporation will be far better served if instead of spending Rs. 6 lakhs every year from Revenue, we raised a loan of Rs. 1 crore with this Rs. 6 lakhs thus released and did our new works with the money thus obtained.

This is a question that deserves careful consideration and if approved of, and in my opinion there is no reason why it should not, effect could be given from the year 1942-43 by which period the whole of the carried over and released works are expected to be completed and paid for.

LABORATORY.

It was felt for some time past that the Central Laboratory situated at the Central Municipal Office buildings had become out of date and required reorganisation and expansion. It has now been shifted to the newly constructed commodious extension wing in the Hogg Street Building. The Laboratory has been thoroughly remodelled and refurnished on up-to-date scientific lines under the supervision of the First Deputy Executive Officer.

CASES BEFORE THE ESTABLISHMENT SPECIAL COMMITTEE.

As per Corporation dated 30th April, 1940, all resolutions passed by the Corporation within the year 1939-40, relating to revision of grade, special increments within the grade, special or personal allowances or additional emoluments of any kind, extension of services, as well as additional staff were rescinded in respect of those cases to which effect had not been given or on which no action had been taken. A Special Committee was appointed to consider all these questions *de novo*. This Committee has not completed their deliberations as yet and no definite directions have been obtained. In the Budget for 1941-42, provision has only been made in accordance with the Advocate-General's opinion. As regards the others, no provision could be made for want of definite directions of the Committee.

THE CENTRAL LIBRARY.

In the current year's budget provision was made for starting a Corporation Library at a Central place but no effect could be given to this as the proposal is still under consideration of the Estates and General Purposes Committee.

CLOSING BALANCE.

The Corporation decided sometime ago to maintain a Closing Balance of Rs. 40 lakhs. In the new Budget, I am glad to say, the Closing Balance has almost come up to about this figure, *viz.*, Rs. 39,70,000.

LOANS BUDGET.

In the Loans Budget next year a total provision of Rs. 37,03,000 has been made including Rs. 17,29,000 for the Works in progress as included in List A and Rs. 19,74,000 in List B for which no loans were raised previously. As usual preference will be given to the works in List A when the Loan Statement is submitted to Government.

The new loan for List A mainly includes provisions of Rs. 2,00,000 for Set Backs, Rs. 7,00,000 for Moore's Scheme and Rs. 8,40,000 for the Main Drainage Scheme—Outfall portion, besides a number of smaller provisions for other miscellaneous projects, the balance being met from the balance of the Loan Fund and probable receipts.

The project of shifting Chingreeghatta Refuse Platform from its present site to Dhappa has been included in the List A as a provision of Rs. 2,07,000 has been made for it by the Corporation by diversion of an equivalent amount from the raised loans of other less important projects in the Budget.

There is hardly any prospect of raising any loan next year also as it is expected that there will be no adequate borrowing capacity.

As the necessity of raising a work loan will be very great next year and so no more funds will be available by diversion from the projects it will be worthwhile to consider how the resources of the Corporation may be utilised for fresh borrowing next year.

INTERNAL DRAINAGE.

The original estimate for the Internal portion of the new drainage scheme is Rs. 65,00,000. So far, however, funds have been provided to the extent of Rs. 42,36,000 including the raised loan of Rs. 39,25,000 and Rs. 3,11,000 obtained by diversion from other projects. Thus there will still be a balance of Rs. 22,64,000 necessary to complete the scheme.

At present the following works are in progress the total estimate of which is Rs. 8,59,000.

	Rs.
(1) Construction of S. W. & D. W. F. pump house in Dhappa Lock Pumping Station	2,24,500
(2) Syphon under Beliaghata Canal	72,600
(3) Construction of road fencing, sludge chambers and drainage connections in the yard at Dhappa Lock ...	51,600
(4) Construction of 6 ft. dia. brick sewer in Canal West Road from its junction with Hazibagan and Grey Street Extension, in connection with the intercepting sewer	1,36,500
(5) Construction of 8 ft. dia. brick sewer in Canal West Road from Mohanlal Street to Grey Street Extension ...	1,96,200
(6) Construction of 9 ft. dia. brick sewer in Canal West Road and Galiff Street up to the junction with Cornwallis Street	1,17,400
(7) Relaying sewer in Pashupati Bose Lane and Nanda Lal Bose Lane	60,200
Total ...	8,59,000

The department proposes to take up the following further works next year for which there is no provision of funds. They will, however, have to be taken up as early as possible.

	Rs.
Construction of 9 ft. diameter brick sewer from Chitpore Lock Pumping Station to Cornwallis Street ...	2,40,600
Chitpore Lock Pumping Station building and staff quarters	84,400
Remodelling Town and Suburban reservoirs including excavation of silt from Suburban Head Cut (Point A to Reflux Gate)	39,640
Remodelling Town and Suburban reservoirs including excavation of silt from Suburban S. W. reservoir (Reflux Gate to 4,000 ft. east)	28,829
Remodelling Town and Suburban reservoirs including excavation of a S. W. channel parallel to Town Reservoir from Pagladanga to Makalpota Sluice ...	47,000
Remodelling Town and Suburban reservoirs including excavation of silt from Makalpota to Byntolla ...	54,800
Construction of a Syphon under dry weather channel for Town Storm Water	60,000
Land Acquisition for Pumping Stations etc. ...	40,000
Total ...	5,95,269
Say ...	6,00,000

Remodelling of the Town and Suburban reservoirs is proposed to be done by manual labour as it was found that the expenditure on the Government dredger was very high.

OUTFALL SCHEME

The original estimate for the outfall portion is Rs. 48,40,000 against which the provision so far made is Rs. 39,90,000 including the raised loan of Rs. 33,00,000 and Rs. 6,90,000 by diversion from other projects.

Thus the balance of Rs. 8,50,000 would be necessary in ordinary circumstances to complete the scheme. The estimate will probably have to be revised to make room for the extra works which had to be done, resulting in an increase in the estimate. This additional amount will have to be financed by a fresh loan.

At present the following works are in progress:—

	Estimate Rs.
Pruss Sedimentation Tank	11,41,700
Surface road from Kulti to Byntala	1,61,000
Total ...	13,02,700

The Department has proposed to take up the following works next year, the probale expenditure being mentioned against each:—

		Rs.
Excavation of D. W. F. channel,	16th & 15th mile ...	32,000
Do.	14th to 12th mile ...	44,000
Do.	11th to 9th mile ...	41,000
Do.	8th to 7th mile ...	45,000
Do.	6th to 5th mile ...	25,000
Do.	4th to 3rd mile ...	23,000
Do.	2nd to 1st mile ...	23,000
Do.	... ...	22,200
Construction of Bridges	... ...	13,000
Cross drainage works		
Total ...		2,68,200
Say ...		2,68,000

At present there is no provision in the Budget to meet this cost, but necessary provision will have to be made as early as possible.

I shall now proceed to compare the Budget Estimates for 1941-42, with the revised estimates for 1940-41:—

	Original Estimate for 1940-41 Rs.	Revised Estimate for 1940-41 Rs.	Budget Estimate for 1941-42 Rs.
Opening Balance ...	51,56,000	64,59,000	40,46,000
Receipts	2,54,77,000	2,54,99,000	2,58,50,000
Expenditure	2,74,54,000	2,79,12,000	2,59,26,000
Closing Balance which is the Opening Balance of the following year.	31,79,000	40,46,000	39,70,000

A. ORIGINAL AND REVISED ESTIMATES FOR 1940-41.

Before I take up the details of the estimates for 1941-42, I shall briefly explain the differences between the Original and Revised Estimates for the current year, *viz.*, 1940-41.

These stand as follows:—

	Original Estimate for 1940-41 Rs.	Revised Estimate for 1940-41 Rs.	Difference. Rs.
Opening Balance ...	51,56,000	64,59,000	+13,03 000
Receipts	2,54,77,000	2,54,99,000	+22,000
Expenditure ...	2,74,54,000	2,79,12,000	−4,58,000
Closing Balance ...	31,79,000	40,46,000	+8,67,000

(1) OPENING BALANCE.

It may be mentioned at the outset that the improvement of Rs. 13,03,000 in the Opening Balance for 1940-41, is not a real improvement as it comprises many deferred liabilities which are mostly unpaid grants These grants, although sanctioned last year, were paid during the early part of the current year, necessitating appropriations from the Closing Balance, they are as follows:—

	Rs
Grants to Hospitals	6,52,000
Grants to Alms Houses, etc.	1,66,000
Grants to Primary and Technical Schools	2,54,000
Total	10,72,000

This increase in the Opening Balance for 1940-41, may be placed, according to our method of accounting, under the following heads —

	Rs
Increase in receipt as compared with the Revised Estimate of 1939-40 (Rs. 2,57,77,000—Rs. 2,56,74,000)	+1,03,000
Decrease in expenditure (Rs. 2,67,03,000—Rs. 2,45,33,000)	+21,70,000
Expenditure on account of advances and purchase of Stores, etc	−9,70,000
Total	+13,03,000

The increase of Rs. 1,06,000 in the Receipts is arrived at as follows:—

Increases.	Rs.
Consolidated Rate	30,000
Trades and Professions Tax	34,000
Sale of Water	1,91,000
Interest on Surplus Cash	20,000
Total ...	2,75,000

Against this should be set off the following decreases:—

	Rs.
Receipts from Markets	14,000
Receipts from Slaughter Houses	10,000
Miscellaneous Fees	29,000
Fines	32,000
Receipts from the Turbo-Alternators	36,000
Miscellaneous Receipts [B I No 22 (n)] ...	34,000
Total ...	1,55,000

The difference is due to small increases and decreases in other items of receipts in the Budget

The decrease of Rs. 21,70,000 in expenditure falls mainly under the following heads:—

	Rs
Contribution to Libraries	53,000
Contribution to Primary and Technical Schools ...	3,41,000
Contribution to Hospitals and Dispensaries ...	7,51,000
Contribution to other Institutions such as Zoological Gardens, Industrial Exhibition, etc.	37,000
Contribution to Mahajati Sadan	1,00,000
Materials	64,000
Dispensaries, Maternity Homes, etc.	37,000
Pensions, gratuities, etc.	33,000
Motor Vehicles, etc	14,000
New Works	95,000
Precaution against epidemics	28,000
Repairs to Bituminous Roads	13,000
Filter Working	1,92,000
Deposit with the Bengal National Bank Ltd , owing to Liquidation unrecoverable ..	2,41,000
Air Raid Precaution	25,000
Expenditure on the occasion of Public Ceremonies etc ...	10,000
Total	20,34,000

The balance is due to other small items of increases and decreases.

(2) RECEIPTS

Coming to the estimate of Receipts for 1940-41, the increase of Rs. 22,000 under revised receipts falls chiefly under:—

	Rs.
Consolidated Rate	3,96,000
Sale proceeds of land	52,000
Rebate on account of Charges for Electricity ...	45,000
Total ...	4,93,000

Against this are to be set off the following decreases:—

	Rs.
Taxes on Trades and Professions	10,000
Calcutta Share of the Combined Hackney Carriage Fund	6,000
Markets, Slaughter Houses and Dhobikhana ...	61,000
Sale of Water	2,24,000
Fines	13,000
Miscellaneous Fees	78,000
Contribution from the Public Utility Companies etc., for the preparation of a Map of Calcutta ...	15,000
Recoveries from Contractors on account of rolling charges	10,000
Profit from Workshop	33,000
By-product from the Incinerator	5,000
Total ...	4,55,000

The difference is due to other small items of increases and decreases.

(3) EXPENDITURE

The increase of the total expenditure for the year 1940-41, amounting to Rs. 4,58,000 falls mainly under:—

	Rs.
Contribution to Free Libraries	44,000
Contribution to Primary Technical Schools	2,91,000
Contribution to Hospitals etc.	6,82,000
Law Charges	22,000
Electricity for Street lighting	10,000
Materials	2,42,000
Precaution against epidemics	33,000
Repairs to Road rollers	40,000
Repairs to Roads	45,000
Repairs to Refuse Wagons	25,000
Repairs to Sewers and Collapsed Sewers	42,000
Filter Working at Pulta	22,000
Election Charges	22,000
Expenditure on the occasion of Public Ceremonies ...	15,000
Scavengers' Strike	80,000
Deposit with the Bengal National Bank Ltd. owing to liquidation unrecoverable	2,42,000
Dearness allowance	90,000
Total ...	19,47,000

Against this are to be set off the following decreases:—

	Rs.
Establishment Charges	2,59,000
Improvement of Primary Education	88,000
Contribution of Zoological Gardens	20,000
Contribution to Calcutta Improvement Trust ...	9,000
Cost of Motor Vehicles etc.	75,000
New Works	9,62,000
Preparation of a Map of Calcutta	17,000
Repairs to Town Hall	9,000
Repairs to Outfall	14,000
Extra cost on account of acting arrangements in leave vacancies	20,000
Central Corporation Library	20,000
Total ...	14,33,000

The difference is due to various small items of expenditure.

In this connection the following items of Increases and Decreases deserve consideration:—

(a) *AS REGARDS RECEIPTS*

(i) INCREASES (NET)

Consolidated Rate—Rs. 3,96,000.

The current year's revised estimate is Rs. 1,91,00,000 against the Budget provision of Rs. 1,87,04,000. This increase is mainly due to the realisation of Rs. 2,81,000 from the Port Commissioners which was not included in the original estimate.

It has been stated already that the current year's collection of Consolidated Rate has so far proved satisfactory and up to the third quarter the collection has been about Rs. 8 lakhs more than that in the corresponding period of the previous year. The revised estimate of Rs. 1,91,00,000 has been taken on the basis that this excess collection of Rs. 8 lakhs will be maintained during the remaining period of the year and also the collection of the Law Department will not be less than Rs. 1 lakh during this period.

Sale proceeds of Surplus Lands and Structures—Rs. 52,000.

In the current year's Budget the original estimate was Rs. 4,13,000 for sale of surplus lands against which the revised estimate is Rs. 4,65,000. The increase is due to the actual prices of some of the plots of land being more than the estimate. The estimated receipt of Rs. 2,60,000 for sale of land at the Mullick Ghat Pumping Station, to be received from the Port Commissioners, is included in the revised estimate.

Rebate on account of charges for Electricity—Rs. 45,000.

The original estimate in the current year's Budget was Rs. 40,000 as the probable receipt for the year 1939-40 as against the revised estimate of Rs. 85,000. This latter figure includes Rs. 44,855, as rebate for the year 1938-39, which was received from the Electric Supply Corporation during the current year.

(ii) DECREASES (NET)

Taxes on Trades and Professions—Rs. 10,000.

The original Budget Estimate under this head was Rs. 13,35,000 against which the revised estimate is Rs. 13,25,000. The decrease is due to trade depression on account of the present International situation.

Calcutta Share of the Combined Hackney Carriage Fund—Rs. 6,000.

The original Budget Provision was Rs. 6,000 against which the revised estimate is nil. We have been informed by the Police Authorities that there has been no surplus in the Hackney Carriage Fund and consequently there is nothing available for distribution. There will therefore be no receipt under this head during the current year.

Markets, Slaughter Houses, Dhobikhana—Rs. 61,000.

The current year's revised estimate under Markets is Rs. 12,55,000 against the Budget Estimate of Rs. 12,92,000 (decrease Rs. 37,000), under the Slaughter Houses Rs. 1,54,000 against the Budget Estimate of Rs. 1,77,000 (decrease Rs. 23,000) and under the Dhobikhana Rs. 18,000 against Rs. 19,000 (decrease Rs. 1,000).

The decrease under the Markets is mainly due to vacancies of stalls due to acute trade depression for which the War appears to be responsible. The receipts of the College Street Market are also partly affected by a number of shop rooms having come into existence in private houses around the market. The decrease in the Park Circus

Market is due to the fact that the new building was ready late in the year.

The decrease under the Slaughter Houses is due to scarcity of animals and rise in the price of Live Stock.

Sale of Water—Rs. 2,24,000.

The total revised estimate under this head is Rs. 5,52,000 against the Budget provision of Rs. 7,76,000. The decrease mainly falls under the following heads:—

	Rs.
To shipping	20,000
To Municipalities and Cantonments ...	1,60,000
For non-domestic purposes	40,000

The decrease under Shipping is due to a reduction in the number of ships calling to port due to the war. The decrease under the Municipalities and Cantonments is due to the fact that the arrears up to 1939-40, amounting to Rs. 1,60,416 due from the Garden Reach Municipality, which were included in the Budget provision for the current year, were actually adjusted during 1939-40, at the rate of Rs. 35,000 per year.

The decrease under the non-domestic purposes is due to the fact that the enhanced rates which were proposed to be introduced this year and on the basis of which the Budget estimate was prepared have not been given effect to during the year.

Fines—Rs. 13,000.

The revised estimate is Rs. 62,000 against the Budget Estimate of Rs. 75,000.

The receipt under this head is on the decline and did not reach the estimate, as before.

Miscellaneous fees—Rs. 78,000.

This decrease includes decreases under the following heads, *viz.*, scaffolding and depositing building materials—Rs. 13,000. Fees from verandahs and projected structures—Rs. 20,000. Sanctioned plan fees—Rs. 33,000 and fees under the Drainage Bye-laws—Rs. 16,000.

The decrease under these heads is mainly due to the fact that on account of the abnormal rise in the prices of materials as also the acute economic depression on account of the war there have been fewer building operations during the year.

Contribution from the Public Utility Companies etc., for the preparation of a Map of Calcutta—Rs. 15,000.

The preparation of the map of Calcutta is estimated to cost Rs. 50,800 as sanctioned by the Corporation dated 10th November, 1937. It includes charges for staff, drawing instruments, furniture etc. The preliminary work was taken up by the Chief Engineer in the year 1935-36 but the actual work against the estimate has not yet commenced for want of Government sanction to the contributions from the Public Bodies and the Government Telegraph Department, although it was stipulated originally that the preparation of the map would take two years to complete.

As regards contributions, it was decided by the Corporation that a part of the cost would be borne by the Public Utility Companies and

Government Post and Telegraph Department in the following proportions:—

	Per cent.
The Calcutta Improvement Trust ...	... 15
The Calcutta Electric Supply Corporation Ltd.	... 25
The Oriental Gas Co. Ltd. ...	... 10
The Calcutta Tramways Co. Ltd. ...	... 5
The Bengal Telephone Corporation Ltd.	... 10
The Government Post and Telegraph Department	... 5

This receipt was shown in the Budget Estimate under B. I. No. 21-B (viii) of the current year's Budget in the hope that Government sanction would be received during the year and the contributions from the above Bodies would be realised on the basis of actual works. The deficit is due to non-realisation of the amount for want of Government sanction as aforesaid.

Recoveries from Contractors on account of Rolling Charges—Rs. 10,000.

The Revised Estimate is Rs. 30,000 against the Budget Estimate for the current year amounting to Rs. 40,000. The receipt under this head also is on the decline.

Profit from Workshop—Rs. 33,000.

The Revised Estimate is Rs. 2,000 only against the current year's Budget Estimate of Rs. 35,000.

For the purpose of the Budget, the usual procedure for the calculation of profit is to take 25 per cent of the estimated cost of raw materials and Labour and deduct therefrom the Workshop on-cost. The Revised Estimate has been calculated on this basis from the Revised Estimates under the respective heads of B. I. No. 91.

By-products from the Incinerator—Rs. 5,000.

The Revised Estimate is nil against the current year's Budget Estimate of Rs. 5,000 under this head. No receipt has been realised as the arrangement for by-products has not yet materialised.

(b) *AS REGARDS EXPENDITURE.*

(i) INCREASES (NET).

Contribution to Free Libraries—Rs. 44,000.

The Revised Estimate is Rs. 84,000 against the Budget Estimate for the current year amounting to Rs. 40,000. This is due to the contributions for the previous year paid during this year.

Contribution to the Primary and Technical Education Institutions—Rs. 2,91,000.

The current year's Revised Estimate is Rs. 5,91,000 against the Bugdet Estimate of Rs. 3,00,000. As in the case of Libraries, the increase is due to the previous year's liabilities being paid during this year.

Contributions to Hospitals etc.—Rs. 6,82,000.

The Revised Estimate is Rs. 14,42,000 against the current year's Budget provision of Rs. 7,60,000. This is also due mainly to the payment of the previous year's sanctioned grants during the current year.

Law Charges—Rs. 22,000.

The Revised Estimate is Rs. 1,38,000 against the current year's Budget provision of Rs. 1,16,000 under this head. This is mainly due to the new provisions for "Suits by outside lawyers" sanctioned by the Corporation on 4th September, 1940.

Electricity for Street Lighting—Rs. 10,000.

The Revised Estimate is Rs. 1,20,000 against the Budget provision of Rs. 1,10,000 for the current year. The increase is due to installation of additional electric lamps during the year.

Materials—Rs. 2,42,000.

This increase is the result of the following increases and decreases:

Increases—

	Rs.
Road metals	37,000
Coal.	1,03,000
Burners, mantles etc.	25,000
Petrol, tyres and tubes of Motor Vehicles ...	60,000
Motor stores and spare parts	15,000
Oil and stores of Water Supply Pumping Stations	13,000
Railway Stores	18,000
Total	2,71,000

Decreases—

	Rs.
Alum Cake	17,000

and various other smaller items of decreases.

Increase in materials is mainly due to rise in prices due to the War.

Precaution against epidemics—Rs. 33,000.

The Revised Estimate is Rs. 1,33,000 against the current year's Budget provision of Rs. 1 lakh. This increase is due to contribution of Rs. 33,500 to the Campbell Hospital for opening temporary Cholera, Small-pox and Meningitis beds during the epidemics in 1938-39 and 1939-40.

Repairs to Road Rollers—Rs. 40,000.

The Revised Estimate is Rs. 1,00,000 against the current year's Budget Estimate of Rs. 60,000. This increase has been necessary for purposes of adjustment of the cost of repairs to certain rollers of the previous year.

Repairs to Roads—Rs. 45,000.

This is due to payment of the liabilities in connection with the unfinished works included in the previous year's Road Repairs Programme.

Repairs to Refuse Wagons—Rs. 25,000.

The Revised Estimate is Rs. 75,000 against the current year's Budget Estimate of Rs. 50,000. The increase of Rs. 25,000 is due to more work being necessary than what was provided for in the Budget.

Repairs to Sewers and Collapsed Sewers—Rs. 42,000.

The Revised Estimate under repairs to sewers is Rs. 37,000 against the Budget provision of Rs. 20,000. This increase is due to payment of Rs. 17,903 for repairing the cracks in the Town High Level Sewer. This was not provided for in the Budget originally.

The Revised Estimate under Collapsed Sewers is Rs. 30,000 against the current year's Budget Estimate of Rs. 5,000. This increase is due to the fact that the works under this head cannot be anticipated beforehand, so that it is not possible to make necessary provision in the Budget in anticipation.

Filter-working at Pulta—Rs. 22,000.

The Revised Estimate is Rs. 1,55,000 against the current year's Budget provision of Rs. 1,33,000. This increase is due to the adjustment of the advances made to the Contractors Messrs. K. C. Ghose and Co. for their work of filter-working during 1938-39.

Election Charges---Rs. 22,000.

The current year's Revised Estimate is Rs. 72,000 against the Budget provision of Rs. 50,000. The increase is due to the cost incurred for erection of polling stations and making necessary arrangements for holding the General Election in 1939-40, which was unprecedented this year due to the introduction of Separate Electorates and Labour Constituencies.

Expenditure on the occasion of Public Ceremonies—Rs. 15,000.

The Revised Estimate is Rs. 25,000 against the current year's Budget provision of Rs. 10,000. This increase is due to payment of previous year's charges for Mohurrum, Id, Eclipses, Durga and Kali Puja festivals etc.

Scavengers' Strike—Rs. 80,000.

There was no Budget provision under this head in the current year's Budget. But the Revised Estimate of Rs. 80,000 includes Rs. 25,000 and Rs. 55,000 for adjustment of the advances and payment of outstanding bills in connection with the first strike in March, 1940 and the second strike in August, 1940, respectively.

Deposit with the Bengal National Bank Ltd., due to liquidation irrecoverable—Rs. 2,42,000.

There was no provision for this in the current year's budget, but there was a corresponding provision in the Revised Estimate for the previous year. This outstanding amount has been adjusted during the current year.

Dearness Allowance—Rs. 90,000.

There was no provision for this in the current year's budget but the amount had to be paid as a measure of compromise during the first strike under sanction of the Corporation dated 15th May, 1940 at the rate of Re. 1 per head to the labour staff whose pay was less than Rs. 30 each. This allowance was subsequently discontinued under the sanction of the Corporation dated 25th September, 1940.

(ii) DECREASES (NET).

Establishment Charges—Rs. 2,59,000.

The current year's Revised Estimate is Rs. 68,31,000 against the Budget provision of Rs. 70,90,000.

Our normal savings under this head are about Rs. 1 lakh each year and are due to vacancies etc., throughout the year. This year, however, it is anticipated that the savings will be Rs. 1,59,000 more. This is mainly due to the savings under the various labour heads resulting from the strikes this year. I have to point out, however, that this saving cannot be regarded as a real saving inasmuch as expenditure has correspondingly been incurred under other Budget heads to cope with the work abandoned by the strikers. The work of removal of refuse is being carried on with the help of hired lorries since the last strike, the cost of which has been proposed to be met out of this saving and advance payments have been made in anticipation of proper sanction and provision of funds. But such expenditure has not been shown in the Budget as no estimates have yet been submitted by the Engineering Departments.

Improvement of Primary Education—Rs. 88,000.

The Revised Estimate is Rs. 11,65,000 against the Budget Estimate of Rs. 12,53,000. The decrease falls under the following heads:—

	Rs.
Pay of teachers	34,000
Equipment	8,000
Rent	3,000
Contingent and other charges	2,500
Repairs to school buildings	9,000
Census of school-going children	1,500
Construction of primary school buildings ...	30,000
Total ...	88,000

The decrease under pay of teachers is due to normal savings as well as vacancies not being filled up.

The decrease under Equipment is mainly due to less expenditure being incurred for conversion of baby-desks into combined benches and desks and also for free distribution of text books as provided for in the original estimate.

The decrease under Repairs to school buildings is mainly due to non-completion of the works and non-payment of bills for the completed works during the year. The provisions are being carried over to the next year.

The decrease under Construction of Primary School Buildings which is an item of New Work, is due to the fact that the provision is being carried over to the next year as the work could not be taken up for want of sanction.

The other items do not call for any particular notice.

Contribution to the Zoological Gardens—Rs. 20,000.

There is a provision of Rs. 20,000 in the current year's budget for contribution to the Zoological Gardens. Against this, the Revised Estimate is nil, as the Zoological Gardens have been exempted from the payment of consolidated rates which will render the payment of contribution unnecessary.

Cost of Motor Vehicles, etc.—Rs. 75,000.

The Revised Estimate is Rs. 1,15,000 against the current year's budget provision of Rs. 1,90,000. The decrease is mainly due to the provisions of Replacements of Asphaltum lorries, Conservancy lorries, Carcass lorries, street watering lorries, silt-lorries, and Motor cars and also for purchase of Street Watering (additional) lorries, being carried over to the next year's budget.

New Works—Rs. 9,62,000.

The current year's Revised Estimate is Rs. 5,77,000 against the Budget provision of Rs. 15,39,000 including Rs. 11,39,000 for works carried over from 1939-40 and Rs. 4 lakhs for altogether new items. The Corporation dated 2nd October, 1940 resolved that out of the total provision of Rs. 15,39,000 nothing but the asphaltum programme (Rs. 2½ lakhs) and works for which commitment in the shape of acceptance of tenders or quotations etc., had been made already be considered this year. The Revised estimate of Rs. 5,77,000 is the result of this direction of the Corporation.

Of this year's provision, Rs. 5,77,200 has been carried over to the next year which includes Rs. 5,21,500 for released items and Rs. 55,700 for items not yet released.

The balance has been dropped from the Budget either being paid during the previous year or as saving out of the estimates for works completed and paid for.

Preparation of a Map of Calcutta—Rs. 17,000.

The Revised Estimate is Rs. 5,000 against the current year's Budget provision of Rs. 22,000. It has already been stated in connection with the Receipt item—Contribution from the Public Utility Companies etc., for the preparation of a Map of Calcutta, that the actual work against the estimate of Rs. 50,800 could not be taken up by the Chief Engineer for want of Government sanction to the contributions from the Public Bodies although it was stipulated orginally that the work would be completed in two years. The revised figure of Rs. 5,000 represents the cost of preliminary works which are being carried on in this connection during the last several years.

Repairs to Town Hall—Rs. 9,000.

The Revised Estimate is Rs. 16,000 against the current year's Budget provision of Rs. 25,000. This is due to the balance of the current year's estimate being carried over to the next year.

Repairs to Outfall—Rs. 14,000.

The Revised Estimate is Rs. 16,000 against the Budget provision of Rs. 30,000. The decrease is due to the provision of Rs. 2,000 for emergent repairs, Rs. 10,000 for clearing silt from the Sub Head-cut from the Ballygunge Pumping Station to Reflux Gate for discharging storm water to the newly dredged channel and Rs. 2,000 for raising the northern embankment of the Town Storm Water Reservoir, being carried over to the next year.

Extra cost on account of acting arrangement in leave vacancies—Rs. 20,000.

This provision is always wiped out at the end of the year as the provision is distributed to the appropriate Budget heads.

Central Corporation Library—Rs. 20,000.

There is a provision of Rs. 20,000 in the current year's Budget for establishing a Central Corporation Library, which is being carried over to the next year.

The other items do not call for any particular explanation.

B. BUDGET ESTIMATE FOR 1941-42.

Coming to 1941-42, the estimates stand thus: —

	Rs.
Opening Balance	40,46,000
Receipts	2,58,50,000
Expenditure	2,59,26,000
Closing Balance	39,70,000

(1) ESTIMATED RECEIPTS.

It may be noticed that the estimated receipts show a figure higher by Rs. 3,51,000 than the revised estimates of receipts of 1940-41 (Rs. 2,54,99,000).

This increase falls under:—

	Rs.
Consolidated Rate	3,00,000
Taxes on Trades and Professions	10,000
Markets, Slaughter Houses and Dhobikhana ...	46,600
Sale of Water	86,000
Fines	13,000
Recovery of Law Charges	9,000
Miscellaneous Receipts including Profits from Workshp	1,24,600
	5,89,200

Against this are to be set off the following decreases:—

	Rs.
Sale proceeds of lands and produce of lands ...	2,10,000
Rebate on account of charges for electricity ...	41,000
Total	2,51,000

The balance is due to smaller items of increases and decreases.

(*i*) *Increases* (*Net*).

Consolidated Rate—Rs. 3,00,000.

The consolidated rate for 1941-42 has been estimated at Rs. 1,94,00,000 against the current year's revised estimate of Rs. 1,91,00,000 and the original Budget estimate of Rs. 1,87,04,000.

The Assessor's estimate for Consolidated Rate for 1941-42 is a current demand of Rs. 1,99,04,000 against Rs. 1,95,70,000 of 1940-41. The percentage of collection has been taken at 92% for 1941-42 as in the previous year. The amount of collection for 1941-42 therefore comes to Rs. 1,83,00,000 of the current demand against Rs. 1,80,00,000 of 1940-41. An additional amount of Rs. 11,00,000 has been added as probable collection out of arrears against Rs. 7,00,000 of the previous year. Thus the estimated collection for 1941-42 including arrears amounts to Rs. 1,94,00,000 against Rs. 1,87,04,000 of 1940-41.

I would point out that there has been a noticeable improvement in collection this year. It may also be possible that the Budget expectation under the Consolidated Rate, will, after a long time, be realised this year.

This may be seen from the following figures:—

Consolidated Rate.

	Budget estimate. Rs.	Actuals. Rs.
1936-37 ...	1,85,43,000	1,78,31,000
1937-38 ...	1,88,54,000	1,78,09,000
1938-39 ...	1,84,43,000	1,78,28,000
1939-40 ...	1,86,26,000	1,85,19,000 (excluding Rs. 12,11,000 realised from the Port Commissioners for revaluation of the King George Docks, which was not included in the Budget.)
1940-41 ...	1,87,04,000	1,87,50,000 (excluding Rs. 3,50,000 received from the Port Commissioners (Rs. 2,81,000) and from other parties, which was not included in the original Budget.)

if this improvement is maintained by the Departments, our anticipations in the next year's Budget provision may be fulfilled. Besides the current demand in the next year's Budget, the Assessor hopes that the large amounts of arrears from the Port Commissioners for their remaining properties in the Docks as well as from Government for the Government House will be realised during the next year.

It cannot, however, be ignored that there is enough margin for further improvement in the collection of rates inasmuch as there is a large accumulation of the outstanding rate bills in the hands of the Assessor, the Collector and the Law Officer, the growth of which may be seen from the following statements:—

Year.	Collector.	Transferred by Collector to Law Officer.	Assessor.	Law Officer.	Total of Columns. 1, 3 & 4.
	1	2	3	4	
	Rs.	Rs.	Rs.	Rs.	Rs.
1934-35 (1-4-35) ...	16,41,000	4,03,000	14,39,000	12,54,000	43,84,000
1935-36 (1-4-36) ...	15,29,000	4,07,000	11,10,000	14,70,000	41,09,000
1936-37 (1-4-37) ...	13,63,000	2,88,000	11,00,000	15,58,000	40,21,000
1937-38 (1-4-38) ...	14,44,000	4,50,000	12,49,000	17,92.000	44,85,000
1938-39 (1-4-39) ...	17,38,000	4,38,000	13,60,000	19,68,000	53,14,000
1939-40 (1-4-40) ...	12,79,000	5,93,000	12,69,000	22,24,000	47,72,000

I am, however, in a position to state that due to the efforts of the Law Department Working Special Committee, a scheme for institution of a larger number of legal proceedings against the defaulting ratepayers by employing outside lawyers, has been adopted by the Corporation, as a result of which the accumulations in the Law Department are expected to go down steadily year after year.

Taxes on Trades and Professions—Rs 10,000.

The new estimate has been increased on the expectation that the deficit during the current year may be made up during the next year.

Receipts from Markets, Slaughter Houses and Dhobikhana—Rs. 46,000.

This is composed of various items in the Markets and the Slaughter Houses. The current year's revised estimates are less than the original Budget provisions for reasons stated already.

Sale of Water—Rs. 86,000.

This increase falls mainly under the following heads:—

	Rs.
To Shipping	20,000
To Municipalities and Cantonments ...	22,000
For non-domestic purposes	40,000
For Building purposes	5,000
Total ...	87,000

The decrease in the current year's revised estimates under Shipping and Building purposes is due to less receipts on account of the present International situation. It is expected that the condition will change next year and the Budget expectations may be fulfilled.

The increase under Municipalities is due to the estimate for sale of water to the Garden Reach Municipality having been prepared as explained previously at the enhanced rate of As. 8 per 1,000 gallons.

As regards non-domestic purposes, it is expected that the Budget provision may be realised when the new rates come into operation next year.

Profit from Workshop—Rs. 34,000.

This is due mainly to the orders received from the Government in connection with the War, as I have already mentioned.

(ii) DECREASES (NET)

Sale of surplus lands and structures—Rs. 2,10,000.

This is due to a provision of Rs. 2,55,000 being made in the next year's Budget for receipts from sale proceeds of surplus lands against Rs. 4,65,000 expected during the current year. The receipts under this head depend upon the number of surplus lands available for sale.

Rebate on account of charges for electricity—Rs. 41,000.

This is due to the fact that during the current year rebate for two years 1939 and 1940 is expected to be realised, whereas the provision for the next year is only for 1941.

The other items do not call for any special comment.

(2) *Estimated Expenditure.*

The Budget Estimate of total expenditure for 1941-42, *viz.*, Rs. 2,59,26,000 is Rs. 19,86,000 less than the Revised Estimates for 1940-41.

The decrease falls under the following items:—

	Rs.
Contribution to the Fire Brigade	2,25,000
,, to Free Libraries	54,000
,, to Primary and Technical Educational Institutions	3,65,000
,, to Hospitals, Almshouses, etc. ...	8,72,000
,, to the Reserve Fund	8,00,000
Deposit with the Bengal National Bank Ltd., owing to liquidation irrecoverable	2,42,000
Dearness allowance	90,000
Expenditure in connection with Scavengers' strike ...	80,000
Precaution against epidemics	43,000
Filter-working at Pulta	47,000
Repairs to roads	45,000
Repairs to road-rollers	50,000
Establishment and other charges for the new lorries in District IV, in connection with the Incinerator ...	20,000
Repairs to Refuse wagons	25,000
Election charges	57,000
Total ...	30,15,000

Against these are to be set off the following increases—

	Rs.
Establishment charges	2,20,000
Primary Education	78,000
Materials	30,000
Pensions, Gratuities & Compassionate allowances ...	75,000
Law charges	48,000
Contribution to the Calcutta Improvement Trust ...	37,000
Motor Vehicles, etc., ...	47,000
Maintenance of Pipes and Reservoirs of Water Supply Pumping Stations	32,000
Extra cost on account of acting arrangements in leave vacancies	20,000
New Works	4,00,600
Total ..	10,56,000

The difference is due to smaller items of increases and decreases.

(i) *Decreases (Net).*

Contribution to the Fire Brigade—Rs 2,25,000.

The revised estimate for contribution to the Licensed Warehouse Fund for Fire Brigade is Rs. 4,28,000 and th. Budget Estimate for 1941-42 is Rs 2,03,000 The revised estimate of Rs. 4,28,000 includes Rs. 2,09,000 for ordinary maintenance of the Fire Brigade contributed from the general revenues of the Corporation and Rs 2,18,000 for contribution towards the construction of the Fire Brigade Head-quarters The Budget provision for 1941-42 is for maintenance only.

It is to be pointed out here, as explained by me in previous years, that due both to the deficits in the receipts of the Licensed Warehouse Fund and increase in the expenditure of the Fire Brigade, the Corporation has been compelled to pay every year for the last several years much more than their share of the moiety to be paid out of general revenues in order to make good the shortage in the moiety to be met out of the receipts of the Licensed Warehouse Fund. Admitting that the revised scale of receipts for the Fund will somewhat improve the position, it is to be considered if further avenues should not be explored to increase the receipts so as to give relief to the Revenue Fund of the Corporation. The following table will show the amount of extra contributions from the revenues—

	Rs.		Rs.	
1931-32 .	67,300	1936-37 ..	39,500	
1932-33	30,400	1937-38 ...	42,100	
1933-34 .	46,200	1938-39 ...	51,700	
1934-35 ..	9,600	1939-40 ...	57,700	
1935-36 ..,	44,800	1940-41 ...	47,100	(revised)

Besides the contribution for ordinary maintenance during 1939-40 and 1940-41, the Corporation had to contribute out of their Revenue Fund, a sum of Rs. 3,71,000 for construction of the Fire Brigade Headquarters at the Free School site This represents 83·5 per cent. of the total contribution made by the Calcutta Corporation, Howrah Municipality and the Garden Reach Municipality.

Contribution to Free Libraries—Rs. 54,000.

The Budget Estimate for 1941-42 is Rs. 30,000 as against the revised estimate of Rs. 83,000 which includes the unpaid contributions for the previous year.

Contribution to Primary and Technical Educational Institutions —Rs. 3,65,000.

The Budget Estimate for 1941-42 is Rs. 2,26,000 as against the revised estimate of Rs. 5,90,000 which also includes the previous year's liabilities.

Contribution to Hospitals, etc.—Rs. 8,72,000.

The Budget Estimate for 1941-42 is Rs. 5,70,000 as against the revised estimate of Rs. 14,42,000 which, as in the other cases of contributions, includes liabilities for the previous year.

It is also to be mentioned in this connection that in pursuance of the direction of the Corporation given on 2nd October, 1940 both the Revised estimates for the current year and the Budget provisions for the next year have been made on the basis of a 25 per cent. reduction from the original Budget provision of the current year.

Contribution to the Reserve Fund—Rs. 8,00,000.

The Budget Estimate for 1941-42 is nil against the current year's revised estimate of Rs. 8,00,000. For want of sufficient surplus after meeting the liabilities, it has not been possible so long to start this Reserve Fund with the contribution of Rs. 8,00,000. It is, however, expected that this will be done before the close of the year, when the position of such surplus is definitely known.

Deposit with the Bengal National Bank Ltd. owing to liquidation unrecoverable—Rs. 2,42,000.

The Budget provision for 1941-42 is nil against the revised estimate of Rs. 2,41,600. No new provision is necessary under this head.

Dearness Allowance—Rs. 90,000.

It has already been mentioned that this amount has been included in the revised estimate for payment, during the current year, of an allowance of Re. 1 per head to the labour staff whose pay was less than Rs. 30 each. No corresponding provision is necessary next year, as this allowance has subsequently been discontinued.

Expenditure in connection with Scavengers' Strike—Rs. 80,000.

This expenditure has been incurred during the current year to meet the exigencies of the two Scavengers' Strikes held during the current year. No corresponding provision is necessary next year.

Precaution against epidemics—Rs. 43,000.

The next year's Budget provision is Rs. 90,000 against the current year's revised estimate of Rs. 1,33,000. The increased revised estimate is mainly due to contribution of Rs. 33,500 to the Campbell Hospital for opening temporary Cholera, Small-pox and Meningitis beds during the period of epidemics in 1938-39 and 1939-40.

Filter Working at Pulta—Rs. 47,000.

The Budget provision for 1941-42 is Rs. 1,08,000 against the current year's revised estimate of Rs. 1,55,000. Increase in the revised estimate is mainly due to the expected adjustment of advance payment made to Messrs. K. C. Ghose and Co., for filter-working during 1938-39.

Repairs to road—Rs. 45,000.

This is due to the increase in the revised estimates for repairs to roads in order to meet the liabilities for unfinished works in the previous year's road-repairing programme.

Repairs to road-rollers—Rs. 50,000.

The Budget Estimate for 1941-42 is Rs. 50,000 against the current year's revised estimate of Rs. 1,00,000. This increase in the revised estimate is necessary for adjustment of the previous year's charges.

Establishment and other charges for the new lorries in District IV in connection with the Incinerator—Rs. 20,000.

The next year's Budget provision is nil against the current year's revised estimate of Rs. 20,000. The original estimate of the current year, Rs. 30,000, was made to meet the cost for running the new lorries in connection with the Goragacha Incinerator which was expected to be in operation earlier in the year. The decrease in the revised estimate is due to the fact that the lorries were actually introduced late in the year. No new provision is necessary under this head as the provision has been distributed over the appropriate Budget items to which it is chargeable.

Repairs to Refuse Wagons—Rs. 25,000.

The Budget provision for 1941-42 is Rs. 50,000 against this year's revised estimate of Rs. 75,000. The revised estimate has been increased to meet the cost of more repairs necessary during the year.

Election Charges—Rs. 57,000.

The Budget estimate for 1941-42 is Rs. 15,000 against the current year's revised estimate of Rs. 72,000. The difference is due to less provision being necessary next year to meet the outstanding charges of the last General Election and probable bye-elections.

(ii) INCREASES (NET).

Establishment charges—Rs. 2,89,000

The Budget estimate for 1941-42 is Rs. 71,20,000 against the current year's revised estimate of Rs. 68,31,000. But if this figure is compared with the Budget estimate for the current year (*viz.*, Rs. 70,90,000) the increase is only Rs. 30,000.

It has already been pointed out that making allowance for the normal savings of Rs. 1 lakh the current year's decrease under the Establishment charges comes to Rs. 1,59,000 which is mainly due to the Labour Strikes during the year. The next year's Budget provisions have however been made on the basis of sanctions and consequently it has not been possible to make any reduction of the basis of this year's figures as a guide. Therefore, the real increase as shown by the difference between the revised estimate for the current year and the new estimate for 1941-42 amounts to Rs. 1,30,000 only. Out of this, Rs. 1 lakh may be taken as the amount for normal savings and Rs. 30,000 as the real increase which again is mainly due to normal grade increments.

Primary Education—Rs. 78,000.

This falls mainly under :—

	Rs.
Pay of Teachers	34,000
Rent	3,000
Repairs to School Buildings	8,000
Construction of Primary School Buildings ...	30,000
	75,000

The balance is due to some other small items of increases.

The increase under pay of Teachers (Establishment) is due to—

(a) Ordinary annual increments to the Teachers.
(b) Provision for existing vacancies,
(c) Provision for the proposed new schools to be started next year.
(d) Increment to menials.

The total number of schools at the end of March, 1941, is expected to be 229, besides one Training College, *viz.*, 7 Model Schools, 98 Class-I Type Schools, 123 Bustee-type Schools and 1 Morning (part-time) School. It is proposed to start 3 Bustee-type Boys' Schools and

one Bustee-type Girls' School and also to convert 3 Bustee-type Schools into Class-I Type Schools during 1941-42.

The increase under Repairs to School buildings is due partly to the liabilities of the current year being carried over to the next year and partly to new estimates.

Construction of Primary School Buildings—Rs. 30,000.

It has already been stated that this provision has been carried over from the current year's Budget as the work has not been taken up for want of sanction.

Although this item is a New Work (Petty Improvement Work), it has been excluded from the total provision of New Works shown in the Budget and included in the item for Primary Education.

Materials—Rs. 30,000.

The increase falls mainly under:—

	Rs.
Fodder	3,000
Incinerators—Stores and fuel oil	30,000
Apparatus for the Laboratory	7,000
Motor Vehicles Dept.—Running stores, *e.g.*, petrol, lubricants, tyres and tubes and miscellaneous stores	50,000
	90,000

Against this are to be set off the following decreases:—

	Rs.
Road Metal	37,000
Coal	8,000
Railway Stores	10,000
Motor Vehicles—Spare parts	15,000
	70,000

The balance is due to some other small items of increases and decreases.

The increases are mainly due to the rise in the prices due to the War, and also to the increased requirements for the various departments, particularly for the "Running Stores" of the Motor Vehicles Department resulting from the purchase of 22 new lorries for District IV.

Pensions, Gratuities and Compassionate Allowance—Rs. 75,000

This falls mainly under:—

	Rs.
Gratuities and Compasionate Allowance ..	70,000
Contribution to Provident Fund	5,000
	75,000

The increase under the former head is due to the provision for the probable retirement of some of the higher officers.

Law Charges—Rs. 48,000.

This is mainly due to the increased provision being necessary for filing a large number of suits for realisation of arrear rates both by the existing staff of the Law Department and by outside lawyers, as sanctioned by the Corporation dated 4th September, 1940.

Contribution to the Calcutta Improvement Trust—Rs. 37,000.

This is due to the increased valuations next year. Under the Calcutta Improvement Act, a contribution of 2% of the annual rateable valuation is paid to the Calcutta Improvement Trust which is paid in 4 quarterly instalments.

Cost of Motor Vehicles etc.—Rs 47,000.

The Budget provision for 1941-42 is Rs. 1,62,000 as against the current year's revised estimate of Rs. 1,15,000.

The new provisions are as follows :—

	Rs
Replacement of Asphaltum lorries	10,000
Purchase of Conservancy lorries	23,000
Replacement of do.	10,000
Do. of Carcass lorries	10,000
Purchase of Street watering lorries	4,000
Replacement of street-watering lorries	12,000
Do of silt-lorries	16,000
Do of Motor Cycles for the Ground Hydrant Inspectors	4,000
Do. of Ambulance (Non-infectious)	4,500
Do of Motor Cars	15,000
Tools etc , for Asphaltum work	13,000
Purchase of Road—rollers	30,000
Do of Asphaltum Mixing Plant	10,000
Total	1,61,500
Say	1,62,000

The revised estimates are –

	Rs.
Purchase of Conservancy lorries	98,800
Tools etc.	13,500
Purchase of Road rollers	14,700
Total	1,15,000

Maintenance of Pipes and Reservoirs—Rs. 32,000

The Budget Estimate for 1941-42 is Rs. 65,000 against the current year's revised estimate of Rs. 32,500 This is mainly due to the provisions being carried over to the next year's Budget.

Extra remuneration on account of arrangements in leave vacancies—Rs 20,000

The Budget Estimate for 1941-42 is Rs 20,000 as against the revised estimate of Rs nil in the current year's Budget As stated already this provision is distributed under the various Establishment Budget Items during the year

New Works—Rs. 4,00,000.

The Budget Estimate for 1941-42 is Rs 9,77,000 against the revised estimate of Rs. 5,77,000 for the current year.

It has been stated already that this Rs. 9,77,000 includes Rs 5,21,500 for works carried over and released, Rs. 55,700 for works carried over but not released and Rs. 4 lakhs for additional works altogether new. The new provision of Rs 4 lakhs is made in pursuance of the direction of the Corporation given last year while considering the Budget Estimates for the current year. Out of this Rs. 4 lakhs, Rs. 2¼ lakhs. has been allotted to all the Districts and the Added Areas for works of bituminous road surfacing and Rs. 1¼ lakhs has been kept as a lump sum to be spent by the Chief Executive Officer for the Districts and the Added Areas in cases of urgency.

ADDED AREAS.

The details of Receipts and Expenditure of the Added Areas for the year 1941-42 are shown below:—

	Cossipore.		Manicktola.	
	Rs.	Rs	Rs.	Rs.
Receipts ...	.	7,68,500	...	5,03,800
Expenditure ...	9,85,000	...	9,26,000	...
Loan charges on Moore's Scheme.	82,500		1,89,400	...
Cost of Water, say ...	55,000	11,22,500	45,000	11,60,400
Deficit ...	...	3,54,000		6,56,600

These figures will show at a glance the disparity between the Revenue and the Expenditure for the Added Areas.

The expenditure on Cossipore and Manicktala has always been far in excess of the total revenues from these areas. The actuals are shown in the yellow sheets in each year's Budget. It may be seen from the following actuals for the last five years that during each of these years substantial amounts had to be drawn from the Balance to cover the recurring deficits owing to the expenditure exceeding the receipts:—

Manicktola.

	1935-36	1936-37.	1937-38.	1938-39	1939-40.
	Rs.	Rs.	Rs.	Rs.	Rs.
Receipts (actuals)...	4,40,100	4,16,200	4,20,500	4,06,900	4,62,000
Expenditure (actuals), ...	10,63,600	12,23,200	11,71,300	11,31 000	8,76,000
Deficit ...	6,23,500	8,07,000	7,50,800	7,24,100	4,14,000

Cossipore.

	1935-36.	1936-37.	1937-38.	1938-39.	1939-40.
	Rs.	Rs.	Rs.	Rs.	Rs.
Receipts (actuals).	6,37,600	6,76,300	6,41,100	7,10,600	7,25,600
Expenditure (actuals).	9,89,500	10,13,900	10,00,600	10,91,600	9,70,000
Deficit ...	3,51,900	3,37,600	3,59,500	3,81,000	2,44,400
The two areas together (Deficit) ...	9,75,400	11,44,600	11,10,300	11,05,100	6,58,400

It goes without saying therefore that unless the expenditure in these areas is brought within their receipts there is no other alternative for the City proper than to suffer on account of these heavy drains

So far as the total Municipal Funds are concerned it may be seen from the following figures that we have drawn large amounts from the Balance during the last several years:—

	1935-36.	1936-37.	1937-38.	1938-39.	1939-40.	1940-41. (Revised Estimate).
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Total actual receipts ...	2,40,77,000	2,38,93,000	2,39,04,000	2,39,19,000	2,55,77,000	2,54,99,000
Total actual expenditure...	2,45,16,000	2,42,55,000	2,42,16,000	2,52,75,000	2,65,24,000	2,79,12,000
Difference	—4,39,000	—3,62,000	—3,12,000	—13,56,000	+13,47,000	—24,13,000

The total actual deficit in five years is Rs. 12,98,000 and together with the estimated deficit on the basis of revised estimates for the current year the total amount rises up to Rs. 37,09,000.

Estimates of Receipts, Expenditure and Balances under the Municipal Fund for the year 1941-42.

(In round numbers)

Total	..	4,44,000		4,44,000	4,44,000		...
Grand Total	82,60,000	4,26,78,000		5,09,38,000	4,59,66,000		49,72,000

The Consolidated Rate is proposed to be levied at 19½ per cent, with an additional ½ per cent on the Howrah Bridge tax, the dog tax at Rs. 5 per dog per annum under Section 173 (2) and the other taxes in accordance with the Calcutta Municipal Act, 1923

The Licensed Warehouse fees will be levied at 10 per cent (as in 1940-41) on the annual valuation of the Licensed Warehouses under Section 10 of the Licensed Warehouse and Fire Brigade Act, as amended in 1934

(a) This Balance is estimated on the basis of Receipts and Payments only, but on the basis of Income and Expenditure a normal liability of Rs 12 lakhs roughly is to be provided for Besides this the balance carries with it a further liability of Rs 5,21,500 for items of New Works which are released and carried over from the previous year The Cash balance does not include the amounts held for contractors' deposit, which are estimated at about Rs 5 lakhs. They are included in the opening balance of Rs. 10 lakhs shown under "Suspense Heads Contra' above

N SARKAR,
Chief Accountant.
6th February, 1941.

J C MUKERJEA,
Chief Executive Officer.

Estimated Receipts of the Municipal Revenue Fund for the year 1941-42 classified as follows and compared with the previous years.

	Estimate for 1941-42.	Original estimate for 1940-41.	Revised for 1940-41.	Actuals for 1939-40.
	Rs.	Rs.	Rs.	Rs.
Consolidated Rate—	1,94,00,000	1,87,04,000	1,91,00,000	1,97,29,789

	—39,07,000(f)	—38,41,000(g)	—48,40,000(f)	—21,09,000 (e)	—30,65,000(h)	—20,13,000(c)	—28,30,000 (e)

Actual Receipts and Actual Expenditure.

Receipts ...	2,41,49,000	2,35,03,000	2,40,77,000	2,38,22,000	2,39,04,000	2,39,19,000	2,57,77,000
Expenditure...	2,30,33,000	2,31,30,000	2,45,16,000	2,42,55,000	2,42,16,000	2,52,75,000	2,45,33,000
	+11,16,000	+3,73,000	-4,39,000	-4,33,000	-3,12,000	-13,56,000	+12,44,000

(a) The deficit is due to less receipts from Consolidated Rate, License Taxes, Markets, Sale of surplus lands, Exemption fees, etc.

(b) The deficit is mainly due to less receipts from Consolidated Rate, Markets and Slaughter Houses, Exemption fees, Sale of surplus lands, Sale of water and Miscellaneous fees.

(c) Mainly due to less expenditure on New Works, Establishment, Materials, Loan charges, etc.

(d) The deficit is mainly due to less receipts from Consolidated Rate, Sale of water, Sale of surplus land and Fines.

(e) Mainly due to less expenditure on New Works, Establishment, Materials, Cost of Motor Vehicles, etc.

(f) The principal items which contribute to this decrease are New Works, Establishment, Loan charges, Materials, Cost of lighting, Cost of Motor Vehicles, etc.

(g) Mainly due to less expenditure on New works, Establishment, Motor vehicles, Cost of lighting, Drainage outfall, Pumping Stations, etc., as also to an amount of Rs. 5,00,000 as contribution to the New Garden Reach Municipality, not being paid during the year, as the said Municipality was not constituted until April, 1935.

(h) The principal items which contribute to this decrease are New Works, Establishment, sundry grants sanctioned very late in the year, Filter working, etc.

(i) The excess is mainly due to the realisation of Rs. 12,10,000 from the Port Commissioners for Consolidated Rate on account of revaluation of the King George's Docks, against which are set off the deficits under Receipts from Markets and Slaughter Houses, Sale proceeds of surplus lands, Fines, Miscellaneous receipts, etc.

THE CALCUTTA MUNICIPAL AMENDMENT BILL 1940/1941

REPORT OF THE SELECT COMMITTEE

[*With the Bill Embodying Amendments Recommended by them*],

We, the members of the Select Committee, to which the Calcutta Municipal (Amendment) Bill, 1940, was referred by a motion carried in the Bengal Legislative Assembly on the 10th September, 1940, have the honour to submit this our final report with the Bill embodying amendments recommended by us. Matter recommended to be omitted by us has been printed in italics and included in square brackets and new matter recommended by us to be inserted has been underlined

The Committee met and began their deliberations on the Bill for the first time at 11 a.m on the 4th December, 1940, and thereafter on the 5th December, 1940, and on the 6th January, 1941.

As the Committee could not come to a final decision on all the provisions of the Bill by the 31st January, 1941, the time appointed by the Assembly for the purpose, an *ad interim* report was presented to the House and the time for submitting the final report was extended till the 28th February, 1941.

The Committee thereafter met from time to time till the 26th February, 1941, when they concluded their deliberations on the Bill

The Bill was published in the *Calcutta Gazette* before introduction on the 13th June, 1940, and we do not consider it to have been so altered by our recommendations as to require republication

The reasons for the changes suggested in the Bill, apart from those of a purely drafting or consequential nature, are as follows.—

Clause 1.

The alteration in the date of the Act has been necessitated by the lapse of time since the introduction of the Bill.

Clause 3

This clause has been deleted in consequence of the deletion of the proposed new section 19B recommended by us in clause 6

Clause 5

We thought it desirable to exclude the few words at the end of the proposed Section 19 to avoid any possibility of undesirable controversies

Clause 6.

The proposed new section 19B was intended as an extreme measure against "incompetence, persistent default in the performance of duties and abuse or excess of powers." In our opinion, the existing provisions of the Act together with the reformatory and penalising provisions introduced by the Bill, including the control of important appointments and supersession of a Department under certain circumstances, are expected, to provide sufficient safeguards against the charges usually made against the Corporation and we have considered it expedient to give the new conditions a fair trial before thinking of a clause for dissolution of the Corporation. We have, therefore, recommended the deletion of this *prima facie* drastic provision from the present Bill.

Clause 7.

In sub-clause (*1*) we have changed "six" to "four" in order to further extend the franchise under clause (*a*) of section 20 of the Act and particularly in view of the fact that there is no class of licenses for the exercise or carrying on of professions, trades or callings for which a fee of six rupees is payable under Schedule VI of the Act.

Sub-clause (2).—We did not consider it advisable to reduce the rent qualification under section 20(*b*) as we were apprehensive of [illegible] taking advantage of such reduction. We have, therefore, recommended deletion of this sub-clause.

Sub-clause (3).—While accepting the principle of reduction of the rate qualification contemplated by the original sub-clause we considered it desirable also to do away with the necessity of an application for registration required by the present law as all necessary particulars for such registration are available from the *Bustee* Inspection Registers maintained by the Corporation. We have accordingly taken the opportunity of revising the entire sub-clause (*c*) of section 20.

Sub-clause (4).—In our opinion franchise contemplated by the proposed new sub-clause (*d*) to section 20 should have a lower rent-qualification for more adequate representation of the persons coming under this sub-clause and we have reduced it from rupees five, as originally proposed, to rupees three. The necessity for an application for registration as provided is expected to be a safeguard, in this instance, against abuse.

Clause 8.

Sub-clause 2.—In our opinion, the mere dismissal of a servant of the Crown unless such dismissal was on a charge involving moral turpitude should not render him ineligible for election or appointment as a Councillor or for election as an Alderman and we have amended the sub clause accordingly.

Clause 9.

We have inserted a proviso to the proposed new section 36 (*1*). This is intended to provide for the proper representation of the particular constituency involved.

Clauses 10 *and* 12.

The provisos to the proposed sections 37 (*4*) and 39 (*2*) have been deleted consequentially on the deletion of the proposed new section 19B in clause 6

Clause 13.

The amendment in this clause is intended to make the provision more stringent in view of the alarming increase in arrears of dues from some of the existing Councillors and Aldermen who are, by virtue of their office, in a more advantageous position than an outsider and are expected to set an example in the matter of payment of their legal dues.

Clause 14.

The deletion has been necessitated by the amendment recommended by us in clause 6 of the Bill.

New Clause 16*A*.

While considering clauses 15 and 16 of the Bill we thought it desirable to take the opportunity of laying down the special procedure to be adopted in election petitions for further scrutiny and recount of votes and the new section 47A has been inserted for this purpose. Among others a preliminary deposit of one thousand rupees as security for costs, counting and scrutiny of votes by the Court, rejection of votes obtained by corrupt practice, casting of vote by lot in case of equality have been provided for after careful consideration.

In the proposed new section 47B we have made clear provisions as to costs and compensation in election cases to avoid any possibility of ambiguity in relation to these matters.

Clause 17.

The sub-clause (*ii*) of the proviso to the proposed new section 51(1) has been deleted in view of the fact that the Committee were strongly of opinion, without casting any reflection on the capacities of the members of the Bengal Civil Service (Executive), that the Chief Executive Officer to be appointed by Government must, for the first few years at any rate, be a member of the Indian Civil Service. Other sources of recruitment for the post should be considered only after the affairs of the Corporation have been brought to a [illegible] satisfactory working order.

Clause 18.

We have deleted the last few lines of the proposed new section 51A(3) as we considered it undesirable to tie the hands of Government in this matter.

The explanation to the proviso to the proposed new section 51B(1) has been inserted with a view to avoid any possibility of circumvention in the matter of temporary appointments.

Some new posts have been included in sub-section (3) of the proposed section 51B, as well as in the proviso thereto, as we thought these were of sufficient importance to be covered by the provisions of this sub-section.

In the proposed new section 51C(2) we have added a proviso giving to any officer or servant of the Corporation, aggrieved by any order of the Executive Officer, a right of appeal to the Corporation. This is expected to operate as a check against any hasty or arbitrary action on the part of the Chief Executive Officer.

Clause 22.

This clause had to be deleted in view of the deletion of the provision for dissolution of the Corporation.

Clause 23.

We have considered it expedient to add an explanatory clause to the proviso that the voting shall be by secret ballot. The intention is to obviate as far as practicable any undue influence or interference, in the matter of free exercise of the right of voting.

Clause 24.

The proposed section 66 has been redrafted with certain alterations. We did not think it necessary that all rules of business made by the Corporation need be subject to the approval of the Provincial Government. It was, in our opinion, essentially necessary, however, that Government should be provided with copies of the rules framed and should have a right to point out any legal or technical defect and also suggest the framing of new rules. The provisions of the original sub-section (2) have also been expanded to provide Government with powers to make rules in cases of failure of the Corporation to do so.

Clause 25.

In the proposed new section 66A we have limited the proposed power of the Executive Officer to sanction estimates up to Rs. 5,000 only instead of Rs. 10,000 as originally provided, as in our opinion this would serve the purpose of the clause without conferring too wide a power on the Officer.

Clause 26.

The amendments to the proposed sub-section (2) of section 67 of the Act have been necessitated by the amendments in the proposed new section 66A.

New Clause 26*A*.

In this clause we have proposed insertion of the new section 67A in order to ensure that execution of works or supply of materials involving expenditure over Rs. 1,000 is not undertaken except on the basis of a fair and over-board contract entered into by the Corporation, as the existing "system of cash purchase" is readily amenable to undue influence and improper advantage.

Clause 28.

The slight amendment here is consequential on the earlier amendments in the Bill.

Clause 32.

In amending this clause our object was to let the Corporation have the final say in expanding the scope of primary education although we have left the details of the proposals for such expansion to the recommendation of the Primary Education Standing Committee.

Clause 33.

In amending the proposed sub-clause (1)(*bb*) we have extended its scope to all concerns of public utility as we thought that the Corporation should have wider latitude in these matters. The amendment in sub-clause (2) is merely consequential.

Clauses 39 and 40.

We have recommended deletion of these clauses as we were of the opinion that these provisions, if enacted and brought into operation, would land the Corporation into difficulties and might also lead to other inequitable results. It is often difficult to realise arrears of consolidated rates from an occupier of land or building when he has left the holding. We were further of opinion that the liability *in rem* provided in section 205 of the Act should be treated as distinct from the liability *in personam* provided in section 200 of the Act. We thought, therefore, that the arrears should continue to remain a charge on the land or building. Experience has shown that a provision for realisation to be completed within three years cannot be worked properly and is bound to result in ultimate financial loss to the Corporation. We have, therefore, thought it proper to delete clause 40

Clauses 41 and 42.

In these two clauses we have considered it desirable to insert a clear provision against permanent closure of ',parts of squares or gardens" except under the provisions of the clause Some consequential changes being necessary in sections 306 and 307 of the Act the clauses had to be recast and redrafted as recommended by us

Clause 44

The earlier portion of the proposed new section 365A (1) appeared to us too wide and open to abuse by unscrupulous persons. We have, therefore, limited the scope of the clause Under our recommendation only those persons who are really affected by any contravention of rules or provisions of this Act, will be entitled to take action under this clause As an additional safeguard we have inserted the new sub-clause (*1a*) by requiring the Magistrate to scrutinise an application under thi., section before proceeding with the case

Clause 46.

We have deleted the original sub-clause (*a*) of the proposed proviso as we considered it undesirable for the Executive Officer to take any action over the head of the Corporation Government measures should be called for only where the Corporation, and not any of its subordinates, has failed to take action and we have amended the rest of the proviso accordingly.

Clause 48.

We have deleted sub-clause (*2*) (*b*) as we did not find any sufficient ground for raising the limit of penalty in this case

CALCUTTA:
The 27th February, 1941.

*Signed, subject to the minute of dissent, annexed

Note 1.—Signatures of Mr K Nooruddin, M.L.A., Mr Syed Bodrudduja, M.L.A.; and Mr Syed Jalaluddin Hashemy, M.L.A., had not been obtained till the time of printing this report

Note 2.—Mr J N Gupta, M.L.A., Mr Pulin Behary Mallick, M.L.A.; and Mr. W. C. Wordsworth M.L.A., were appointed members of the Select Committee by Mr. Speaker under Rule 127 of the Bengal Legislative Assembly Procedure Rules in the respective vacancies caused by the resignations by Maharaj Kumar Uday Chand Mahatab, M.L.A., and Mr. Hem Chandra Naskar, M.L.A. of their membership of the Select Committee and by Mr. P. C. Mitchell of his membership of the Assembly.

Minute of Dissent by Mr. J. N. Gupta, M.L.A.

While I reserve to myself the right to suggest any amendments I may think fit when the Bill, as amended by the Select Committee, comes before the Assembly, I sign the report subject to the following minute of dissent :—

In clause 18, in sub-section (*3*) of new section 51A, I consider that the members of the Service Commission should not be appointed on communal basis; hence, I suggest that the fourth and fifth lines be deleted.

Joint Minute of Dissent by Mr. Anukul Chandra Das, M.L.A., and Mr. Palin Behary Mullick, M.L.A.

We, the undersigned members, sign on Select Committee's Report, subject to the following note of dissent :—

That in clause 17 the appointment of the Chief Executive Officer should not be reserved for the members of the Indian Civil Service, but the same should also be open to the members of the Bengal Civil Service (Executive). Therefore, the original clause (*ii*) should be retained.

That in clause 18 which deals with section 51A, sub-clause (*3*), in place of "one a person other than Muhammadan" the following should be inserted "one a person belonging to the Scheduled Castes." This is necessary to safeguard the interest of the Scheduled Castes who have been systematically neglected in the administration of the Calcutta Corporation.

Joint Minute of Dissent by Mr. C W. Miles, M.L. A. and Mr. W. C. Wordsworth, M.L.A.

We generally approve of the provisions of the Bill and the alterations made by the Select Committee in so far as they relate to the executive and the proceedings of the Corporation but we find it necessary to record our dissent with regard to the following points :—

(1) We consider that the inclusion of provisions extending the franchise in a Bill the primary object of which is to improve the adminstration of the Corporation inadvisable and inappropriate. The addition of a large number of new voters to the Electoral Roll will tend to increase opportunities for the irregularities which have been so marked a feature of recent Corporation elections and will hinder rather than help the main object of the Bill. In our opinion extension of the franchise is a separate problem which should be considered in conjunction with the rules governing the conduct of elections and the preparation of electoral rolls and the statutory provisions relating to elections and dealt with in a separate Bill.

(2) In our opinion clauses 43 and 44 do not touch the root of the undoubtedly unsatisfactory position with regard to the regulation of buildings in Calcutta. The trouble is mainly due to the system of sanctioning building rules and to the fact that the building rules themselves are out of date, and we therefore consider that the provision in clause 44 for filing objections to contraventions of the building rules will be of little value so long as the building rules themselves are not revised and may prove a source of additional trouble. We therefore recommend that these provisions should be ommitted from this Bill and that Government should immediately take up the revision of the building rules with a view to introducing a separate amending Bill dealing solely with this question.

(3) Our signature of the Report does not denote our acceptance of (*a*) the constitution of the Service Commission as laid down in clause 18, new section 51A(*3*), nor the alteration made by the Select Committee to this sub-clause, and (*b*) the deletion of clauses 39 and 40.

We reserve the right to move any amendments to the provisions of the Bill we consider proper.

Joint Minute of Dissent by Mrs. Hasina Murshed, M.L.A., and Khan Sahib Mohammad Sulaiman, M.L.A.

We feel that we cannot sign the Report of the Select Committee without stating our views on certain clauses of the Bill.

Clause 17.—Sub-clause (*ii*) of the proviso to the proposed new section 51(*1*) should not in our opinion be deleted. We very strongly feel that this deletion is absolutely uncalled for and the original sub-clause (*ii*) of the proviso to the proposed new section 51 (*1*) should be restored. We fail to understand why this sub-clause should be deleted at all. If any amendment was needed, the scope of cluse 17 might have been extended rather than narrowed down, as it is now sought to be done by deleting the sub-clause (*ii*) and thereby debarring a class of officers from being appointed Chief Executive Officer who actually form the backbone of administration in the province. It is very curious that in a scheme of Provincial Autonomy provision should be made for the employment of an officer of the Indian Civil Service over whom the Ministers have no control whatsoever. It is, therefore, a retrograde policy to reserve by statute a post for members of the Indian Civil Service over whom the Ministry have no control. Secondly, from the point of view of efficiency, it cannot be said that officers of the Provincial Civil Service are in any way inferior in calibre, in administrative ability and in other respects to the members of Indian Civil Service as a class. In spite of the very limited opportunities to the members of the Provincial Civil Service, they have held the highest of administrative posts available to them in the province, for instance, posts of Divisional Commssioners have very worthily been filled by the members of that Service It is extremely unfair, therefore, to shut out officers of this category by statute. The suggestion for the deletion of the sub-clause, in our opinion, is tantamount to a want of confidence in members of a Service over which we have control and which has more than a century established a tradition of which it may well be proud

Clause 40.—We do not agree that clause 40 of the Bill should be deleted. While we appreciate the difficulties which might ensue if clause 40 were enacted, we cannot at the same time give a *carte blanche* to the Corporation authorities to allow arrears to accumulate through their own indifference and remissness and then make the party liable for such huge arrears of rates and taxes. In our opinion, the deletion of this clause will have the effect of putting a premium on negligence, and we feel that in no case should the Corporation authorities be permitted to realise arrears beyond a certain specified period. There may be a difference of opinion with regard to the period of limitation. If the three years suggested previously be considered to be too small, we suggest that the period be fixed at four. In other words, no rates, etc., will be leviable after the expiry of four years from their becoming due. Four years ought to be enough to enable the Corporation authorities to wake up and to realise their dues. If they do not, the fault certainly lies with the authorities and not with the poor tax-payers. Where is the guarantee that the so-called arrears have not been due to the indifference and negligence on the part of the tax-collectors more than to the unwillingness on the part of the tax-payers to pay? We, therefore, repeat that we very strongly feel that this sub-clause should be restored, but the period of limitation may be altered to four years.

[The text of the Bill as amended by the Select Committee will appear in the next issue of the "Gazette" —Editor, "C. M. G."]

THE CORPORATION BUDGET: 1941-42

BUDGET SPECIAL COMMITTEE CHAIRMAN'S STATEMENT

Presenting the Budget Estimates as modified by the Budget Special Committee, Mr. Phanindra Nath Brahma, (Deputy Mayor), Chairman of the Committee made the following statement at the Special Meeting of the Corporation on Thursday, the 20th March, 1941. —

The Corporation on the 10th February last appointed the Budget Special Committee to consider the Chief Executive Officer's budget estimates for the year 1941-42. The Budget Special Committee finished its labours in 10 sittings. I venture to think that the members of the Committee proceeded with their task with an outlook which was realistic. This will be evident from the Minutes of their deliberations which have been circulated amongst you already. In the main the Chief Executive Officer's provisions have been left untouched, and his suggestions have been adopted. We have however brought to bear on the whole problem, in a generous measure, the impress of our own point of view,—the point of view of representatives of rate-payers; and we have been materially assisted in our task by the invaluable help rendered throughout by the Chairman of the Finance Standing Committee who proved to be a prominent and particularly useful member of the Budget Special Committee.

In an organisation like ours which proceeds on democratic lines what fundamental functions does the Budget fulfil? This question has thus been ably answered by a modern authority on Municipal Government:—

"Two things must be done in democracy, to make control over the purse effective, whatever may be its form of organisation namely:—

A. A constitutional inhibition must be established to the effect that no money may be raised or spent by officers except with the consent of a majority of those who have the authority to express the will of the people.

B. There must be a full accounting for past grants and a plan for future revenues and expenditures which are acceptable to a majority"

The Budget is thus indeed the "measuring stick of democracy;" and this factor of all factors invests it with a special meaning and significance.

Coming back to the realities of our present situation, the Chief Executive Officer's suggestion, so far as the revenue budget is concerned may be summarised as follows:—

1941-42

		Rs.
Opening balance	... ...	40,46,000
Receipts	... .	2,58,50,000
Expenditure	... ...	2,59,26,000
Closing balance	... ...	39,70,000

The Chief Executive Officer's budget showed a small deficit of Rs. 76,000 though the closing balance in hand was nearly Rs. 40 lakhs.

Our proposals may be summarised as follows:—

1941-42

		Rs.
Opening balance	... ...	40,70,000
Receipts	... ...	2,59,50,000
Expenditure	... ...	2,55,38,000
Closing balance	... ...	44,82,000

We have thus wiped off the small deficit, reduced the revenue expenditure and correspondingly enhanced the closing balance *i. e.* by nearly Rs. 4,12,000.

As regards the loans, as in the suggestions of the Chief Executive Officer, we have decided to provide for a loan of Rs 37 lakhs during the next year; with regard, however to the questions (i) as to how the necessary borrowing capacity for the loan should be established (ii) as to how the money, when raised should be spent, we have come to decisions mainly on the advice of our Chief Accountant

An important change we have instituted under receipts is the increase in the figure for consolidated rates by Rs. 1 lakh As is well-known this constitutes our principal source of revenue The actual collections under this head this year have reached a high level (revised estimates Rs 1,91,00,000) although the percentage of collections against the demand might fall somewhat short of our expectations. On the basis of the actual collections during the last few years, the Chief Executive Officer thought we could reasonably collect Rs 1,94,00,000 under this head next year.

As members might know there were rate bills to the total value of over Rs 28 lakhs to be collected in the Law Department at the beginning of this year. The successive formalities of legal procedure delay results in the Law Department so that any appraisal of work of that department must be qualified by this consideration We have however provided facilities by way of additional staff, and have also fixed the actual quota of work for each member of the staff We feel the department ought to be in a position to collect at least Rs. 4 lakhs in place of Rs. 3 lakhs suggested by the Chief Executive Officer. Another minor enhancement approved by us under "Receipts" is in the schedule of fees and charges for sale of water for non-domestic (*i. e* business) purposes. This would scarcely operate as a hardship while the expected annual increase in revenue on this account is Rs. 50,000

Coming to revenue expenditure our total liability on account of salaries of the staff as per the Chief Executive Officer's budget is Rs. 80,50,000; pensions etc., Rs 5,98,000. Total roughly Rs. 86½ lakhs, of which Rs. 3,83,000 is to be spent in respect of the superior staff, which works out at 4·4 per cent. of the total. It is for the rate-payers of the city to judge if this percentage has been fixed on an unduly liberal scale While arriving at their decision ratepayers must also reflect on the tasks and responsibilities assigned to the superior staff, which includes, besides routine work, disposal of valuations amounting to crores, the collection of the revenues and other dues of the Corporation now exceeding a total of Rs. 2½ crores per annum, storage and disposal of materials worth tens of lakhs, control of over 12,000 employees classed as labour, supervision of capital engineering works of stupendous proportions which would tax the ingenuity of the ablest technicians all the world over. The realities of the task demand that we must have none but the ablest men at the helm of affairs, men whose integrity is unquestioned, whose ability beyond doubt, and whose technical skill of the highest order. Any compromise in these vital regards would have the most deleterious effect on the entire administration of our city.

Sound finance dictates that in fixing the emolument of an employee, the employer should simultaneously consider the value of the service rendered by the employee. It may be sound finance to fix the emoluments of an employee on an apparently liberal or even lavish scale, if the latter is able to secure for the administration annual savings valued at several times his own emoluments. This principle is in operation in a systematic way even in Soviet Russia. On the other hand a low paid employee is nevertheless an expensive employee if he renders indifferent or unsatisfactory service.

In my considered view true economy in administration costs can best be achieved by reorganisations and realignments in the several departments, which eliminates waste, and avoids duplication, which secures the maximum of effort, of service and of results, on the minimum of outlay. The alternative is a general pay cut, resorted to on occasions in the past, which must operate not only as an abatement of the emoluments of the employees in general, but also as an expression of no confidence in them. Any proposal for a general pay cut must take both these factors into account.

I may mention in passing that out of the Rs 86½ lakhs to be spent on the staff over Rs. 27 lakhs are for the labour staff

Next to establishment our heaviest (revenue) expenditure is on account of loan charges. The amounts budgetted under the several heads for loan charges total Rs. 57·6 lakhs.

I cannot help remarking that the incidence of our loan charges on our general revenue from year to year is exceedingly unequal This fact was brought out clearly in a note prepared by an outside expert on municipal finance, Prof K T Shah, who sometime ago, was specially requested on our behalf to examine the position with regard to our outstanding loans, and the incidence of the liability on account of the loans. The annual liability which now bears a comparatively high proportion to our present income will diminish comparatively rapidly in the years to come

Placed as we are it will be decidedly easier and more convenient for us to bear a lighter though longer burden *A lighter burden would be most welcome* at the present juncture, when we have nearly completed an expensive Water Works Extension Scheme which has taxed our resources to such an inordinate extent, and are in the midst of an expensive Drainage scheme. *A longer burden we can bear* firstly, because we hardly think the capital works which may eventually have to be undertaken (say within the next decade or two) could bear comparison in magnitude with the Water Works Extension and Drainage Schemes combined; also because it would be reasonable to expect that the lives of the capital works financed out of our outstanding loans would last much longer than the periods of currency of those loans.

Professor Shah's suggestion was virtually to consolidate all our outstanding loans into one single loan spread over a longer and more convenient period, so that we secure an immediate relief without imposing any undue burden on the generations to come. This suggestion the execution of which would require an amendment of the statute is well worth examination

In this connection I would request the Chief Executive Officer to consider the question of detailing a senior officer to examine comprehensive financial problems of this type. He might be authorised to consult the leading financial experts of the city as well as the advisers of the provincial and Imperial Governments. I am convinced much useful and fruitful work can be done on these lines

In making the provisions for school grants next year we had to take into account the 25 per cent. cut imposed by the Corporation by their resolution dated October, 1940. The rapid expansion of Primary Education in the city during the last 15 years has been a feature of our administration, one which any administation might have well been proud of. Any suggeston of slackening efforts on our part in this regard at this stage would meet with opposition, even resentment from all quarters and from all sections of our citizens. The cry is emphatically for progress, not retrogression We have compulsory education only in one ward; in Bombay, it is universal. Even in Chittagong it is so.

Japan made primary education compulsory in 1872. The result attained enabled her to stride over the transition between medievalism

and modernism in 40 years. England, France and Germany took four hundred In Japan as elsewhere compulsory primary education proved to be the most potent factor not only in building up the nation, but in strengthening the nation, and in organising that strength

A few facts may prove interesting reading.

Primary education in Japan is comprehensive in its outlook and includes moral development, language, mathematics, history geography, elementary and natural science, drawing, singing and gymnastics.

Meals are often provided free.

In Japan there are at present :—

Schools including Kindergartens and Universities ...	46,000
Number of Teachers	840,000
Students attending	14,000,000
Percentage of students in relation to population, ...	20
Ratio of children of 6 to 12 years	99·58 p.c.

This is the highest percentage in the world

Primary Schools :—

Number of Schools	25,000
Expenditure per year	Yen. 250,000,000 (1 Yen = 1s. 3d.)
Average per School	,, 10,000
Number of students	11,000,000
Average per School	440
Number of Teachers	25,000
Average per School	10

A comparison with the statistics of Bengal should be considered pertinent and be excused. The Report of the Administration of Primary Education, recently published by the Bengal Government, shows :—

Number of schools	61,000
Expenditure per year	Rs. 8,300,000
Average per school	Rs. 136
Number of boys and girls	2,486,000
Average per school	40
Number of teachers	92,000
Average per school	1½

So much for the Land of the Rising Sun. Let us turn to London, the metropolis of the Empire over which the sun never sets. The expenditure on education in London is approximately 2 crores of rupees a year. I am quoting from the London County Council report for 1938.

"Some idea of the size of the problem may be gathered from the annual cost. The estimated expenditure by the Council on all education for 1937-38, is approximately £14,021,000. To meet this expenditure about £5,200,000 will be received from Government grants, some £540,000 from fees, and the remainder, rather more than 8¼ millions will fall on the rates.

The description of London education may conveniently be given under four headings—(i) elementary, (ii) special (including residential), (iii) secondary and univerisity, and (iv) technical and continued evening education".

Thus of the 14 million pounds London spends annually on Education, nearly 37 per cent. is directly contributed by the Government. What an object lesson for the Government of Bengal!

Coming nearer home, in Afghanistan elementary and secondary schools exist throughout the country, elementary education is free and compulsory, and higher education is also free.

Shall we be wrong in demanding that a fair share of our expenditure on education should be contributed by the Government!

In the Budget Committee, apprehensions were felt in the minds of some, that it was not fair to burden the general revenues of the Corporation year to year with increasing demands on account of the spread of education while the important and appropriate source of special taxation, the education cess remained unlevied. In the Budget Committee, the question of levying of fresh taxes nowhere found favour.

The Mosquito Control department has lately come in for some criticism on the score that the expenditure on the supervision staff is high compared to the cost of the materials handled by the staff, further relatively much more is spent over supervision than over labour.

The Mosquito Control Department has a considerable area to supervise,—a fact which may be advanced by way of an explanation. The Special Committee appointed by the Corporation may examine the working of the department, and if necessary, suggest a suitable reorganisation.

It has been represented in the Budget Special Committee that the present practice of financing ward improvements known as petty improvement works out of revenue is fundamentally unsound. Most of these so called petty works last long enough for their burden to be legitimately spread over a number of years: it would be unfair to charge any single year with liability on account of such works. It is often a matter of considerable difficulty to classify works of a permanent, semi-permanent or non-permanent type. The magnitude of each work as well as its duration have to be taken into account before its category could be settled

There is much to be said in favour of a general policy of capitalization of recurring expenditure, especially at the present juncture. when every item of recurring saving has to be conserved in order to establish a possible borrowing capacity.

In the course of our sittings, and at our request, the Chief Accountant placed before us a note pointing out how in the coming year, a borrowing capacity could be established He pointed out that a surplus of Rs 2,63,000 of recurring receipts over recurring expenditure is possible which would enable us to borrow Rs 37,00,000 In calculating the surplus however, he made no provision whatever for petty improvement works under revenue, and it must be clearly understood that a borrowing power can only be established on the basis of this important omission, *i e*, if we agree not to charge petty improvement works to revenue

But no budget would be complete without adequate provision for improvement works—a point of view which admits of no controversy In our last meeting we arrived at the following decision We would accept the Chief Accountant's suggestion for raising a loan of Rs 37 lakhs on the basis of the figures placed before us by him. Out of the Rs. 37 lakhs we would spend Rs. 15 lakhs on Ward improvements *viz.*, Rs. 3 lakhs in each of the 4 districts, and Rs. 1½ lakhs in each of the two added areas,—the expenditure being spread over a period of 3 years.

The rest of the money would mostly be spent in financing the Main Drainage Works.

The earliest opportunity will be taken to raise the loan for the next year

This is admittedly a departure from our usual procedure, but we are convinced it possesses certain distinct advantages :—

(a) it provides for a more even and more equitable distribution of liability;

(b) it permits a planned programme for improvement works.

It is to be of advantage if in handling such works, which often concern several departments, a Central Co-ordinating Authority could be established. A senior officer may be placed in charge, at all the stages in connection with the execution of a set programme of improvement works, including their planning, securing of sanctions, release of funds, scrutiny of their progress, right up to completion.

These are the broad features of our lines of work in the Budget Special Committee.

Those of us who have examined our finances closely can arrive at only one conclusion. Not only there is nothing wrong with our finances, but provided we adopt certain sane and wise principles, we can look forward to the future with confidence. The principles which appeal to me are:—

1 We must set our face sternly against any suggestion of pampering our liabilities and alienating our assets.

2. All expenditure that we incur must be done with an eye to its possible productivity. The return may be direct and immediate; it may on the other hand equally be remote or merely potential. But all expenditure ought to be remunerative in the long run.

3. We must strive, with the limited powers at our disposal, for the general expansion and prosperity of the City.

Elsewhere and abroad the local authority is invested with almost limitless powers in this regard. The City authority promotes the industries or the city by reserving certain areas for workshops, warehouses and factories; by arranging for cheap and abundant supply of power; by creating and encouraging markets for fabricated wares. The City authority further offers working facilities through Municipal banks. The growth of the city is fostered by publicity work which brings out the advantages of Community living, of the superior sanitary conditions in a well-ordered city, the advantages of an organised system of free primary education and of medical relief, etc.,—factors which promotes the attraction of population to a city.

Much useful work can be done on these lines.

As I said the present state of our finances does not call for undue pessimism or undue alarm. On the other hand there are certain definitely reassuring factors. The receipts under the consolidated rates—our principal revenue receipts—indicate a welcome improvement. The collection of current demands has been maintained at a satisfactory level; as regards arrears, there has also been an improvement. Elaborate steps have been taken to set the machinery of the law against defaulters. The assessments have also been fully maintained, —so that the annual demand is now approaching the unprecedented total of Rs. 2 crores. The settlement of age-long disputes regarding the assessments of certain valuable holdings, and the assessment of others previously unassessed, have chiefly contributed to the improvement.

Indeed when we examine the position closely, we find we have not only no grounds for pessimism,—we might even display an attitude of mind which may be regarded as one of balanced optimism. Over 50 lakhs of rupees in outstanding rates are waiting to be collected; and if we address ourselves to the task of collection with energy, judgment and determination, it would be possible to convert these enormous frozen assets of the Corporation into fluid ones, and that within a shorter period than most of us imagine.

In connection with the Outfall and other main Drainage projects we have acquired immense areas of land in the immediate neighbourhood of Calcutta. To put these lands into economic use, either directly or through reliable agents would not be a difficult task. These lands thus represent assets which are both useful and unalienable.

The large Pulta Pumping Station area can partially at any rate, be put to similar remunerative use.

Throughout the city the Corporation possesses valuable areas of land, with gradually appreciating values.

In return for our annual statutory contribution the Calcutta Improvement Trust transfers to us every year fully developed areas which contribute to such a large extent to the annual increase of our recurring revenue. Individual enterprises also result in similar transfers, though on a smaller scale. We have numerous sanctioned road alignments in almost every locality in the city. Even a partial maturity has a potential value in raising our income

These have all a cumulative effect on the valuation of the city.

While we have thus large and growing assets it cannot be denied that our responsibilities are heavy. The extensive Water Supply Extension and Drainage reorganisation schemes may nevertheless prove inadequate, at no distant date, to meet the needs of a growing city. The ameliorative social services may have to be further expanded, primary education made compulsory throughout the city, medical relief, both curative and preventive need further extension

With our large and growing assets, however, we need not falter in our task. It is only a question of approaching the problems on the basis of a sound and businesslike financial policy, which aims at conserving our assets,—which are indeed very real and very considerable—and at the exercise of judgment in expenditure. Finance to be sound, must be judicious. And true thrift is often judicious spending.

In framing this Budget we have neither imposed any new taxation, nor increased the existing scales of taxation. We have made full provisions to enable us to discharge our obligatory duties. We have not neglected those which are merely optional. We have adequately provided for the Main Drainage Scheme We have not forgotten the Ward improvement works.

The results of our deliberations are now placed before you for your scrutiny and verdict.

Principal resolutions of the Budget Special Committee.

(1) *That a representation be made to the Government for increasing the rates of supply of water to other municipalities.*

(2) *That in connection with the Corporation resolution dated 20th March, 1940, regarding enhancement of fees for supply of water for non-domestic purposes, it be also directed that the ferrule rates and other rates be increased with retrospective effect from April 1, 1940, as in the following schedules.*

Schedule of Fees and Charges for Sale of Water.

Filtered water for non-domestic (business) purposes:—

Size of ferrule.	Existing rate p.m.	Enhanced rate p.m.
	Rs.	Rs.
1/8"	3	4
3/16"	5	7
1/4"	8	11
3/8"	15	20
7/16"	24	32
1"	30	40
1½"	90	120
1"	180	240

Filtered water for petty businesses from domestic connections or from standposts:—

Quantity.	Existing rate p.m.	Enhanced rate p.m.
1 to 30 gals. per day ...	Free	Free.
31 to 200 gals. per day ...	Rs. 3	Rs. 4.
201 to 350 gals per day ...	Rs. 4	Rs. 5.
F. W. for manufacturing articles for human consumption in town.	Annas 3 per 1,000 gals.	Annas 4 per 1,000 gals.
F. W. for repair works, additions, alterations, etc.	1 per cent	... Re. 1-4-0 per cent
Motor-bus and lorries, (number not exceeding 5).	Rs. 2 each p.m.	... Rs. 2-8-0 each p.m.
Motor-cars (number not exceeding 5).	1 per car p.m.	... Re. 1-4-0 per car p.m.
Rickshaws (number not exceeding 4).	1 per rickshaw per qr.	Re. 1-4-0 per rickshaw per qr.

Unfiltered water supply for business (non-domestic)—

Size of Ferrule.	Size of Pipe.	Existing rate p.m.	Enhanced rate p.m.
1"	1"	6 4 0	9
1"	1"	10 8 0	16
1"	1"	12 4 0	18
1"	1¼"	13 0 0	19
1"	1½"	13 8 0	20
1"	2"	14 8 0	22
1"	2"	15 8 0	23
1"	1"	25 4 0	38
1"	1¼"	38 12 0	50
1"	1½"	38 8 0	58
1"	2"	43 0 0	64
1"	1"	35 4 0	53
1"	1¼"	47 12 0	72
1"	1½"	57 12 0	87
1"	2"	67 0 0	100

	Existing rate.	Enhanced rate.
For use of U. F. W. from ground hydrants.	Re. 1 per hour per Hyd.	Rs. 1-8-0 per hour per Hyd.
For cattleshed and stables per animal.	„ 0-4-0 p.m.	„ 0 6-0 p.m.
Repair works upto Rs. 2,000.	„ 2 p. m.	„ 3 p.m.
For garden supply (½" Ferrule and ½" pipe).	„ 5 per qr.	„ 7-8-0 per qr.
For building (½" ferrule and ½" pipe.)	„ 5 p. m.	„ 7-8-0 p.m.
For 3" Tee connection for fire extinguishing purposes.	„ 15 p.a.	„ 22-8-0 p.a.

Outside Calcutta:—

F. W. for private residents	Re. 1 per 1,000 gals.	Re. 1-4-0 per 1,000 gals.
F. W. per *Mosak* or 3 *Kalsis.*	3 pies	4½ pies.

(3) *That the Corporation give direction to the appropriate Committees to go into the matters like uniforms, contingencies, etc., scrutinise their cost, find out if any increase in expenditure in respect of those items was justified or not and help the Budget Committee with their definite views in future.*

(4) *That in modification of the previous resolution of the Corporation dated 20th March, 1940, the Corporation accept the principle that from the year 1941-42, the maximum amount to be provided annually for New Works out of Revenue should be fixed at Rs. 50,000 only for small works, any new work in excess of this amount being undertaken out of Loan.*

(5) *That the Corporation also accept the principle that the Bituminous road surfacing work which had hitherto been executed out of Revenue Fund be included in the Loans Budget from the year 1941-42.*

(6) *That the Corporation give direction to the District and other Committees that all allotments shown in the New-Works List appended to the Budget against the carried over but unreleased total provision for New Works amounting to Rs. 55,700 be treated as cancelled and the provisions be re-allotted to such works as in the opinion of the respective Committee would be of urgent nature.*

In connection with the Loans Budget, the Committee resolved :—

(7) (a) *That the following additions be made in List A of the Loans Budget—*

	Rs.	As	P.
B. I. No. XI(c)—Storm Water Drainage of the area between Tolly's Nullah and Kidderpore Docks, Wards 23, 24 and 25 ...	89,600	0	0
B. I. No. XI(f)—Main Drainage Extension Scheme (Internal)	2,65,000	0	0
B. I. No. XIII(b)—Extension of the Tiljala Ground	26,000	0	0

(b) *That the following modifications be made in List B of the Loans Budget.*

B. I. No. VIII (a)—Raising Dhappa Road—Rs. 21,308 in place of Rs. 36,000.

B. I. No. XI (l)—Laying 24 in. Hume Pipe in Lansdowne Road—Rs. 10,075 in place of Rs. 12,000.

B. I. No. XI (m)—Laying S. W. Pipe Sewers in Palm Avenue—Rs. 11,352 in place of Rs. 12,781

B. I. No. XI (n)—Sewering the area of Ward 21 where Hide Tanning Depots are located—Rs. 23,740, the provision retained.

B. I. No. XIX (f)—Contribution to the C. I. T. for laying 24 in. unfiltered water main in Chittaranjan Avenue between Grey Street and Shambazar Street—[Scheme No. VII (J)]—Rs 9,378—the provision retained.

B I No. XIX (h)—Contribution to the C. I. T. for laying 24 in. unfiltered main in Chittaranjan Avenue from Grey Street and Beadon Street—Rs. 16,900, the provision added.

Lump sum unallotted for Improvement works in the Districts including Added Areas—Rs. 15,00,000, the provision added.

All other works included in List B of the Chief Executive Officer's Loans Budget be dropped.

(8) *That a loan of Rs.* 37,03,000 *be raised in* 1941-42 *for Capital Works as set out in List A and List B of the Chief Executive Officer's Loans Budget subject to the amendments made by the Budget Special Committee including Rs.* 15,00,000 *for Improvement Works in the Districts and the Added Areas, which had previously been done out of the Revenue Fund, to be distributed as follows:—*

Districts I—IV—Rs. 3,00,000 each.
Cossipore and Manicktola—Rs. 1,50,000 each.

(9) *That the Departments be directed to submit to the Chief Executive Officer within the month of June,* 1941—*programmes of Improvement works to be executed out of the above allotments from Loan duly approved by the District and other Committees for inclusion in the Loan Statement to be submitted to the Finance Committee in the month of July.*

(10) *That the Chief Executive Officer's Estimates of Income and Expenditure for* 1941-42 *as modified by the Budget Special Committee be recommended to the Corporation for adoption under section* 94 (1) (a) *of the Calcutta Municipal Act as the Budget Estimates of the Corporation for the year* 1941-42.

(11) *That under Section* 94 (1) (b), *the following rates, taxes and fees be levied for the year* 1941-42 :—

(i) *Consolidated rate at* 19½ *per cent. plus* ½ *per cent on account of Howrah Bridge Tax.*
(ii) *Dog Tax under section* 173 (2) *at Rs.* 5 *per dog per annum.*
(iii) *License and other taxes as levied in the current year.*

(12) *That under Section* 98 *of the Calcutta Municipal Act, the total amount of loan to be raised in* 1941-42 *for capital works be fixed at Rs.* 37,03,000.

BUDGET SPECIAL COMMITTEE'S RECOMMENDATIONS

Estimates of Receipts, Expenditure and Balances under the Municipal Fund for the year 1941-42, as they stand as the result of the modifications made by the Budget Special Committee.

(In round numbers)

PARTICULARS.	Opening Balance on 1st April, 1941	Receipts during 1941-42.	Reference to page	Total of Opening Balance and total receipts, (columns 2 and 3.)	Expenditure during 1941-42	Reference to page	Closing Balance on the 31st March, 1942.
1	2	3	4	5	6	7	8
THE MUNICIPAL FUND.	Rs	Rs		Rs.	Rs		Rs.
REVENUE FUND .	(a) 40,70,000	3,59,50,000	16	4,00,20,000	3,55,38,000	30	44,82,000
Suspense Heads Contra . .	10,00,000	1,26,36,000	18	1,36,36,000	1,26,36,000	33	10,00,000
LOAN FUND.							
For works of a permanent nature as in List A	32,14,000	21,57,000	309	69,64,000	53,69,000	319	2,000
For works of a permanent nature as in List B	—	15,93,000			15,93,000		
	32,14,000	37,50,000			69,62,000		
TRUST FUNDS							
(a) Combined Cart Registration Fund of the several Municipalities . .		1,15,000	20	1,15,000	1,15,000	34	...
(b) Licensed Warehouse Fund .		3,29 000	20	3,29,000	3,29,000	34	...
Total	...	4,44,000		4,44,000	4,44,000		...
GRAND TOTAL .	82,84,000	4,27,80,000		5,10,64,000	4,55,80,000		54,84,000

The Consolidated Rate has been taken at 19½ per cent, with an additional ½ per cent as the Howrah Bridge tax, the dog tax at Rs. 5 per dog per annum under Section 173 (2) and the other taxes in accordance with the Calcutta Municipal Act, 1923

The Licensed Warehouse fees will be levied at 10 per cent (as in 1940-41) on the annual valuation of the Licensed Warehouses under Section 10 of the Licensed Warehouse and Fire Brigade Act, as amended in 1934

(a) This Balance is estimated on the basis of Receipts and Payments only but on the basis of Income and Expenditure a normal liability of Rs 12 lakhs roughly is to be provided for Besides this the balance carries with it a further liability of Rs 5,46,200 for items of New Works which are released and carried over from the previous year The Cash balance does not include the amounts held for contractors' deposit, which are estimated at about Rs 5 lakhs They are included in the opening balance of Rs 10 lakhs shown under "Suspense Heads Contra" above

N. SARKAR,
Chief Accountant.
17*th March*, 1941.

J C MUKERJEA,
Chief Executive Officer.

Estimated Receipts of the Municipal Revenue Fund for the year 1941-42 classified as follows and compared with the previous years.

(Chief Executive Officer's estimates as modified by the Budget Special Committee.)

	Estimate for 1941-42.	Original estimate for 1940-41.	Revised for 1940-41.	Actuals for 1939-40.
	Rs.	Rs.	Rs.	Rs.
Consolidated Rate—p. 6	1,95,00,000	1,87,04,000	1,91,00,000	1,97,29,789
Tax on Animals and Carriages—p. 6	67,000	67,000	67,000	62,212
Tax on Trades and Professions—p. 6	13,35,000	13,35,000	13,25,000	13,59,117
Contribution from Govt. as compensation for taking over the licensing of Motor Vehicles—p. 6 ...	4,50,000	4,50,000	4,50,000	4,50,000
Receipts from Markets, Slaughter-houses and Dhobi-khana—pp. 8, 10 & 12	14,73,700	14,88,800	14,27,100	13,89,020
Do. from Tramways, Telephone and Electric Companies—p 8	1,15,000	1,14,300	1,13,200	1,12,420
Exemption fees, Rent of Lands, Buildings, &c.—p. 6 ...	1,81,200	1,81,900	1,79,100	1,73,210
Sale Proceeds of Lands and Produce of Lands—p. 6 ...	2,56,000	4,14,100	4,66,000	58,336
Contributions from Government—p. 14 ...	72,800	73,800	74,000	76,535
Receipts from Burial Grounds and Crematorium—p. 16	27,500	27,500	23,500	20,265
Do. from the Combined Cart Registration Fund, being the share of the Corporation in the surplus—p. 6 ...	78,100	77,500	75,900	75,017
Do. from the Combined Hackney Carriage Fund, being the share of the Corporation under Section 60 of the H. C. Act—p. 6	2,000	6,000	...	2,104
Sale of Water—p. 6	6,38,000	7,76,000	5,52,000	7,11,544
Scavenging Tax—p. 6	40,000	40,000	40,000	40,762
Fines under the Municipal Act and other Acts—p. 14...	75,000	75,000	62,000	89,599

THE CALCUTTA MUNICIPAL AMENDMENT BILL 1940/1941

AS AMENDED BY THE SELECT COMMITTEE

Note.—Matter omitted by the Select Committee has been printed in italics and included in square brackets and new matter inserted by the Select Committee has been printed in bold types.

A

BILL

further to amend the Calcutta Municipal Act, 1923

Bengal Act III of 1923

Whereas it is expedient further to amend the Calcutta Municipal Act, 1923, for the purposes and in the manner hereinafter appearing,

It is hereby enacted as follows —

Short title and commencement.

1 (1) This Act may be called the Calcutta Municipal (Amendment) Act, 194[0]1

(2) It shall come into force on such date as the Provincial Government may, by notification in the *Official Gazette*, appoint.

Amendment of section 2 of Bengal Act III of 1923

2 Sub section (5) of section 2 of the Calcutta Municipal Act, 1923 (hereinafter referred to as the said Act), shall be omitted

Amendment of section 10

[3 *In sub section* (1) *of section* 10 *of the said Act, after the words "following year" the following proviso shall be insterted, namely :—*

"Provided that, if the Corporation is dissolved under section 19B, *the Mayor and Deputy Mayor shall continue in office until the date of the first meeting of the Corporation held after the ensuing general election, and at that meeting the Corporation shall elect two of their number to be Mayor and Deputy Mayor, respectively, until the first meeting of the Corporation held in the next following year"*]

Amendment of section 12

4 In sub section (3) of section 12 of the said Act, after the words "vested in him under" in the second place in which they occur the words, figures, letter and brackets "sub-section (1) of section 66A and" shall be inserted

Substitution of new section for section 19.

5 For section 19 of the said Act the following section shall be substituted, namely —

Power of Provincial Government to annul or suspend proceedings of the Corporation or any Committee or Sub-Committee

"19 The Provincial Government may by order in writing, either of their own motion or after considering any representation which may be made by the Corporation—

(*a*) annul any proceeding of the Corporation or of any Standing Committee or Sub-Committee thereof or of any Special Committee which, in the opinion of the Provincial Government, is not in conformity with law or with the rules or by-laws in force thereunder, and may do all things necessary to secure such conformity, and

(*b*) suspend any resolution of the Corporation or of any Standing Committee or Sub-Committee thereof or of any Special Committee which, in the opinion of the Provincial Government, is likely to lead to a serious breach of peace or to cause serious injury or annoyance to the public [*or to any class or body of persons*]."

Insertion of new section (s) 19A [and 19B].

6. After section 19 of the said Act the following section [s] shall be inserted, namely:—

Power of Provincial Government to Supersede a Department of the Corporation.

"19A. (*1*), If, in the opinion of the Provincial Government, the Corporation have, in respect of any department thereof, shown their incompetence to perform, or persistently made default in the performance of, the duties imposed, or exceeded or abused the powers conferred, upon them by or under this Act or any other law for the time being in force, the Provincial Government may, except in the case of an emergency, of which the Provincial Government shall be the sole judge, by an order in writing direct the Corporation to show cause, to the satisfaction of the Provincial Government and within such period as may be specified in the said order, against the supersession of the said department by a person to be appointed under sub-section (*2*).

(*2*) If, within the period specified in an order under sub-section (*1*), cause is not shown by the Corporation to the satisfaction of the Provincial Government, the latter may, by notification published in the *Official Gazette* and stating the reasons therefor, supersede the said department and appoint a suitable person to have charge thereof for such period as may be specified in the notification, and such person shall, in respect of that department and during that period, exclusively exercise all the powers and perform all the duties of the Corporation and any Committee thereof and the Executive Officer

(*3*) In any notification under sub-section (2) the Provincial Government shall further direct that the expenses incurred in the performance of his duties by a person appointed under that sub-section, together with such remuneration for that person, as the Provincial Government may from time to time determine, shall, in such manner and within such period as the Provincial Government may specify, be paid to that person from the Municipal Fund

(*4*) Any dispute as to whether a power is exercisable or a duty performable by a person appointed under sub-section (*2*) shall be referred by that person to the Provincial Government, whose decision thereon shall be final.

Power of Provincial Government to Dissolve the Corporation

[19B *If, in the opinion of the Provincial Government, the Corporation have shown their incompetence to perform, or persistently made default in the performance of the duties imposed or exceeded or abused the powers conferred, upon them by or under this Act or any other law for the time being in force, the Provincial Government may, by notification published in the "Official Gazette" and stating the reasons therefor, dissolve the Corporation and direct that the Corporation be reconstituted by a general election and appointment of Councillors in conformity with the provisions of Chapter III and by an election of Aldermen in conformity with the provisions of section 9."*]

Amendment of section 20.

7. In sub-section (*1*) of section 20 of the said Act—

(*1*) in clause (*a*) for the word "twelve" the word "four [*six*]" *shall be substituted,*]

[(*2*) *in clause* (*b*) *for the word "twenty-five" the word "twelve" shall be substituted,*]

(*3*) [*in clause* (*c*) *for the word "twelve" the word "six" shall be substituted, and*]

for clause (c) the following shall be substituted, namely:—

"(c) was or has been, for not less than six consecutive months during the year last preceding the year in which the election is held, the owner of a hut in a bustee valued for assessment purposes under Chapter X on account of which a sum of not less than six rupees has been paid during the said year in respect of the consolidated rate; or," and

(*4*) after clause (*c*) the following clause shall be inserted, namely:—

"(*d*) being or having been the occupier of any hut in a *bustee* valued for assessment purposes under Chapter X, or of a portion of such hut, for any period during that year

last preceding the year in which the election is held, paid rent for such occupancy for at least six months during the said year at a rate not less than [*five*] three rupees *per mensem*, and has on application to the Executive Officer had his name entered in a Register to be maintained for the purpose:

Provided that the application to the Executive Officer shall be made not later than the 30th September immediately preceding the election or such other date as the Executive Officer may notify in this behalf"

Amendment of section 21.

8. In section 22 of the said Act—

(*1*) in sub-section (*2*), after the word "appointment" the words "as a Councillor or for election as an Alderman" shall be inserted;

(*2*) after sub-section (*2*) the following sub-section shall be inserted, namely:—

"(*2*[*A*]**a**) A person who has been dismissed from the service of the Crown **on a charge involving moral turpitude** shall, unless the order of dismissal has been set aside, not be eligible for election or appointment as a Councillor or for election as an Alderman for five years from the date of the order of dismissal ";

(*3*) in sub-section (*3*) after the word "appointment" the words "as a Councillor or for election as an Alderman" shall be inserted;

(*4*) the proviso to sub-section (*4*) shall be omitted; and

(*5*) after sub section (*4*) the following sub-section shall be inserted, namely:—

"(*5*) Any disqualification specified in sub-sections (*2*), (*2*[*A*]**a**), (*3*) or (*4*) may be removed by an order of the Provincial Government in this behalf."

Appointment By Provincial Government To Make Up Prescribed Number Of Elected Councillors.

Amendment of section 36.

9 For section 36 of the said Act the following section shall be substituted, namely:—

"**36** (*1*) If there is not a sufficient number of valid nominations for an election in any constituency, or if the electors of any constituency do not elect the prescribed number of Councillors, the Provincial Government shall, by notification published in the *Official Gazette*—

(*a*) in the case of a general election, before the meeting held under section 9 for the election of Aldermen, and

(*b*) in the case of a casual vacancy, before the first meeting of the Corporation held after an election under sub-section (*1*) of section 43,

appoint as many Councillors as may be necessary to make up the *prescribed number of elected Councillors* [.]

Provided that no person shall be appointed as a Councillor unless he possesses the qualifications mentioned in section 23 for election as a Councillor to represent the said constituency.

(*2*) A Councillor appointed under sub-section (*1*) shall, for the purposes of this Act, be deemed to be an elected Councillor."

Amendment of Section 37.

10. For section 37 of the said Act the following section shall be substituted, namely:—

Appointment By Provincial Government To Make Up Prescribed Number Of Appointed Councillors.

"37. (*1*) In conformity with the provisions of section 5 the Provincial Government shall, by notification published in the *Official Gazette*—

(*a*) in the case of a general election, before the meeting held under section 9 for the election of Aldermen, and

(*b*) in any other case to which the provisions of sub-section (*2*) of section 43 do not apply, before the first meeting of the Corporation held in any year,

appoint as many Councillors as may be necessary to make up the prescribed number of appointed Councillors.

(2) A Councillor appointed under sub-section (1) of this section or under sub-section (2) of section 43 shall, for the purposes of this Act, be deemed to be an appointed Councillor.

(3) Subject to the provisions of section 43, a Councillor appointed under sub-section (2) shall hold office for a term of three years or for such shorter term as may be specified in the notification published under that sub-section:

Provided that the Provincial Government may, by notification published in the *Official Gazette*, extend the said term for a further term not exceeding one year, if in special circumstances (to be specified in the notification) they think fit.

(4) The term of office of a Councillor appointed under sub-section (1) shall commence from the first meeting of the Corporation at which a quorum is present held after a general election or in the year in respect of which the appointment is made, as the case may be, and shall be deemed to include any period which may elapse between the expiry of the said term and the first meeting of the Corporation at which a quorum is present held in the year next following that in which the said term expires [:] .

[*Provided that, if the Corporation are dissolved under section 19B, the term of office of an appointed Councillor of the Corporation so dissolved shall be deemed to expire on the date of publication of the next succeeding notification under sub-section* (1).]"

Amendment of section 38.

11. In section 38 of the said Act, for the words "elected a Councillor/appointed an Alderman" the words "elected or appointed a Councillor/elected an Alderman" shall be substituted.

Amendment of section 39

12. For section 39 of the said Act the following section shall be substituted, namely:—

Term of Office of Elected Councillors and Aldermen

"39. (1) Subject to the provisions of section 43, an elected Councillor or Alderman shall hold office for a term of three years:

Provided that the Provincial Government may, by notification published in the *Official Gazettee*, extend the said term for a further term not exceeding one year, if in special circumstances (to be specified in the notification) they think fit

(2) The term of office of an elected Councillor or Alderman shall commence from the date of the first meeting of the Corporation at which a quorum is present held after a general election, and shall be deemed to include any period which may elapse between the expiry of the said term and the first meeting of the Corporation at which a quorum is present in the year next following that in which the said term expires [:].

[*Provided that if the Corporation are dissolved under section 19B—*

(i) *the term of office of an elected Councillor or Alderman of the Corporation so dissolved shall be deemed to expire on the date of publication of the next succeeding notification under sub-section* (3) *of section 29, and*

(ii) *the term of office of a Councillor elected at the ensuing general election, and of an Alderman elected at the ensuing meeting held under section 9, shall be computed by counting as one year the period remaining between the date of the first meeting of the Corporation at which a quorum is present held after the said meeting under section 9 and the thirty-first day of March of that year.*]"

Amendment of section 41.

13. In clause (*b*) of section 41 of the said Act, after the word "allegiance" the words "or to be in arrears for more than one year in the payment of [*the whole or any portion of any rate or tax*] any sum in respect of the consolidated rate or any tax, rent or other dues payable by him under this Act" shall be inserted.

Amendment of section 45.

[14. *In sub-section* (2) *of section 45 of the said Act, after the word "months" the words, figures and letter "or, if the Corporation are dissolved under section 19B, not less than one month," shall be inserted.*]

Amendment of section 46.

15. In section 46 of the said Act—

(1) for sub-section (1) the following sub-section shall be substituted, namely:—

"(1) If there is any dispute as to whether any person, whose name is published under sub-section (8) of section 29, is qualified to be elected a Councillor, or if the validity of any election is questioned, whether by reason of the commission of any corrupt practice by a candidate or his agent or by any other person or by reason of the improper acceptance or rejection of a nomination or of the improper reception or refusal of a vote or of any non-compliance with the provisions of this Act or the rules made thereunder or of any mistake in the use of any form annexed thereto, any person enrolled in the electoral roll may, on depositing the sum of one thousand rupees as security for costs, at any time within eight days after the said publication, apply to the High Court;

Provided that no election shall be called in question on the ground that—

(a) the name of any person qualified to vote has been omitted from the electoral roll, or

(b) the name of any person not qualified to vote has been inserted in that roll "; and

(2) in sub-section (2) for the words "Sets aside an election or declares an election to be null and void" the words "declares an election to be void" shall be substituted

Amendment of section 47.

16. In sub section (1) of section 47 of the said Act—

(1) for clause (c) the following clause shall be substituted, namely:—

"(c) the result of the election has been materially affected by the improper acceptance or rejection of any nomination or by the improper reception or refusal of a vote or by any non-compliance with the provisions of this Act or the rules made thereunder or by any mistake in the use of any form annexed thereto", and

(2) for the words "the election of the returned candidate shall be void" the words "the Court shall declare the election of the returned candidate to be void" shall be substituted

Insertion of new sections 47A and 47B

16A. After section 47 of the said Act the following sections shall be inserted, namely:-

Election petitions for further scrutiny and recount of votes

"47A.(1) If there is any dispute as to the validity of an election of a constituency by reason of erroneous or wrongful scrutiny and counting of votes given to a candidate, any unsuccessful candidate of the said constituency may, on depositing the sum of one thousand rupees as security for costs, at any time within eight days after the publication of names under sum-section (8) of section 29, apply to the High Court for a further scrutiny and recount of votes.

(2) The Court may, if it considers that a further scrutiny and recount of votes are necessary, scrutinise and recount the votes, or cause them to be scrutinised and recounted in its presence, and if the Court is satisfied after such further scrutiny and recount of votes that the number of valid votes given to a candidate has not been correctly scrutinised and counted, it shall, if necessary, set aside the election of such candidate and shall declare the candidate or candidates to whom the largest number of valid votes has been given to have been duly elected.

In the case when on such a further scrutiny and recount of votes an equality of votes is found to exist between any candidates and the addition of one vote will entitle any of the candidates to be duly elected, one additional vote shall be given by the Court to the candidate or the candidates, as the case may be, selected by lot drawn in the presence of the Court in such manner as the Court may determine:

Provided that for the purpose of a recount no vote shall be reckoned as valid if it is found during the scrutiny that any corrupt

practice was committed by any person, known or unknown, in giving or obtaining it.

(3) If the Court is satisfied that no grounds exist for modifying the election in the manner provided in sub-section (2), it shall confirm the election.

(4) Any decision or order of the High Court under this section shall be final.

(5) Every candidate for election in the constituency to which the dispute relates shall be deemed to be a party to such dispute.

Costs in election petitions.

47B. (1) In every proceeding duly instituted under section 46 or section 47A the High Court shall also record a finding as to the total amount of costs, if any, which are payable and the persons by and to whom such costs shall be paid.

(2) If in any such proceeding the High Court is of opinion that the grounds for such proceedings were false and either frivolous or vexatious to the knowledge of the applicant, it may in its discretion direct the applicant to pay to any party objecting to such proceeding costs not exceeding five hundred rupees by way of compensation in addition to other costs, if any, awarded in such proceeding."

Substitution of new section for section 51.

17. For section 51 of the said Act the following section shall be substituted, namely :—

Appointment, Term of Office, Salary, Leave and Conditions of Service of Chief Executive Officer.

"51. (1) The Provincial Government shall appoint a suitable person to be Chief Executive Officer of the Corporation :

Provided that the person so appointed shall, on the date of his appointment, be[—]

[(*i*)] a member of the executive branch of the Indian Civil Service, who has served for not less than fifteen years in that service.[,*or*]

[(*ii*) *a member of the Bengal Civil Service (Executive) who has served for not less than twenty years in that service.*]

(2) The Executive Officer—

(i) shall hold office for a term of three years, which may be renewed by the Provincial Government for such further term or terms as they think fit,

(ii) may at any time be removed from office by the Provincial Government which shall remove him if, at a special meeting of the Corporation called for the purpose, two-thirds of the Councillors and Aldermen of the Corporation vote for his removal,

(iii) shall be paid from the Municipal Funds such salary not exceeding two thousand five hundred rupees *per mensem*, together with such allowances not exceeding in the aggregate five hundred rupees *per mensem*; as the Provincial Government may from time to time determine, and

(iv) shall be granted leave by the Provincial Government, which, whenever such leave is granted, shall, subject to the provisions of sub-section (1), appoint a person to officiate in his place.

(3) The Executive Officer shall be a whole-time officer of the Corporation and shall not, without the sanction of the Corporation and the Provincial Government, undertake any work unconnected with his office."

Insertion of new sections 51A, 51B, and 51C.

18. After section 51 of the said Act the following sections shall be inserted, namely :—

Appointment, Salaries, Allowances, Term of Office, Conditions of Service and Staff of Service Commission.

"51A. (1) The Provincial Government shall appoint a Service Commission (hereinafter referred to as the Commission), which shall, subject to the provisions of sub-section (1) of section 51B, select persons to be appointed to posts under the Corporation [or to

(2) Subject to any rules made by the Provincial Government in this behalf, the Commission shall be consulted on all disciplinary matters, including memorials and petitions relating to such matters, affecting any officer or servant of the Corporation, other than the Executive Officer, who holds a post carrying a maximum salary exceeding fifty rupees *per mensem*; and it shall be the duty of the Commission to advise on any matter so referred to it.

(3) The Commission shall consist of a Chairman, who shall at the time of his appointment have been for not less than ten years in the service of the Crown, and two members, of whom one shall be a Muhammadan and one a person other than a Muhammadan, [*and of the two Members one shall at the time of his appointment have had not less than five years' experience of the administrative work of the Corporation*]

(4) The Provincial Government shall prescribe by rules made in this behalf—

(*a*) the term of office and conditions of service of the Chairman and Members of the Commission,

(*b*) the number and conditions of service of the officers and servants to be appointed by the Commission, and the manner of their appointment; and

(*c*) the manner in which the Commission shall perform the duties imposed upon it by or under this Act.

(5) The Chairman and Members of the Commission, and the officers and servants appointed by the Commission in conformity with the provisions of this section and of the rules made thereunder, shall for the purposes of this Act be deemed to be servants of the Crown, and shall be paid from the Municipal Fund such salaries and allowances as the Provincial Government may prescribe by rules made in this behalf.

Appointment and Salaries of Officers and Servants of the Corporation

51B (1) Subject to the provisions of section 51, no appointment to a post under the Corporation shall be made except on the recommendation of the Commission.

Provided that appointments to posts carrying a maximum salary not exceeding fifty rupees *per mensem*, and temporary appointments for a period not exceeding three months to posts carrying a maximum salary exceeding fifty rupees and not exceeding two hundred and fifty rupees *per mensem*, shall not require the recommendation of the Commission.

Explanation.— **Any extension of a temporary appointment to a post carrying a maximum salary exceeding fifty rupees and not exceeding two hundred and fifty rupees 'per mensem' beyond the period of three months from the date of the first appointment, or any renewal of such appointment shall be deemed to be an appointment for a period exceeding three months.**

(2) Appointments to sanctioned posts carrying a maximum salary not exceeding two hundred and fifty rupees *per mensem* shall be made by the Executive Officer, and appointments to posts carrying a maximum salary exceeding two hundred and fifty rupees *per mensem* shall be made by the Corporation.

Provided that appointments to posts carrying a maximum salary exceeding five hundred rupees *per mensem* shall require the approval of the Provincial Government.

(3) Subject to the provisions of this section, the Corporation shall appoint suitable persons to be Chief Engineer, Chief Accountant, Health Officer, [*and*] Secretary, **Assessor, City Architect, Collector, Chief Education Officer,** and may appoint not more than two Deputy Executive Officers and such other officers and servants as the Corporation may think, fit, and shall fix the salary and allowances to be paid from the Municipal Fund to, and the conditions of service of, all persons so appointed.

Provided that the appointment, salary, allowances, and conditions of service of the Chief Engineer, **Chief Accountant, Health Officer, Secretary, Assessor, City Architect, Collector, Chief Education Officer**

and any Deputy Executive Officer, and any action taken by the Corporation with a view to the termination of their appointments, shall require the approval of the Provincial Government.

(4) The Chief Engineer, Chief Accountant, Health Officer, Secretary, any Deputy Executive Officer and any person appointed to a post under the Corporation carrying a salary of or exceeding five hundred rupees *per mensem* shall be appointed for a renewable term of five years. and every other officer or servant of the Corporation shall be appointed for such term as the Executive Officer or the Corporation, as the case may be, think fit

51C The Executive Officer shall have power—
Control of officers and servants of the Corporation.

(1) to grant, subject to rules made under section 56, leave, leave allowance or acting allowance to any officer or servant of the Corporation who holds a post carrying a maximum salary not exceeding two hundred and fifty rupees *per mensem;*

(2) subject to the provisions of sub-section [(1)] (2) of section 51A, to fine, reduce, dismiss, dispense with the service or accept the resignation of, any officer or servant of the Corporation who holds a post carrying a maximum salary not exceeding two hundred and fifty rupees *per mensem* [,]

Provided that every such officer or servant shall have the right of appeal to the Corporation from an order of fine, reduction, dismissal or removal passed under this clause;

(3) to suspend any officer or servant of the Corporation
Provided that the Executive Officer shall report—

(*i*) to the appropriate Standing Committee, the suspension of any officer or servant who holds a post carrying a maximum salary exceeding two hundred and fifty rupees and not exceeding five hundred rupees *per mensem*; and

(*ii*) to the Corporation and the Provincial Government, the suspension of any officer or servant who holds a post carrying a maximum salary exceeding five hundred rupees *per mensem;* and

(4) to transfer from one place to another or from one department to another any officer or servant of the Corporation who holds a post carrying a maximum salary not exceeding two hundred and fifty rupees *per mensem.*"

Amendment of section 52.

19. Section 52 of the said Act shall be renumbered as sub-section (1) of section 52, and after sub-section (1) so renumbered the following sub-section shall be inserted, namely:—

"(2) On the occurrence or threatened occurrence of any sudden accident or unforeseen event involving or likely to involve extensive damage to any property of the Corporation or danger to human life or serious interference with any public utility service in the city, the Executive Officer shall have power to take such immediate action as the emergency may appear to him to justify or require, and shall forthwith report to the Corporation the action which he has taken, the reasons for taking it, and the cost of such action if such cost is not covered by the budget allotment of the current year:

Provided that, if in the opinion of the Provincial Government the Corporation have failed to take, or the Executive Officer has failed to take under this sub-section, such immediate action as the emergency appears to the Provincial Government to justify or require, the Provincial Government may take such action as they consider necessary, and the cost of any action so taken by the Provincial Government shall be paid from the Municipal Fund."

Amendment of section 54.

20. In section 54 of the said Act—

(1) in sub-section (1), for the word and figures "section 51" the words, figures, letter and brackets "sub-section (3) of section 51B" shall be substituted, and

(2) in sub section (2), for the words, figures and brackets "sub-section (1) of section 51" the words, figures, letter and brackets "sub-section (3) of section 51B" shall be substituted.

Substitution of new section for section 55.

21. For section 55 of the said Act the following section shall be substituted, namely:—

Contributions payable by the Corporation in respect of servants of the Crown whose salaries and allowances are payable from the Municipal Fund.

"55 When the salary and allowances of any servant of the Crown are payable from the Municipal Fund under the provisions of this Act, the Corporation shall—

(*a*) deduct from his salary and allowances and pay from the Municipal Fund such contribution towards his provident fund account and family pension fund account, and

(*b*) pay from the Municipal Fund such contribution towards his passage account, provident fund account, leave salary and pension,

as may, by the conditions of his service under the Crown, be required to be paid by him or by the Provincial Government respectively."

[*Amendment of section 59*]

[22. *In section 59 of the said Act the words "of April" shall be omitted.*]

Amendment of section 65.

23. For the proviso to section 65 of the said Act the following proviso shall be substituted, namely —

"Provided that—

(*i*) if such poll is demanded in connection with the election of an Alderman or of the Mayor or Deputy Mayor, the voting shall be by ballot, and

(*ii*) the Corporation may, subject to such rules as may be made under section 66, resolve that any other question or class of questions shall be decided by ballot ["]

Explanation.—**In this section the word "ballot" means that the voting shall be secret and that the person voting shall record his vote at a place screened from observation."**

Amendment of section 66.

24. For section 66 of the said Act the following section shall be substituted namely :—

Power to make rules of business

"66. (1) The Corporation may make rules for the conduct of business at their meeting.

(2) The Corporation shall within a fortnight after the date on which any rule is made, added to, amended or varied submit a copy of the rule, addition, amendment or variation to the Provincial Government.

(3) If any such rule, addition, amendment or variation is, in the opinion of the Provincial Government, inconsistent with or repugnant to any provision of this Act or any rule made by the Provincial Government under sub-section (4), the rule, addition, amendment or variation made by the Corporation shall to the extent of its incon sistency or repugnancy be void and the Provincial Government may require the Corporation to make a new rule.

(4) If the Corporation fail to make any rules for the conduct of business at the meeting of the Corporation which the Provincial Government consider necessary within such time as in the opinion of the Provincial Government is reasonable, the Provincial Government may themselves make such rules and upon publication of the same in the "Official Gazette" these rules shall have the same force and effect as rules made by the Corporation under sub-section (1)."

Power to make rules of business.

[*"66. (1) The Corporation may make rules for the conduct of business at their meetings, and such rules shall be subject to the approval of the Provincial Government.*

(2) If, by such dates as the Provincial Government may specify from time to time, the Corporation do not make rules of business, such rules shall be made by the Provincial Government."]

Insertion of new section 66A.

25. In Chapter V of the said Act, after the sub-heading "Contracts and Seal of Corporation" the following section shall be inserted, namely :—

Power to sanction estimates.

"66A. (1) The Executive Officer may sanction any estimate, the amount of which does not exceed [*ten*] **five** thousand rupees.

(2) The Corporation, or a Standing Committee thereof to which the appropriate powers have been delegated under section 71, may sanction any estimate, the amount of which exceeds [*ten*] **five** thousand rupees :

Provided that any estimate, the amount of which exceeds two and a half lakhs of rupees shall be submitted to the Provincial Government, who may reject or sanction it either wholly or in part."

Amendment of section 67.

26. For sub section (2) of section 67 of the said Act, the following sub-section shall be substituted, namely .—

"(2) With respect to the making of such contracts the following provisions shall have effect, namely :—

(*a*) every such contract shall be made on behalf of the Corporation by the Executive Officer;

(*b*) every contract made by the Executive Officer, which involves an expenditure exceeding one thousand rupees and not exceeding [*ten*] **five** thousand rupees, shall, within fifteen days of the making thereof, be reported by him to the Corporation or to the appropriate Standing Committee thereof;

(*c*) no contract involving an expenditure exceeding [*ten*] **five** thousand rupess and not exceeding two and a half lakhs of rupees shall be made by the Executive Officer unless it has been previously sanctioned by the Corporation;

(*d*) no contract involving an expenditure exceeding two and a half lakhs of rupees shall be made by the Executive Officer unless it has been previously sanctionel by the Corporation and the Provincial Government."

Insertion of new section 67A.

26A. After Section 67 of the said Act the following Section shall be inserted, namely:—

Corporation to enter into contract in certain cases.

"67A. The Corporation shall enter into a contract in every case in which the execution of any work or the supply of any materials or goods involves an expenditure exceeding one thousand rupees."

Amendment of section 68

27. In sub-section (1) of section 68 of the said Act, for the words "Mayor or Deputy Mayor" wherever they occur the words "Executive Officer" shall be substituted.

Amendment of section 69.

28. In section 69 of the said Act—

(1) in sub-section (1), for the word "they" the words "the Executive Officer" shall be substituted;

(2) in sub-section (2), for the word "one" the word [*ten*] **five**" shall be substituted; and

(3) in sub-setcion (4), for the words "The Corporation" the words "The Executive Officer, the Corporation" shall be substituted.

Amendment of section 73.

29. In section 73 of the said Act, after sub-section (3) the following sub-section shall be inserted, namely :—

"(4) The Corporation may, each year and by specific resolution, delegate to the Committee any of the functions, powers or

duties of the Corporation in respect of any matter relating to public instruction, including primary, technical and industrial education."

Amendment of section 79.

30. In clause (*b*) of sub-section (1) of section 79 of the said Act, after the word "to" the words, figure and brackets "sub-section (1) of" shall be inserted.

Amendment of section 85.

31. In sub-clause (i) of clause (c) of the proviso to section 85 of the said Act, after the figures "18," the word, figures and letter "19A, 52 or 447" shall be inserted.

Amendment of section 91.

32 In section 91 of the said Act—

(1) for the words "between the ages of six and twelve years and girls between the ages of six and ten years residing in Calcutta" the words "and girls residing in Calcutta and not exceeding the age of twelve years" shall be substituted, and

(2) after the words "age of twelve years" so substituted, the following *Explanation* shall be inserted, namely —

"*Explanation.*—For the purposes of this section primary education includes kindergarten, nursery-training and such other pre-primary stages of education as may from time to time be approved by **the Corporation on the recommendation of** the Primary Education Standing Committee."

Amendment of section 97.

33. In sub-section (1) of section 97 of the said Act—

(1) after clause (*b*) the following clause shall be inserted, namely –

"(*bb*) the acquisition and management of any tramway **or other public utility concern or;" and**

(2) after the existing proviso the following additional proviso shall be inserted, namely –

"Provided further that—

(*i*) a loan raised under clause (*bb*) shall be on the security of both the consolidated rate and of all the taxes, fees and dues authorized by this Act, and

(*ii*) for the purposes of this proviso the word 'dues' shall be deemed to include the income derivable from the tram way **or other public utility** concern acquired

Amendment of section 121A.

34 Section 121A of the said Act shall be renumbered as sub-section (1) of section 121A, and after sub-section (1) so renumbered the following sub section shall be inserted, namely —

"(2) Any person who, after having been convicted of an offence referred to in sub-section (1), continues to commit such offence shall be punished for each day after the first during which he continues so to offend, with fine which may extend to fifty rupees "

Amendment of section 123B.

35 In sub-section (1) of section 123B of the said Act the word "Accounting" shall be omitted

Substitution of new section for section 138.

36. For Section 138 of the said Act the following Section shall be substituted *viz.* :—

Notice when valuation is made for the first time or revised

"138. The Executive Officer shall, in all cases in which any land, *bustee* or building is for the first time valued, or in which the valuation of any land, *bustee* or building is revised under section 131, give special notice thereof to the owner or occupier of the same, stating therein the amount assessed upon such land, *bustee* or building; and when the valuation is increased, the said notice shall contain a statement of the grounds of such increase."

Amendment of section 139.

37. In sub-section (1) of section 139 of the said Act—

(1) after the word "made" the words "or revised" shall be inserted, and

(2) after the word "such valuation" the words "or revision thereof" shall be inserted.

Amendment of section 142.

38. In sub-section (1) of section 142 of the said Act, after the word "made" the words "or revised" shall be inserted.

[Amendment of section 205.]

[39. *In section 205 of the said Act after the words "to the said person" the following proviso shall be inserted, namely:—*

"Provided that—

(i) any sum due on account of consolidated rate from the occupier of any land or building shall not be a charge upon such land or building, and

(ii) the property of a purchaser of any land or building or divided or undivided share in any land or building shall not be chargeable in respect of any sum due on account of consolidated rate from the owner of such land or building or such divided or undivided share in such land or building, other than a sum so due from such owner for a period not exceeding one year prior to the date of the purchase."]

[Insertion of new section 205A.]

[40. *After section 205 of the said Act as amended the following section shall be inserted, namely:—*

Limitation on recovery of arrears.

"205A. No sum due on account of consolidated rate shall be recoverable after the expiry of three years from the date on which such sum becomes due;

Provided that any such sum due on the date of the commencement of the Calcutta Municipal (Amendment) Act 1940, shall be recoverable within three years from that date"]

Amendment of section 306

41. In section 306 of the said Act—

(1) in clause (c) after the words "public square or garden" the words "or part of such square or garden" shall be inserted, and

(2) after clause (d) the following proviso shall be inserted namely:—

"Provided that the Corporation shall not permanently close any public square or garden or part of such square or garden except in pursuance of a resolution in favour of which not less than two-thirds of the Councillors and Aldermen present and voting at a meeting have voted."

[Amendment of section 306.]

[41. *In section 306 of the said Act, after clause (d) the following proviso shall be inserted, namely:—*

"Provided that the Corporation shall not permanently close any public square or garden, except in pursuance of a resolution in favour of which not less than two-thirds of the Councillors and Aldermen present and voting at a meeting have voted."]

Amendment of section 307.

42. In sub-section (1) of section 307 of the said Act—

(a) after the words "public square or garden" the words "or part of such square or garden" shall be inserted;

(b) after the words "the square or garden" the words "or part of such square or garden" shall be inserted; and

(c) after the words "by such closing" the following proviso shall be inserted, namely:—

"Provided that the site of such square or garden or part of such square or garden shall not be leased or sold, except in pursuance of a resolution in favour of which not less than two-thirds of the Councillors and Aldermen present and voting at a meeting have voted."

[Amendment of section 307.]

[42. *In sub-section (1) of section 307 of the said Act, after the words "by such closing" the following proviso shall be inserted, namely:—*

"Provided that the site of such square or garden shall not be leased or sold, except in pursuance of a resolution in favour of which not less than two-thirds of the Councillors and Aldermen present and voting at a meeting have voted."]

Insertion of new section 334A.

43. After section 334 of the said Act the following section shall be inserted, namely:—

Notices of relaxation of building rules.

"334A. Before sanctioning the relaxation, in respect of any building, of the provisions of any rule contained in Schedule XVII, the

Corporation shall serve upon the owner of any land or premises adjoining such building a notice of the relaxation proposed, and shall, before according sanction to such relaxation, consider any representation that may be submitted by such owner within fifteen days of the service of such notice."

Insertion of new section 365A and 365B

44. After section 365 of the said Act the following sections shall be inserted, namely :—

Demolition or alteration of work on application by persons other than the Corporation

"365A (1) [*If any person, who is liable to pay any rate or tax under this Act or is the owner or occupier of any building in Calcutta, has reasonable grounds for believing that in contravention of any rule contained in Schedule XVII or of any provision of this Act, any new building is being or has been erected or any addition or alteration to any existing building is being or has been made*] If any person who **is the owner or occupier of any land or premises situated near or adjacent to the site where any new building is being or has been erected, or near or adjacent to an existing building to which any addition or alteration is being or has been made, has reasonable grounds for believing that such new building is being or has been erected or such addition or alteration is being or has been made in contravention of any rule contained in Schedule XVII or of any provision of this Act,** he may, either during the period of such erection, addition or alteration or within three months of the completion thereof, file before a Municipal Magistrate an application objecting to such erection, addition or alteration as the case may be and shall make, with such application, a deposit of two hundred rupees as security for costs

(1a) No application made under sub section (1) shall be entertained by a Magistrate unless such Magistrate is satisfied that the applicant is or is likely to be injuriously affected by the erection of the new building or the addition or alteration to the existing building in respect of which objection has been made.

(2) On receipt of such application, the Magistrate may call from the Corporation for such papers as he may think necessary and if, after hearing the applicant, the Corporation and the owner and occupier of the building in respect of which objection has been made, he finds that such building has been erected added to or altered in contravention of any rule contained in Schedule XVII or of any provision of this Act, he may order the demolition or alteration of such building by the Corporation as if the application had been made by the Corporation under section 363

(3) The cost of such demolition or alteration shall be paid by the Corporation, and shall be recovered by way of surcharge in accordance with the provisions of section 123B—

(*a*) if such erection, addition or alteration was agreed to by the Corporation or any Standing Committee or Sub-Committee thereof or any Special Committee, from such members of the Corporation or of such Committee or Sub-Committee as the Magistrate may declare to be responsible for such agreement, and

(*b*) in any other case, from the owner of such building.

Quarterly statement of rules relaxed

365B At the end of each quarter the appropriate Standing Committee shall submit to the Corporation a statement showing the cases in which any provision of any rule contained in Schedule XVII has been relaxed during that quarter, and the Corporation shall forward such statement to the Provincial Government, together with a report of the action taken by the Corporation in respect of each case shown in the statement."

Amendment of section 378.

45. In section 378 of the said Act—

(1) after Clause (*a*) the following clause shall be inserted, namely :—

(*aa*) acquire, construct or maintain any railway which is a tramway situated in Calcutta and by agreement with any local authority, any railway which is a tramway situated within the jurisdiction of such authority."; and

(2) after clause (g) the following proviso shall be inserted namely:

Bengal Act XV of 1932.

"Provided that the previous sanction of the Federal Railway authority shall not be required in respect of any action taken by the Corporation under this section in relation to a railway which is a tramway situated wholly within the limits of Calcutta or of any municipality constituted under the Bengal Municipal Act, 1932, or of both."

Amendment of section 447.

46. In section 447 of the said Act, after the words "or the spread thereof" the following proviso shall be inserted, namely:—

"Provided that[—]

[(*a*) *in the case of any exceptional emergency, of which the Provincial Government shall be the sole judge, the necessary action under this section may be taken by the Executive Officer with the sanction of the Provincial Government, and*]

[(*b*)] if the Provincial Government consider that the [*Executive Officer or the*] Corporation have failed to take under this section the action necessary for the prevention of the outbreak or the spread of any such disease, the Provincial Government may by order appoint a Special Health Officer who shall take such action as they may from time to time direct, and shall fix the remuneration to be paid to such officer, and shall direct that such remuneration and the cost of taking such action shall be paid from the Municipal Fund."

Amendment of section 472.

47. In section 472 of the said Act, after clause (*iii*) the following proviso shall be inserted, namely:—

"Provided that, except in pursuance of a resolution in favour of which not less than two-thirds of the Councillors and Aldermen present and voting at a meeting have voted, the Corporation shall not sell, lease or otherwise transfer any land or building so vested at a rate which is less than the rate prevailing on the date of such meeting for the sale, lease or transfer of land of a like description in the same locality."

Amendment of section 488.

48. In section 488 of the said Act—

(1) in sub section (1) after the words "of the said table" the following proviso shall be inserted, namely:—

"Provided that whoever commits any offence by contravening any of the provisions of section 391 shall be punished either with fine, which may extend to the amount mentioned in that behalf in the third column of the said table, or with imprisonment, which may extend to three months."; and

(2) in the table of penalties[—]

[(*a*)] the entries relating to sub-section (2) of section 121 in the first, second, third and fourth columns shall be omitted[, *and*

(*b*) *in the entry relating to section* 391, *in the third column, for the words "Five hundred" the words "One thousand" shall be substituted*].

Amendment of section 554.

49. In section 554 of the said Act—

(1) after the words "officer and servant" the words, figures and letter "every person appointed under sub-section (2) of section 19A" shall be inserted, and

(2) after the figures "121" the words and figures "every Special Health Officer appointed under the proviso to section 447" shall be inserted.

Amendment of section 555.

50. In section 555 of the said Act, for the word "Mayor" the words "Executive Officer" shall be substituted.

GOVERNMENT AND THE CHIEF EXECUTIVE OFFICER

MR. MUKERJEA TO CONTINUE TO ACT AS C. E. O.

CORPORATION MAKES "AD-INTERIM" ARRANGEMENTS

THE Corporation of Calcutta, it will be recalled, on the 28th February last, passed a resolution reappointing Mr. J. C. Mukerjea, as Chief Executive Officer for two years from April 1, 1941, when his term of appointment was due to expire. The Government, however, refused to sanction his reappointment. Following this, the Corporation at a meeting held on the 22nd March re-affirmed its previous resolution and requested the Government to reconsider the matter.

When the House met on Monday, the 31st March, at a Special Requisition Meeting at 4 p.m., Mr. Naresh Nath Mookerjee said addressing the Mayor: "We understand that the Government have refused sanction to the Corporation's proposal for the re-appointment of Mr. J C. Mukerjea for a further term of 2 years. Have you any news to give us, or are you in a position to make any statement as to further developments, if any?"

The Mayor replied that he had none. He added that in order to reach a compromise in the matter a conference had been arranged between the Premier, Nawab of Dacca (Minister for Local Self-Government), the Mayor, the Deputy Mayor (Mr. P. N. Brahma), Mr. M. A. H. Ispahani, Mr N. C Chatterjee and Mr. Watson.

The Mayor informed the House that difficulties had been added to the situation by the Chief Executive Officer who had issued a notification withdrawing all the powers and functions delegated by him to the different officers in the Corporation

The heads of the different departments in the Corporation, the Mayor said, came to him and they told him that they had become *functious officio* in view of the Chief Executive Officer's notification. "As I have no power to take action," the Mayor added, "you, gentlemen of the House, may take the matter into your consideration. What I feel is that the Chief Executive Officer is to function under our instruction upto mid night to-day. Therefore, I told the officers who came to me in a terrible state that this notification of the Chief Executive Officer will have effect after mid-night to-day."

The Special Meeting terminated at 4-45 p.m. The House was to meet again at 5-15 p.m. at another Special Meeting. When the House met at 5-15 p.m. Mr. B N. Roy Chowdhury was elected President of the meeting in the absence of the Mayor and the Deputy Mayor, who, along with Messrs. Chatterjee, Ispahani and Watson, it was stated, had gone to the conference convened by the Minister for Local Self-Government at the Assembly House.

The meeting under the presidentship of Mr Roy Chowdhury went on till about 7 p.m. when the Mayor and the others returned from the conference. The Mayor on resuming his chair informed the House as to what had happened at the conference, and a discussion followed with regard to the possible means of ending the deadlock.

At 7-25 p.m. the House adjourned for a short while at the request of Mr. N. C. Chatterjee, who told the Mayor that they had received a fresh intimation with regard to the question at issue

The House met again at about 8 p.m. when the Chief Executive Officer (Mr. J. C. Mukerjea) came to the meeting and made a statement which was to the effect that he had agreed, in deference to the wishes of the different sections of the House, to his re-appointment for a period of 15 months and that the notification he had issued withdrawing all powers from his subordinates would also be withdrawn by him.

After a debate lasting about three hours the meeting decided that Mr. J. C. Mukerjea should continue in office as the Chief Executive Officer until a statutory meeting of the Corporation was called to submit a fresh proposal to the Government.

The Corporation took this decision, at the instance of Mr. W A Burns, in view of the "emergency and the legal impasse" that had arisen

The motion ran as follows :—

"That in the present emergency and in the face of the legal impasse, Mr. J. C. Mukerjea do continue to act as Chief Executive Officer subject to the powers delegated to him and by him re-delegated to his officers until a statutory meeting is called to submit a fresh proposal to the Government."

The motion was adopted by the House by 39 to 28 votes, 2 not voting.

Before the motion was put to the vote several members pointed out that the motion was illegal.

The Mayor said: "I take full responsibility for any decision taken here to-night. The Corporation must function"

Extract from the Proceedings of the Corporation Meeting dated the 31st March, 1941.

POSITION WITH REGARD TO THE APPOINTMENT OF CHIEF EXECUTIVE OFFICER.—

Mr. Naresh Nath Mookerjee: I understand that the Mayor has returned from the Conference and we are all anxious to know the result of the Conference.

The President then vacated and the Mayor occupied the Chair

The Mayor: Before we proceed further, it is my painful duty to announce to the House that it has not been possible to arrive at any satisfactory conclusion in regard to the impasse that has been created The Government came forward to meet our demands half way and the three representatives of the three Groups in this House *minus* one were agreeable to accept the proposal of the Government. But unfortunately Mr. J. C. Mukerjea did not help us to come to the decision which we wanted to and the impasse therefore continues. Of course, the arrangement that we wanted to make was subject to Mr Mukerjea cancelling the notice about his withdrawal of powers from the Heads of Departments. He was perhaps advised to do so, but the meeting felt that he should withdraw it first Unfortunately the meeting failed on the question of the period. The Government came down and we went up and there was considerable bargaining. But our hands were not strengthened by the attitude taken up by the Chief Executive Officer. Therefore the situation remains as it was before the meeting started

Mr. Naresh Nath Mookerjee: To-day being the last day of the year the Corporation will practically cease to function till it has elected its Mayor and Deputy Mayor at the first meeting in April. In view of the deadlock that has been created is it not our duty to do something to-day whereby the administration might go on in the normal way? Is it not possible to direct the First Deputy Executive Officer to carry on the administration notwithstanding the fact that the delegation has been withdrawn from him by the Chief Executive Officer? I think to-day after 5 p.m. the delegation vested again in the Corporation which is the parent body Of course, I am speaking without the Act before me, perhaps Mr N C. Chatterjee will be able to enlighten us on the subject But I feel that it is very important that we find a solution to this impasse before we proceed to any other business.

The Mayor: I am in the hands of the House. There is such a thing as suspension of standing orders in Legislative bodies. I do not think that the Rules of Business or the Act permit us to do that, but we are the House and we can perhaps do something of the kind if the House so wills it and agrees to suspension of the Rules of Business. Like His Majesty's Government the Corporation must go on and if it is the desire of the House to let the Corporation function in a normal way as if the Chief Executive Officer has gone on leave or has met with an accident, then it is for the House to decide that way

Mr. B. N. Roy Chowdhury: I maintain that we cannot proceed any further with this matter at this meeting I hear that the Chief Executive Officer has withdrawn all the powers that he delegated to different officers. After to-day the Chief Executive Officer ceases to be the Chief Executive Officer and those powers will automatically vest in the Corporation and under Section 12 of the Act, those powers can be delegated to another officer. But in order to delegate those powers we have to call a Special Meeting under the Rules. That we cannot do because according to the Act the first meeting in April will be a meeting for the election of Mayor and Deputy Mayor. That is

the trouble Otherwise we would have been quite competent to call a Special Meeting of the Corporation for the purpose of re-delegating all those powers to the 1st Deputy Executive Officer. But there again, if you hold the first meeting of the Corporation in the next financial year quickly, say, 48 hours from to-morrow and thereat elect the Mayor and the Deputy Mayor, then the same night you might have a Special Meeting where you can re-delegate powers to the First Deputy Executive Officer till the Chief Executive Officer is appointed.

The Deputy Mayor: Section 12 says that the Corporation may, by a resolution delegate to the Executive Officer any of the Corporation's powers, duties or functions under this Act or under any rule or bye-law. Under Section 3(30) "Executive Officer" means the Chief Executive Officer appointed under Section 51, Sub-Section (1) and includes an Acting Executive Officer appointed during his temporary absence. So, unless there is a Chief Executive Officer, we cannot delegate our powers, but I do not think there can be any deadlock. There are certain standing orders which the Chief Executive Officer cannot do away with and under which Heads of certain key Departments can certainly function. Of course, certain functions delegated to them by the Chief Executive Officer cannot be performed.

But on that account the administration will not come to a stand still I shall also draw attention to Section 501 which reads thus. Whenever under this Act or under any rule or bye-law made thereunder the doing or the omitting to do anything or the validity of anything depends upon the approval, sanction, consent, concurrence, declaration, opinion or satisfaction of (a) the Corporation or (b) any Municipal Officer as the case may be, a written document signed in case (a) by the Secretary to the Corporation and in case (b) by the said Municipal Officer, purporting to convey or set-forth such approval, sanction, consent, concurrence, declaration, opinion or satisfaction, shall be sufficient evidence thereof. So that, many of the functions of the Corporation can be performed by the Secretary I am not here to advise on a point of law, but a legal opinion can be taken. Personally I am of opinion that there will be no deadlock as is apprehended

The Mayor: The situation is bristling with legal and administrative difficulties. Here is a situation which perhaps was never contemplated by the makers of the law. But I take it that we have got to function and if that is so, I would suggest to the House to take it as if the Chief Executive Officer has gone on leave or has met with an accident. In that way we can perhaps ask the First Deputy Executive Officer to carry on the work of the Chief Executive Officer until we hold our first meeting after the election of the Mayor and Deputy Mayor.

Mr. N. N. Dalal: Suppose, God forbid, the Chief Executive Officer dies as a result of an accident. In that event, different Heads of Departments would be exercising the powers and functions delegated to them by the Chief Executive Officer. But in the present case the Chief Executive Officer has withdrawn all the powers re-delegated by him to the various officers and until and unless we divest him of those powers, we cannot re-delegate those powers to any other officer.

The Mayor: The difficulty is that the year comes to a close to-day and we have got to take the situation in hand. All the Standing Committees will become *functus officio* to-morrow. Besides, the nominated members will go out, but the Mayor fortunately survives until his successor comes in. That is the actual situation, and the question is how are we going to meet it?

Mr. W. A. Burns: There is a Latin maxim that the safety of the people or safety of the House or safety of the city is the greatest of all laws. Corporation work has to be carried on and the common-sense view is that the First Deputy Executive Officer should carry on Corporation work. If there is any legal anomaly in the matter, that can be rectified afterwards. We are in an emergency and as long as we concentrate our mind upon the emergency and reach the best possible decision, no one can question us.

Mr. S. C. Ray Chaudhuri: If there is any deadlock we are not responsible for it. We sent up our recommendation to Government in time; and it was the duty of Government to act in such a way that

this deadlock might not have arisen There is yet time for Government to reconsider the position.

The Mayor: Government has gone not half way but three-fourths of the way to meet us, and I can assure you that our conversations went on in a very friendly way. I did not want to say it, but the representatives of the Muslim League and the European Group and the Hindu Mahasabha were agreed on the settlement that we thought best in the circumstances. Unfortunately the Chief Executive Officer was intransigent. He would not agree to any compromise; he wanted to dictate his terms. We went one step further. Even then we failed, and that is the saddest part of the whole thing. You, gentlemen, and I have to think of the Corporation, but there are men amongst us who put the Corporation in the background. It is a very sad position; but so far as I am concerned, I can assure you that I consider it to be my bounden duty, my religious duty, to maintain the dignity, status, prestige and honour of the Corporation. We tried and we failed. I have no hesitation in declaring that the failure is more painful to me than to any one else. We cannot do anything further. Whatever the view of the House, we have got to function to-morrow.

Mr. Mohamad Rafique: The situation has been aggravated by the fact that the Chief Executive Officer has withdrawn the powers delegated by him to the Deputy Executive Officers. If the Chief Executive Officer had not withdrawn those powers the Corporation would have gone on functioning as it has been functioning hitherto. The only course left open to us, if the House unanimously agrees, is to withdraw those powers from the Chief Executive Officer and delegate them to one of the Deputy Executive Officers as an *ad interim* measure.

Mr. N. C. Chatterjee: I want to assure all sections of the House that we impressed upon the Chief Minister and also the Minister-in-charge of Local Self-Government with the utmost emphasis we could command the desirability of complying with the Corporation's point of view We put forward our case with the utmost possible cogency and emphasis. We were given a very patient hearing We had a heart-to-heart talk, and myself, Mr. Ispahani and Mr. Watson representing different groups came to a tentative settlement which we thought was a reasonable settlement in view of the difficulties of the situation. Government was prepared to accept Mr. Mukerjea for a period of 15 months from to-morrow. We thought that in view of the great difficulty facing Government and commitments of the Ministry, we thought that, after all, it was not an unreasonable settlement and we three accepted it. Of course, the position of Mr. Brahma and Mr. Sarat Chandra Bose was different. But inspite of their dissent or protest, the Government were prepared to accept Mr. J. C. Mukerjea as Chief Executive Officer for a period of 15 months. We thought that should be accepted and as a matter of fact a letter was drafted from the Government of Bengal addressed to the Mayor so that a resolution might be passed to-night by the Corporation. Unfortunately Mr. Mukerjea insisted on 18 months and not a day less. Government could not accept this and therefore the basis of the settlement fell through. I am not a pessimist and I am still hoping that a *via media* will be found; that a reasonable and honourable settlement will be arrived at—honourable at least to the Corporation, if not honourable from the Government point of view. I also hope that pending the solution of this deadlock there will be no difficulty created in appointing an Acting Executive Officer under Section 3 (30) of the Act to tide over the crisis. But for Section 10 there would not have been any difficulty. There is a lacuna in the Act, in that it does not contemplate such a crisis. Under Section 10 the first meeting in the month of April shall be for the election of Mayor and Deputy Mayor. That means that there is a compulsory statutory interregnum of at least 3 weeks during which the Corporation will be without the pivot of the whole show, namely, the Chief Executive Officer. Under the statute all Officers of the Corporation must function under the Chief Executive Officer. There must be one Chief Executive Officer and the whole machinery revolves round him. He is the pivot of the administration. I am still hoping that we shall

have Mr. Mukerjea as Chief Executive Officer and there shall be an honourable settlement between ourselves and Government. It is a question of 15 months or 18 months after all Pending that, I am appealing to you to appoint here and now an Acting Executive Officer.

Mr. Syed Badrudduja: The real point is whether we can appoint an Acting Executive Officer at this meeting. We have not had 48 hours' notice and the matter has yet to come before us. We are not competent to appoint an Acting Executive Officer at this meeting.

At this stage at the suggestion of Mr. B. N. Roy Chowdhury the House agreed to sit till this matter was finished.

Mr. S. C. Ray Chaudhuri: Mr. Chatterjee told us just now that he along with others tried his best to come to a settlement over this matter. We want to know something about the settlement which they tried to arrive at with Government. We ought to know about it before we can try and bring about a settlement here and now. Some of us were never told about the projected settlement. If really there is a talk of settlement, then the matter should be gone into thoroughly before we take any action. The matter should be disclosed to us and then we shall see what can be done.

Mr. M. A. H. Ispahani: May I inform my friend that the leader of his Party, Mr. Sarat Chandra Bose was present and took part in the discussion that took place. Therefore he should question Mr Sarat Chandra Bose.

The Mayor: There is nothing to be hidden. I spoke in a general way, while Mr. N. C. Chatterjee gave details. But where you work on a party basis, whenever any discussion is to take place with gentlemen outside the Party, it is the leaders, who sit in consultation. If a settlement had been arrived at, we should have been very happy. Unfortunately there was no settlement. We tried to bargain, but perhaps we were not very good bargainers. Whatever view you take, the problem before us is, what are we going to do to-morrow?

Mr S. C. Ray Chaudhuri: You, Mr. Mayor, are aware that in this particular matter we differ most respectfully from our leader There was a strong divergence of opinion and we respectfully differed from our leader. That was known to you and also to Mr Ispahani. The reason which impelled us to support Mr Mukerjea's re-appointment was that we were anxious to defer the enactment of the Bill in which Government were seeking to take power to appoint a person of their own choice in the post of the Chief Executive Officer. Now, the Chief Executive Officer cannot give any word without any consultation with us. Therefore we should be given an opportunity to go and talk to him and see if a settlement can be arrived at. We should be given a chance in this matter

Mr. L. P. Atkinson said. I wish to endorse what Mr Burns said. Let us take the common-sense point of view We are hedged round by legal difficulties In other words we have been cornered by the Chief Executive Officer legally. He has placed us in an absurd position but we are the masters. From that point of view I think it is frightfully wrong for the Chief Executive Officer—a servant of this body—to stop by one stroke of his mighty pen the whole administration of the Corporation Now, my point of view is this, that we Councillors are masters in this House. In case of emergency this House is entitled to pass whatever resolution they like to deal with the emergency Assume that the Corporation acts illegally to-night and passes a resolution which is against the spirit of the Act Assume also that a certain member of the Corporation goes to the High Court and asks for a ruling that the Corporation resolution is *ultra vires* and not in accordance with the Act. Now, as Mr Burns said, we are acting from the common sense point of view and I am sure that the Judge will also take the common sense point of view. If by passing an illegal resolution the Corporation saves, say, the health of the city, I am sure no Judge of the High Court will consider the legal position only and not take the common-sense point of view as well. Any resolution that we may pass to-night will operate until such time as we do appoint a Chief Executive Officer What will happen in the *interim* period? Nothing more

than this, that the ordinary work of the Corporation will go on as usual. We shall not be delegating any extra-ordinary powers to anybody but just those powers which will enable the Heads of Departments to carry on the ordinary work of the Corporation under the direction of the Chief Executive Officer. I also endorse every word that Mr. N. C. Chatterjee uttered with one exception and that is that I do not entertain any hope that there will be a settlement between the Government and Mr. Mukerjea because of the act done by him before the conference met. I could quite understand Mr. Mukerjea withdrawing his delegation after the conference but certainly not before the conference.

At this stage, at the suggestion of Mr. N C. Chatterjee, the House adjourned till 7-30 p.m.

Mr. Hamoodur Rahman: On a point of order, Mr. Mayor, you adjourned the House till half-past seven, since then 15 minutes have elapsed and yet we have not resumed the proceedings.

The Mayor: I did adjourn the meeting till 7-30 p.m. but as everything is being done in an extraordinary manner I have allowed all these minor legal points to be waived to-night.

Mr. D. N. Mukherjee: May I say some words regarding the action that has been taken by Mr. J. C. Mukerjea?

Mayor: Let us talk to-night as much as we can.

Mr. B. N. Roy Chowdhury: Can we say anything about the merits and demerits of Mr. J. C. Mukerjea as Chief Executive Officer?

Mayor: My whole object is to bring peace where there is trouble and therefore, if you use milder expressions and language it will be better. Mr. J C. Mukerjea is here and I am given to understand that he wishes to make a statement before the House. I hope you will give him a patient hearing.

The Chief Executive Officer: I thank you for the opportunity you have given me to say what I feel about this matter. I have been approached by various members of the House and in deference to the wishes of leaders of different sections of the House, I have decided to agree to my appointment for a further period of 15 months. I understand that you wanted to hear this from my own mouth. I am here and I say that I am agreeable to work for a further term of 15 months.

Mr. D. N Mukherjee: May I know the names of those members of the House who approached the Chief Executive Officer?

Mayor (to the Chief Executive Officer): The House is also very auxious to hear from you that the notice which you issued has been withdrawn, because the arrangement that was to be, was subject to that condition-precedent.

The Chief Executive Officer: I might tell the House the reason why that notice was issued. I thought that as I would leave the Corporation to-morrow and as the powers which had been delegated to me and re-delegated by me to the different officers were subject to the exercise of my supervision, it would be best to hand the powers over to the Corporation before I left. Now, I would certainly withdraw the notice and see that the work was carried on in the best possible manner.

Mr B N. Roy Chowdhury: After the statement made by Chief Executive Officer I think that the term of 15 months which was offered by Government might be accepted.

Mr. N. N. Mookerjee: How does that question arise?

Mr. Satish Ch. Bose: I oppose any further move on the part of the Corporation We must take up an attitude consistent with the dignity and self-respect of the House. I am surprised to find that the Chief Executive Officer on the last day of his term would so far forget himself as to withdraw all the powers delegated by him to his subordinate officers.

Mr. P. K. Dutta: Is Mr. Bose entitled to speak when there is no item before us?

Mr. Satish Ch. Bose: After having eaten the salt of the Corporation for about 20 years, Mr. J. C. Mukerjea is leaving behind a most ungracious and unhandsome act by withdrawing the powers delegated by him to his subordinate officers.

Mr. S. C. Rai Chaudhuri :Mr. Mayor, You should allow us to speak on this.

Mr Satish Ch. Bose :Consistent with the self-respect and dignity of the House we must open the door and say to Mr. J. C. Mukerjea "Now, leave the Corporation", but instead of doing that, you are beseeching the Government to allow him a further term of office.

Mr. N. N. Dalal: On this momentous occasion

Mayor: I know that some members have strong feelings on the subject but a majority of the House feels that the work of the Corporation should go on. Our first consideration should be that in view of the difficulties that have arisen how best can we carry on the good work of the Corporation. Even if any brother of ours is irritated or annoyed, may I beg of other members not to retaliate (cheers).

Mr. N. N. Dalal: I would request Mr. Bose to withdraw the remarks made by him concerning the Chief Executive Officer.

Mr. Satish Ch. Bose: I refuse to withdraw the remarks.

Mayor: It seems that my appeal is wasted.

Mr. N. N Dalal: The Mayor should protect an officer against whom certain adverse remarks are made in his absence.

Mr. N. N. Mookerjee: What is the procedure we are going to follow? What is the constitutional position? The Government have only the power to approve or disapprove the appointment we have made They have no power to reduce the term that we have sanctioned or to suggest any other modification of the Corporation resolution. If any modification has to be made, it has to be made by this House at a properly constituted meeting The only thing we can do to-day is to see that there is no deadlock. Unless you are prepared to suspend all the Rules I do not know whether before convening a proper meeting you can discuss the question of the appointment of the Chief Executive Officer or discuss the situation which has arisen. I do not know whether that is allowed under the Rules, I am asking a question.

Mr. M. A. H. Ispahani: I do not want to import further heat into the controversy. I want to make a statement. I was certainly one of those who requested Mr. J. C. Mukerjea to accept the offer of the Government and I appreciate the difficult position Mr. Mukerjea is in. But once Mr. Mukerjea refused to accept the offer of 15 months' office that was made to him by telephone by Mr. Watson, I had nothing further to say. I did not approach Mr. Mukerjea after that. Therefore as Mr. Mukerjea's statement is liable to be misunderstood that in view of the persistent requests made by various party leaders he had to reconsider his former decision, I only want to make it clear that I did not approach Mr. J. C Mukerjea after his definite dicision not to accept the offer.

Mr. B. N. Roy Choudhury: Although I am agreeable to the proposal for the appointment of Mr. Mukerjea for a further term of 15 months, there is a difficulty in our way. The point is that the appointment has first to be made by the Corporation The Government cannot appoint Mr. J. C. Mukerjea for a period of 15 months unless the Corporation in the first instance appoints him for the said period I am very anxious to see that the machinery of the Corporation is not stopped, but at the same time, we have got to do things in a regulear way as otherwise we might leave the Corporation open to damages to the extent of lakhs and lakhs of rupees I do not see how we can make such an appointment now.

The Mayor: Unfortunately the dates are so awkward that there is hardly any time left to us. No meeting of the Corporation can be held after the 31st March until a Mayor and a Deputy Mayor are elected, until new nominations have been announced by the Government and until the Standing Committees for the year have been constituted. That is why I suggested earlier in the evening that if the House allowed suspension of Standing Orders, if it could turn itself into a special meeting and if we could, after accepting the statement made by the Chief Executive Officer, send our recommendation, we could obtain the approval of the Government by to-morrow morning

The difficulty I am faced with now is that I tried to get the Hon'ble the Minister in charge of Local Self-Government on the telephone and failing him I tried to get into touch with the Hon'ble the Chief Minister who too was not available; probably the meeting of the Legislative Council had ended earlier than anticipated. I shall now have to go round the town if the House finally decides upon something definite. There are the legal hitches and there are many legal difficulties. Can the House not take a decision in anticipation of ratification and regularisation of its action at a later date? If it cannot, then this position would remain the same as at present.

Mr. Hamoodur Rahman: The obvious way of meeting the difficulties we are confronted with is to do nothing at all at the present moment. Let Mr. J. C. Mukerjea continue till the Government has signified its willingness to accept the recommendation of the Corporation for the appointment of Mr. Mukerjea for a term of 15 months. The formal sanction might come in a day or two. Meanwhile, I am sure, the Government will not come down upon the Corporation and force them to perform their duties in strict accordance to the statute

Mr. N. C. Chatterjee: I have to draw the attention of the House to Section 51 (1) of the Act. The Government have no power to appoint Mr. J. C. Mukerjea for 15 months or for any period.

The Mayor: What about part 3 of our second resolution?

Mr. N. C. Chatterjee: The Government can only approve or disapprove a resolution of the Corporation. Therefore, unless we put forward some resolution, nothing can be done.

Mr. M K. Majumder: Unless you rescind your previous resolution, you cannot make any fresh proposal.

The Mayor: I know that. There are those legal difficulties, difficulties of procedure and of the Act itself.

Mr N. N Dalal: If I might make a humble suggestion: Let the Government withdraw their order refusing sanction to the recommendations sent up by the Corporation and let them approve the third part of the resolution. The Corporation might meet in a month's time and send up a modified proposal for the sanction of the Government

The Mayor: That cannot be. It would be illegal.

Mr. B N. Roy Chowdhury: Now that Mr J. C. Mukerjea has agreed to accept 15 months' term, may we request him to re-delegate all his powers under Section 12 of the Act to the 1st Deputy Executive Officer or any other officer, and after the Mayoral election we will have a Special Meeting and appoint Mr. Mukerjea for a term of 15 months. That seems to be the only way out of the difficulty. If Mr. J. C. Mukerjea is amenable to reason, I am sure he will be, let him do so.

The Mayor: Let us find a solution.

Mr. S. C. Rai Chaudhuri: If we look at the Rules we shall find that we cannot do anything this way or that way. We began discussing this topic and there was some proposal for the appointment of an Acting Chief Executive Officer, some proposal of re-delegation of powers. All these we cannot do if we mean to follow strictly the Act and the Rules made thereunder. These Rules are sought to be avoided by what we are going to do here to-night. If we can do so, why can we not pass a resolution here and now making the appointment in anticipation of Government sanction in view of the settlement which had been arrived at?

Mr. P. K. Dutta: There are certain difficulties over the appointment of the 1st Deputy Executive Officer and there are certain irregularities which are to be subsequently rectified. Let us to-day make the appointment and if there is any irregularity we can rectify it when the Corporation meets after the Mayoral election when we could send up our recommendation for the approval of the Government.

Mr Syed Badrudduja: I entirely agree with Mr. S. C. Rai Chaudhuri. We may not follow the Rules strictly in view of the desperate situation which has arisen. I think that in view of the statement which Mr. J. C. Mukerjea was compelled to make, we might appoint him in anticipation of the sanction of the Government.

The Deputy Mayor: I think what you are going to do will not be legal because the matter is not before the House at all.

Mr. S. C. Ray Chaudhuri: Why did you start the discussion then?

The Deputy Mayor: I never started the discussion. The Mayor wanted to make a statement before the House as to what happened elsewhere lest there was a misapprehension that something was being hatched in secret, and in the course of the statement certain suggestions were made. I think we cannot appoint Mr. J. C. Mukerjea, or Mr. S. P Chatterjee or anybody else at this meeting because the matter is not before us. What was discussed there and the solution which was arrived at, if I have understood it, is this: The Government will be agreeable to sanction the appointment of Mr. J. C. Mukerjea for a term of 15 months but this should be regularised by the Corporation by sending another resolution to the Government to that effect in a properly constituted meeting when the Government will approve it. This is what they said not as Ministers but sitting as friends to solve some difficulties. The Hon'ble the Chief Minister clearly stated that he was not to be considered as Chief Minister, and if the proposal came up through the proper channel in the interest of the welfare of the Corporation they will consider the proposal as Ministers. In my opinion, what we can do is to make some temporary arrangement.

Mr S. C. Ray Chaudhuri: How can you do that without proper notice?

The Deputy Mayor: You must find a desperate remedy for a desperate situation. I know that there is no item of business before us and so it is irregular.

Mr. P. K. Dutta: If there is no item of business, how can you go on discussing this matter?

Mayor: We all know the Rules, you need not point that out. There is nothing new you are telling us

Mr P. P. Dutt: The Deputy Mayor appeared to be blowing hot and cold in the same breath.

The Deputy Mayor: I am drawing the attention of the House to Section 79 of the Act to which I again desire to call your attention.

Mr. S. C. Ray Chaudhuri: Why not apply that section to the case of Mr. J. C. Mukerjea?

Mr. B. N. Roy Chowdhury: We are making a request to Mr J. C. Mukerjea to do certain things which no body had said was illegal. We make the request to Mr. Mukerjea to save ourselves from an *impasse*

The Deputy Mayor: The Corporation might appoint somebody, X, Y or Z, to act as Chief Executive Officer for a certain term Although this might be irregular, this irregularity might be condoned in view of the desperate situation which has arisen

Kaviraj Satyabrata Sen: All the difficulties will be solved if the Government withdraw their order refusing sanction to the appointment of Mr. J. C. Mukerjea.

The Deputy Mayor: Mr. Fazlul Huq and the Nawab Bahadur of Dacca personally discussed the matter and they were very clear on that point. They did not discuss the matter as Ministers, even as Ministers they might refuse the appointment.

Mr Debendra Nath Mukherjee: I agree with Mr. B N Roy Chowdhury that it will be better to ask Mr. J. C. Mukerjea to re-delegate his powers to the 1st Deputy Executive Officer and a date might be fixed in April to appoint Mr. Mukerjea for a term of 15 months

Mr. N. C. Chatterjee: I wanted to clear the misapprehension that we did not go to Ministers but discussed the matter with Mr. Fazlul Huq and the Nawab Bahadur of Dacca. The following letter which I received signed by the Hon'ble Minister in Charge of Local Self-Government would make the position quite clear:—

"Dear Sir,

We shall be obliged if you meet the Hon'ble the Chief Minister and myself this afternoon at 4-30 p.m. in the room of the Hon'ble the Chief Minister at the Assembly House to discuss the question of the appointment of the Chief Executive Officer of the Calcutta Corporation.

Kindly consider this urgent."

We met the Hon'ble the Chief Minister and the Minister in charge of the Local Self-Government Department. We realised the difficulty in making an appointment to-night, but we must resolve the deadlock, we must end the *impasse* in view of the reasonable attitude taken up by Mr. J. C. Mukerjea. It seems to me that there is only one course open to us and I therefore move:—

"*That the Chief Executive Officer be directed to delegate all his powers to the 1st and/or the 2nd Deputy Executive Officer for a period of one month pending his appointment as Chief Executive Officer at a special meeting of the Corporation.*"

Mr. B. N. Roy Chowdhury: In seconding Mr. N. C. Chatterjee's motion I desire to make it clear that we are not passing a regular resolution of the Corporation but I am sure that Mr. J. C. Mukerjea will accede to the request that is being made to him by the Corporation.

Mr. S. C. Ray Chaudhuri: We agreed that if Mr. J. C. Mukerjea is agreeable to our terms then we can allow him to continue and request the Government to re-consider their decision. With that end in view we brought Mr. Mukerjea here and we asked him to tell the House what he meant to say and he did it. That being so, I do not think we should adopt the resolution as moved by Mr. N. C. Chatterjee. Even the resolution moved by Mr. Chatterjee was not regular as there was no notice of the motion. We are not going to consider such a motion if Mr. Chatterjee insists on it.

Mayor: What is the resolution you suggest?

Mr. S. C. Ray Chaudhuri: In any event, we cannot to-night observe the Rules. If you resort to the Rules and the Act, we cannot do anything but go away leaving the matter as it is. If you can do this or do that, why can you not appoint Mr. J. C. Mukerjea by modifying your former resolution in expectation of sanction of the Government?

Mayor: You may propose it.

Mr. S. C. Ray Chaudhuri said that as pointed out by the Deputy Mayor, they could have recourse to Section 79 of the Act. He formally moved:—

"*That in modification of all Corporation resolutions to the contrary, the Corporation re-appoints Mr. J. C. Mukerjea as the Chief Executive Officer of the Corporation for a further period of 15 months from 1st April, 1941, on his present pay and emoluments and that the resolution be forwarded forthwith to the Government of Bengal for approval under Section 51 (1) of the Act.*"

Mr. N. N. Dalal seconded.

Mr. N. N. Mookerjee: Whatever we do to-night would be irregular. The Heavens would not come down upon us if things were left in their present state for 2 or 3 days. Let us call a meeting to elect a Mayor and a Deputy Mayor in three or four days and after their election, let us convene a special meeting to appoint a Chief Executive Officer whoever he might be. I do not think we can do anything more to-night. There is another aspect of the question. If the powers are returned to the Heads of the Department they could function independent of the Chief Executive Officer. It might be that there are some very important functions which we specifically delegated to the Chief Executive Officer himself but it does not follow that the whole administration of the Corporation would go to pieces because we have no Chief Executive Officer. The Deputy Executive Officers could function. That is the only constitutional way in which we can proceed.

Mr. Syed Badrudduja: Can the powers which have been withdrawn from the Heads of the different Departments by the Chief Executive Officer be re-delegated to the Departmental Heads to-night without calling a special meeting? I think we cannot do so. Why should the Chief Executive Officer who has already withdrawn the powers re-delegate them to the various Heads of Department unless we consider his statement as that of a gentleman? (Cheers).

The Mayor: I have this very moment sent a slip of paper enquiring of the Chief Executive Officer whether he had withdrawn the notice. If he says yes, it will be all right.

Mr. Syed Badrudduja: In deference to a general desire of the House the Chief Executive Officer agreed to withdraw the notice in the hope that his statement should be accepted on its merit, that we are in a mood to appoint him in the light of the new developments. The only course for us is to appoint him as otherwise it is no use dragging in a man and compromising his position.

Mayor: I cannot allow that remark of Mr. Badrudduja to go unquestioned. It is a question of the honour of this House (cheers). If the Chief Executive Officer takes it into his head to act in a manner derogatory to the dignity of the House, we have to put him right. On that point I am adamant. The Chief Executive Officer was to get 15 months conditional upon the withdrawal of the circular. The work of the Corporation must not be interferred with by anybody. I am trying to find out the easiest solution of the difficulties we are faced with. The *status quo ante* will be restored automatically the moment the Chief Executive Officer does that. I do not think there is any humiliation involved in it At any rate, I cannot allow the dignity of the House to be compromised. I shall put Mr S. C. Ray Chaudhuri's motion, the second one, to the vote first and if that is accepted, Mr. N. C. Chatterjee's motion will drop automatically.

Mr. Syed Badrudduja: I am afraid that I was wholly misunderstood. What I meant to say was this: Mr. J C. Mukerjea was brought into the House by a responsible leader of a particular group of the House with the clearest understanding that if he would agree to a 15 months' term, the House would agree to send up a modified proposal to the Government in view of the desperate situation created by certain forces over which they had no control. We can send up a modified recommendation, and in doing so I feel there is no humuliation The Chief Executive Officer might have withdrawn powers re-delegated by him to certain officers. If he has withdrawn he has done so in his right I think there is absolutely no humiliation, no insult meant to the House when the Chief Executive Officer withdraws powers which are vested in him.

The Mayor The honour of the Corporation demands that the servant shall withdraw a circular which the House in its wisdom considers to be a wrong act The opinion of leaders of various sections of the House is that Mr J C Mukerjea's action is wrong and derogatory to the dignity of the House. It is for this reason—it does not matter whether Mr J C Mukerjea had acted rightly or wrongly—that I insisted that the withdrawal of that circular shall come first and then the 15 months' term. The dignity of the Corporation has to be preserved. The withdrawal will also help further negotiations

At this stage the Mayor read out to the House the following note received from the Chief Executive Officer:—

"The above order is withdrawn provided the powers and functions are exercised under my supervision."

J. C. Mukerjea,
Chief Executive Officer.
31-3-41.

The original order ran as follows:—

"The powers and functions delegated or re-delegated by me as Chief Executive Officer to different officers of the Corporation are hereby withdrawn."

J. C. Mukerjea,
Chief Executive Officer.
31-3-41.

Mr. B. N. Roy Chowdhury: We should now come to a decision I wish to remind the House that after 12 o'clock this opportunity will be lost.

Mr. Hamoodur Rahman: I wish to point out that the motion of Mr. S. C. Ray Chaudhuri does not seem to be in order. My reason for saying so is this: A little while ago, this House imposed a cut of 25 per cent. in the salary of the Chief Executive Officer but the salary of the Chief Executive Officer is not subject to such a cut in the motion as moved by Mr. S. C. Ray Chaudhuri.

Mr. N. N. Mookerjee: I move that we do nothing to-night. We insist on the Chief Executive Officer delegating powers back to the Heads of Departments unconditionally. Secondly, we meet at the earliest opportunity in April to elect a Mayor and a Deputy Mayor. Thereafter, a special meeting may be called at as early a date as possible to appoint a Chief Executive Officer.

Mr. Debabrata Mukherjee: I move:—

"That except in so far as statutory functions exercisable by the Chief Executive Officer qua Chief Executive Officer are concerned, the Deputy Executive Officers continue to carry on the administration till such time as a Chief Executive Officer is appointed."

The Chief Executive Officer must re-delegate the powers to the Deputy Executive Officers. Of course, this resolution will have no effect unless and until those powers are re-delegated to the Deputy Executive Officers which will be a condition-precedent to the passing of this resolution, if accepted by the House. I ask the House to pass this resolution and do nothing further to-night, because, as soon as possible, we shall meet to elect a Mayor and a Deputy Mayor and after that appoint a Chief Executive Officer.

Mr. P. K. Sett seconded the motion.

Mr. W. A. Burns moved: *"That in the present emergency and in the face of the legal impasse Mr. J. C. Mukerjea do continue to act as Chief Executive Officer subject to the powers delegated to him and by him re-delegated to his officers until a proper meeting can be called to submit a fresh proposal to the Government."*

Mr. Md. Israil seconded.

Mr. N. N. Mookerjee: We shall be surcharged if we pass such a resolution.

The Mayor: I have no hesitation in affirming that the Chief Executive Officer could have been a bit more generous in his language and helped us to get out of this difficulty.

Mr. D. N. Mukerjee: I believe he is coercing us into appointing him.

Mr. S. C. Ray Chaudhuri: There is suspicion on both sides.

Mr. L. P. Atkinson proposed *that the House do take up and consider Item No. 14 in the Agenda.* He thought the Corporation would not come to an end if they wanted for a few days and took up the question of the appointment of a Chief Executive Officer at a Special meeting after the Mayoral election at as early a date as possible.

The proposal of Mr. Atkinson was put to the vote and declared *lost*

Mr. B. N. Roy Chowdhury thought that it should be made clear to the House that all these resolutions were not to be taken as resolutions of the Corporation but as resolutions of a public meeting. This was nothing more than that.

Mayor: *I rule that whichever resolution is accepted by the House will be a resolution of the Corporation legally defective to be regularised later on but tonight passed under section 79 of the Act.* I know that you cannot commit a mistake deliberately and yet the law has its own fiction and we have to act fictitiously sometimes.

The Mayor then read the motion of Mr. Burns.

Mr. B. N. Roy Chowdhury protested against this sort of proceeding. He wanted a ruling from the Chair if they could take up a motion of which 48 hours' notice was not given.

The Mayor: I am trying to be as illegal to-night as I could. Any member of the House will have the right under the law to approach the Court and bring an injunction against me. I take the fullest responsibility for any decision taken here to-night (cheers). The Corporation must function. And if it can do that, I am prepared to go down on my bended knees before all and sundry, for the good work of the city must go on. Members do not know how humiliated I am feeling, but

personal sentiment must give place to the welfare of the city. That is the background on which I have been thinking and working. I have not the slightest hesitation in confessing that as a member of the Muslim League I entered the Corporation to remove Mr. J. C. Mukerjea from the post he was occupying, and yet to-day, I am here advocating Mr. J. C. Mukerjea's cause. Circumstances have changed, minds have changed and ideas have changed. The Muslim League has gone back upon its own decision, the Forward Bloc has broken into two. Whatever we do we should have the interest of the city at heart and give it precedence over every thing else.

The motion of Mr. W. A. Burns was then put to the vote and declared *carried*.

A poll was demanded.

Mr. M. A. H. Ispahani: Before the poll is taken let me say that we shall be voting against the motion because in our opinion this motion is irregular.

Mr. B. N. Roy Chowdhury and Mr. N. N. Mookerjee expressed the same view as Mr. Ispahani did.

Mr. M. A. H. Ispahani: We are not expressing our hostility.

Mayor: I am not prepared to listen to these explanations. Take a decision, if you do not want to take it, remain neutral if you like or oppose. I am not forcing any body to express any particular views. A poll has been demanded. Let us take it. Why these explanations? Are they qualms of conscience?

Mr. M. A. H. Ispahani: No, this is not a question of conscience.

The poll was allowed and taken with the following result :—

For.	*Against.*
(1) Mr. Sudhir Ch. Ray Chaudhuri.	(1) Mr. Adam Osmaan
(2) Mr. Hridoy Krishna Ghose.	(2) Mr. Taj Mohammad.
(3) Mohan Lall Mackar.	(3) Mr Amulya Ch. Mitter
(4) Mr. Madan Mohan Burman.	(4) Mr. Pupvangsu Kumar Seth.
(5) Mr. Debjiban Banerji.	(5) Mr. Gulzaldas Mohata.
(6) Mr. Anandi Lal Poddar.	(6) Mr. Indra Bhusan Bood.
(7) Kaviraj Satyabrata Sen.	(7) Mr. Naresh Nath Mookerjee.
(8) Mr. Jagannath Kolay.	(8) Mr. Bejoy Kumar Banerjee.
(9) Mr. Tulsi Charan Ray.	(9) Mr. Satish Ch. Bose
(10) Mr. Bepin Behari Ganguly.	(10) Mr. Debabrata Mukherjee.
(11) Mr. Bepin Behari Sadkhan.	(11) Mr. Phanindra Nath Brahma.
(12) Mr. Sudhangsu Kumar Mitter.	(12) Mr. Dhirendra Kumar Mazumdar.
(13) Mr. Profulla Kumar Dutta.	(13) Khan Bahadur Moulvi Md. Solaiman.
(14) Mr. Pulin Behari Khatik.	(14) Mr. Abdur Rezak.
(15) Mr. Harihar Das Chowdhury.	(15) Mr. Hamoodur Rahman.
(16) Mr. Dhirendra Nath Ghosh.	(16) Mr. M. A H Ispahani.
(17) Mr. Krishna Ch. Ghose.	(17) Mr. M. A. Jubbar.
(18) N. C. Chatterjee.	(18) Mr. Md. Mohsin Khan.

(20) Mr. Bidhu Bhusan Sarcar.	(20) Mr B. N. Roy Chowdhury.
(21) Mr. Narendra Nath Dalal.	(21) Mr. Sarfuddin Ahmad.
(22) Jogesh Ch. Ghose.	(22) Mr. Pulin Behari Mullick.
(23) Mr. Fakir Ch. Ghose.	(23) Mr. Anukul Ch. Das.
(24) Mr. Syed Badrudduja.	
(25) Haji Md. Yusuf.	
(26) Mr. Md. Israil.	
(27) Mr. S. A. Habib.	
(28) Sk. Basir Ali.	
(29) Mr. Abdul Matin.	
(30) Dr. Sadeque Hossain.	
(31) Mr. Suresh Ch. Varma.	
(32) Mr. Ziauddin Ahmad.	
(33) Mr. E S. W. Haward.	
(34) Mr. W. R. Humphrey.	
(35) Mr. F. G. Watson.	
(36) Mr. J. J. M. Bloch.	
(37) Mr. Maskarenhas Johan.	
(38) Mr. [illegible] A [illegible]	

Mr. Debendra Nath Mukherjee and Mr. Mrigendra Kumar Mazumdar refrained from voting.

The Mayor announced that the result of the poll was that 39 voted for and 28 against the motion while two members did not vote. The Mayor declared *Mr Burns' motion carried*

Resolved—

That in the present emergency and in the face of the legal impasse Mr J. C. Mukerjea do continue to act as Chief Executive Officer subject to the powers delegated to him and by him re-delegated to the officers until a proper meeting can be called to submit a fresh proposal to the Government.

The Mayor To-night was the night for my swan song according to the tradition of the House. But members reserve their right to speak after proposing or seconding a motion—Mr. Burman has taught me this; I reserve to myself the right to sing my swan song on the day when the new Mayor takes office. I declare the meeting closed. It is a pity we have not been able to finish the Agenda.

Mr Hamoodur Rahman What about the grants which have been left over?

Mayor Let us leave them to my successor

NOMINATED COUNCILLORS

The Governor's Choice For 1941-42

A *Calcutta Gazette Extraordinary* states that the Governor has appointed the following to be Councillors of the Corporation of Calcutta —

(1) Mr B N Roy Chowdhury, Barrister-at Law
(2) Mr Madhub Charan Law
(3) Mr Pulin Behari Mullick M L A
(4) Mr. Anukul Chandra Das M L A
(5) Mr Pachu Kali Shaw
(6) Rai Bahadur Nelson C Bose
(7) Mr S Sharfuddin Ahmad and
(8) Mr Tanweer Ahmad

The Governor has also directed that these Councillors shall hold office up to March 31, 1942

CHIEF EXECUTIVE OFFICER'S APPOINTMENT

INJUNCTION PETITION AT HIGH COURT

(Before Mr. Justice [redacted])

Manindra Nath Banerjee and another

vs.

Jyotish Chandra Mukerjea and another.

This *ex-parte* application was made on April 4, on behalf of the plaintiffs-petitioners Manindra Nath Banerjee, a barrister and rate-payer, for himself and other rate-payers and Satish Chandra Bose, a Councillor and barrister also for an injunction restraining both the defendants, J. C. Mukerjea and the Corporation of Calcutta, from acting in pursuance of resolution, said to have been passed at meeting of the Corporation on March 31 last.

Mr. Sarat Chandra Bose, Mr. P. C. Basu and Mr. P. B. Mukherjee appeared for the petitioners.

In reply to his lordship, Mr. Bose said that he was questioning the resolution, dated March 31, 1941, regarding the continuance of Mr. Mukerjea as Chief Executive Officer of the Calcutta Corporation. Counsel continued that this appointment had to be sanctioned by the local Government but before the Corporation could discuss any resolution relating to the appointment 48 hours' notice had to be given to the Councillors and Aldermen. In this case no such notice was given. In March 31 last notice was given for five special meetings of the Corporation but there was nothing in any of the agendas of those meetings in this connexion. No notice of any resolution relating to Mr. J. C. Mukerjea or of any resolution to the effect that Mr. Mukerjea might continue for a certain period after the expiry of his term of office on March 31 last, was given.

Mr. Bose stated that the Corporation on two previous occasions had passed resolutions appointing Mr. J. C. Mukerjea as Chief Executive Officer for a further period of two years These resolutions were sent to the local Government for approval but twice the local Government had turned down the proposal. Approval of the local Government had to be obtained by the Corporation under Section 51 of the Calcutta Municipal Act.

In reply to his lordship, Mr. Bose said that there was a conference on March 31, 1941, with certain ministers of the Government to settle the matter which came to nothing Eventually, what was done after that conference was that certain members went back to the Corporation and without giving any notice to any councillor or alderman, proposed the resolution in question. The Mayor who presided over the meeting admitted that it was illegal but instead of dissolving the meeting allowed it to continue

Mr. Bose said he was not applying for an *interim* injunction to-day but he asked for leave to serve short notice for Tuesday next and that the defendants be directed to file their affidavits in opposition by 12 o'clock on Monday next.

His Lordship granted the prayer, the application was fixed for hearing on Tuesday next with notice to the parties.

Attorneys: Mr. [illegible]

COUNCILLORS' PETITION

This was an application made on April 7, on behalf of the petitioners Major Stanley Edwin Tee, Charles Griffiths, Sudhangsu Kumar Mitter and six other Councillors and also on behalf of five other petitioners, stated to be rate-payers including Major Provat Kumar Burdhan, for an order that the petitioners be added as parties defendants to the suit brought by the plaintiffs. Manindra Nath Banerjee and Satis Ch. Bose against J C Mukerjea and the Corporation of Calcutta.

Mr. B. C. Ghose and Mr. Clough appeared for the petitioners; Mr. Sarat Bose, Mr. P. C. Basu and Mr. P. B. Mukherjea for the plaintiffs on notice to the plaintiffs' attorney by letter.

Mr. Ghose said that the petitioners did not agree to the suit being filed by the plaintiffs and they wanted to be added as defendants on the ground that the suit was not a representative one and that it was frivolous and *malatide*.

Mr. Bose said that there was no time to reply to the facts stated in the petition (of the present petitioners). To cut the matter short, he had no objection to the petitioners being added as parties defendants. This was without prejudice to his rights to deal with anything contained in this petition, should any matter contained therein be used in the affidavits in opposition to Mr. Bose's application for an injunction.

Mr Bose then said that the matter (application for an injunction) was very urgent and if it appeared at the bottom of the list on Tuesday, which was the day fixed for its hearing, there was very little chance of its being heard. From his point of view, the person appointed Chief Executive Officer had no right to be there, and every order that he was making was illegal. It was a pure question of law and there were no facts in dispute, so far as Mr. Bose could judge. He, therefore, suggested that the matter should be taken up on Tuesday morning or at 2-30 p.m. on Tuesday

Mr. Ghose suggested that Wednesday morning would be better, as he would have to deal with the petition of the plaintiffs for the injunction. He thought that there was no urgency in the matter.

His Lordship directed that the matter should be put at the top of the motion list on Wednesday.

Mr. S. B. Sinha then asked for leave to file the affidavits in opposition to the application of the plaintiffs for an injunction.

Mr. Bose said that the affidavits in opposition were to have been filed by 12 o'clock but this had not been done. Subject to his objection, they might be filed.

1. Babu Sudhir Kumar Chatterjee, representing Sm. Saila Bala Dasi—Simla Road *Bustee*
2. ,, Binode Krishna Banerjee—14, Bibi Bagan Lane.
3. ,, Ramendra K. Neogy, representing Babu Nripendra Narain Deb—Pottery Road and Ananda Palit Road.
4. ,, Dwarka Nath Chatterjee—16/2/1A, Baghbazar Street.
5. ,, Haradhan Pal—21, Sashi Bhusan Dey Street
6. Moulvi Hafiz Md Fateh Nasib—3, Ballygunge Circular Road.
7. Mr. K. P. Banerjee, representing late Prio Nath Bhattacherjee—15B, Monoharpukur Road
8. ,, K. C. De son of late Kalipado De—31, Christopher Road.
9. Babu Ram Sankar Bag, representing Sm Moti Bala Debi—63, Chingreeghata
10. ,, Prionath Guha, representing Haridas Shaw.
11. ,, Bibhuti Bhusan De, representing Sudhir Ch. De—Karbala Tank.
12. Mr. Bula Bux, representing Rai Saheb Sundermull—Kidderpore *Bustee*.
13. ,, S. H. Sur, representing Central Bank of India, Ltd.—Bhukoilash Estate
14. ,, N. Bose, representing Central Bank of India Ltd.—Elliot Road property.
15. ,, J. N. Sircar, representing Collector, 24-Parganas—Manicktala Area.
16. ,, S N. Ghose, Deputy Magistrate, representing Collector 24-Parganas—Manicktala Area.
17. Babu Gour Hari Mitra, representing Narendra Mohan Tagore—3, Raghu Nandan Lane.
18. ,, Gobinda Chandra Pal—10, Sashi Bhusan De Street.
19. Sm. Elokeshi Dasi, representing Narayan Chandra Mitra—8, Mohan Bagan Lane.
20. Babu Promatha Nath Bhowmic, representing S. C Banerjee—36, Sarker Lane
21. Mr. H. K. Basu—40/1, Tangra Road.
22. Babu Chuni Lal Biswas—3, Olai Chandi Road
23. Mr. S. A. Rahman—13, Rai Charan Pal Lane.
24. ,, Md. Ibrahim—3, Convent Lane.
25. ,, Akbar Ali—Ahiripukur 2nd Lane.
26. Babu Sachindra Nath Kundu—38/1, Harish Neogy Road
27. ,, Nagendra Sett—1/2, Rustomjee Parsi Road, Cossipore.
28. ,, Manick Lal Chakrabarty—71, Manicktala Main Road.
29. ,, Ashutosh Ghosal, representing Raja Rajendra Mullick Debuttar Estate.

30. Babu Mohini Mohan Ghosh, representing Jatindra Lal Dhar —Upper Circular Road.
31. Mr. T. N. Laha, representing Sham Lal Laha—69, Prem chand Boral Street.
32. Babu Ananta Mohan Roy Chowdhury, representing Sm. Satya Rani Dasi—20, Raja Dinendra Street.
33. ,, Jatindra Mohan Saha, representing Rai Satish Chandra Chowdhury Bahadur and ors.—Olai Chandi *Bustee*.
34. Mr. S. C. Ghosh—69, Manicktala Main Road.
35. ,, S. M. Moslem—15, Bechulal Road—Rani Swarnamoyee Road.
36. ,, B. K. Hazra, representing Estate of Sm. Sindhu Bala Dasi--Beliaghata *Bustee*.
37. Babu Santosh Kumar Banerjee, representing Sm. Sindhu Sudha Dasi--Tangra.
38. ,, Ananga Mohan Das, representing Sailendra Nath Addhya--97, Hazra Road.
39 ,, Hari Das Bhadra, representing Madan Mohan Mulllick Roy—Harrison Road.
40. ,, Bimala Kanta Das representing Shamlall Sil--Kala Bagan, 250, Muktaram Babu Street.
41. ,, A. D. Addy.
42. ,, Bhupendra Krishna Ghose, represented by Babu Tulsi Prosad Mitra--Pathurighata Street.
43. ,, Gobinda Prosad Mitra, representing Mr. Sachindra Nath Mukherjee, Receiver of Bhukoilash Debuttar Estate—Bhukoilash.
44. ,, Subimal Chatterjee—33, Linton Street.
45. ,, Akshoy Kumar Banerjee.
46. ,, Rakhaldas Pramanick.

CHIEF EXECUTIVE OFFICER.

The Chief Executive Officer in requesting the Mayor to open the Conference said :—

GENTLEMEN,

This Conference was convened for 5 p.m., but it is now about 5-20 p.m. and I do not think I should keep you waiting long. On your behalf and on behalf of the Corporation, I request the Mayor to open this Conference. Gentlemen, you remember that some time ago we had a consultation here in another room at which you very kindly accepted our invitation. The Mayor was also kind enough to attend that meeting and placed before you his views. I do not propose to repeat what he said at that meeting. There was a general concensus of opinion that the *bustees* in Calcutta needed more attention and, if you as owners of *bustees*, wish Calcutta to be regarded as a fine and healthy city, we must be prepared to clear or improve the slums. The question is what should be done at this stage. The Mayor has been going into this question of improvement of *bustees* very closely. He has very sound ideas and I am in entire agreement with him. He had already expressed to you his ideas. We are meeting here this afternoon to find out if we could not make a beginning. With your permission, Gentlemen, I now ask the Mayor to open this Conference.

THE MAYOR.

The Mayor in opening the Conference said :—

Gentlemen, there is nothing new that I can tell you this afternoon. We met at a small consultative Committee some weeks ago and as a result of conversations held then, we are meeting here today in their Conference. You will agree with me that the *bustees* are a disgrace to Calcutta. They have been there for decades and I feel that in this 41st year of the 20th century, we should unitedly do something that will make Calcutta habitable. To have these *bustees* slums as they would be called elsewhere in the heart of the city, nullifies any efforts that the Corporation may make to make the city healthy and to give civic amenities to the citizens in many direc-

tions for which the Corporation has been spending lakhs and lakhs of rupees every year. I admit our people have not reached a very high standard of cleanliness and hygiene, but that is primarily due to their poverty. Unless the better class of citizens and the organisations in the city come to their help nothing will avail. It is for this reason that I have given you the trouble to assemble here to-day and to help the Corporation in bringing about better surroundings for our poorer brethren. I know there are difficulties in your way. Things to-day are more difficult than they would have been had there been no war and yet I am asking you in the name of Calcutta—in the name of its poorer citizens—in the name of our labouring and working classes to come forward and join hands with the Corporation to give them a better life and better housing conditions than they have to-day. I am anxious that any programme of Bustee clearance that may be adopted should go ahead with your sympathy and with your co-operation. There is not the slightest intention to injure or to harm your interests but the time has now come when a definite forward step must be taken to remove and to eliminate these bustees from Calcutta. I beg of you to look at things in a more national way, in a more sympathetic and friendly way if you can. If there is a bit of financial loss, I beg of you to suffer it. It will be the effort of the Corporation not to put a burden on your shoulders which is heavier than what you are prepared to bear, but you will pardon my speaking frankly when I say that you have neglected to perform your duties. You have not given your tenants the amenities which householders and owners of property should have given. I know most of you are generous and nationally inclined. You want to see your properties better fitted up. Your tenants do not usually respond to your high ideals and that is exactly how the Corporation feels about you. It spends tons of money every year in trying to improve conditions and yet without your active help and co-operation all its efforts go to pieces. With a bad *bustee* and its insanitary conditions, there is always the danger of epidemics. The Corporation has to provide medical aid and adopt measures against epidemic diseases spreading over the city. It is spending over a lakh and half of rupees in trying to control mosquitoes. With ponds and service privies, with choked up gutters and drains, with abominable huts and their more abominable surroundings, all the money spent on these hygienic and health giving operations is wasted. Gentlemen, do you realise that Calcutta—the premier city of India, has not yet been able to provide free compulsory and primary education in the city? Why? For the simple reason that money is required in other departments to such an extent that we cannot spend more on this prime necessity, which the leaders of the country have been trying to secure for us for the last 50 years. I could go on talking to you like this, but I should not take more time. We have already been delayed. I would most earnestly appeal to you in the name of the city which is yours, in the name of its poorer population, even at the risk of some sacrifice, to come and help us. Let me tell you that if I can secure your co-operation, the Corporation will do its best but that is not all. We have the City Improvement Trust. If we approach them with the scheme to be drawn up by us in consultation with you, I feel certain that the Trust will have to consider the problem of the improvement of bustees more seriously. They have not paid much attention to this question till now which it deserves. When we have this institution along with us, I feel confident that we can secure not only the sympathies but perhaps financial assistance from the Government of Bengal. Then by working together for the common end of finding better housing conditions for our working classes we would be able, in God's good time, which I place at 10 years, to do things in a broad-minded and broad-based manner. I need not give you instances of other Municipalities. Those of you who have been to Europe must have seen how amenities are provided for the working classes there. Even in India, Bombay first and Madras afterwards, have given money and have made arrangements for habitable dwellings for the working classes. Calcutta unfortunately is lagging behind. If I have, as I have already stated, your support and co-operation and even your blessings in this matter, I shall consider myself a lucky man and, I think, you will earn the blessings of the poorer citizens of Calcutta. (Cheers).

Resolutions Adopted.

Mr. Amulyadhan Addy in moving the following resolution for the formation of a Joint Committee said: I take this opportunity of thanking you Mr. Mayor and the Chief Executive Officer for having given us an opportunity to attend this Conference with a view to lay before you the grievances not only of the owners of bustees but also of the poor hut-owners. Sir, at the last meeting it was decided to form this Joint Committee to consider the question of improvement of *bustees*. In moving the above resolution I appeal to you to look to the grievances of the *bustee*-owners. They are ready to co-operate with the Corporation for the improvement of the *bustees*. The Calcutta Municipal Act has given wide powers to the Corporation for improvement of *bustees*. Under Section 343 of the Act the Corporation may require by written notice the owners of any *bustee* to construct drains, privies, streets and passages etc., but unless and until the tenants are ejected nothing can be done. The *bustee*-owners cannot eject tenants unless they pay compensation. At the last meeting several suggestions were made. I have submitted eleven suggestions for the consideration of the Corporation. It is not practicable for the Conference to consider those suggestions and it is desirable, therefore, that the suggestions should be placed before the Joint Committee.

This Conference of the representatives of the Corporation and the Bustee owners is of opinion that the bustees in Calcutta have become a danger to the health of the city and stand in need of urgent improvement. The Conference, therefore, appoints a Joint Committee of twelve representatives of the Bustee-owners with the Mayor, the Chief Executive Officer, the 2nd Deputy Executive Officer, the Health Officer, the four District Health Officers and the four District Engineers to formulate proposals for the betterment of the bustees, particularly in regard to roads, lighting, water supply, drainage, sanitation and other amenities. It also recommends that the Committee should consider the types of the huts and tenements to be constructed in the bustees.

This Conference is further of opinion that the Bustee-owners and the Corporation should co-operate in carrying out the improvements decided upon by the Joint Committee and expect that the Bustee-owners individually and collectively will comply with and be prepared to implement the directions of the Committee.

This Conference also expects that the Corporation will extend its assistance and support in every manner possible to the recommendations of the Joint Committee.

Mr. B. K. Hazra seconded the resolution moved by Mr. Addy.

Mr. Benode K. Banerjee moved as an amendment that the Joint Committee should consist of 14, representatives of the *bustee*-owners instead of 12.

Mr. Addy accepted the amendment.

The Mayor: Before the House votes on this resolution I should like to point out that the right thing would have been to have included some members of the Corporation as well as some members of the tenants who live in *bustees*. We could have added more officers but the idea was to have 12 from the Corporation and 12 from the *bustee*-owners. I think the objection of Mr. Banerjee will be met if we add the words "with power to co-opt more members" after the words "District Engineers" in the resolution.

Mr. Gobinda Prosad Mitra: I think it will be better if we limit the number of members to be co-opted.

Mr. Sircar: Is it not desirable to take in the City Architect. He is a much more competent authority in planning and housing?

The Mayor: We shall seek his assistance whenever we think necessary. Not to speak of the City Architect we can get the assistance of any officer we require.

Mr. Guha: I suggest that of the 12 members from among the *bustee* owners a certain percentage of them should be technically qualified to understand what is being done in the Joint Commiittee.

The Mayor That is a point on which I can give no decision It will be for you to select them.

After some further discussion, the Conference agreed to the following resolution :--

This Conference of the representatives of the Corporation and the Bustee Owners is of opinion that the bustees in Calcutta have become a danger to the health of the city and stand in need of urgent improvement. The Conference, therefore, appoints a Joint Committee of twelve representatives of the Bustee Owners with the Mayor, the Chief Executive Officer, the 2nd Deputy Executive Officer, the Health Officer, the four District Health Officers and the four District Engineers with power to co-opt five more members to formulate proposals for the betterment of the bustees, particularly in regard to roads, lighting, water supply, drainage, sanitation and other amenities. It also recommends that the Committee should consider the types of the huts and tenements to be constructed in the bustees.

This Conference is further of opinion that the Bustee Owners and the Corporation should co-operate in carrying out the improvements decided upon by the Joint Committee and experts that the Bustee-owners individually and collectively will comply with and be prepared to implement the directions of the Committee.

This Conference also expects that the Corporation will extend its assistance and support in every manner possible to the recommendations of the Joint Committee.

Mr. Bejoy Kumar Banerjee: I move that the following members from among the *bustee*-owners be taken in in the Joint Committee :--

(1) Kumar P. N. Tagore, Bar-at-Law.
(2) Mr. A. Addy.
(3) Mr. Subimal Ch. Chatterjee
(4) Mr. Akshay Kumar Banerjee.
(5) Mr. Rakhal Das Pramanick.
(6) Mr Benode Krishna Banerjee, 14, Bibi Bagan Lane
(7) Mr. H. K. Basu, 40/1, Tangra Road.
(8) Mr. Chunilal Biswas.
(9) Mr. B. K. Hazra.
(10) Mr. S. M. Moslem, 12, Rani Sarnamayi Road.
(11) Mr. P. C. Mallik, and
the Mover.

The Conference accepted the motion.

Resolved: That the following members from among the *Bustee*-owners be taken in in the Joint Committee:—

(1) Kumar P. N. Tagore, Bar-at-Law
(2) Mr. A. Addy.
(3) Mr Subimal Ch. Chatterjee.
(4) Mr. Akshay Kumar Banerjee.
(5) Mr. Rakhal Das Pramanick.
(6) Mr Benode K. Banerjee
(7) Mr. H. K. Basu
(8) Mr. Chunilal Biswas.
(9) Mr. B. K. Hazra
(10) Mr. S. M Moslem
(11) Mr. P. C Mallik, and
(12) Mr. B. K. Banerjee.

The Mayor: If you have have any other names to suggest, you will kindly send them on to the 2nd Deputy Executive Officer, who will include them.

The Mayor: I thank you Gentlemen very much for having helped us in making a beginning. Let me also tell you that although there is no definite assurance or programme. Government will help us as far as it can in its present financial difficulties to do all what the Committee may recommend as regards the Halsibagan and other *bustee.* I had a talk only yesterday with the officers who are dealing with this aspect of Government arrangements and the encouragement I received from them was very helpful and encouraging.

Mr. Mullick next moved as follows:—

"That the resolutions already sent to the 2nd Deputy Executive Officer be forwarded to the Joint Committee for consideration.

Mr. Addy: I suggest as an amendment that the words "and to be sent" be added after the word "sent" in the first line.

The motion as amended was accepted by the Conference;

Resolved: That the resolution already sent *and to be sent* to the 2nd Deputy Executive Officer be forwarded to the Joint Committee for consideration.

The Chief Executive Officer, Mr. J. C. Mukerjea next moved—

"That the 2nd Deputy Executive Officer do act as Secretary to the Joint Committee".

Mr. Addy seconded the motion, which was carried.

Resolved—

That the Deputy Executive Officer II do act as Secretary to the Joint Committee.

Mr. Subimal Ch. Chatterjee next proposed a vote of thanks to the Mayor.

The Conference then came to a close.

FIRST CORPORATION MEETING OF THE YEAR 1941-42

ELECTION OF MAYOR AND DEPUTY MAYOR

AT the first meeting of the Corporation in 1941-42 held on Monday, the 28th April, 1941, MR. PHANINDRA NATH BRAHMA and MR. M. A. H ISPAHANI were elected MAYOR and DEPUTY MAYOR of Calcutta respectively, until the first meeting of the Corporation in 1942-43.

Mr Naresh Nath Mookerjee, Mr. Debabrata Mookerjee and Mr Anukul Chandra Das conducted the Deputy Mayor to the *dais* where he was garlanded by the Chairman. There was a shower of flowers on the Mayor and the Deputy Mayor as they took their seats

CONGRATULATORY SPEECHES

Mr. A. R. Siddiqi

Mr. Abdur Rahman Siddiqi said :—

I feel a bit nervous in addressing you to-night for the simple reason that this is my maiden speech in this House as a Councillor, and therefore if I am lacking in correct expressions or if I commit any blunders or mistakes, please attribute them to my nervousness and not to any lack of sincerity or genuineness in my felicitations or congratulations to you.

Your promotion from the Deputy Mayorship to the highest office in this Corporation is a matter of genuine pleasure to me, for having sat next to you and benefited from your experience and sound advice, I feel that the affairs of the Corporation are now in the hands of a tried servant who would be faithful to the traditions of this House and alive to the wider necessities of the city.

What gives me greater pleasure is that in your elevation to the Mayoral seat we have succeeded in establishing a convention for which I and a body of men tried for years. Being dissatisfied with the affairs of this Corporation and with the public life in this city a band of men formed themselves into what was known as the new Moslem Majliss. During the Mayoralty of Mr. Santosh Kumar Basu we sent a petition requesting him to try and establish a theory of rotation in Calcutta, as in the other large cities of India. We failed and tried again and again and each time our efforts were thwarted. By good luck, under the amended constitution and with a man like Mr. Subhas Chandra Bose to deal with, we came to an arrangement which led to the realization of my dream. He agreed to the theory of rotation and I was the first person elected as Mayor under that system. During the last 12 months there have been troubles and the convention that we tried to establish was sometimes in danger. But it gives me pride and satisfaction to say that we have succeeded in establishing that theory, and I hope when time comes for you to lay down the reins of office we shall see a representative of one of the minority communities occupying the great position you are occupying to-day (Applause).

I am anxious for the House to realize that it is not so much this convention that we have established as the co-operation over which we shook hands last year which should continue. We had our cloudy days but I can assure you that in any steps you take for the betterment of the city or any other steps that you take for the establishment of the rights of the Corporation you will find us neither hesitant nor backing out of any arrangement that you suggest, for we are as anxious that the dignity and honour of the Corporation be established as any other group of members in this House.

May I also go a bit forward and inspite of the charges of being arrogant and a bit exaggerated in my statement I assure you with all the force that I possess that the vision of Mr. Subhas Chandra Bose and the lines on which he carried on his work in this Corporation are safer in my hands and those who think like him than some who feel that they are the devotees and followers of Mr. Subhas Chandra Bose. We also have our dreams; we also have our visions and I assure you that those dreams and visions shall be realized. For, the co-operation which we have once more established to-day in your elevation to that chair will take us out of the wood.

To speak to you about the troubles that face us is like trying to convert the already converted. You know our difficulties, for you have had a longer experience of these difficulties than most of us in this House. You are bringing to us ripe judgment and wise guidance. I hope we shall get over our financial and many other difficulties during the year of your regime. Having established the convention of the rotation of Mayoralty, may I draw the attention of the House to the great necessity of establishing some other convention if we can. Let us establish the convention that corruption and bribery shall have no quarter at the hands of this House during the coming year. We and corruption have become bye-words. Only the other day a colleague of the Hindu Mahasabha group in this House told me that the name of the Corporation among those who did not know good English was, "Chore poration." Let us ostracize and cast out the "Chores" among us, whoever they may be, because it is they who are bringing disgrace and dishonour to one of the biggest institutions in this country.

Mr. Deputy Mayor, I delight in seeing you where you are. Your work during the last twelve months has brought honour, prestige and dignity to the group you led. We are proud and happy that under your leadership our affairs, particularly in the earlier months of the year, all led to success. Moslems in Calcutta can never forget, you for the great services you rendered to them during the days of the boycott and your continued efforts to remove from the civic body the poison which had entered it due to Moslem grievances. We cherish the hope that you and your Chief, the Mayor, will work hand in hand and try to remove the grievances which are yours as well as ours and which require an early elimination so that we go ahead hand in hand and fight the battles of the Corporation shoulder to shoulder. I feel certain that I am echoing the sentiment of everyone in this House when I say that in you the Corporation of Calcutta has found a Councillor who has yet to render valuable and meritorious services to the city in which we live.

I wish you both a happy year and also great success in anything you do, and I assure you that you will find me and the group to which I have the honour to belong, carrying out your behests and orders with happiness and joy (Applause).

Mr. N. C. Chatterjee

Mr. N. C. Chatterjee said:—

Mr. Mayor, before I come to you I want to say a few words about the outgoing Mayor, Mr. Siddiqi. I am one of the few Councillors in this House who put to the severest test the qualities of the Chair and I must admit that Mr. Siddiqi as Mayor stood the test exceedingly well (applause). When Mr. Siddiqi was elected to the Mayoral Chair some of his friends and admirers—genuine friends and admirers—assured me that during his term of office the Opposition would be effectively gagged. I discovered that that was a slander. The Opposition was not gagged. On the other hand the Opposition was treated with the utmost respect and consideration. So long as he occupied the Mayoral

Chair he held the scales even as between man and man and as between party and party. And I am quite sure that all sections of the House will join with me in my appreciation and tribute to the outgoing Mayor.

Now, I along with the members of my party came to the Corporation to participate in a co-operative venture for the common good of the city of Calcutta. Unfortunately exigencies of party and political alignments made it impossible for us to work on any of the Standing Committees of the Corporation. I and members of my party are not sorry for that having regard to the castigation which these Standing Committees had the other day in a speech delivered at the Rotary Club where we were authoritatively told that these Standing Committees have made this Corporation synonymous with corruption.

Sir, this City and the Province of Bengal are really passing through very critical times indeed. As a matter of fact, I was touring for some days in the rural areas of the District of Dacca and the horried scenes of arson and devastation that I saw there are haunting me day and night, and I have come to the conclusion that the time has come when there should be radical re-orientation of our social and political outlook. I am honestly convinced that the salvation of the city of Calcutta and salvation of the Province of Bengal lies in the pooling of minds, not in antagonism (applause). Salvation of the city and salvation of the Province of Bengal demand not the accentuation of party and communal differences but co-ordination of all the nationalistic forces for the common good of our Motherland. I hope your election to-night as Mayor of Calcutta will pave the way for a real and most effective co-ordination of all the nationalistic forces and therefore I welcome your election to-night. It is now for me, on behalf of my party, to offer you my heartiest felicitations. As one belonging to common coterie in the Temple of Themis I congratulate you on your election. But there is something more. I had privilege to work with you on many Special Committees. I worked with you on the Special Finance Committee, on which I accepted a seat at request of Alderman Subhas Chandra Bose. I had privilege to work with you on the Calcutta Municipal Amendment Bill Committee and other Committees. It seems to me that you are a conscientious objector in certain matters. You are a conscientious objector of executive inefficiency. You are a conscientious objector of reckless financial generosity. You are also a conscientious objector of Bureaucratic attempts to destroy the civic autonomy of the City of Calcutta. There is one bond between you and me and that bond is this. You and I are relentless critics of the Calcutta Municipal Bill; you and I are sworn enemies of that measure. We shall join hands to fight that Bill—you as Mayor and I as a humble Councillor. We are sure that your election to-night as the First Citizen of Calcutta will hearten every champion and every supporter of democracy. I say that not because I believe in copy book maxims on political philosophy. We want freedom because we are convinced that a man's highest freedom is corporate freedom. We want freedom from impure water; freedom from poisnous food; freedom from the mid-night prowler that carries on depradation on the sly; freedom from wicked men that would feign destroy the freedom of this foremost citadel of Democracy

Now I come to the Deputy Mayor. We have crossed swords on the floor of the House, and I am quite sure that many of us will miss you. We have fought with each other and the satisfaction is that we fought clean; that we fought on principles. I do not know why Mr. Ispahani has been elevated to that Chair. I am quite sure that there is a friendly conspiracy to deprive this House of a belligerent force that created trouble (laughter)! So long as you hold the scales even I assure you that you will have the continued co-operation of my Party. I wish both of you God speed.

Mr. B. N. Roy Chowdhury

Mr. B. N. Roy Chowdhury said :—

On behalf of nominated members, I offer you our best congratulations on your elevation to the Mayoral Chair. Personally I have been very happy about your election to-night. For the last eleven years I have had the pleasure of working with you in this Corporation both on the floor of this House as well as in the Committees, and I can say without any hesitation that

your ability, your straightforwardness and your integrity have impressed me deeply as also other members who have come in contact with you. As this has been made the occasion to stray hither and thither I cannot resist the temptation of offering my sincere tribute to the outgoing Mayor, Mr. Siddiqi. Unlike previous years we could not get an opportunity to express our acknowledgments to him and I would only say that if you during your term of office are able to show the same spirit with which our outgoing Mayor was imbued; if you fill the Chair with the same dignity and display the same amount of straightforwardness as our outgoing Mayor did, then at the end of your term we shall have better occasion to say better things of you. I am sure Mr. Siddiqi as Mayor has done a lot to improve matters in the Corporation. I do not wish to say anything disparaging to the Corporation. Corruption there is everywhere. Not in the Corporation alone. But we are determined to stamp out corruption and in order to do it we must have a clear-cut programme. We have heard speeches on this side and that side of the House. Speeches do not help. Rate-payers want of us real, substantial and solid work and I am sure you will keep before you the laudable programme of civic improvement and I have no manner of doubt that like a seasoned skipper, you will be able to steer clear of shoals and quicksand.

We are living in difficult times and many problems, apart from civic problems, you will be called upon to handle with care. So far as we are concerned we assure you of our co-operation in the discharge of your onerous duties. I congratulate you once more.

I also congratulate you, Mr. Deputy Mayor, and in doing so I feel certain that in you the Mayor will find an able lieutenant and co-adjutor, for you have been found to be quite an efficient leader in this House I am sure that you will bring great help to the Mayor. I heartily congratulate you once more.

Mr. Susil Chandra Sen

The Chairman (Mr. Susil Chandra Sen) said:—

It is a Red Letter day in one's life when he is installed in this Chair, which has been occupied in the past by many an illustrious son of Bengal. You ought to be proud that the City of Calcutta has chosen you to be the First Citizen for the next ensuing year. You ought to be proud of the fact that you have had the support of all sections of the House. I dare say you appreciate that no success is worth its name unless it has the approval of all sections of the House. We hope that with your wide experience of the affairs of the city you will give of your very best from that chair that you will be guided only by the best interests of the city We hope that as long as you are in that chair you will forget that you belong or belonged to any particular party and that you will give your decisions with that sobriety of judgment which your years and experience make us bold to expect It will be for you to give the fullest scope to all sections and I expect that you will get the co-operation of every section in the House during your tenure of office. We hope that you will try and prevent nepotism and jobbery in the Corporation. We also cherish the hope that under your enlightened guidance this House will show that we can sink our differences, that we can work in a team spirit for the furtherance of the best interest of the city, thereby giving the lie to the stigma attaching to us.

Mr. Deputy Mayor, to you I convey my congratulations as an erstwhile colleague with whom I have differed on many occasions. I join with Mr. Chatterjee in saying that although we have been opponents in many a round, we have enjoyed our fights and for myself, I have always found that even as an opponent you have been remarkably considerate. I hope you will maintain that strict sense of justice which we found you to be imbued with on the floor of the House. To you both I convey my warmest congratulations and I hope that at the end of your term you will be able to say that you have served the city to the best of your ability.

Mr. F. G. Watson

Mr. F. G. Watson said:—

May I take a leaf out of Mr. Chatterjee's book by first of all offering our congratulations to the outgoing Mayor on what must have been a very arduous but nevertheless a very successful year of office. His tact and diplomacy in handling difficult situations which had arisen earned for him the admiration of all of us. There is no harm in saying that when Mr. Siddiqi was made Mayor we were a little apprehensive lest his lack of experience in civic work should prove to be a handicap to him. But results have shewn how utterly unfounded those fears were.

Mr. Mayor, I and my colleagues in the European Group offer you our congratulations on your becoming a Mayor. It might be said that you have served an apprenticeship during the past year as Deputy Mayor. But, after all, experience is the best teacher and the very long experience which you have had in this House must be the very best qualification that you can have for holding this important office. We also know you are a lawyer of repute and enjoy the confidence of your colleagues and we feel sure that your decisions and rulings will be as just as they can possibly be. For our part we assure you of our wholehearted support in all matters relating to good administration and the general good of the city.

Mr. Deputy Mayor, we also congratulate you. We were impressed last year by your energy, enthusiasm and hard work which you put in and the office to which you have been called perhaps comes to you as a reward to some extent. There have been occasions when we did not see eye to eye with you, but we never doubted your sincerity. We congratulate you on your elevation.

Mr. N. N. Dalal

Mr. N. N. Dalal said:—

On behalf of the Congress Party and also on behalf of the members of the Alipore Bar, I congratulate you on your elevation to the Mayoral Chair. I have been associated with you for the last 30 years not only in this House but outside, and it will not be presumptuous on my part if I say that I am more happy than anyone else here to see you elevated to the Mayoral Chair. Your elevation has been a belated one and the reason is to be found in the fact that you are so unassuming. I have no doubt that as Mayor you will guide the deliberations of the House in a non-party and non-communal spirit. You have the best interests of the city nearest to your heart and the deliberations of this Corporation will be the better for your wise counsel, ripe judgment and enlightened guidance. I am proud to think that after a lapse of so many years you have been elevated to that Chair by the unanimous verdict of the House. That shows that you are held in great esteem by your colleagues for your uprightness, for your sense of justice and fairplay and for your disinterested motives. You are also non-communal in your outlook, and my Moslem friends are very glad to see you in that Chair. I again congratulate you.

Mr. Deputy Mayor, I congratulate you heartily. I am glad to see you elevated to that Chair. I have watched your activities in the Committee over which you presided. You are just and fair-minded and when you occupy the Chair you are absolutely non-communal. I hope that as Deputy Mayor you will be imbued with the same sense of justice and fairplay.

Mr. Syed Badrudduja.

Mr. Syed Badrudduja said—

Mr. Mayor, before offering you, on behalf of the Moslem League Municipal Association, my sincere felicitations, I would refer to our outgoing Mayor. The speakers that preceded me anticipated all that I could say about the services of the outgoing Mayor to the city. There have been much greater personalities occupying that exalted Chair; there have been men with better record of service in diverse spheres; but never have I come across a man more straightforward, a man with greater courage of conviction and sincerity of purpose than Mr. Siddiqi. He has proved to demonstration that the interest of the city at large, the interest of all sections of the community are as safe in the hands of

a Moslem Mayor as in the hands of any other person belonging to any other creed, denomination or persuasion who happens to occupy that Chair. It is heartening and encouraging to reflect that we have succeeded in electing one of the ablest, one of the sincerest and tried servant of the Corporation to that exalted office. Amidst the most difficult and trying circumstances and despite the attempts made from various quarters to sow dissension amongst us and to bring about a disruption of the Congress-Moslem-League—Coalition, we have been able to maintain our solidarity as well as the pact which was entered into between the Congress and the Moslem League last year. It repudiates the suggestion and impression that has got abroad that we Moslems and Hindus are incapable of sinking our political, cultural and religious differences in the general interest of the city. You have been marked out for your honesty of purpose, for your dignity, for your intelligence and above all, for your wide experience which you have brought to bear upon civic affairs for a long time. By electing you we have honoured ourselves. By rising superior to communal jealousies and bickerings and electing you to that Chair by a unanimous vote we have done something which great leaders of public opinion outside have failed to achieve inspite of their best efforts. Let us hope and pray that this will have a repercussion on the larger political sphere outside. So long as you occupy that Chair we expect that you will rise above communal, sectional and parochial considerations, take a comprehensive and detached view and grapple with the problems with which we are faced in a most dispassionate spirit. So long as you occupy that Chair you will shed your party and political complex and forget that you belong to any particular party or denomination. That is what I wish to impress upon you. For our part, I assure you of our unstinted help in carrying out the duties of your exalted office.

It now remains for me to congratulate the Deputy Mayor. Representing as he does a great party and organisation, may I appeal to him to maintain the traditions of justice and fairplay, truthfulness and veracity, which are the characteristic ideals of the great Moslem League. Once again I offer you my felicitations.

Mr. Naresh Nath Mookerjee

Mr. Naresh Nath Mookerjee said :—

I shall be failing in my duty if I do not offer words of congratulation to the outgoing Mayor. Mr. Siddiqi. When we elected him to that high office last year, a certain section of the House had misgivings in their minds as to whether he would be able to discharge the onerous duties which we placed on his shoulders, because he was inexperienced in civic affairs. To-day it must be admitted on all hands that he has discharged his duties to our entire satisfaction. He has fulfilled the high expectations that we had of him. We on this side of the House had no doubt in our mind when we put forward his name for the office of Mayor that he would prove to be an admirable Mayor. He has had a very difficult year of office —a year full of trials and tribulations—and I think I am echoing your sentiment when I say that he has emerged triumphant from the ordeal. He held the scales even between parties and parties and we never found in him any trace of communalism or partisanship.

Mr. Mayor, it is not for us to eulogize you. You are one of us. As a mark of its supreme confidence in you, the entire House has unanimously bestowed on you the highest honour in the gift of the City of Calcutta. You have been elected as the First Citizen of this city. As a testimony of further confidence in you, you have been elected without any contest. Knowing you as I have done for the last so many years your unanimous election to-night has given me immense pleasure. I have the greatest regard for your integrity and honesty of purpose. You have always tried to uphold the principles laid down by your illustrious predecessors in office. We are confident that you will follow in their footsteps and worthily uphold the high traditions that have been handed down. We know that you have a very difficult year ahead. You have taken upon your shoulders very great responsibilities. During the next twelve months we do not know

what is in store for us. We are also afraid that an attempt, a successful attempt will be made to rob us of our autonomy, to rob us of the prestige and freedom we enjoy at present, through the instrumentality of the Calcutta Municipal Amending Bill which has been rightly described as a communal measure. I say that this Bill seeks to take away the freedom of everyone of us here, whether he is a Hindu or Moslem, European or Schedule Caste. You will be called upon to give us a lead in the matter and to vindicate our honour before the public.

Mr. Deputy Mayor, it gives me great pleasure to congratulate you on your election to-night. It came to me as a bit of surprise because I never expected till the very last moment that you would be a candidate for the office of Deputy Mayor. I feel sure that you will hold the scales even.

Once again I congratulate you both.

Mr. C. Griffiths

Mr. C. Griffiths said:—

Mr. Mayor, Sir, allow me to congratulate you on your success in being unanimously elected Mayor of Calcutta. In complimenting you, Sir, on your exalted position as the first citizen of this great City —the second in the British Empire, I do so on behalf of the Anglo-Indian and Domiciled Europeans who are not only countrymen of yours being children of the soil, but are also sons of the paramount power and the descendants of Job Charnock and his band of early settlers who founded this city 250 years ago on the 24th of August, 1690.

Mr. Chairman, I trust you will be patient with me, and not rule me out of order, while I try and build up the case of my community and place their claims before the new Mayor for consideration.

Mr. Mayor, Sir, I take it that the British Government granted this Corporation autonomy with a view that good-will and harmony would prevail among us, that justice and equity would be meted out to each and every community.

But alas, what did we find? Communalism rampant. The majority community, by force of number under the guise of Democracy, appropriated all power in the Corporation and became masters of their previous rulers, the Moslems, and that section of the British who had domiciled in the country.

Result? Can any one blame Mr. Jinnah for demanding Pakisthan to prevent this kind of majority rule at the centre whereas the other minorities will have to subordinate themselves without any safeguard. And again, if this is a logic, then all must agree the tenants who are more numerous than the landlords should control this Corporation instead of the landlords. Surely we cannot blow hot and cold at the same time. No wonder it is aptly said that the Devil was the first democrat for he could juggle with the situation to suit his overselfish and greedy ends. I think the position is well summed up in the words of our Bengali poet Rabindranath Tagore who recently said "I begin increasingly to discover that those who accepted the best truths of civilisation disowned them with impunity, whenever questions of selfishness and greed were involved."

If we were to examine the first 11 years of autonomy from 1924 to 1934 we will find only Hindu Mayors elected. Then during the next 6 years we find, three Hindus and three Moslems, *viz*., Mr. Fazlul Huq, Mr. Zakariah and Mr. Siddiqi and why? Is it because the Government of India Act, 1935 was framed and a Moslem Ministry was to govern Bengal and so a compromise was arrived at between the two major communities to share the spoils?

But what was the fate of my community? Men who were born and domiciled here like Roberts and Kippling and all other minorities? It remained the same.

In the joint elections, we were not supported. You helped other minorities, so we were wiped clean off the picture as far as the Mayoralty was concerned. Then you ruthlessly removed us from the Corporation services. The vacancies caused by our retirement or dismissal were not filled up by other Anglo-Indians so that to-day after 17 years of autonomy you cannot point out one Anglo-Indian holding any position of mark in the Calcutta Corporation, the city built by our

forefathers, and we are about 27,000 strong in Bengal. Could things be worse?

Sir, it is up to you to undo the wrong done us. You can rise head and shoulders above your predecessors, gaining the love and respect of all, if you were to work in the spirit of Nationalism and not communalism. If you were to work as the retiring Mayor Mr. Siddiqi had just suggested with justice and equity, you would prevent all this hatred now existing in the country.

Mr. Deputy Mayor, I also congratulate you on your election. I feel positive that you will be an asset to the Mayor and both will work in harmony and do justice to each and every community.

Finally, I wish you both every success during your term of office.

Mr. Pulin Behary Mullick

Mr. Pulin Behary Mullick said—

It was about this time last year that I had the honour of congratulating you on your election as Deputy Mayor of this Corporation. To-day you have been unanimously elected to the Mayoral Chair. I submit that this greatness has not at all been thrust upon you. You have earned this promotion by dint of your courage of conviction, sincerity of purpose and genial temperament. Troublous times are ahead and a man of your qualities of head and heart will stand us in good stead.

Mr. Deputy Mayor, we came to know each other about 4 years ago in the Bengal Legislative Assembly. Our acquaintance deepened into friendship in the course of last year in this Municipal Building. I have always been struck by your keen sense of justice and your suave manners. I shall always remember you with gratitude because of the fact that you have fought hard for the rights of the Schedule Caste community. Let me assure you that even in your new office you can depend upon our gratitude. I whole-heartedly congratulate you.

Mr. Satish Chandra Bose

Mr. Satish Chandra Bose said—

I rise to add my voice to the chorus of congratulations which have been extended to you from all sides. I congratulate you on your election to the Mayoralty by the unanimous suffrage of all Councillors and Aldermen present. This Chair which you have the honour to occupy today was once sanctified by the touch of three of our illustrious countrymen, the pioneers of freedom movement in India, men who lived a life of suffering and sacrifice so that their beloved Motherland may be free. Mr. Griffiths told us that the British Government granted us autonomy. I say that this statement of fact is historically wrong. No autonomy was granted to us by the British Government. It was wrested from their tardy hands. The Congress won the present constitution for the whole country.

Mr. Mayor, you are a tried servant of the Corporation and I hope you will be able to bring your wider experience, sound judgment and strong common sense to bear on your work as Mayor. Throughout your career as Councillor you worked with a single-minded devotion to the Corporation. Now that the civic freedom of this city is in peril, I hope you will rise equal to the occasion and preserve its freedom inviolate. It has been said that corruption is rampant in the Corporation. Fortunately or unfortunately corruption is not the monopoly of this Corporation. In diverse other spheres and places corruption is rampant to the shame of this Province. I hope during your term of office you will carry out your duties impartially and fearlessly and be just to all the communities that inhabit this city. I mean those who have made Bengal their home and who enjoy the fruit of the soil, whether Hindus or Moslems, Christians or Jews.

If they bear alligiance to the soil of Bengal they are brothers. That is the test which we Congressmen have always applied. I came in contact with you years ago and I can say without any exaggeration that by your impartiality and sound judgment you have been able to endear yourself to all the Councillors of this Corporation. You worked on the Services Committee without having any personal axe

to grind. You did what you considered to be the best for the services and I am sure your sound judgment and impartiality will win for you greater popularity as Mayor.

MR. DEBENDRA NATH MUKHERJEE

Mr. Debendra Nath Mukherjee said—

Apart from what has been said by Mr. N. C. Chatterjee in offering you his felicitations on behalf of the Hindu Mahasavha group, I think I shall be failing in my duty if I do not say a few words to express my feelings of pride on your elevation to the Mayoral Chair. With your elevation to the Chair it is for the second time that the Alipore Bar Association has been able to secure the Mayoral Chair for one of its members from the hands of the Corporation. It is a matter for gratification that you have been chosen for this high office from amongst various candidates of wide repute and great distinction. It is a great personal triumph of yours and as a member of the Alipore Bar Association I take pride in that. The eminence which you have risen has not been won by chance or accident. It is not a gift at the hands of any political party. It is a tangible recognition of your sterling worth. It is a reward for your faithful and ungrudging services to the Corporation for the last 13 years. I have known you now for 30 years. Sincerity of purpose, single-minded devotion to duty, regard for truth and courage of conviction are your outstanding characteristics and it is these virtues which have secured you this high position.

I shall refer briefly to some of the problems which face us today. I need hardly refer to the programme of work chalked out by our First Mayor, Deshbandhu Chittaranjan Das. As you are well aware, his aim, in the main, was to remove illeteracy and to change the top heavy character of the Corporation administration. These were his cherished ideals. It will be for you to examine how far these ideals have been realized. The outgoing Mayor, Mr. Siddiqi, referred to the corruption which is rampant in the Corporation. Certainly the Mayor and the Deputy Mayor will pay attention to it and try to stamp out the evil. At the same time I would ask you to see to it that the promises held out to the public are made good. You will remember that a competitive examination was held some considerable time ago. We took fees from the candidates, and then the examination was held and the results were published in due course. Since then considerable time has elapsed and yet you have not been able to appoint one from amongst the successful candidates. You must see that our promises are redeemed.

Mr. Deputy Mayor, I have a great regard for you for your outspokenness. We do expect many things from you. We expect first and foremost that you will be able to restore amity, concord and harmonious relations between two great communities. As an intelligent and cultured man it is easy for you to see through the game which is being played by self-seeking people to keep us apart. If you sincerly try I am sure the old amity of relations between the two major communities will soon be re-established. With these words, I extend to you my hearty felicitations.

MR. JOGENDRA NATH MONDAL

Mr. Jogendra Nath Mondal said :—

Permit me to associate myself with all that has been said by Mr N. C. Chatterjee and Mr. Badrudduja regarding the outgoing Mayor, Mr. Siddiqi. Mr. Siddiqi discharged the duties of Mayor with remarkable ability and success and it gives me pleasure to say that he worthily maintained the dignity and prestige of that Chair.

Mr. Mayor, I offer you my heartiest felicitations on your election as Mayor of the first city in the East. You to-day occupy a Chair which was once adorned by men like Deshbandhu Chittaranjan Das, Deshpriya Jotindra Mohan Sen Gupta and Deshgaurab Subhas Chandra Bose. I hope you will strive to achieve the lofty ideals which these illustrious sons of Bengal set before the Corporation. I need hardly remind you of the problems of the city. The problem of the city is

the problem of the hewers of wood and drawers of water, the problem of slum dwellers. I hope you will never fail to meet the needs of suffering humanity.

To you, Mr. Deputy Mayor, I offer my sincere felicitations. Although my acquaintance with you as Councillor is very short I have had ample opportunities of watching your activities in the Bengal Legislative Assembly. I have always found in you a man of strong determination and indomitable courage.

Mr. Prafulla Kumar Dutta

Mr Prafulla Kumar Dutta said:—

First of all, allow me to pay my tribute to the outgoing Mayor, Mr. A. R. Siddiqi. At the time when he was elected Mayor there were doubts and misgivings in various quarters on account of his outlook or political views. But by his uprightness and straightforwardness he allayed all these fears and misgivings and led this Corporation through troublous times. He never shirked his duty.

Mr. Mayor, as a matter of convention I rise to offer you my congratulations. The time for offering you my sincere, warm and genuine congratulations will come on the day when you relinquish your office after having maintained the dignity and prestige of the Congress to which both you and I owe allegiance. The Chair which you occupy to-day was adorned by no less a person than Deshbandhu Chittaranjan Das, and I cherish the hope that you will maintain its high traditions unsullied. The Mayoral position is not an emblem of any powers. It is an emblem of sacrifice and service. Various speakers have referred to corruption in the Corporation. It is agreed on all hands that this is an evil which must be eradicated at any cost. We must remember that the second city of the British Empire is not only a city of palaces but a city of slums and bustees. There is a crying need for the supply of filtered water in bustees and I am sure that by supplying this desideratum you will be rendering a great service to poor bustee-dwellers. I expect you to give us a lead in another matter. A great danger to the autonomy of this Corporation looms large before our eyes, I mean the Calcutta Municipal Bill. It seeks to curtail our cherished rights and privileges and to destroy our civic freedom. It is an anti-national and retrograde measure. I hope you will give us proper lead in the matter of repelling this onslaught on our civic autonomy. We who have worked with you in close collaboration for some years know that you will be able to discharge your duties to the satisfaction of all communities.

To the Deputy Mayor I offer my hearty congratulations. I have had the opportunity of seeing him preside over the deliberations of various committees and I always found him conducting those meetings without any bias whatever. I have no doubt that he will render all possible assistance to the Mayor.

THE DEPUTY MAYOR

The Deputy Mayor said—

Aldermen and Councillors, let me thank you for the honour you have done me this evening in electing me as your Deputy Mayor for this year. I thank you also for the very generous and kind reference that you have made about me in the course of your speeches. I have not the least doubt that I am totally unworthy of the honour you have done me. My esteemed friend and leader, Mr. Siddiqi, showered on me cart-loads of rose petals. I am grateful to him and I take the opportunity of assuring him and all of you that I shall spare no pains in the performance of my duty to the very best of my ability. I mean to serve you and rate-payers of this great city of ours, to the limit of my capacity and I affirm from my place here that if I fail in that it will not be for want of sincerity or initiative or industry on my part.

I am beholden to the Aldermen and Councillors belonging to the various groups in this House, and in particular, to my dear friend, Mr. Subhas Chandra Bose wherever he may be, for the courtesy and co-operation that I have uniformly received at their hands during the last one year when I had the proud privilege of being the leader of the

Coalition Party. As Mr. Chatterjee said, we have had at times sharp difference of opinion. We had at times tugged and pulled in opposite directions; but at no time has our fight been anything other than a clean fight.

I shall not take up any more of your time because the hour is far advanced and the Mayor must be afforded the fullest opportunity to express himself as freely as he can within the limited time at his disposal.

Before I resume my seat, let me once again thank you from the bottom of my heart for the honour you have done me.

THE MAYOR'S ADDRESS

Replying the Mayor said—

Aldermen and Councillors, I am grateful to you for the high honour you have bestowed on me. I am conscious of my limitations and foibles. I know that I am far, far inferior to the illustrious hermits who occupied this Chair in the past. The First Mayor, the great Deshbandhu, was a patriotic hermit. He gave up his earthly-all and embraced a life of poverty and self-abnegation for the sake of his Motherland. I am free to confess that I can never approximate to him. I confess to my sheer incapacity to tread in his footsteps. But I shall try to work on the lines he chalked out for us. I hope you will try to help me, for, without your help it is not possible for me to achieve anything. By electing me tonight you have done honour to the cause which is represented by our esteemed leader, our lost leader, Mr. Subhas Chandra Bose. Today I sadly miss him here. Had he been in our midst we could have done many things for the Corporation. We have lost him at a time when his services are needed most. We had it from our esteemed friend, Mr. Siddiqi, that this Corporation has acquired the name of *Chore-poration*. But is it not a reflection on us? Does it not implicate us too? Those who control *chores* are either *chores* themselves or are totally unfit to be here. But we must take it upon ourselves to eradicate this evil and thereby do our duty to ratepayers.

Aldermen and Councillors, it is through our negligence and inertia that this state of things has come about and it does not look nice for us to parade before the public our own remissness; our own sins of omission and commission. Let us grapple with the evil of corruption in right earnest; let us try and find out the root causes and then let us apply proper remedies. That is the way to go about it. It is no use abusing ourselves and then leaving it at that. I have been told that there are communal differences. That is, I fear, the truth. The canker of communalism is eating into the very vitals of our body politic. It is and has been the bane of India.

To-day we find that Indian troops are fighting side by side with other Empire troops in this great war. Indian troops have been found to be most the best fighters in the world. Time was when our poets, philosophers, scientists and statesmen were held in the highest esteem all over the world. Mr. Griffiths said that domiciled Europeans should be accorded the same position as Indians. I am ready and willing to subscribe to that proposition. Was not Lord Roberts an Indian? Was not Rudyard Kipling an Indian? India had produced men like them. Did not Suresh Chandra Biswas rise to high eminence as a soldier in far-off Brazil? I ask you, what has been the cause of our downfall? What is the reason that we have no place in the comity of nations? What is the reason that we have no inter-national status? The reason is not far to seek. It is to be found in the evil of communalism. Will you try to eradicate it? It can only be eradicated through heart-searching, only by developing in ourselves a sense of justice and fair-play. Moslems cannot unite with us as long as they are not satisfied that we are just to them. It is by developing in ourselves a sense of justice that we can unite the two communities into one nation. The British conquered India not by sword nor by shear force of armed might, but by their innate sense of justice. And when we found that this sense of justice in them was on the wane, we embarked on political agitation. So the only way to unite the two communities is not by entering into pacts, nor by showing con-

dessions, but by doing justice to each other. We must learn to do justice. We must learn to mete out justice tempered with mercy. If we do that I believe we shall yet unite into one nation Before that comes about we cannot expect to make any headway. We can do it if we have the will. It is not impossible of achievement. In schools and playgrounds there are no such differences and divisions. As I said, we can end our communal, social and political bickerings and present a united front.

Reference has been made to the Calcutta Municipal Bill which is now on the legislative anvil. We have already lodged our dignified and emphatic protest against it. I believe Government will take due note of our protest. But if they go forward with the measure, undeterred by our protest, then we shall say that they are unreasonable because justice is on our side. Should occasion arise we shall use all legitimate and constitutional means to prevail upon Government to desist.

It has been said that there is bribery and corruption in the Corporation. I do not deny that. We must take practical steps to stamp out these evils, instead of inveighing against them and then sitting back with folded hands.

I am at one with Mr. Debendra Nath Mukherjee that although we held a competitive examination and published the results about a year ago, we have not yet provided for any of the successful candidates. It is a reproach on us that we have not yet redeemed the promise of employment that we held out to these candidates. We have no right to deal with them in this fraudulent way. We must attend to it immediately and undo the wrong which we have done.

Complaint has been made about inadequacy of filtered water supply. I had been on the Water Supply Committee for a long time. It is not so much the insufficiency of supply as the errors of distribution which cause scarcity of water. I can tell you from my experience and knowledge that it is not difficult to remedy these defects in the system of distribution. The only thing is that distribution mains have to be laid and for that money is needed. So, we must be extremely thrifty. In the last budget we tried to be as thrifty as possible. But we have not reached the limits yet. Our economies should be such that we can discharge our obligations to rate-payers. The Budget Committee has shown that our finances are intrinsically sound.

I do not wish to detain you longer. Let us proceed to work. Mere speeches will not be of any avail Let me tell you that Calcutta with all its fault is a very popular city. The latest census figures show that Calcutta's population is 22 lakhs as against 12 lakhs formerly. In the course of 10 years the city's population has increased by 50 to 60 per cent. This goes to show that this city of ours is popular, that people from other parts of India come and take up their abode here. They come and settle down here not for the pursuit of pleasure, but for the purpose of making a living. If we go on improving may be one day it might become the first city of the British Empire

Aldermen and Councillors, I thank you again for the high honour you have bestowed upon me. Certainly, I shall try my best, but without your help and co-operation I can do mighty little. Your co-operation and support is essential to the success of any venture that we might embark upon. I implore you to bear in mind the complaints which have been voiced to-day and proceed to work in right earnest from the very commencement of the year, for we have a good deal of leeway to make up.

On the motion of Mr. Profulla Kumar Dutt, seconded by Mr. I. B. Bedi, it was

Resolved—

That in modification of the Corporation resolution dated the 28th August, 1935, all Corporation Offices, Schools and Workshops do remain closed on Tuesday, the 29th April, 1941, in honour of the election of the Mayor and the Deputy Mayor and the labour staff employed in the Workshops be allowed full wages for that day.

The meeting was then closed.

SUSHIL CH. SEN,
Chairman.

8th April, 1941.
